# UNIVERSAL KNOWLEDGE FOR TIIE PEOPLE 

## ELEPHANT.

ELEPHANT (Gr: Eleqhas), a genus of qualrupeds, of the order Pachullermata ( $\mathrm{q} \cdot \mathrm{v} \cdot \mathrm{v}$ ), and of the section Pmboscidea. Elephants are the largest existing land animals. The orlinary beight at the shoulder is about eight feet, but sometimes exceeds ten feet. The weight of a large L . is abont five tons, the bonly beine very buiky in proportion to its heieht. To sustain this weight, it is furnished with limbs of colossal thickness and strength, which are also remarkahly straight, each bome resting vertically on that leneath it. From the appearance of inflexibility presented by the limbs, arose the notion prevalent among the aneients, and throughout the middle ares, that the limbs are destitute of joints, and that consequently an $E$. cannot lie down to rest like another quadruped. and if it were to lie down, could not rise again, hut always sleeps standing, or leaning against a tree. It is indeed true that the E. often sleeps standing, and when fatigned, falls asleep leaning agginst a rock or tree, agginst which it may have heen rubling itself. The thexitility of the limbs is, however. sutheient to pernit elephants to ram with speed nearly equal to that of a horse, to impulge in playful ganbols, and to ascend and descent stee], momntains. Elephats are more sure-footed and servicealle than either horses or mules, in liffieult mountain roals. On the very stecpest declivities, an E. works his way llown pretty rapilly, even with is homelak and its nceupants upon his luack, his chest and belly on the grouml, and each fore-foot employed in making a hole for itself, into which the hind foot afterwards follows it, and to which the weight may be trusted, that another stel may he ventured with safety. In lying down, the F. iloes not bring his himi-legs under him, like the horse and other quadrupeds, but extends them hackwarls (as man does when he assumes the knceling josition), an arrangement which, 'hy enabling him to claw the hind-feet gralually under lim, assists him to rise almost withont a jerceptible effort.' The E.'s pizee, when exceeding a walk, is neither a trot nor a gallop, 157
which would be too violent a motion for its conformation and huge body, but a sort of shuflle, the speed of which is increased or diminished without other alteration. The E. is ineapable of springing like the deer, horse, and nther animals which have the hones of their shoulders and hoeks set at an annle.
The beal in elcphants is large; the neck is short and thick, the long flexible proboscis compensating both for the shortness of the neck, and for the intlexibility cansed loy the largely developed processes of its vertelro, and enabling the animal readily to reach objects on the ground, or to a lieight of several feet alowse its heall, or on either side. A great extent of bony surface in the head affords attachment for museles destined to move and give power to the proboscis or trumk. This extent of bony surface is proviled in a remarkable manner, which at the same time makes the head, beavy as it is, lighter in proportion to its bulk than is usual in quadrupers; a great space separating the internal and extermal tables of all the bones of the skull, except the necipital lones, so that the space ocelpied by the lrain is but a small part of the whole head. The space between the tables of tho bones is occupied lyy cells, some of which are four or five inches in length; others are small, irregular, and honcycomblike; 'these all communicate with each other, and through the frontal sinuses with the cavity of the nose, and also with the tympanum or drum of each ear ; consequently, as in some birds, these cells are filled with air.' The luge and extranclinary bones of the skull, besides affording attachment for muscles, allord mechanical surport to the tusks.

The masal bones of the E. are scarcely nore than rudimentary; lout the tapering proboscis, to the very extremity of which the nostrils are prolonged, is nearly eight feet in length. Besiles the great muscles connected with it at its base, it is composed of a vast multitude of small museles variously interlaeed, but chiefly either longitudinal, and divided

 fromess-strume suit, and flasible like the rest of the tambs. and arthowed with the mast delueate sense of

 the tramk: ly ratems of the tank, also, it arimlis,

sucking up into it a quantity of water sufficient to fill it, and then diseharging the montents into the mouth. Valves at the lase if the trum 1 revent the water from going too far ny the mastrils. The trunk is constantly employed by elephants in providng in
 two pratices to wheh they are gratly ablinted. Their matiad coresses are ilso manarel ly means of the tromk, and thomeh it they make a lomed shrill sman, mulicative of rate, which is aleseribed ley Arstuthe as resemblint the harse sement of a trmmex, and from which this man received its french natue trompe cormutal in English into trunk. With the trunk also, they sometimes, when anery, beat whently on the ermand.

The sense smed is very anote in the F., as i.s also that of hearing. 'lhe exrs are lure and pendulum, the eyes are small.
lelephants have ha canine tecth, un have they any incrons in the lowne jow. Ithe upere jan is fromishel with two incisms, which issume the pechlian datuteter of troks, aud attain an enommos Sive, it simgle that sumetimes weighing lion or even : 100 l w. The tow ome however, often imperfectly developnals ten twelve inches in lensth, and one or two in diancter. 'Shese stunted tuds are often used for stheh jurpuses ats snapping off small hranhes and trarine dimbinf fants from trees. Thme clophanto which poosuss great tusks employ them also for surh other uses as loosening the roots of trees which they camot uthorwise tear from the gromal: ur in astate of dousestication,
 or carrying timber. A pherind E. will mise and carry on lis tuks a lug bid half a ton weight or more. 'The turks if the L', surpass in size all other teeth of cwisting ammals, and are the largest of all teeth in propretion to the size of the bonly. They consist chictly of that varicty of dentine called
 incisors of the roments, to which they are in some respects analogons-even when the animal has

A, skinl of lndian wephant: 13 , shall of African clephant;
 numer ind lower molar tecth of Afran ehmhatit: $G$, the rriginal tate of the gitndery whon the lamine of which they consixt arens get unownected tomether: H, the lamine as they ate attached in parablels one to the other by cortical substance.
attainell a great age, if met the the ver eme of its life, The young E . is at tirst furnished with deciduens incisors, which are shol between the first and sceond yenr, amd are suceceded hy the promanent tusks. - The melar tecth of the E. are developed in sucecssion : ant at least in the Indian b., never more than two :me to be seen in the same side of a faw at one that. The tirst mulars cut the grm in ahont two wehes after birth, aml are shed about the end of its secomalyatr. 'The sixth molars,

## ELEMHANT.

which are also believed to be the last, are sulposed to appear about the tifticth year of the E.'s life. The molar tecth of the E. are remarkalile for their great size, and for the extreme complexity of their structure, to which the nearest rescmblance is found in sume of the small ronlents. They are composed of vertical plates of bony sulstance, separately cnveloped with enamel, and cemented together by a third substance, called crusta petiosa, cortical, io cencon, more resembling hone than enamel. Each succeeding touth is not only more complex, but occupies a greater space in the jaw than its predecessor. Although formed from a single pulp, the molar tooth of an E. resembles an aggregation of teeth; and in the earlier stages of its growth, when the coment is not yet depuisited, it seems as if many separate teeth were soldered together. As the surface of the tooth is worn down by mastication, the harder enamel is exposed in elevated ridges. The whole of a tonth is not in emphoyment at once. From the peculiar manner uf its growth, the anterior part legins to be employenl. and to be worn away, whilst the latter part is still in process of furmation.

The digestive apmatus of the E. is similar to that of the other pachydermata; lut the stomach, which is of a very lengthened and narrow form. exhibits a peculiarity which assimilates it to that of the camel; the internal membrane, at the extremity beyoud the eardiac orifice, forming thick wrinkles and folds, the lroadest of which, and nearest to the gullet, seems to act as a valve, making that ent of the stomach a rescrvoir for water, capable of coutaining about ten gallons; whilst a peculiar musele, connecting the wimpipe and gallet, enables the aumal to open this reservoir at $l^{\text {leasure, for the }}$ rechurgitation of the fluid, which is then sumetimes received into the trunk. and squirted over the body, to free it from the nuisauce of Hies, or the heat of a tropical sum.

The fumale E. has only two teats, situated letween the fore legs. The young suck with the month, and not with the trunk. They are suckled for about two years. The puriod of gestation is also nearly two fears, and a smgle young one is produced at a bith.

The slin of the E. is very thicle, of a dark-hrown colour, and in the existin! species, has scarcely any covering of lair. The tail does not reach to the ground, and bas a tuft of coarse bristles at the crid. The feet have in the skeleton five distinct toes, but these are so surrounded with a firm Lorny skin, that only the nails are risible externally, as on the maryin of a kind of hoof. The foot of the $\mathbf{E}$. is admirably adapted for steep and rough ground, the protective skin which covers the toes allowing them considerable freedom of mution.
Only two existing species of E. are certainly known, the Indian ( $E$. Indicus) and the African ( $E$. Africanus), although differences have recently been observed in the E. of Sumatra, which may gerhaps entitle it to be ranked as a distinct species. Elephants are found in all parts of Africa, from the Sahara southwards, where wood and water are sufficiently abuadant; also throughout Iudia and the south-eastern parts of Asia, and in some of the tropical Asiatic islands. They extend northwards to the Himalaya; and Chittagong and Tiperah vie with Ceylon in the superior exeellence of the elephants which they produce. The Indian E. is distinguished by a comparatively high oblong head, with a concave forebead; whilst the African has a round head and convex forehead. The ears of the African E. are much larger than those of the Indian, covering the whole shoulder, and descending
on the legs. A marked listinction of the two species is also found in the molar treth: thoze of the Indian E. exhibiting ramy perellel transorse ridges; whilst those of the Afriean species lave the

divisions of the crown of the tooth fewer, broater, and lozenge-shreped.

Elephants live in herls, not senerally numerous, but several herds oiten congregate together in the same forest or at the same place of drinking. Lach herd has a lealer, generally the largest and most powerful animal. The leader seens to exereise much control over the movements of the herl, gives the alarm in case of danger, and seems to eximine and iecile for the whole herd as to the safety of proceeding in any particular direction. On account of his tnsks, the leader is yery often the animal against which the efforts of the hunter are lirected ; but the rest of the herd do their atmost to protect him, and when driven to extremity, they dace him in the centre, and crowl so caretly to the front of him that some of them nust often be shot are ho ean be rached. A family resemblance is usually very visible among the elephants of the same herd; some horls are distincuished loy greater stature, and others by more butky form and stronger limls; some by particularly large tuslis, some loy slight pecuharities of the trunk, \&e. In the East Indies, distinctions of this kind have long been carefnlly noticed, and partieular names are given to eleplants according to them, some leing considered as highcuste, and others as low-custe ele h hants. An E. which by any cause has been separated from its herl, seems never to be admitted into another, and these solitary elephants are paticularly trublesome, in their elepredations exhibiting an andacity which the berds never exhilhit; they are also savage and much dreaded, whilst from a berd of elephants danger is scareely apprehendel. The E is generally one of the most inoffensive of animals, although in a state of domestication, it shews, as is well known, a power both of remembering and resenting an injury.
The favourite haunts of wild elephants are in the depths of forests-particularly in mountainous recions - where they browse on branches, and from which they issue chietly in the cool of the night to pasture in the more open grounds. They are ready to plonder rice or other grain-fields, if not deterred lyy fences, of which. fortunately, they have, in general, an maccountable dread, even although rather imaginary than real. A fence of mere recels will keep, them out of tields, where, as soon as the grain is removed, they enter by the gans of the fence, and may be seen gleaning among the stubble.

## ELEPllANT

Whan the 1:. ats grima, nething can he more gracefal than the eate with whelh, heture cambey an? it to has monh , he lrats, the earth from its

Fihphants deliplat in ahundan'c of water amb enter it very frecly, often remainine in it for a comsiberable time and with reat erident cojoyment. They sometmes swim with mot only the lurly lout the head under water, the only part clevated above it buine the extremity of the trumk.

The hatits of the African E. appear in no import. ant respect to differ irom thase of the Ladian clephant. It is the latter only that is at the present day domesticated; but it is certain that the African species was anciently domesticated, and the figures on many lionam medals attest it.
Elephants rarely brees in a state of domestieation, althouch, a few years ago, the birth of an elephant took place in the Zoolurical Gardens of Londen, an occasion of much interest not aly to the scientifie but to the general public. They are generally tamed within a few montha after they are captured; some decren of severity heiny ampheel at first, which, however, as soma as the animal has berun to respect the puwer of man, is exchanced for kiminess and genteness of treatment. Elephants intented for domestication are eapthred in varions ways. It was firmerly common to take them in pitfails, hat in this way they were often mach injured. Another methon frequently pratised is liy the aid of tume elephants. Hale elephants eliefly are captured in this way, the decoy elephants emphyed being females, traind for the purnuse. With these the hunters very cantionsly approach the animal they mean to capture, and be enerally pernits them to come 10 to him, and is su pleaser to make the ater uaintance of the females, that he takes mone of their riders and other luman attemiants. Two of the females take their plates, whe orith site of him, and whist the is wewnal with them, mem, the promsinn of whese lives it is, and who display a womderful ryorthess in the work, contrive to ret leneath their halies, and to pass ropes rombl the lers of the intomed mptive. Hos two himders are fastened turether hy in or meht ropes in the form of the
 juturae than, and a strunt eahbe with a ruming nomen is attachen to wheh himbleg. Ahont twenty mimiter are namally speat in fixing the necessary ropas. fromand sif+nce heing mantamed if the phatess wnse on munsersent. ar sume of the other hanatera hatractine the attention withe $E$. from thene whe arre encaped in this work ; and when at lowt, lacmons stmahn of his dager, he tries
 lam, by hasan of the linge cables whiels tran behind him. th some tree strong emough for the purpose. Dis miy thon hoomes unovernable, and he makes nold ut and prollgions eflonts to set free, throwing limelt on the ermal, and twistang himself into the mont atrmmanary pmitions. It is mot until he has plumondy ixhansted himself. amb begins to suffer sevelely irnm fathoue, thirst, and
hunger. that the next steps are taken towards taming bim and making him of willing servant of Sinall mere womberful is the capture of a wild F . sometimes be mot more than two lunters, who for this purpose will sul into the wools, without aid or attenelants, their unly weapm a flexible rope of hide. With this they seeure one of the E.'s hindleven, folluwing his fortsteps when in motion, or stealimy close ${ }^{1}$, to him when at rest, or sometimes speating the buse ow the ermum, partially concealed ly remts and leaves, lwenth a tree on which on. of the party is statimut, whome business it is to lift it sumbenly by mans of a cord. When arrested les the rope leing condel arombl a tree, the F . naturally thrns unn the man who is engaged in making it fast, lut his emmpnion interferes on his behali, ly provine the amimal: anel thus not only is the first rope male fast, lut noose after nowse is passed over the legs, until all are at last ticd to trees, and the eapture is complete: upon which the hunters buill a luoth for themselves in front of their misoner, kimulle their fires for cooking, and remain day and night till the E. is sutficiently tamed to be led away.
but these huge animals are not always eapturel singly; whole heris are often taken at once. This is aceomphished by means of an enclosure, towards which the elephants are driven by great mumbers of men encireling a considerable space, and contracting the circle ly slow elegrees. Weeks, or even months, are spent in this operation, and at last the elephants, hemmed in on every side except the month of the enclosure, enter it, and the gate is immediately closed. The moles of constructing the enclosure are lifferent in different parts of the East. Tame dephants are sometimes sent into it, and the captives are in suceession made fast to trees there, in a way sonewhat similar to that practised in capturing single chephants.

The E. first became known in Enrope from its employment in the wars of the East: "in Jndia, from the remotest antiquity, it formed one of the most picturesque, if not of the most effective, features in the armies of the native princes.' Elephants have heen taught to cut and thrust with a kind of scimitar carricel in the trunk, and it was formerly usual for them to be sent into linttle, covered with armour, and learing towers on their lacks. wheh containel warriors. But the principal use of the E . on war is for earrying batgage and for dragging Luns. An E. will aply hes forehen to a camon, and urge it through a luge, thrugh which it wond be almost impossible for men and cattle to clrag it ; "IC Le will wind his trunk round it, and lift it up, whilst horses or cattle drag it forwarls. Elephants are used in the East fur earrying persons on their backs, it number being seated together in a howdeh, whilst the driver (mathout) sits on the l.'s neck, Elephants have alwas a eonspichous phace in the Leat pronessimens and state displays of eastern prinees, and whiteclephants - albinns-are peculiarly valued. Dhephants are also emploget in many kinds uf hathor, ath display great saguity in conurehending the mature of their task and alaping themselves to it. In piling timiner, the lí 'manfests an intelligene and rexterty which is surprising to a stamger, becanse the sameness of the operation cualles the amimal to wn un for hours disposing of leg aiter log, almost withont a hint or dircetion from his attemeant.'
(1) the maracity of the J., many interesting anmedetes are on record, as crery reader of hooks of travels and of natural history knows. Sut Cuvier , refuses, and arparently with justice, to ascribe

## ELECHANT

to it a degree of saracity limher than that of the log. In a state of dumestication, the E. is a delieate animal, reguiring much watchfulness and eare, althungh maturally it has a very long life. and instances are on record of extreme longustity in domestication, extending not ouly to more than une humdren, but almost to two humitrel years.
The numbers of wild elephants in some parts hoth of the East Indies ann of Africa, are leing gradually reduced as cultivation extends, and many are shint for no other reason than a desire to reduce their numbers, aul put an sud to their ravages on cultivatud grounls. A rewarel if a few shillings per heal was clamed for 3500 destroyen in part of the nurthern province alome of Ceylon, in less than three years prior to 1848. It is for the sake of ivery that the greatest slaughter of elephants takes phace. A ball of harel netal. skilfully ${ }^{\text {d }}$ duted in the eye, lase of the trunk, or behind the ear, generally pals an E.'s life in an instant; and expert sportsumen have been known to kill right and left one with each barrel.
Fossil Eleqhonts.-The E. makes its alprearance in the Plestincene strata. Its near ally, the mastolion, whose remains are found assuciatell with it, began life earlicr ; it has left its traces in Miocene deposits. 'Fen specie's of fossil elfyhants have been described, the remains of three of which are fomm in Europe. The best known of these is the Elophess primigraius, or Mammoth, the tusks of which are sol little altered as to supply an irory which, thengh inferion th that of the living slecies, is still usel in the arts, especially in Rassia. Its tusks are, on this acconnt, regularly searchell for loy 'ivory lhunters' in Sitheria, where, in the suleerficial deposits of saml, gravel, and lonm, the remains vecur in chomons almudance. They are also fowd in similar strata all over Europe. Tn Eritain, the localities that have supphied these remains are very numerous. They are esprecially abundant in the P'lcistocene deposits of the east and south-east of Enaland. Woulward, in his Gcology of Xorfolk, ealenlates that upwards of 2000 grinders of this animal have been drellyed up by the fishermen off Happishargh in thirtcen years. The bone-eaves also yield remains of this gigantic animat.
The mammoth truly belongs to the geolurical history of the world ; it clied fint at the cluse of the peried represented lyy the lleistocene bels. It is the only fossid animal that has leen preserved in a perfeet conclition for the examination of man, In all other remains we have to deal with the hard portions
 conly with fragmentary protions, reqniring the skill of a Covier or an Oworn to make from them an ayproximation to the perfect animal. But the mammoth has been preserved so that its flesh has been eaten by thos, lears, and wolves. la 1799, a Tunge sian, namell Schumathofl, while searehing atong the shores of Lake Oncoul for mamu,th tusks, olscervech auony the blocks of ice a shapeless mass, hut did nut at the time discorer what it was. The heat of succeeding summers gradnally melten the ice around it, and, in is03. the mammath fell ma a bank of same. In March of the following year, the humater visitud it, ent ofl, and earried away the tusks, which he suht for tiity rubles. In 1S06, Mr Adams visited the loeality, and examinct the animal, whieh still remaned on the sams-hank where it had fallen, but in a greatly mutilatel condition. The Jakutski of the neixhlh, murhool had eut off the Hesh to feed their douss, and the wid beasts han almost contirely cleared the boncs. The skelcton was, howeyer, entire, excepting one of the fore-legs, and some of the lones of the tail. Nany of the loones were still held together by the ligaments and liy parts of the
skin. The head was cuvcred with dry skin; one of the ears was well preserved; it was furnished with a tuit of hairs. Three-fourths of the whole skin were procurel, which was so heary that ten persons foum great dificulty in trawsporting it to the

Skeleton of Mammoth.
shore, a distance of 1.0 feet; it was of a darkegray colour, and was converel with a reddish wool, anil long black hairs ir lristles. The wool was short, and curted in locks: the bristles were of different lengthes, varying from 1 to 18 inches. Some of this coverias still remainel attachel to the skin, but the treat mass was entirely separated from it. Ir tdams collectod 35 phinds, althongh mueh of it hal been ilestroyed from the dampmess of the place where it hat laiu so long. The aminal was a male, and had a long mane on the neck. The entire carcass was remored to st Petershnurg, where it js now preservel. The tusts were repurchasen, and alded to the animal. It measures from the forepart of the skull to the end of the mutilated tail 16 fect 4 inches; the height to the top of the dorsal spines is 9 feect 4 inelues: the length of the tusks along the eurve is? fect 6 inches. Portions of tho lairy covering have been bronght to this country, and may lu seen in the Eritish Nusemm.
Taking the teeth as exhibliting clearly a marked lifference in the recent slecies, the mammoth is casily separated from both by its lroader grinders, which have marrower, and mure numerous. and cluse-set plates and rillues. The existenee of the E. and uther genera, whase representatives are now fonud only in the warmer regions of the earth, in the north of Europe aul Asia, leld to the lalief, that at the recent perion in the world's history when they were its living iulalitants. a tropical temperature existed in the temperate zume, and stretehed further north tuwarls the julc: l lat the discovery of this perfect animal shewed that these huge elephants were adapted ly their clothing to eulure a cold climate, and loy the structure of their teeth were able to cmploy as froll the branehes anl fuliago of the northern pines, lifrhes, willows, ice. There are few generalisations more jhursible at first sight than to preclicate of an unknown species of a geins what is ascertainel regarding the known members of the same gemus. It required a striking case, steh as that supplicel hy the discorery of the mammoth, to shew clearly the fallacy of deduetions which were alunst universally received ly scientific mea not many years nyo, which still iccasionally misleal, and which may even now be met with in somo pepular hand-bouks of science.
Elephant. An order of the elephant was instituted in Denmark, ly King Frederick 1I. The balce was a collar of elephants towered, sulpportiag the king's arms, and hawing at the end the fincture of the Virgin Mary.

## ELEPHANTA-ELEUSLNIAN MYSTERIES,

ELEPHANTA an island of six mile in circuit, stanks in the harhme of lambay (is. r.), alume eccm miles to the east of that entro and alonent tive manes to the west of the mainlamb. It takes this its
 near its primatal hatine ham, which, howerer. alymes to habe srablually imablal away This colneash ammal hain heen out ont of a detathenl rewe, which is apparatly of hasaltin orimin. Further towards the interior, threve temples, dug ont of the lume s:mentain, present themselve-the roufs
 varums fams and incatmes, and the walls homs thickly sculgoture liat. all the waricties of Ilinda mythuthes. The luse of of the the wexarations
 and immeliately fontine its man entime stamls
 a luight of is toct, and in brealth of as. These anomuments of supertition, like the quatrupen which quards as it wow the apprames to them,
 which, lowhes in sume matm accometing for the -xantion of sheh works, sems to be inomsistent with any very high antipuity. The ishme is in lat.

ELEPIANTINE, a small islam of the Nile, lyind "Inmite to Arsoman (f. w.) the aucient syene, on the contines of Feypt and Nulba, in $24^{5} \mathrm{~F}$. lat., and $: 32^{3}$ ir E. loug. From this island, the Greek meronaries were sent by Psammitichns 1. to reall the beyptan deserters, am it was arrismed in the time of the lhamons, l'ersians, aut homans. The islam was ancinatly called flom, or the "ivory islam,' from its having lecen the entrepot of the trade in that precioms material. The most important ruins are a goteway of the time of Alexamler. ani it amall womple dedicated to Khuma, the gul of the waters, and his contemplar deities, Anncis ami sate. This temple was funded hy Ampornis Ill., and (mothished by hameses 11 i Another remarkahe white is the ancient Niboneter, formerly mentioned hy strabu, and which appears to have been buite in the time of the ('icsatrs ; num several remaining inseriptams recond the heights of imundation from the time of Angustus to Severns. This islath hat the homer of giving a dynasty (the Sth) in Esypt, ans was evintently an ingortant flace, the inserigtions on the rocks attesting the whation paid ly Sethis I., l'samnitichus II., and other muarehe, to the local deities. Other interesting manments have heen frum on this ishand: amonent which may loe cited part of a calondar reomding the rise of the Dor-star in the reign of Thnthmes 111 . (14tis b.e.), and numernes framents of pothery-pincipally remelpts in the lircel lan-Enare-given loy the farmers of the taxes in the reign of the Antmines. Tha islame is at present inkabited by Nuhans.- Wilkinsm, Toperforthy of Thetore, 1. fito; Champellion, Sotice Descripitio, 1. :15: Champollion, Lottres Ecrites, IM. 111, 157, 171,:

ELEUSINE, a gemus of (irasses, chictly natives of India and uther wam climates, several of which are cultivated as grains. This is especially the case with E. corverna. in Indian apecies, ealled Natelneo and Nagla Ragee, also Mand and Murwa, which has aggregated digitate spows timally incurved. The Tibetins make a weak nort of beer, much in use amongst them. from this rran. E. stricta is cultivated as a gram-crup in the same parts of the world, and is, like the fomer, extrendy prolnctive. The grain called Tesensso in Abyssinia is also a species of this minm. $E$. Towaso.-A decoction of E. Etgptiara is used in Egypt for cleausing uleers; and a trink mande from the sueds is regarded as usefnl in diseases of the kidners and blader. A decoction of $E:$. Indice is also alministered to infants in Demerara, to prevent or cure convulsions.
ELEUSI'NIAN MY'STERIES, the sacred rites with which the amual festival of Ceres was celebraterl at Elensis. Many tralitions were atfoat in ancient times as to the origin of this festival. Of these the most generally ace ped was to the effect that c'eres, wamicring over the earth in quest of her danghter Proserpine, arrivel at Elensis. where she tonk rest on the sorrmful stome beside the well Callichorns. In return for some small acts of kiulness, and to commemorate her visit, she tanght Triptomemus the use mi coms on the Tharian plain near the city, and instituted the mystic rites peens. liarly known as hers. The mitward methal of the celebnation of these mustorics is known with consilerathle accmacy of detail. Their esoteric signiticance is very varionsly interpetel. The ancients themselves generally haliewal that the doctrines reveaded to the initiated mave them better bopes than other mone enjured, luth as to the present life am as to a future state of existomed. Modern speculation has run wihl in the attemut satisfactorily to exphan these mysterics. As reasmable a sthution as any uther secms to he that of lishop Jhirlwall. who times in then 'the remains of a worship which preceded the rise of the Ihedraie mytholoy ane its attendant rites gromuded on a view of nature, less fameinh, more earnest, and better fitted to awaken h,th philosophical thonght and religions feeling.' The festival itself comsisted of two jurts, the greater and the lesser mynteries. The less mportant feast, Serving as a surt of preparation for the greater. was hell at Agrae, on the llisans. The celuration of the great mysterins heran at Elensis on the both day of Bodiromion, the thind month of the Attic yar. and lasted wer nime days. On the first day (eallen ugmoms, the assmblime), the neophytes, alrealy initiated at the preparatory festaral, met, and were instracted in their saned duties. On the speoml day (callon Ilalade. myste, To the sem, ye initated!), they puriliod themsilves ly washing in the sea. in the third das, suritives, eomprising, ammer other thines, the mullet-fish, ank eakes made of harley from the liharian plain, wore othered with sucial rites. The furtl? diay was keoted to the proension of the sament hasket of Cores (the Kalathion). This basket, comstmang pomeramates, salt, poppy-seds, \&e., and followid loy bauts of women corrying smader baskets smilarly tilled. was drawn in a conserated cart thomsthe strecte, amid
 difth day was known as the 'day of the torchers' and

## ELEUSIS-ELF-ARROW•HEADS.

was thought to symbolise the wanderings of Ceres $i_{n}$ quest of her daurliter. On it the mystre, led by the 'daduchus,' the torch-bearer, walked two by two to the temple of the goddess, and seem to have spent the night there. The sixth day, called lacchus, in honour of the son of Ceres, was the great day of the feast. On that day the statue of lucthus was lonme in pomp along the sacreal way from the ('eramicus at Athens to Eleusis, where the votaries spunt the night, and were initiated in the last mosturies. Till this stage of the proceedings, they liad lexen only mysta: lut on the night of the sixth alay they were admitted into the innermost sanctuary of the temple, and, from being allowed to behold the sacred thines, lecame entitled to lec called "epoptre, or 'ephori ;'i.e., spectators, or contemplators. They were once more priritied, and repeated their original noth of seerecy with an imposing and awful ceremonial, somewhat resumbling, it is believel, the forms of modern free-masonry. On the seventh day, the votaries returned to Athens with mirth and nusie, halting for a while on the bridge urer the Cephisns, and exereising their wit and satire against the spectators. The eighth day was called Diplauria and wos lwhered to haw been added to the nrimal number of the days for the convemence of those who had been umable to attend the gramd edemonial of the sixth day. It was named in Jnnour of Fsculapius, who arrivel on one occasion from his native city of Enidamms tom late for the solemor rites, and the Athenians, unwilling to disappoint so distinguished a bevetactor of mankinot, added a supplementary day. On the ninth day took place the ceremony of the 'Plemochose,' in which two earthen vessels filled with wine were turned one towards the east, and the other towards the west. The attendint priests, uttering somo mystic words, then upset looth vessels, and the wine Suispilt was offered as a libation.

Initiation intu the Eleusinian mysteries was compulsory on every freeborn Athemian; lat slaves, prostitutes, and persons who had forfeited their citizonship were excluded from the rites. During the period of the festival, none of those taking part in it could be seized or arrested for any ottence. L.veurgus, with a view to destroying listinctions of class. forbarle any woman to rible to the Eleusinia in a chariot, under a penalty of 6000 drachmae. The mysteries were celebrated with the most scrmpnlins seerecy. No initiated person might reveal what be bad seen under pain of death, and no minitiated person conld take part in the ceremonies umler the same lenalty. The priests were chosen from the sacreal fimily of the Eumolpidax, whose ancestor, Eumolpus, hail been the special farourite of Ceres. The chief priest was called the "Hielvlhant, or 'Mystagonue ;' next m rank to him was the Diuluchus. or 'Gorch-bearer ; after whom came the "Hiero-Cerwx," or Sacred Herall, and the rriest at the altar. jeesides these loalug ministers. there was a multitude of inforior priests and servauts.

ELEU'SIS, a celebrated town in ancient Attica, stood near the northern share of the Gulf of Salamis, and not far from the contines of $\lambda$ esaris. It was famous as the chiof seat of the worship of Ceres, whose mystic rites were here performed with great pomp and solemnity from the ewliest authentic times till the era of Alaric. See Eletsintan llysTFRIEs The temple of the gobldess. lesigned ly Ictimus, the architect of the Parthenon, was the hirisest sacred edilice in Greece. The site of the wh Elensis is now oceupied lyy the Little village of Lefisma or Lepsina.

ELEU'THERA, one of the Baliamas ( $\mathrm{q} . \mathrm{v}$ ), is, noxt to New Providence, the most populous islaud
in the whole chain. Ineluding its dependent cayas or keys, E., in 1551, contained 4610 inhahitants. It is more fertile than most of its neighbours, more especially surpassing all of them in the growth of fruit, such as the pine-apple, the orange, and the lemun.

LLEUTHE'RIA BARF, a name not unfrequently given to the bark of the C'soton Eleuthoria, also known as Cascarilla Bark. Sce Cascafilla. It is called Eleatheria (or Elenthera) Bark, becanse it is chietly gathered on the island of Elenthera.

E'LEVATED. Wings turneal upwards are described in herahlry as elevated.

ELEVA'TION, in Architectural Drawing, is a representation of the flat side of a building, drawn with mathematical awonacy, lut without the slightest attention to effect. In Art, again, eleva. tion is ra raising of the subject beyond its ordinary character in real life. A rery good instance of eleration in this sense is given ly Fairholt in his Dictionary of Terms in Art, in Rembrandt's "Adration of the shepherds.' The whole of the objects and surroundings of the infant Sariour are of the most homely description; and still the light which is representerl as issuino from his person rives an elevation to the scene which takes off from it entirely the charaetar of being commonplace or rulgar.

ILLEVATION, in Astronomy and Geography, means generally the height above the horizon of an object on the sphore, measured by the arc of a vertical eircle thon it and the zenith. Thus, the dovation of the equator is the are of a meridian intercepted between the equator and the horizon of the place. The elevation of the pole is the complement of that of the tquator, and is always equal to the latitude of the place. The elevation of a star, or any other print, is similarly its beighte above the horizon, and is a maximum when the star is on the meridian.

ELE'VENTI, in Music, is the interval of the octare above the fonth.

## ELF, a fairy, pl HLVES. See FuriLz.

ELF-ARROW-MEADS. ELFIN-ARTOWS, ELF-BOLTs, ELF-DARTS, ELF-SHOT, and HLF-STONEs, mames populaty given in the licitish Islands to the arrow-hents of thint which were in use at an early period among the barbarons tribes of this comntry and of Europe generally, as they are still in use among the Ancrican Indians, the Esquimanx of the Arctic regions, and the inha. litants of some of the islands in the Pacific Ocean. It was believed that elves or faries, hovering in the air, shot these barlos of Hint at eattle, and occasionally even at men. Thus. Robert Gordon of stralseli. an accomplished country gentleman of the north of scothand, writing in
16.)4, tells how one of his friends, travelling on horseback. found an elf-arrow-head in the top of bis lout, and how a pentlewoman of his acquaintance, when out riding, disenvered one in the breast of her habit. He remarks that, althourh they are got by chance in the tichls and on the highwars. one who goes to lowk for them on jurpose will seareh in vain. He adds that they are most com-

E'L(IINSHILR, MO'RAYSHIRE, or WURRAYSHlliE, a maritime comenty in the northcast of secitland, on the Dheray Firth. It contains 531 square miles, ank is 30 mites lomor and 20 miles brow, while atwe a third part is cut off on the south by a detarhed part of laverness-shire. In the south are the high and ruged Momalhliadh Mountains of Invernos-shure, dividing the hasius of the Spey and Findhm, and forking in the north to inclinde the basin of the Lissic. The Lassie, $\Omega_{5}$ miles lons, is the only strian entirely included in the county, but the rapid spy amI Findhom, the latter moted for its time sernery, skirt its cast and west sides respectively: In the sonth, gneiss predominates with a little granite; and in the north, sandstoue with fish and reptilian remaius, and small patches of oolitic aml wealden strata. West of the Finithorn mouth are the samd-dunes of Culbin, three spuare miles in extent, some of them rising $11 s$ feet. Great massis of $p^{\text {reat }}$ and trunks of trees are often cast ashore mar the month of the Findhom. The climate is mild and dry, and the county has been called the Deronshire of Scotland, the mountains of therelenshive and Banffslire protecting it from the cold moist winds of the German U'ean. The soil is open, sandy, and gravelly, and very fertile in the north, with some deep loans and clays. In 1s57, a fourth of tho county was in crop, the chief crops being oats, wheat, and twrmps. E. was anciently reckoned the granary of sootiani. Pup. (1:81) 42,692, (IS51) B5.950, chictly agriculturists. The chief exports are grain, cattle, salmon, and timber. There are some manufactures of wombens and malt liquors. E. unites with Naimshire in sending one member to parliament. It contains 20 parishes, and portions of others. In 1851 , there were fil places of worship (2.) of Estabished, and 90 of Free Chureh) ; 96 doy-schools, with to echelars. The parish schools enjoy the I hick Berquest. The chief towns are Elgin ant Forres. The ancisent province of Moray included the connties of Elqin and Kam, and parts of those of Inverness and lianf. Scambinaiaus early settled im it. About 1160, Malcoln 15 . sutmed it. The chief antiquities are ELcin Cathemal. Spmie Castle, Duflus Castle, Plusearletr Abhery, Kinhuss Abhey, and the Norman parish church of Simie. Burg. hem, on the const, is supposed by many to have been a lioman station, hut ste ramparts and diteles, now almost instroyed, were ponalily of more recent origin. It was the last stronghohl if the Norsemen in this part of seotland. E. was wrom in the civil wass of Montrose, 164.5, \&c. (1571-1mp, 43,598.)

Elif'AS, St, a lofty mountain which necupies a conspenons , osition on the north west coast of Amoricat, in lat. $60^{\circ} 1 \mathrm{~s}^{\prime} \mathrm{N}$., and in long. $140^{\circ} 30^{\prime} \mathrm{W}$. It rises abint 17,560 feet, or almost $3 \frac{1}{2}$ miles alove the se:i, leing visible to mariners at a distance of 50 leagues. Thysically, it marks pretty nearly the laint where the shore, after troming in a northwest direction, tums due west, and jwilitically it liviles itself letween the torritories of Fussia and freat Iritain.

ELI'JAH (in the Greck form, nceurring in the Now Testament. Elias), the greatest of the prophets of Isracl, was bron at 'Tishbe, in Gileal, on the borders of the desert. He comes upon the scene in the time of Ahals, almout 930 B . C. When that monarelh, to dease his l'hemician wife Jezebel, had
introunced, on an extensive seale, the worship of Baal, E. pronounced a curse on the land. The prophet had to fice. He took refuge by the brook Cherith, probally one of the torrents that cleave the ligh table-land of his mative region. Here he was miracidonsly fed by ravens. He then went to Zarephath, a town lying between Tyre and Sidm. Here he lodged with a wilow woman, prolonged her wil and meal, and hronght back her son to health from the lrink of the grave. Subsequently, the maile a tenderary reconciliation with Ahals, and on Nount Carmel exechted dreadful vengeance on the prophets of Daal, slaying 400 with his own hand. Such a deed enraged Jezebel to the utmost. She swore to destroy the promet. who once more took refuge in tlight. He rested not till he reacheal Beersheba in the far south, on the elge of the desert that leals down to Sinal. The brief allusion in Seripture to his weary wanderings is very touching. At last he comes to Horel, where he has an intertiew with Jehovah. The passage in which this is retorled is one of the grimdest and most significant in the whole of the Ohl Testanent. He then receives certain instructions from Jehovah, among others that he should select Elisha to be prophet in his room. E.'s next appearance is when Ahal, rides forth to take possessiou of Naboth's vincyarel: he denomes the murlecons monarch, and utters an awful prophetic curse on him and his wife. After the death of Abals, he relukes the idolatries of his son Alaziah in a solemn and blondy fashion; and after the death of Ahazial, we find him interfering in the affairs of the king of Julah, who had married a danghter of Ahab, and hat hegun $t$ 's 'walk in the ways of the kings of Israel.' He denouncal his evil doings, and predicted his death. The clusing scenc of his life on earth is exquisitely narratel. A chariot of fire and horses of fire appeared after Elislia and he had crossed the Jortan, and -Elijah weat up by a whirlwind into hearen.' His political and religious aims were carried out by his disciple and successor, Elisha.

TELIMINNA'TION is a process by which, where we have a number of statements concerning several quantities, we can oldain a seprate statement concerning eacl. Thus, in Algebra, elimination is the operation which cousists in getting rid of a quantity or letter which is commion, say, to two equations, ly forming out of the two a new equation, in such a way as to make the quantity in question dis. Mrpar. if three unknown quantities, for instance, are to be fouml from three inderendent equations, the lirst step is to form out of the three given equa. tims two new erpuations, so as to eliminate one of the unknown quantities; from these two equations auother of the cquantities is eliminated in the same way, giving nne equation with one unknown quantity, the value of which is then foumd. In complicated equations, elimination becomes difficult, asd often imprssible. Elimination is an important process in other sorts of reasoning besides the mathematical; in this larger acceptation, it means the setting aside of all extranusus considerations-of everything not essential to the result. In astronomical observations, the elimination of errors of observation is often effected by rejeating the olservations several times in such a way as to cause the errors to be of opposite linds, then adding the observel valnes, and taking their average.-The word to 'eliminate,' is often erronemusly used in the scnse of to 'elicit,' or bring to light.
ELJS, one of the ancient divisions of the Peloponnesus, hounded N. and N.-E. by" Achaia, E. and S. ly Areadia, and W. by the Fonian Sea. It was
originally divided into three districts-Cole or Hollow Elis, Pisatis, aml Triphylia. Of these, the first-mamed was by far the largest and most valuable, comprising as it did the broad and fertile phains watered ly the Peneus and the Ladon, and problucing excellent crops of corn, cotton, and Hax; while the pastures by the river-lanks reared eattle and horses of proverbial excellence. This district, from its fertility, was called 'the nuilk-cow of the Moren.' Pisatis is drained ly the Alpheus, and is separated from Cole Elis ly Dhont l'holoe, a spur of Erymanthus. The low groumds of this division jossess grat natural fertility. Must of the surface of Triphylia is hilly, being occupied with offshoots from the great Arcadian ranges. It is separated from Pisatis ly the Alphens, un whase lanks were the grove and temple of Olympic Jove, and the plain in which the great Olympic games were celemated. Though FA had few facilities for preventing invasion, it yet suffered less from war than any other of the Greck states-an adrantare chiefly due to the sacerel character of the country, as the seat uf the greatest of the national festivals. Their premerative of homling the Olympic games gave the Elcans a prestige wifich they continued to enjoy in greater or less degree till the games themselves were sulpressed by the Emperor Thembosins in 394 A. D.--Eles, now Lelosconn, the capital of the foregning cumtry, strond on the Peneus, and was ling fammen as one of the most splemition anopulnus cities of Creece. It was at one time strongly fortified, and contained many magnificent luilitirss, comspichous among which was the Gymmasimm, in which it was necessary that all athletes intending to take part in the 11 ym pic games should go throneg a month's training before they were allowel to compete. See Leake's Morea, ani Curtius's Pelmponnesus.

ELI'SHA, a prophet of Israel, the successor of Elijah, who fonmilhim at the plouh hand consecrated lim to the sacred oflice by throwing his mantle over lis shonlders. He excrised his functions for a period of 53 years. When Elijah was carried up into heaven, E. retumel to Jericho, where he dwelt for some time. He then proceetled to Bethel, where the pernlexing miracle occurred of the destruction of the fo- children hy the two shebears. After this period, he seems, besides performing an extraordinary number of miracles, to have taken an active part in the relious politics of his country, but he exhibited nothing of the fiery and sanguinary zeal of his master. Mihl, tolerant, conciliatory, we hardly ever, if at all, finl him relmaing the lwal-worshiy, that was still Irevalent in lsazel. Nany of the incilents in his history recall the creations of castern fancy, such, for example, as those of the horses and chariots of fire round about E . on the hillside, of the smiting of the Syrian host with blindness, so that the prophet led them all uneonsciously into Samaria, captive, \&e. With Elijah, it has been sainl (see Smith's Dictionary of the Bible: Art. • Elisha", the miracles are "introduced as means towarls great ends, and are kept in the most complete suhordination thereto. But with E., as he is pictured in the Helrew narrative, the case is completely reversed; with him, the miracles are everything, the prophet's work nothing. The man who was for years the intimate companion of Elijah, on whon Elijah's mantle descended, and who was gifterl with a double portion of his spirit, appears in the Old Testament chiefly as a worker of prodigies, a predicter of future events, a revealer of secrets, and things happening ont of sight or at a distance.' The difficulties that thus beset the literal accoptance of the narrative of E.'s miracles have been felt hy most modern commentators, and to evade these

When Mary dice (ITh Suymber 155S), E. whe twenty-five yeas of aut. Hur accession was welempal alike lyy ('atholie and I'rotestant. Tho former were, ontwardy at last, the majority in llary's riyn ; hat amons then there were fow whe reatly cared for the jecoliar dactrines of the liman "hurch, and there were many who were weary of priestly interference foreig dictation, and ernel persccution. Like E. herself, there were many who had comfomed merely to save thenselves from tromble. They hall whed the Six Articles in llenry's time: had agratt to the Protestant suttlement of Edward: Mal tomen with Goeen Mars, and were bum realy to turn again with Qucen Elizalneth. The J'motestants. uf enurse, who had never believed the sincerty of liss conformity, wedeoned her to the throne. E. then legan, amidst dangers and deffeulties, a reign which, contrary to the expectation of all. was of unexampled length and prosprity. It wombl be womg nut to attribute to her inthetnee sume dfoed in promeling the great chanacs which, during the nest forty-four years, twok pare in Enghand; butsufar as these changes were not promine al in the natural course of the develonment of the nation's Inwers, and so far as they bar the mark of an individual mind, they hein moth morn the imperse of the bale yet catutions jombunt and dear intelloct of the freat minister, Cewh, than of the sowerien's will. It is to the highest praise of L. that har tirst at an suceceding was to consult witl such ar man, ami that to the very last she cond land her capmicions tomper to his control.

How the serernment influener was to he directed, was not lone in be ines shewn. Till prorlianent shonh moct, E. issual a promamation that the English lannaite shomld be nasid in the wratey part of the churd somber, and that the Itast slonid not be clevated by the priest durime mass. This sufficiently indicated into. what hames power hal passed, and was mough th then the mass of the indillerent

## ELIZABETII.

to the side of the Protestants, and to cause a l'rotestant majority to be returned to E.'s first parliament. The acts of this farliament must be ever memorable in our history. It was then that Enyland took its position as a l'rotestant power. Tlue Book of Common l'rayer, retaining, doubtless, some mixture of medieval thought, lhat still vivil with new energy, was appointed to he used in all churches; the Thirty-nine Articles were settled as the national faitly; the quech was leclared to lee head of the ehureh. Thus all allegiance to liome was thrown off. This revolntion was son accomplished, and with little turmoil. The bishops, with one exeeption, refused to conform ; hut as a sign of the times, marking how thumurdy the priesthond must have become demoralisel before their pawer was lost, it is noteworthy that of the 9000 clergymen who hedl livings in England, there were fower than 060 who resigned, rather than bley the bew order of things.

The policy of E .'s ministers was onc of peace and economy. They found the mation at war with France and scotland, and one of their first acts was to secure peace apon faromable terms. Exer
afterwarls, they followed the same path. No war was undertaken in bur reign for the sake of territorial conquest. Tustrenithen ber own throne, $\mathbf{E}$. secretly succoured the I'rotentants in scotland, in France, and in the Low C'ountries; but she had few open wars. To be at frace with a govermment, nay, apparently to he upon the most amicalle of terns with it (as E. was with the French court, while she sent assistance to the ltuquents at lachelle), and at the same time to aid its rebellious sulijects, was in those days thousht only part of the pulitic dissimulation without which. it was believed, no nation could be safely rulecl. To maintain the security of her own throne. and to prevent foreign interference in linglish matters, was the mainspring of E.'s foreign pulicy ; and she last no olnmptunity of wakening aud finding occupation ahroad fur any foreign power that unduly theatencd her authority.

The one grat blunder of Encland's policy was the treatment of Mary gueen of scots. Hal E. pursued a straightiorwaril course, when her rival was thrown into her hands, much evil might have been spared. Some of the English ministers were

Fac-sinile of Queen Elizabeth's Signature.
prepared to take effectual measures to remove a life which might be turned into so dangerous a tool in the hands of Catholics. E. shrank from that course, but had not the courage and generosity to set Queen Mary at liberty: Hat this eourse been taken, Mary would have gone to France or spain, wonld have made a foreign marriage, and as a foreigner would have lost the only sourees of her real power-the sympathies of the Scotch and English C'atholies. As it was, E. retained her a prisoner, and thus for years gave cause to conspiracy after conspiracy anong the English Cathoties. For a rebellion incited to set Mary free, the richest and most popular of the English nobility, Norfoll, was executed. The discovery of every now plot led to demands, on the part of parliament, for the exention of Mary. The plots then took a graver aspect. The assassination of E., an! the flacing of Mary on her throne, became the object. On the discovery of Babington's conspiracy for this purpose, the popular cry was irresistible, and was joined in by C'ecil and Walsingham, and others of E's ministers, who hat simned tuo deeply arainst Mary to run the risk of her succession to the throne. With reluctance and hesitation, the sincerity of which necl not be questioned, E. consented; and Mary, after long years of contimement, was condemned and executed.

This led to new evils. The participation of the Catholic party in the rlots was retaliated hy persecution. Many suffered under an act prassed in 155.5, making it treason for a Catholic 1 riest to be in Eugland, and felony to harbour one. These cruel muasures were the ultimate means of bringing upon England the most monacing foreign attack which she hat suffered. Philip of Sman harl long meditated rengeance against Englad. The greatest state in Eurne, enriched ly splendid acquisitions in the New Wurh, coubl ill brook that a power of the secmad rank should incite rebellion anong her subjects in the Netherlanls, should airl the l'rotestants in their desperate struggle against. Al a , and allow its ships (little better than pirates, it must be confessed) to enter the Sjansh harbouss, and cut ont the rieh laden gallowns. These were the real reasons: to restore the Catholic faith, and to revenge the death of a Cathulic queen, furnisheal ostensible reasons. Years hal heen spent in prepration. In 155s, the 'Invincible Armadil' sailed from the Tagus, manned by 8000 sailors, and carrying 20,000 soldiers. To aid these, a land-army of 100,000 men was to be transported from the Netherlands under the Duke of Parma. The news roused all England, and every man who could carry arms-Protestant and Catholic from is yars of are to 60 -was enrolled in the forces. The old gueen herself rode at Tilbury;

Fummary 17, 162? when his right to the lalatimate dewolvel on Charles-Louis, who, hy the treaty of Westphalia, was restorel to the family inheritance, October $\because 4$, lows. This faromahle turn of allairs did not memi the fortunes of E.. who was scandalously neglected ly her son, the youmg Elector-falatine : and all ho woukd do for the fanfly was to give a shelter to his youngest sister suphia, until she was marrich to Ernest-Augustus, a scion of tho llonse of Brunswick. who ultinately succeeded to the electurate of IIanover.

Weprived, in one way or other, of alt her children, the Queen of Buhemia-lig which title she contimed to be known-resulvel tu quit tlolland. Redieved of her delets by the sale of jewols, and by ail of a pecuniary sulsidy from the Iritish parliament, she embraced an invitation from ler nephew, charles II.. to come to Lingland. She arriver May 17, $16 i 1$. From this time she was in a oreat measure indeloted to the haspitality of Lori ' 'raven, in a mansion which he had purchasid from Sir Robert Drury, in 1 Pury Lane, London. ('larles 11. paid her little attentim: but at her death, whieh ocenred Fobruary 13, 1662 , he ransed her remains to be interred in Westminster Abley. Charles-Lomis, her som, tied in 16So, leavine a son, who died without issne, and the falatinate then went to a distant branch of the family: he left also a daughter, charlote-blizalneth, who. in 16al, las married Philip, Duke of Orleans, only hrother of Lonis XIV. In 16a4, she gave lirth to a prince, who became the noted Regent of France dorines the minerity of houis XV. She died at st Clome in 1722. The late Enuis-Philippe, Jing of the French, was her lineal descendant. When, in 1705, the question of succession to the crown of (ireat Britain was dehateri, it was fomm that all the deseendants of dames 1. were cither deal or were Roman ("atholics, except compia, Electress of IIanover, and her family. by act of parlinuent, that year, the crown was acerolingly secured to her and hor descendants. "heing Protestants :' and in virtue of this act of settlement, on the death of Queen Anne, Sophia womll have ascended the throne, but she predeceasell the queen three months, and her son hecame sovereige of these realms as George I., August 12, 1714. In this extraordinary and unforeseen manner did] a gramison uf the mafortunate fueen of Bohemia become king of England, and originate the dynasty of the reigning monareh. The Memoirs of Stizatheth stuart, bletro of Bohemia, by Miss Benger, 2 vols., may be ferusel as an accurate and pleasing picee of bingraphy.

ELIZABE'THAN ARCHITECTURE, a term applich to the mixed style which sprang up on the decline of (rothic architecture. By sonc it is called the Tudor style, hat that name belongs more enrrectly to the p'erpenlienlar, or latest kind of Cothic. The Elizabethan is chictly exemplifien] ly mansions erected for the nolility in the reigns of Elizaboth and James I., and originater in the first attempt to revive classie architecture, influenced, no dumbt, by Mhblein, who was patronised hy Henry VIfI., and furnished several desigus in this mamer. John of l'adua succeeded him, and built in the
mixel style a palace for the Protector Somerset (for Which purmose the eloisters of St l'aul's were taken down), and the mansion of Longleat for his secretary, Sir John Thynne. The vast dimensions of the aproments, the extreme length of the galleries, and

Holland Mouse.
enormons square windows, are the leading characteristies of this manner of building. The orvaments lowth within and without were cumbrous; nothing eould execen the heariness of the cornices and ecilincs wrought into compartments; in short, the architecture was just in keeping with the dress of the period, rich and gorgeons, rather than elegant, graceful, and comfintalle. The following cxamples if mansions of the 17 th c . may he still scen near Lomlon: Wolland House, Cumplen House: and the following in kent: Sir T. Willow's at Charlon, the Marquis of Salisbury's at Hatfield, and knowle, the property of the Dike of Dorset. The most eminent architects of those times were John 'Thorpe, Gerand Christmas, Rodolfh Symonds, and Thomas Holt.

ELIZABETOTOL, a town of Passian Transcaucasia, is situated in lat. $410^{\circ} 42^{\prime} \mathrm{N} .$, longe $46^{\circ} 20^{\prime} \mathrm{E}$. The tuwn consists of three parts, one if which is fortified with a bastioned wall. Its prineipal buiks. ings are its churehes and mosques, of which there are many. A peculiarity of this town is its mmeruns fruit-gardens or vineyarils. Hortienlture, the rearing of silk-worms, bees, and eattle, with agrienlture and mining, are the chief oceupations of the inhabitants. Pop. (18.5.7) 12,966, prineipally Tartars and Armenians.

ELK, MOOSE, or MOOSE DEER (Alces Malchis, or ("rous ulons), the largest existing species of the Curvide, or deer family, is a mative of the northern parts of Ehroje, Asia, and America. When full grown, it is about six feet in height at the shoulilers, and sometimes weichs 1200 pounds. The body is roum, compact, and short ; the neek is shoit and thick, unlike that of decr in general, but thus arlapted for sustaining the great weight of the head and horns. The head is very larse, narrow, ahout two feet long. The horns in males of the second year are unbraneled, not flattened, and about a foot long; as the animal becomes oller, they hegin to display a blade, with more numerous snags, and in mature elks the hade becomes very broal, the snags sometimes fourteen on each horn; a single antler has been known to weigh alont sixty pounls. The horns have no basal sma; projecting forwards. The ears are long, and have been compared to those of the ass. The eyes are small. The limlis are lons. and very graceful. The tail is only about four inches

## LEKK- EITAENBOROTGII.

long. 'the Indy is ewored with conser angular hair, which hreaks when it is loent. (1) the ueck :and whthers there is a heavy mane, and the throat is eopered wath long hain. A large goitre-like swelling umder the throat of the younerer elks has a very curious appearance. footing ou soft marslay ground on on sum: they make a clattering when it runs. In moning, it earries its muzkle forward, with the homs thrown back upun the neels, so that they may mot be caught by hanches. Its shoulters leing higher than the croup, its rommen gait is a shambling trot; but it can alsogallop with grat rapidity. The eolour of the elk is Lrumish black. darker in winter than in summer: the limbs, the sides of the head, and the mane are of a lighter colnur than the body. Elks are sonctimes scen in small herds, but often singly; they are now very rare in Europe, and are no longer fomad in parts of North America in which they were nace common. They formerly cxtended as far south as the Ohin. Thry are smmetimes seen even on the shnees of the Aretic Ocean. 'l'hey delight in marshy districts and in forests. When empelled to eat grass, they must wet down mi their knees to reach it: their proper food consists of the branches and foliage of shrubs and trees. They an yery timid and inollensive, except domine the metting season. I single struke of an elk's fore-foot is sulacient to kill the strunerest hog. it is also an extremely wary amimal, and is with the greatest difficulty approched by the hunter. its sense of smell is very acute, and the slinhtest somml excites its alam. it is, however, muth sought after in North America. In Sweden, its destrution is prohibited: and in Norway is placel under lerat restrictions. The llesh of the elk is estecmed a good kind of venison; the fat is remalialily soft: the nose and the tongue are recknowh helicacios. Jhe skin is used for at vacty of purquast.
'The olle is casily fomesticated, and was at one
 heing capable of trawnlling more than $2(x)$ mites in a day when attichorl to a sledge.

The de of 'eplen is a dew of the eromp to which the name linse has luecn given.

DLAK, Imsn (Mogacons Mibrmicus), a large deer foume in the l'histinesu strata. There is a double eror in its popalar mame, for it is a tru" deer. hetween the fallow and rinin dow, and thonghalumed. ant in Irelanel, it is not pechliar to that eomery, bume fond also in Englamb, reotand, and on the contanent of Eurofe. In Irtaml, it oceurs in the
shell marl muterlying the extensive turbaries. In lingland, lacustrine a legnsits and lrick-clay contain its remains, and, associated with the mammoth and rhinoceros, they are found also in ossiferous caves.

Fossil Elk.
The most striking featme in this amimal was its enomons antlers. A straght line drawn hetween their extreme tips in one specimen masured ten feet ten inches. The form of the antler differs from that of any lising slecies of decr. The beam cnlarges and thattens into a paln : a brow suag exists as in the fallow-deer, hat in alult squecimens, this bifurcates and expands somewhat as in the reindeer -a pecnliarity never olserved in the fallow-deer groul. The antler is also furnished with a back snar. Some idea of the enormms size and weight of the antlers may be formed from the fact that, in a specimen where the head weighelt of poumls, their weight was 81 pomeds. To sustain this, the vertelree of the neck and the limis are very much larger ani stronger than in any other deer. A line and almost preffect slecimen of this amimal, from the lsle of Man, exists in the bliulmugh Masemm.
EL-KHARGBH, capital of the Great Oasis,
 40' E. In the viemity of the tuwn are numerous rans, among which are those of a temple; there is also ar remarkable necropolis. Pop, tieno.
ELL (alliod to flow, Ger, chlohogen, Lat. ulne the fore-arm on arm in general) is a measure of loneth now little used. it was oriminally taken in some vague way from the arm, and henee has been used to denote very different leugths. The Latin nina appears to lave denoted sometimes the measure from the elbow to the tips of the tingers, sometimes that between the outstretched hands. The Euglish ell, as a measure of eloth, is equal to five quarters of a Yavd (y. v.).

E'LLFNBOHOUGH, EARL of. Elwad Law, first Earl of $\mathcal{E}$. son of tho first baron (many year: (Chief-justice of the King's bench), was bern I790; colucated at Eton and at St John's College, C'ambridge, where he graduated M.A., 1809 ; succeded his father in the barony in 18IS; was lard l'riyy Seal in the Duke of Wellington's admimistration, isos18:9: 1'resident of the loward of Comtron daring the shurt-lived T'ee? administration of $18{ }^{3} \%$ - 183.5 ; and appoisted, on the return of Sir Robert Ped in Siopenter 1841, to the same office, which ho relinepuisheal a momth afterwards for the post of ( bucraor-general of India. He received the thanks of pardiament in 1848 for his 'alility and julgment' in supprting the military perations in Afghanistin. In many other respects, his Intian administration
was open to eensure. He was charged with reserving his favonr for the military, and inflicting undeserval slights upon the civil servants of the Cumpany. He made show y progresses; alliressed proelamations to the rulers and natives of India which apmeared to sanction idolatry; and, finally, in his proclamation concerning the sandal-wood gates of the temple of Jiggernant, when hrought back from Ghuznee, he reached the climax of a series of cxtravagances, which induced the directors of the Enast lnrlia Company to exercise a power only used in extreme cases, and to recall him. The ministry, however, stood by him, and he was created hy the crown an eall and a viscount; he also receivel the distinction of G.C.B. In 1546, Sir R. Peel made him first Lord of the Admiralty, an office whicl he resigned in July of the same year, when the disruntion of the Peel administration took place. In the Derby alministration of 18.5 s le was again Minister for India, and the anthor of an India Bill, which failed to olstain the sanction of parliament. Having permitted a dispatch to see the light, in which he had administeren a severe and canstic rebuke to Viscount Canning, Gosernor-general of India, an ontcry was raised arainst him, which threatened the existence of the Derly government. To avert this result, Lord E. resigned. He has since taken a frequent and influmtial part in the debates of the Upper House. He is stylfid, by no less a judge than M. Guizot, the most brilliant of the Tory orators.' He has been twice married-first to a daughter of the Nlarquis of Londonderry, and second to the danghter of Admiral Digly. 1tis divorce from the latter made some noise at the time. Should he die without issue, the earllone and viscounty will become extinct. (Died 2.2 d December 15: 2 .)
ellefriedel?, Marif, a female painter of very high excellence, was born at Constance in 1791, studied in Munich, and in $15: 0$ went to Rome, to perfect her knowledge of art. IFer admiration of the oll Cerman masters gave a religious bent to her genius. On her return to Ciermany, she resided for some time at Carlsruhe, where slie painted a 'Martyrdon of St stepthen' as an altar-piece for the Foman Catholic Church. She was afterwards appointed court-painter at Munich, but bas since fixed ber residence at Constance, and devoted herself exclusively to her prufession. Among her principal pieees are the "Transfiguration of St Bartheleny,' 'Christ Blessint listle Children,' Mary anil the lnfant Jesnas, 'Joseph and the Infant Jesus,' 'St Cucilia,' F'aith, Jope, and Charity, and a Madouna. Marie E. is reckoned in Germany the greatcst female artist of the present age. full of illeal grace and beanty are the heads of her women and children, in particular, that it has been said that 'she seems to paint in the presence of angels;' her colouring, however, is gray, dull, and sombre, like that which prevails among the old masters of the German school.
ÉlLesmere, first Earl of, politician, patron of the arts, aud author. I'rancis Egerton, second son of the first Duke of Sntherlind, was born 1806; graduated at Christ Church, Oxford, where he was second-class in classics, 1820; entered the House of Commons, 1820, and represented snccessively Bletchingly, Sutherland connty, and South Lancashire; filled the office of Chief-secretary for Ireland from January 182S to July 18:30, and Secretary at War from July to November 15:30; in $18: 33$ assumed the name of Lord Francis Egerton, in Lieu of his patronymic Leveson-Gower. He achieved considerable literary distinction as a writer of graceful poems, translations from the German, \&e. He also publisbed a pampllet on the defenceless
state of the coasts and of the metropolis, which called forth some adverse critieism. Ihe was a munificent patron of the arts, and made many valuable alditions to the collection of fictures which he inherited with the large estates of the last Duke of Bridgewater. If also built a noble gallery for their reception, which he liherally threw open to the public. After faithfully woting with the Conservative party in partinment for a quarter of a centriry, he, on the retirement of the loel alministration in 1846, ohtained a revival in his favour of the preages of Elleswome and lrackley. His last public arpearance was in May 1556 , when he moved, in the House of Lords, an aildress to the crown, approving of the treaty of prace after the war with Russia. He died in 18.57 at his new mansion, Bridgewater House, Lomlon, and was succeeded in the earidom ly his eldest son, Viscount Brackley.

ELLESMERE, a town in the north-west of Shropshire, near a beautifnl lake or mere, 19 miles north-north-west of Shrewstury. Pop. 1861, 2114. It has considerable malting estallishments. $\mathrm{O}_{11}$ the present site of a bowling green once stom an ancient eastle, alternately held by the Englisls and Welsh.
e'lliot, Ebenezer, the Cony-law Rifymb, was born at Masborough, in Yorkshire, Narch 7. I: © His father was a man of strong character and narrow opinions, and, as appears from Elenezer's Intobiography (gublished in the Altrurum in 1550), exercised in little influcnee on his son's modes of thinking and sympathies. Wheu a liny at school, E. was not a quick pupil; and even after his tather had sent him to work in the iron-foundry where be himself held the situation of a clerk, the youth exlibited no fondness tor reading. Before long, however, he entirely changed, and commenced in study Nilton, Shakspeare, Ossian, Junins, and other authors. His first publishel $]$ wem was comporsen in his fith year: it is entitled The lemal Holk. This was succeeded by Night, Whamarliff, ise. In 1821, E. began lusiness as an iron-fonnder on his own account at Sheffield. He was very successful; and in 1S4] retired to an estate which he had Jurchased at Great Houghton, near Barnesley, whre he died 1st December 1849. E.'s primcipal proluctions are Love, accompanied with a letter to Lord limon, his famons Corn-luw Rhymes, The Ranter, and The l'illage Patriareh, a work full of noble and carnest phetry, ail of which arpeared betreen 182?-1830. In 15:3, he issnel a collected edition of his works, in 3 vols.; and in 1840, an edition in one volume. E. followed Crabbe, but with more depth and tire of feeling in depicting the condition of the poor as miserahle and oppressed, tracing most of the evils he deflores to the social and political institutions of the country. The laws relating to the importation of corn were denounced ly E. E. as speeially oppressive, anll he inveighed against them with a fervonr of manner and a harshness of phraseology which ordianary minds feel as repulsive, even while acknowledged as flowing from the offended benevolence of the poet. but the glow of earnestness kindes his verse, and bides a multitule of faults. More enduring, however, than his rhyming mhilippics are his descrip. tions of Fnglish, and especially of Yorlishire scenery, and lis delineations of humble virtue and aflection. These are instinct with the purest spirit of poetry:
ELLI'PSE is the name of a ficure in Genmetry, important from its being the aproxinate shape of the planetary orbits. It is a curve of the second order, and is a conic section, formed lyy cuttin; a right cone ly a plane passing obbiquely throush its opposite sites. It may be defined as a curve,

## 1:LLIPSS-LLLORA

the sum of tho distances of every foint in which from twor fixed pints within the corve is always than same Those two fixed puints are called the foe : and the, drameter drawn through then is the major axis: the minor axis losects the majow at rinht amslen. The distame of either forus from the mildll of the majur axis is the eremtridily. The lese the cenentricity is compured with the axis, the mater the tinure abpunches to ar wele : and a
 cumeste.

 'The simpleat methom of eleseription is tor fix on a plan the two ouls of a throzi with pins in the foci, and nake a pencil mow on the phane kendine the thereal eonstantly stretobeal. The whe of the pencil will trace an ellipes whos majo axis is egnal to the length of the the end.

The equation to an ellipen (sere (ondminates). refered to its cemtre as imizin, and to its major mal minor axes as rectangular axes, is $\frac{r^{2}}{1^{2}}+\frac{y^{2}}{1,}=\mathbf{1}$, where $a$ and $b$ are the semi-major and sumbinor axes respectively: From this cynation, it may be shewn, by the integral calculus, that the area of an chipse is erpual to onb; or is ent ly multiplying the urontact of the semi-major and semi-minat axis by 31416. It may alow ha shom that the length of
the circumference of an ellipse is got hy multiplying the major a is be thr pmantity $\tau\left(1-\frac{d^{2}}{2^{2}}-\frac{3 t^{2}}{2^{2} \cdot 1^{2}}\right.$ $\frac{\left.3^{2}-\pi\right]^{2}}{2-t^{2} . n^{2}}-$ de $)$. Where $l=\begin{aligned} & 1-4^{1,2} \\ & 4 t^{2}\end{aligned}$
 Grammar and hiluturie. to signify the omission of in worl meessary themplete the expression or sentence in its usual furm. The olject of ellijsis is shortness and impressivness: accordingly, it pee vals in growerns. Ellipens are nsed in all languages, lut the same furms of dilipets are nest common to all. 'Thus, 'the house we saw,' insteal of 'the house that we satw,' is a kind of ellignis peenliar, so far as we know, to Earhish.

ELLI 1'soll is a surface of the secomd order. of whelh the Shernd ( 1 . w.) is a speeies and the most interestinc, from the fiact of the form of the earth leing spheromal. The equaton to an elliposing referrel to its centre and rectamolar coordinates is $\frac{x^{z}}{a^{2}}+\frac{n y^{2}}{b^{2}}+z^{z}=1$.

'fle name Sphinh Ely is given in the West 1ndics to a tree also called Bois de Cirypre, Cordia Gidanonthus, of the natural order Cordiacter, the timber of which is valuable; also to Homelite rentric, , of the matural order Rubiucea, the timber of whin is known to cabinet-makers as Prince-wood.

ELAHINA, a fortified town and seaport of West Airicio capital of the Dutch settlements on the Gond Const. is situated in an modulating and thickly womled district, in lat. $5^{\circ} 10^{\prime} \mathrm{N}$., and long. alkmt $\mathrm{I}^{\circ}$ fo' W . It is a larce, irregularly hilt, and extremery neclean native town, and sems to be entirely destitute of any noteworthy architectural features. The inhahitants consist chiefly of traders, fishermen. and artisans. A few miles to the east is Cajo Const Castle. E. was first established lig the lonturtese in 1fS1, and was the first European settlement plantel on the const of Gunea. It was taken ley the 1hitch in 1637, aud, fow years after, was linaly ceded to them by the crown of Portugal. Loppe cstimatel at frum 8000 to 10,000 .

BLMMTIA. a town of New York state, contains, acorrling to the census of $1860, S 682$ inhahitants. In point uf situation, it possesses both natural and artificial alvantares. It stands on the Chemmer a mavisable fucdur of the Suspuelanna; it is connected hy a camal with suncer Lake aud the interior of 1emernania, as 1 it is intersected by the railway which, with : leugth of fion miles, connects Jersey 'ity, virtaally a mibuth of New York, am Dankirk Wh lathe Erse kis is andes distant from the eaprital of the state.

FLLAO'S FIRE, ST, is the prphar name of an appearmer sonctimes seen, especially in sonthern climates during thuntrestorms, of a bush or star of light at the tup of maste, spires, or uther pointed rhigeto. It is sumotimes accompanitel ly a hissing mise, and is whently of the same nature as the lidit cansenl by doctricity stremmine of from points chnectel with an anctran madhe. Se Elec-
 Wresen loy the Cirecks into the myth of Castor and J'hux: and even rot such lights at the mast-heal are emendidred hy sailors atigh that they have nothine to fear from the stum.

DEMELIORN: a twa of Womark, in the Ah hy of Thlotum, 20 mil os moth-west of latmburge is situatel on buth homke of the Krickan, a mavighle stream. and focche of the lathe. It is well built. has eonsiderahe mamfactures, and in active trade in prain; it has also a bat-huiling yarl, and some tamuries. Vist numbers of boots
and shoos are made at E , and are sold at all the fairs in the duchies of Slesris and llolstein. Many Jews reside here, as this is one of the few places in the duchies in which they are allowed to settle withont having presionsly whtance permission. 1. has an important annual cattle-market. I'op. 4461.

EL، OLELIL, Nec li. Obelis, or Lobeid.
RLOCL'TIOS (Lat. for spaking out), the art of effective spacaing, more suecislly of palific spreaking. It regards solely the utterance or delivery; while the wider art of wratery, of which elocntion is a hranch, takes aecount also of the matter spoken. The art of cocution beld a prominent place in ancient chacation, but has lewe greatly neglected in modern times. See Readng anis spaking.

ELOGE. When a member of the French Académie dies, it is customary fir his successor to deliver an oration, setting forth his merits and services. This is called an éloge (Lat. clogium, Gr. culogia, 1raise), aud a considerable branch of French literature goes by the name. Nany of the French cloges are mere florid panegrics; lut others, particularly those written by Thomas, D'Alcmbert, Bailly, Condorcet, Cuvier, and other eminent savants, are interesting and valuable biographics. The proper epoch of the eloge began with Fontenelle (2 vols., l'ar. 1731), who was distinguished for clearness, ease, and elegance. His successors have tried to cutshinc him in pomp of language.

ELOH1M, Hebr. plural of Eloùh, Aral. Ildh, Chald. Elah, Syr. Aloh, might, power; in plur., intensified, collective, highest power-great beings, kings, angels, gods, Deity. As a pluralis excellentios or majestatis, and joined to the singular verb, it denotes, with very rare exceptions, the One, true God. Joined to the plural verb, however, it usually means gols in general, whether including the One or not. It is mostly used (in the singtuar sense) for or together with Jehovah (the Everlasting One); but some portions of the Scriptures employ exclusively either the one term or the other. This circumstance has given rise to endless discussions, and has also suggested amongst others the notion of different anthors of Genesis. On this, and on the relation of those two worls to each other, see the article Jenovan. We shall only mention here the hitherto mnoticel opinion of the Talmudists, that Elolim denotes the Ahnighty under the aspect of a Gol of strict justice; Jehovah, of clemency and merey. As improntant for the history of the word Elohini, we may add, in couclusion, that it was very probalily letrus Lombardus who dirst tried to prove the 'Irinity out of this plural forman attempt which, although unanimously and scornfully rejected by all scholars, from Calvin, Mercerns, Calixtus, the younger Buxtorf, \&c., to our times, has lately been revived by Rudolf Stier, who has qone so far as to invent a new granmatical term, 'Plurelis 'Trinitatio,' for this propiose. Sce also the articles Shentic l'dural and l'metatecen.
blongidion, Angle of, is the angle measuring the distance between two stars, as seen from the carth. Usually, it is employed only in speaking of the distance of planets from the sum; the word ' listance' being used insteal of the word elongation, in recarl to fixed stars and planets, as related to one another.

## ELOPEMENT. Sce Abrlitisy.

fL PA'SO DEL No'rTe (in English, the Pass of the North) is a marrow valley of nine or ten miles in length, near the north-castern extremity of the repullic of Mexico. It is sitnated within tho state of Chiluahua ( $q . v$ ), in lat. $31^{2} 42^{\circ}$ N., and loug. $106^{\circ} 40^{\prime} \mathrm{W}$., being on the right lank of the

## ELPHIN-ELSLNORE.

Rio Grande, or Rio Bravo del Norte, about 1420 miles from its mouth. It is remarkably fertile, yielding, in particular, considerable quantities of wine and brandy. It contains abont 5000 inhabitants, nearly all of them of mixed hood. In fact, the pepple are little letter than the aboriginal savages, being almost destitnte of the most ordinary a phlimees of civilised life. The place is wortly of notice chielly as the main thoroughfare between New Mexico and Mexico Proper.

E'LPHIN, a bishop's see in Felaul, united to Kilmore in 183.

ELPMISSTONE, Wilmin, a celemated Seottish prelate, and founder of King's College, Aberdeen, was born in the year 1430 or 1431. He was the son of William Elphinstone, Rector of R゙irkmichael, anl Archdeacon of Teviotdale, and, as the marriage of ecelesiasties was then prohibited, his birth was illegitimate. E. studied at the miversity of Glasgow, where the took his degree of M.A. at the age of twenty-four, at the same time that he took priest's orlers. He secms to have acted as his father's curate at Kirkmichael, for four years, bat being strongly attachen to the stuty of law (he hal practised as an adsocate in the church courts lefore this), be went to France in his tweoty-ninth year, at the instication of his unele, Laurence Elphinstone, who supplied him with the moans of sturlying at the most celchratel schools of the continent. E. so highly distinguished himself, that after three years he was apminted professor in the university of Paris, and afterwards at Orieans, which had then the highest reputation as a legal schnol. So greatly were his learnimt and talents appreciated, that the parlianaent of laris used to ask his opinion on great 'fluestions. Aiter a residence of mime years abroad, he returned to Scotland, and was made sucecssively official-general of the diocese of Glasgow ( $1+71-$ 14.9), rector of the university ( 147 ), and official of Lothian in 14 -s, "then probably,' says Alr Cosmo lmmes (Sketches of Lerly Scottish II istory, Edin. 1861), 'the second juliciat offiee in the kinedom, which he filled for two years, sitting in parliantent, and serving on the judicial committers, whieh fomen the supreme civil jurisdiction in suotland.' His dignity, learning, and prudence, now began to procure him universal respect. He was the principal member of a great cmbassy sent from Ricotlind to France, to settle cortain disputes that had sprung up hetween the two countries, and threatenci the stalility of their ancirnt allimee. In this important atlair, he was eminently successful. $\Theta_{12}$ his return, he was made Bishop of lioss in 1481. In 1483, he was removed to the see of Aberdeen; and hetween this periol amet the death of lames III. he was several times engraged in entbassies to France, Englanl, burgmoly, and Austria. For a few months befure the death of that monarch, he lueld the oftice of chancellor of the kirghom. IIe lost this great oflice on the accession of James IV., but, says the authority already quoted, 'he was speedily "restored to favour, and to the royal commeils, and seems to have been keeper of the Privy seal from 1500 tult his death.' He thid not suffer his office to withAraw hims from the care of his diocese, where he applied himself to the faithful discharge of his elniseopal functions, endeavouring to reform the chergy, the service, and the ritual of his church. He woxt coneluded folule on a mission to the continent for another purpose) a treaty with Holland, which was bencticial to Scotland. E. seems to have had a gemuine desire for the enlightemment and improvement of his countrymen. Whenever leisure permitted, we tind him engaged in devising means to this end. It appears to have been chiefly through
his influence that the first printing-press-that of Chepman and Millar-was estallished in Scotland. He superintendel the preparation and printing of the Breviary of Aberdeen, and collectel the materials for the lives of the Scottish saints contained in that work. He procured from the pope (Alexander VI.) a bull for erecting a wiversity in Aberdeen. The bull was seut in 1494 , but the college was not founded till 1500, when it was dedieated to St Mary-a name afterwards ehanged to King's College. E. built also the great central tower and wooden spire of his eatheriral church at Aberdeen, provided its great bells, covered the roofs of its mive, aisles, and transept with lead; and, at his own expranse, built a stone bridge over the Dee for the benelit of his townsmen. The fatal battle of Flodiden, 9th September 1513, broke the spirit of E., who was never seen to smile after. He died 2nth Octoher 151t, and was buried before the high altar of the chapel of the college which he foundel. E. was a man of great vigour of mind and nobleness of nature-'one if those prelates,' says a writer in the Quarterly Texiew (No. elxix. 1. 141), 'who in their maniticent acts, and their laborious and saintly lives, shewed to the Senttish church, in her commition and decay, the glorious image of her youth.' 'We know him,' says Slr Innes, 'in the history of the time as the zealons churchman, the learned lawyer, the wise statesman; one who never sacrificed his diocesan duties to mere secular cares, but lunew how to make his political eminence serve the interests of his charch; who, with manners and temperance in his own person, befitting the pimitive ages of Chistianity, threw around his cathedral and palace the taste and splendour that may aiorn relinion, who found tinze, amidst the cares of state, and the pressure of daily duties, to preserve the Christian antiquities of his dineese, and collect the memories of those ohl servants of truth who had run a course similar to his own ; to renovate his cathetral service, and to suphort and foster all good letters, while his economy of a slender revenue reutered it suthiciant for the erection and support of sumptrous buildings and the endowment of a famons university,' Some volnmes of notes male by E. when stmbying in the law schools, are preserved in the library of the Cuiversity of Aberieen. A transeript of "Fordm's Scotichooricon, with some additions, in the Boaleian Library at Oxford, was long erroneonsly ascribed to him. His Brevierium Atherdonense, printed in 1509-1510, was reprinted in two volunes quarto at London in 1553.

EL ROSA'RIO, a small town of the Mexican Confederation in the state of Cinaloa, is situated 55 miles east-north-cast of Mazatlan. It is important chindy as beincs a commercial entrepot between Nlazatlan and the interiur. P'op. 5000.

ELSINO'RLS, a town anel seaport of Denmarls, on the island of seeland, is sitnated on the western shore of the Sound, and at its narrowest part, $3!$ miles west-south-west of the town of Helsingborg in Sweden, and 21 miles north of Copenhagen. Lat. $56^{\circ} 2^{\prime} \mathrm{N}$., long. $1 \underline{O}^{\circ} 30^{\circ} \mathrm{E}$. The town, which has been in recent times considerably impoved, is spacions, and consists of one long $\mathrm{m}^{\text {nincipal }}$ street, with several hateral branches. The cathedral, containing some fine tombs, many of them very old, may be considered as one of the most interesting edifices. At a short distance to the cast of E. are the castle and the fortress of Kronborg, the former a white stone building in the Gothic style, and the latter, a stronghold momited with guns that emmaud the Sound in all directions. To the north-west of $\mathbf{E}$., and in its immediate vicinity, is the royal chatean of Marienlist, the pleasuregrounds of which, occupying
the crest of a hill, are grea to the public. From the grands of Amamist, magnitieent views may be hat of the somal, of Helsingtorg, and ot the phans of sweden. 'The harheme bía formed lis a worlen pier is accessime to ships of light atraght. Fi. has a lrisk fureion trade, and has, busides, manufactures of straw-hats, arms, sugar, hamly. 太e., also cotton. printint and tisheries. The somad Dues (d. v.) wate collected here. I'ry 9097.

Saxo Crammatiens, fomons writer of the foth c. Was harn here. Hore shakspare lan the some of his Itumbt, a perversion of listory on the part of the great dramatist, as outlimb, nut reclimh. was Hambet's comatry. 'Ihe vants under the eastle of Frontrors were suphosed to be the resintane of Holper Danske, the mythic hero of Demmark, who never alpeared abose cromblate when the comotry was in danger, and was then surposed to march at the head of the banish amise. In severe winters the comb is frozen wer at l ... so that whe ear walk over the fee from Denmark to sweden.
 at Viema in the year 1811, and equatet in Naples for the ballet. abong with her edele sister Theresa. The dirst trimph the sisters tonk place at Berlin, where they aplueared in $18: 0$. The reputation acquirel lis Fany in Berlin peceded her to ltaly, Atmerica, Bugland, and st lefershorg, where her beanty, amiatolity, and mastery in her art, charmed all elasses of siciety. In 1stl, the two sisters went to Amerian where they exeited mwontal enthosiasm. diter founy hat tamed hamels in sit Ietersharg she returned, in lsjl, to Viema, to take a timal leave of the stave. She then retired to Hamburg, where shestill rindes on a small estate furchased by herbeynd the bammothore. Theresa was less graceful in her motions than her sister, lat exhihited great strength, boldness, and agility. On the "oth Apal 15:7, she hecame the wife of l'ince Adal. bert of l'russia, and was emolled by the king of I'rusin.

L'LSTER, the name of two lisers of Cermany, the Whate and the Black Elster. The White E. rises at the foot of the Elster mountains, on the north-westim homedary of Kohemin, flows in a wortherly drection, and falls into the saale three miles suinth of the town of llalle, in l'rissia. Its chief atlluent is the I'leisse from the right. Total length, 110 mills. The Back E. rises in the kingdom of Saxony, within two miles of Elstra, Hows nurth. wot, enters Irussia, and juins the lilte eridht miles sonth-catst of Wittmbers. Length, IUS miles.

RLSTRACKE, Regisald or Remohf, an Finmish ensraver, who flomished alont 1000. Ine worked Mandy for the lawkellers, and his phates, which are executed with the graver, without - telines, are alanont entirely ennfinel to pantraits. Jrint from his thates are much sulght after, not only form ther sancity, amb as illustratimy lenchsh histury, but an whos of art, in which much character is expensed 13 a fim and foreible manner. When he dud not sinn hif phates with his name, loe marked then with his initials, li. I'

WhTON゙, a fanms valt lake of liussia, is situated in the government of Suatos, 170 miles senth-smentheast from the town of that name, the lat. of its
 longest dianeter is rheven miles, aum its shortest about nime miles. It has asurericial extent of 4,500 limglish acres, hat at m Jhan is it mare tham alout 15 incles in Anth. It is of an oval form, aned can be casily raculad from the smath, lint the northern banks rise sor rambly that access to it from that quarter is diflicult. In the bottest seasm, sie wouderful is the illusion probluecd ly the crystallised
salt. that the lake seems covered with sum and ive. F. yidhls about 100,000 tons of salt ammally, in the collection of whel about 10,060 persons are (mployed.
Ehi raldetion is the term applied to the proces of separating, by mons of water, the finer particles of earths and pigments from the heavier protions. 'The apmatux gemerally used is a large rat, in which grinting whels revolve, and the substance to be redncol to powder lowing placed in the rat alons with water, the wherls in revolving not only pulverise the material, hant fam their motion leing commonicated th the water, the latter is cmalided to retain in mechanical smbernsion the fincr partiches of the clay. \&e. liy allowing a stream of water to flow in and out of tho vat, the tiner garticles can le constantly doated away, ame the liguid being run into suttling vats, the line jowder settles to the bottom, when the water can he run of from the surface. This process is much compleyed in the manufacture of the materials used in puttery, and in the preparation of pigments.

ELVANS are veins uf a gramlar crystalline mixture of felspar and quarta, jrobably proceding from a sranite mass, which are fond in granite rocks and fossiliferms slates in Curnwall, Devon, and the south of lreland.

ELNAS, an eprisempal city and fortress of Portugal, stamis in a very fruitful district on the eastem frontier of the province of Alemtejo, 10 miles west of Batajoz, and 40 miles north-east of Froma. It is the strongest furtress in l'ortugal, and one of the strongest in Farop: It is built upon a precipitous hill ; is surrounded loy walls, and by a placis and coveredway. Besides these, L, has other defenees in two fomidahle forts. Fort Nita. Lucia, and Fort Lippe, the fommer to the sumth, and the latterahost entirely shell-proof-to the north of the city. E. is an olel town; many of its honses are badly built. Its most striking architectural feature is an enormons aqueluct, which convers water to it irom a distance of thee miles. This aqueduct consists of four ticrs of arches built upors one another, and rising to the height of about 2.0 foet. The chice manfactures of E. are arms and jowellery. There are here extensive store-hneses filled with british manufactures, anl the inhabitants, ly illegally selling these enods within the rmanish frontier, ratise considerable wealth. Pond 12, 400 .
E. has undertone many sidges, hat has never been taken. The Spaniards hesided it in lasi, and again in 16.5 , when a fompus hattle tonk $\mathrm{p}^{\text {limee }}$ called the lines of 10 k : L , in which the l'urtugucse, though greatly inferior in mmbers, drove the spamards from their lines in front of the town. E was raised tu the rank of is city ly I. Manoel, king of I'ortugal, in 1513.

## ELNES. New Fhimes.

E'LY', se called from a Saxom worth dith an ed, or helid, it willnw, may be called a cathedral town rather than a city, anil is situated on an eminence in that part of the fen-comatry of cambridgeshire callen the lale of lily. I'th, alont form. 'The Eastern Comaties and the (ireat Xorthern lailways have ewh stations, the firmur outside, the latter in the town.

Ety ('athedred. - Went the year Gi.3, bethetreda. detughts of the ling of bist Amglia, and wife of Uswy, king of Northumberland, fommed a monastury here, and took on herself the gosemment of it. 'l'wo hamed years afterwaris ( 570 ), the banes ravaged the liste, ant destronal the monastery, which was rebnilt in 900 by sit lethelnohl. Dishop of Winchester; and this entimuel till losi, when a new churel was leghu, which was converted
into a cathedral，and the abbey erected into a see in 1109 ．The possessions of the abbey were divided between the bishop and the community． The cathedral enntains some beantiful specimens of architecture，especially of Early Norman．lts exterior dimensions are 535 feet from west to east． The great cross or main transept is 190 fvect ．The turrets of the west tower are 2 tis feet high，and the lantern over the central tower 170 fect．Tha west front was built by Geotiry Ridel，the thirl hishop， who diel in 11s9，and is if Norman work．Nbout 200 years aiter his time，an addition of bufect was made to the tower，aml ofer that a spire．This great superincumbent wedght crushed the north－west transept，and the sonth－west one，which still remains， was considerably weakenerl．In front there is a west portico or salilee（4．5），of Early Gothic， said to be the work of Bishop Eustachins．The nave is of Norman work，and was completed about 1174．The columas are altomately round and neta－ gomal．The rouf was，in 1861，beartifully painten． The transtlits，which are the most ancient parts of the church．were buit in the reign of Heury $\mathbf{I}$ ． ＇They hal origimally a mitde and two sime aisbes， but the latter are，in the sonth transept，walled up，and the sprace nised as a vestry and lihrary： Originaly there stoml a syuare tower in the centre of the biblding，＂rewing into the nave and transepts： hut this tave way in lise，and fell eastwards， crushing three arches of the choir．The repair of this dileydiation was mulertaken by the sacrist of that time，Alan de Watsingham．The design was original，an octagon tower with four longer and fomer shorter sides，summonted by a lantern．The uper part uf this，which is of timber，is about to les rebuilt as a memmial to the late Dean Peacock．

T＇${ }_{1}$ e cheir contains some rich varieties of decomated linthic，and the fine shafts of larbeck marble com－ bine beantifully with the white stone work．The whone has lately been restored and beautified． Origimally，it was much shorter eastwards，and jro－ trmed into the nase，but in low，the semicircular chs of the ollt church was taken down，and six arelaes added lyy Hush de Northwhe．It the dedi－ cation aml removal if the relies，Henry III．and his court were lresent．The east end is eminently beantiful：it consists of two tiers of high lancet－ shaperl windows．lerhaps the most interstime and yet beautiful part of the lmideng is the Luly ＂lhapl－an incomparable worls，irreparably spuiled low the barbarism of luritan times．It was beron in $13: 1$ and finished in $1: 319$ ，simultaneonsly with the rehoidding of the central tower amb rumed choir． a cirenmstance higlly illustrative of the taste ami munificenem of the times．It has a stone roof like Kinsts（chllose（haped in cambrider，which it is supinsed to have survesterl，and the walls were race decurated from the to bottom with conntless niches and images of saints ancl martyrs，not one of which remains undefacen．Its lenstis is 100 foct：width， 46 ；lache，60．lishop Alocot＇s chapel，in whing be lies lmurion，is at the cast ent of the north aisle－ an overloaderl specimen of the richest florill quthic． lishop W＂est＇s thalel，at the east emu of the south aisle，is a more pleasing example of the same style．
Amongst the eclelrated mames comnected with E．are Albort Thurstan，who defended the 1 sle against William the Conqueror for suren years： Lougchany，chancellor and regent under lichard I．：＇chaucelhor Mortou，Simon Patrick，ant Bishop Andrews．The bishops of E．，like the hishops of Durham，formerly enjoyed a palatine jurisdiction， amb alpointed their own chicf－justice，\＆re：but this privilege was taken from them by the 6th and $\overline{0}$ th Will．TV．The Bishop of E．is risitor tost l＇eter＇s， St Johu＇s，and Jesus Colleges，Cambritge，of which
last he also appoints the master．There is a grammar－ school attached to the Cathedral，fonimed by Heary VIII．There are some interesting remains of the old conventual builimes in the ueighbombood of the cathedral．

BLI，Iste of，the south part of the Pedforl Level，or the fart of cimaridueshire nonth of the Ouse．It inchutes above a half of this county，is of miles loner from north to south，with an average breadth of 14 miles，and coutains four lumdreds．It consists of a monotonums，marshy，of fenuy flain， formerly cusered with wator，and atumbling m aquatic hirls and phants．It chiefly consists of black earth and turf，and，where well ilranem by imm－ merable artiticial camals and ditches，it jroduces tive crops of hemp，flax，wheat，uats，and crile sead． Over it are interspersed small emincuces，womerally crowned with villates aml towns，as lily City， March，Thomey，Whitllesea，and Tislonach．L＇口l＇ about 60，000．

## E＇LYMUS．Sce Lyme Gfins．

ELYSHUB（fir．elysion），a place in the infernal regions of the ancient classical mythology，where the sonls of the erool llwell after death．In the Ohyses．4．Homer lescribes it as a place where the souls of the departed lived in case and abomiance among imocent pleasures．amd enjoying a mild amd wholesonne air．In the lied，hovever，ho gives a sombre view of the statc of the delarted sculs． Achilles，though in Elysimm，is made to envy the life of the mancest himl on carth．by succeeding pocts，the hhess of Elysium is drawn in much more lively colours．Iksides the amenity and various Whints uf the jlace，divarse employments are foumd for the inhabitants，acerding to the ruling passion of cach while on carth．Elysimn was surpoed by some writers to be in mild－air，hy others in the sun，ley others in the centre of the earth，next Tartarns，by uthers，in the Islamis of the Elest．

ELZEVIFIR，of ELZEVIR，the name of a eclebrated fimily of printers at Amsteriam， Levilen，and other places in Hollanl，whose hautiful alitions were chictly lablished between the yars 158：and 1680．Louns，the firet of them， is sain to have been born at Louvain about the your fisto．He was inhect by religious ilistarts． ances to leave his mative city，and in 15so，he settled as a lowhbinder and hiokseller in Leglon， where le died abont $161 \%$ ．The tirst work edited by him bears the title Jonsii Ehmicomm Quers－
 af Tortins，in Aradrmin Luthenensi M11LNXXIII．
 legione behule Nour．＇The secoml，a leutropins ly I．Mernla，lears the late 1stro，and was lonis ＂rymombly beplicued to be the first that issued from Ľis jress．Fire ont ut Lomis＇s seven soms continued the carry wh their father＇s hasiness．Their mames were llatthew，Lonis，A Ahtins，Jorlochs（Joust）， and Bonaventura．＇the last，in conjunction with his neplew Abrahan E．（a son uf Ahatthew），pepared the smaller editions of the classics，in 12 mon and leme，which are still valued for their beanty amt correctness．It is mamly on these that the ir reputa－ tion is hasel．The house of E ．，in Ansterlam，was establisheil by Louis，the son of Jethous E．，in laiss loter L．．gramlsun of the last mentionel，carrica on the bonkselling hasiness in［＂trecht，and dien in lGom For more than a century，however，this family has ceasel to have any eonnction with book－printing． It is representem at bresent ly lammelmani Elacerior，whose iather was envernor of the isle of C＇uraca，and lied in 1s4l．The Elzevier cditions of Virgit．Turnce，aud othar Roman classical anthors， as well as of the New Testament，the Psalter，\＆c．，

## EMANEIP d'TIOS, Soc Slamerr.

LMADCIPATION, in the Inman law, was the act by which the Potrice Potestos (1. v.). or paternal authority, was rissolved in the lifetme of the father. It tork filace in the form of a sale (mancimatio) by the father of the sim to a thirl party, who manumittel him. The Twolve Tables required that this coremony should le gone throuh three times, and it was only atter the thind sale that the son became sui juris mater lis nwn law. In wemeral, the som was at lase resold to the father, who manmitted him, and thes acguired the richts of a latron (4. 5.), which wouk otherwise have lechoned to the alien purehaser who tinally mammittod him. In the case of daughters and gramichilden, one sale was suthcient. If the chad hlich intestate, wr it he required is tutur or curator, the father's rights as patron come into play; but it the fathor died interate, the san timk nothine, hecanse he was ont of his family. Lut this rigour of the whaw was moditied by the pratur's edict, which placel all the chitatren on the same fonting. In the law of Sentiand, eman-

## EMA'RGINATE. See Jfathe.

PMD. 1 , river of Turkistan, in the Kirghiz territory, rises at the western Latse of the Muehajar or Mongojar Monntains, and tlowing in a sonth-west dircetion, enters the Caspian Sca after a course of about 300 miles.
ENIBATAINC, the art of preserving the body after death, invented by the Egyptians, whose prepared bodies are known by the name of mummies, and are ealled in the hicroglyghs salu, and by St Augustine gabbaroe. This art seems to lave derived its origin from the idea, that the preservation of tho body was necessary for the return of the sonl to the human form after it had completed its cycle of existence of three or ten thonsand years. Physical and sanitary reasons may also have induced the ancient Egyptians; and the legend of Osiris, whose body, destroyed liy 'lypon, was found by lsis, and embalmeal 1 y his son Anubis, gave a religions sanction to the rite, all decased prersons being sulposed to be embalmed after the model of Osiris in the abuton of lhila. The art appears as old as 2000 b.c., at least the bodies of Cheols, Myeerinus, and others of the age of the th dynasty having bean embalmal. One of the earliest recorded

Egyptian Mummy.
cmbalmments on record is that of the patriarch Jacob; and the body of Joseph was thus prepared, and transported out of Egypt. The process has bean described by Herodotus and Diodorus; bnt their accounts can only refer to their own are, and are only partially confirmed by an examination of the mummics. "The following seems to have bean the usual rule observed after death. The relations of the deceased went throngh the city chanting a wail for the dead. The eorgse of a male was at once committed into the charge of the undertakers; if a female, it was retamed at hone till decomposition had hecun. The puraschistes, or thank-inciser of tho district, a yerson of low class, whose establishment was situated in the emetories or suharbs, eonveyed the corpe home. A scribe marked with a reed-pen a line on the left side beneath the ritos, down which line the paraschistes mate a deep incinion with a mate lanie or Lethiopian stone, probathy thint. Ho was then pelted ly those arounl with stones, and pursued with curses. Another linul of embalmer, the taricheutes, or preparer, then proceded to remove the entrails and lungs, with the execption of the hart amd kidneys. The ham was extracted by
 throngh the nose. All this havint loen eflected, the boly was ready for the salts and spices

## EMBALMING-EMBANKMENT.

necessary for its preservation, and the future opera tions depended upmen the sum to be expended on the task. When Jlerodotus visited Fryput, three nethods provialed: the first, accessibl only to the wealthy, consisted in massing peenliar drugs throngh the mostrils into the cavities of the skull, rinsing the belly in 1 alm-wine, and filling it with resins, cassia, and other unbstances, and stitching un the incision in the laft lank. The mummy was then steeped in matron for seventy lays, anl wrapred nup in linen, ecmented by groms, and set uprizht in a wooldn collin arginst the walls of the limse or tuml. This proeess cost a silver talent, which, considering the relative value of ancient money at one-third of that at present, wonld amonut to about $5^{2}, 2.5$. 'l'he secomel pocess consisted in rmaving the brain, as lefore, but only injecting the viscera with lichion, or cular oil, and soaking the corluse in a solation of natrun for seventy days, which brount aw゙ay on destroycd the viscera amd soft portions, hewinis only the skin amb bomes. 'The expunse was a minor, relatively worth about 2.243 . The thinl process, in use for the poorer classes, washen the eorpse in myrrh, and salted it for seventy alays. 'Tle expense was a trifle, not mentioncd. When thus prepareal, the bodies were rexdy for sepultura, lut were often kept some time lefore heing buricd-often at home-and evon moxduced at festive entertainments, to recall to the gucsts the transient lot of lamanity. When heried, they were sunt to the rholchyter, a higher class than the tariderater, who had charge of the tombs, the inummics, ant the masses for the dead. Nll classes were embalmed, even malefactors: and those who were drowned in the Nile or killed loy crocodiles received an embalmment from the city mearest to which the accident nccurred. As the art. howerer, cxisted for many conturits, it may be easily ennceived that manmies were preservel by very dif. ferent means, and quite distinct from those described by classical athors, some having been found merely ldied in the xaml; others salted hymatron, or loniled in resins aud bitumen, with or withont the dank incision, having the brains removed through the pes or base of the cranium, with the viscera returned intor the body, placed upon it. or reposited in jars ist shajes of the genii of the dead, the skin partially raided, the llank incision covered with a tha plate. the fingers cased in silver, the eyes removed, and pplaced. 'I'lic mummes are generally wrapped in linem bantures, anm placed in costly coftins. See simeophantis The sacred animals were ilso mammierl, but hy simpler proeesses than men. ithmnaios, it may be ohserved in passing. wore used in the loth and listh conturies of the Christian era for lhari anl other medieal faryoses, ind nustrums auninst disuasts, ank a peenitir brown colour, used ats the batkeronnd of pietures, was olatained from the hitmmer. 'The" lithimpians nsed similar means th preserve the drat, and the successful nature of amblemine maty be julifel from the momerous mummies in the ditheratit musemms of Fibroue. (otlon less successful means were used hy nations of antiruty to cmblalm. 'lhe Jersians employed wax: the Assytians, honey; the Jews embalmed their monareles with spices, with which the booly of our Lurd was also anointed: Alecamer the Great was preservel in wax and honey, and some lioman hodies lave been fonmb thas embalmed. The Guanches, or ancient inhatsitants of the Canary Islos, used an thalmate process like the Eiryptian ; aml desiccated homlies, preserved by atmospheric or other circumstances for centuries, have been foumd in France, Sicily, England, and America, especially in l'entral America aml Peru. 'The art of cmbalming was probably never lost in Earope; and De lils,

Inyysch, Swommeriam, and Clauderus boast of great success in the art. There was a celelorated eabinet of N. De Iiasicre in 1727 , containing pre. pared bodies: and the mote of embalming princes and others, by prepared bahns and other substances, is detailed by Penicher, consisting in the removal and separate embalmment uf the beart and viscera, and removing the brain, and introducing the prepar. ations by incisions all orer the lody. Dr Ilunter injected essential oils throurl the principal arturies into the lody. Bondet, durines the lirench Empire, embalmed the Lodics of the seuaturs with canphor, balsam of Peru, Jews' pitch, tan aul salt; but the discovery of Chaussier of the preservative power of corrosive sullimate, by which animal matter lreconses rigid, havl, and grayish, introdlecd a new means of cublalming by Beclard and Larrey ; lout owing to the desiccation, the fentures do not retain their shape. The discovery of the pre. scrative power of a mixtore of equal parts of acctate and chloribe of alnmina, or of sulphate of alumina, by Gannal in IS: $\frac{1}{2}$, amd of that of arsenic by Tranchini, and of pyroxilic spirits ly Babington and liees in 1839 , and of the antiseptic nature of chloride of zinc, have led to the application of these salts to the embalming or prepraration of lodies required to be preserved for a limited time: but there is no reason to believe that bodies so freserved will last as long as Egyitian mummies. See J'ettjorew, Mistor! of Mummics (Ato, Lonal. 1S34); Gannal, Traité á Ěmbumement (Svo, I'aris, 1838), tramslated by Harhan (swo, l'hiladelph. 1st(0): Nitmus, Jies Einholsimiven der Leichen ( 8 vor, Braunseh. 1839).

EMBANMMEAT, EATTHWORK. Embankmonts, in Einenineering, are masses of earth, rock, or other materinls artilicially formul, and rising above the natmal suriace of the grommt. They are chictly fomed either ( 1 ) to carry railways, common roads, ramals, de., ofer depressions of the country ; or (2) for hyirandic puposes, such as the fornation of rescroirs for storing water ; or as defences argainst the orerflowing of rivers, the encroachments of the sea, of lakes, \&

In the formation of canals, railways, and other roads, embankment and ercaration go hand in hand, aul, under the name of EARtumonk, form-espuecially in modern times, and since the development of the ralway system-a vast branch of inlustry, griving employment to many thonsands of labourers, known in England as 'navies.' The earthworks executed within the last quarter of a century in Circat livain alone have cost many millions of frounde.

In planniner works of the kind alluked to, moginecrs follow, as much as possible, the principle of making the cuttings or excavations and the embankments halance: i. e., of makims the earth, de., taken from the enttinors he sutlicient for the formation of the embankments. Sce liallwais (Evginereinci). In proceeding to the actual constrnction of a railway cmbankment, e.g., a beginninis is made at the points whare the level of the formation meets the surface of the gromml ; and on earch side of these points the cutting is taken out, and the embankment formed by men usine pick, showel, and barrow, so that a rombay is formed for a distance of from 50 to 1011 yards. "When the • Jead.' or the distance between the fiten of the cutting and the 'tip-head,' or end of the embunkment, is meater than this, it is mo longer economical to use the barrow. To continne the cuttimis and embankment, several methods may bo rmpliymi: the most common are, dohbin carts; small waeons run u!om light rails at a narrow gange, and drawn by men or horses; ordinary earth-wagons diawn hy horses, and oceasionally by a locomotive;

Embattled. betrl, a shbiber.

E'MBER or EMBLERING DAIS. According to the Book of Common Proyer of the Church of England, thrie days are appointed four times in the year to be observed is days of fasting and abstinence: these days are the Wednesday, friday, and Saturiay after the tirst Sunday in Lent, after the feast of l'entecost, after the I4th Selitember, and after the 13 thi December. The term 'embering's has been varionsly derived from the Greek ruspa, ant from the cmbers or ashes which in the earliest times were strewed over the head at times of fasting, in tokell of lumility amd self-combemation. Fint the more conrect derivation would appear to he from the Saxom J'mbine daga, from the fiaxon mm , about, and ryme, a course ur runming, the term applied to these fasts because they cane rombl at certain set seasons in the year. Somner, Dietionminm Einonici. This phrase is used in the laws of - Hefred the Great, and also of Cannte, and cormespons with the term used by the camonists, ifyum quatuen thmorum, the fasts of the fonr scasons. Al sommer says that the embering days were 'times of wh chosen and set apart for fasting and prayer for oliteyning the fruits of the earth, aud to give thamks for the same. whereas at those times they are either sowen, sprung up, coming in their rijenesse, or gatheret into the harne as also to obtaine the grace of the Iholy finost, when holy orlers are given and ministers made. It is to this latter purpose that the Chureh of Englaml in the present day particutarly devotes the cmber days, and a special prayer is appointed for use at those seasons.
EMBERIZA and EMDEEIZID.E. Sue Bextive.
HMBE'ZZLENEST, the felonious appropriation he clerks, servants, or ethers in a position of trust, of grois, money, or other chattels intrusted to their care, or reccied in the course of their duty, on account of their cmployers. It is essential to the crime of embezzlement that the article taken shond not haver hecn in the actaal or constructive possession of the employer; for if it were, the uffence would amount to Lirceny (4. v.). Emhezzlement is not an oflence at common law; hence. persons suilty of this crime were formerly sulfered to escape pumbment. Ia consequence of a thagrant instance of this immunity (Bazeleys Case, ii. leach. S3.7), the Act 39 (ieo. 111. c. 85, was passel, wherehy ombezzlentent was made a fulony. This act has been repeadel, hat the law has since been fixed by sulnequent enactments. The learking statute on this subject is 7 and 8 tico. 17. e. e9.

Amberement by clerks or scrunts is monishahle bey transpatation or imprisnmment. See It sisumive. If the oftender lee a male. he is latble to ln onec, twice, or thrice publicly or privately whipred, at the diserction of the judre. Questions of mech nicety often arose as to whether the facts provel constituted the crime of embezalement or that of larceny: but this distinction bas ceased to he of any inportance siner the passing of the ('riminal Justice Act ( 14 and 15 Yict. e. 100), whereby it is made competent, on an indictment for embezaloment. to convict a man of larceny, and rive versa. But it has been decided in a recent case. R. X. Gorlmet, 26 Lew Jonm, M. U. 47, that on an indictment for larceny, it is nut competent to convict of larceny where the facts amomet only to embezalement.

Embestement by bankers, brokers fretors, and other ayents, is regulated by the above statute, sect. 49, and also by the Fraudulent Trustees Act ( 20 and ol Vict. c. $\overline{2} 4$ ). These most important statutes have rendered almost every conceivable species of fraudulent misappropriation by bankers and others
a punishable offence. In particular, by the latter stathte, embezzlement ly a Bailee (see Bammest) is nuw indictalle. Eniter this provision, a shopkecper approprating eoods intrusted for repair, may be tried and convicteri.
Embezlement by benkrats of any part of their estate, or of any hooks. \&e. relating to the same, with intent to defraud their crenlitors, is, by 12 and 13 Vict. e. 106, made pumishathe by transportation for life. sue biventert.

Embealement of lethersand nowspopers by servants of the Postontice, is alsa made highly penal ly 7 Will. IV. and 1 Vict. c. B6. The cmbezzlement of newspapers is muishable ly fine or imprisoment: lout to embezale a letter, subjects the oftencer in all cases to transportation for seren years: and if the letter contain money or valuables, to transportation for life.

Emberkmemt of the Qurpn's storrs is pumishable hy thansportation fur life (4 Geo. N. c. 233 . In reraril to this species of embezzlement, summary authrity is granted to comptrollers and other officers named. on proof of embezzlement of fovernment stores blow the ralue of twenty shillings, to fine the wflemers to the anount of domble the value of the irticle taken.
In Scotland, the erime of embezzlemont, or breach of trust, is punishable at common law. The distinction between this crime aml that of theft is substantially the same as between embezzlement and larceny in England. In woth chuntries, the criterion relied upn to distinguish these crimes is the question of possession by the owner: lont in Sentland the timdency of the decisions of late years has been to regard the alpropriation of articles intrusted for a temurrary pimpose as amounting to theft. In this respect, the law of Scotland differs from that of Encland in regard to cmbezzlement $1, \underline{y}$ a bailee. In kostland, the apmopriation of thines found withont an owner would appear, according to Mr Hume, not to he an indictable offence. Snch a case wouh unpues. tionably be treated in England as Larceny (q. v.).

E'ABLENI, a representation of an object intended to signify or indicate to the umlerstanding something else than that which it directly represents to the cye. The meanine of the emblem rests upn its seconilary not its primary signification. Emblem is often used in a sease synonymons with scmbol, under which, as the wider worl, it will the more eonvenient to treat it.

EMBLEMATA (frr), the works of art with which gold aul siture vessels were decorated by the ancients. These senlptured figures were generally executed either in the precious metals or in amber. They were called crustie by the IRomans, thongh the Greck word was alen uscel.

E'MELEMENTS (Fr. cmblurer, to sor with わe: or wheat), growing crops of cereal and vecetable productions raised ly the labour of the cultivator. Fruits of trees growing on the land, and grass, are not emblements. The law has ever been mindful of the interests of the tenant who has expended his toil and capital in tilling the rommd. By the fendal law, when a tenant for life died between March and August. his heirs were entitled to the mofits for the whole year. By the existing law of Eagland, a tenant for life, or other tenant, whose term may be suddenly and unexpectedly bronght to a close. is cutitled to reap the crop which he has sown, and to enter the lands after expiry of the term to remove the emblements. By 14 and 1.5 Vict. e. 95 a tenant at Rack-rent (q. v.) under tenant for life is entitled, where the tenancy determines by death of tenant for life, to hold the land

## EMBLICA-EMMBIASURES.

till the expiry of the current yar. But if a term le hrought to an end by the aet of the tenant, he is not cutithed to cmblements. Thus, a tenant for hife who commits forfeiture. or a whlow entitled to dower -who, as remeds dower-lands, is consilered temant for life-marrying arain, are not catitled to emblements. On the death of a tenant, the executor, aml not the heir, is entitled to the emblements. By 11 Gea. II. c. 19, emblements may be distrained for rent, ame ly common law they may lre taken in cxechtion. The right of liferenters in soctlame to rape the growing crop is somewhat similar to the Enghsla right to embments. See Lire-tenter.

FiMBLICA, a pemus of phants of the natural order Liuphorbacet, haviug a tleshy fruit. $E$. eficinalis is a tree found in most parts of ladia. with a crooked stem, thinly scattered spreating branches, long narrow leaves, minute greenish dlowers, and a globular fruit about the size of a gall-nut. The fruit is very acid, and somewhat astringent, which qualities it retains when dry and shrivellet. It is used in India as a denbstruent and febrifuge, also for tanming leather, and making ink, and is generally called Emblic Myromatans.

EMBOSSLNE, the art of prolucing raised fizures upon various substances. such as paper, leather, wood, metals, \&e. This is usually efliected by pressing the substance into a die, the kind of die and mode of applying the pressure being modified according to the nature of the design and the properties of the sulstance to be embossed. Sheetmetal is embossed by stamping it letween a pair of steel dies, one in relief, the other in intagho. See Die-sinking. When the pattern is a deep one, several pair of dies are used, and several blows given with each, the metal leing occasionally anmealed. The dirst stamping produces a crude resemblance to the tinal design, of moderate depth; successive stampings bringing up more of the details, and gisine increased depth. The upper die is usually raised ly a rope attached over a pulley to a stirrup, b1 which the workman places his foot; lie draws his fuat down to raise the heasy die to the required height, and then suddenly releases the pressure of his foot from the stirrup, When the die deseencls by its own weight. While thus raising the die with his foot, he arljusts the work in its place with his hands. Smaller work is embossed with a screw-pess, the lever of which is tumed with one hamb, while the work is placed moder the dies and remosed hy the other. Paper and card are embossed in a stmilar manner, fint the dics are frequently of hrass, somptimes of copper electro-deposits. suitahly backed. The comenterdic is enmmonly made of soft metal, card or mill hoard, pressed into the metal intagho die until a sharp impression is prohnced. The paper or card is well damped, and a fly-press is generally used. The leather or cloth fur bookhiniling is cubbossed in this manner, the counter-die being usually made by ghing several pieces of millhoard together, and gluing them to the upper bed of the press, then stamping these into the lower die until a perfect impression is obtained. The emhossing press designed and constructed ley Mr Ldwin Ilill, for impressing the metallion upon postage envelopes, is a very thaborate and beatiful machine, which inks the die itself, and with the aid of two loys, to place and remove the envelopes, cmbosses sixty onvelopes in a mimute. When large surfaces of textile fabrics, such as tahle-covers, \&e., lave to be embossed, the falric is compressed between rollers. one leing of metal, upon which the device is sunk like a die; the counter-roller or ledcylinder is of paper corvered with felt; this yidels sulficiently to allow the fabric to be pressed into
the die-eylinder. A third smooth metal moller is commonly uscul to press out asain the impression mate mon the lem-eylimer; this acts upon the hed-eylnder on the side from which the fabrie umerges. liper is sometimes embossed in this mannor; and the datting ruller may le dispensed wit! if the eylimens are sufticiently accurate in thoir dianeters for the pattern always to fall on the same place at each successive revolution. Lather embossed in high relici has been used for ornamental purposes in place of wood-earving on picture-frames, cabimet-wnek, de. The dies are of typemetal or electrodeposits, and the leather is suftened or fullod, i. c., worked with water till it contracts aud thickens, then it is pressed into the dies by suitalle romel $1^{\text {winted }}$ tools, like modelling tools, male of woonl. hene or coller. When dry; the leather is removel from the moulds, and by its elasticity amd shrinking it will relieve from very deep and underat desions.-Mr Straker's mode of embossing wool difters from all the ahove, and is very curious and ingenious. When wood is pressed and rubbed with it bluit instrument, the surface yields, and a depression of some depth may be made in it ; if the wood be now soaked in water, the depressed protion will rise again to its original level. Mr Straker takes advantage of this property thas. He rubs down the surface in those parts that are to le linally in relief, he then planes or slaves away the uncompressed portions until the hottom of the depressions are reached and made level with the new surface; the wool is then soaked; the compressed parts rise to their original level, and, of course, in doing so, rise abce the portions that have heen planed away, and present the required device in relief.

EMBOUCHURE (Fr.), that part of a wind instrument to which the lips are applied to prodnce the sombl. -The temm Embotentrais also applied to the month of a river.
EMBOWNED, the heraldic term for anything which is lent like a bow. The illustration represents a sinister arm coupech at the shoulder,

Counter-embowed.
embowed. When the arm is turned the reverse way, it is said to be counter-embowed.

EMBRADCERY: in the law of Englanel, the offence of inthurneing jurors by corrupt means to deliver a partial verilict. This oftence is a species of Maintenance (q. r.). The givine of money to lee distributed amongst jurors is embracery, though the money le not actualty distributed. Fot only persuns attempting to intlucnce the jury, but jurors themselves attenpting momluly to wias the mimes of their fellows, are guilty of cenbracery: The usine mindect means in irder to be sworn on a jury, is also embracery. 'This oftence is punishable by various chld statutes. At present, the crime is punishable ly 6 Geo. IV. c. Su. which emacts, that every person guilty of embracery, and the jury wasentiar thereto, slall lownished ly tine and imprisonment.
FMDRASURES, in Furtification, arc openings in the parapets, flanks of hastions, and other parts of the defence-works, throngh which eannon are

## EMBROCATION-ENEROTDERY.

pointed. The siere-batteries of the enemy have also embrasures. Their use is, to shiedd as much as possible the guns, gun-carriages, gummers, and interior of the place, and yet leave spaces for the free firing of the guns. Laeh opening slopes ontwards, so as to give a greater sween to the gun's aetion.

EMBROCATLOY (Gr, em, into, and brecho, I wet), the same as Liniment ( $q . v$. ).

EMBROIDERY, the art of producing ormamental needlework-patterns upon falries of any lind. This art is coeval with the earliest and rudest manufacture of bair and woollen fabries. It was one of the most important of the early arts in Oriental eountries, where it is still Imactised with great skill amd diligence. It is common among most savage tribes that wear any kind of clothing. The blanket-wrapper of the Red Indian is commonly ornamented with embroidery; the Laplander embroiders upon the reindeer skin that forms his clothes patterns worked with needles of reindeer bone, and thread of reindeer sinews and strips of hide. It is practised as a domestic art in our own country by all classes, from the puneess down to the panper school-ginl, and is carrient on in large manufaetories by very elaborate machinery.
'the Chinese are perhaps the most laborions and elaborate lame-embroiderens of nodern times; their best work is unon silk. The figures are either in coloured silk alone, or in silk combined with gold and silver threat; the figures of men, horses, drasons, \&c., being outlined with gold eord, and tilled "1p coloured aud shaded with silk. The Persians, Turks, and Hindus also still exeel in embroidery; they tose, besides silk and gohl and silver theat, beads, spangles, prents, aml irecions stones. 'The dressslippers of Turkish women of all ranks are elahorately embroidered, usually with a precions stone or a glass beal in the midille of the toe-part of the slipper, and a radiating pattern in gold, silver, or brass wirt and silk surrounding it. The Turkey carpet is a sort of cmbroidered fabric. See Cimpres MaNCFACMURE.

Sume of the Oricutal and Indian embroiterers inelude in their work a great variety of materials besides those above mentioned : feathers arm largely and very tastefully used; the skins of insoets; the nails, claws, and teeth of varions aumals; nuts, pieces of tir, skins of serpents, \&e., are among these. Coins, which are no commonly used as ornaments for the hair of mmarried women in the East, are sometines also worked into their dresses with the embroidery. 'This is especially the case with the 'lurds and (iempians. The Indian women embroiler with their own hair and that of anmals.
Tapestry is a kiml of embroidery, formedy done with the needle, but now chietly with the shuttle. 'Ihis kind of work is, in fact, intermediate between embroidery ant wewving, and it is somewhat diflicult to determine mader which it shoulal be elassed, but in aceordance with the definition given above, we shall anly include needlework under combroidery, and tapestry will he seprately treated.

For hand-embroidery, the falmere is usually stretehed ujou a frane, and the design to be worked is drawn upon it, or sone other contrivance is used to guide the worker. If the falmic is sufficiently thin and opron, a coloned drawing or engraving may be placed behind the work, and fullowed with the neerle. A sheet of thin transparent paper, with lines upon it eorresponding to the threads of the canvas to be worked upon, is sometines used; this is seenred by gum or wax to the drawing; and the design is copied by observing the number of small squares oceupied
by each colour, and filling in the corresponding meshes of the eanvas. Berlin-work, which is is kinal of embroidery, is done in a similar manar, the jattern being an cngraving on which the lines corresponding to tho thireal are printed, and the meshes fillect up with the required colours, nainten in by hand lyy women and clindren, who copy it from the original design of the artist. The name has been given from the fact, that the best matterns have, since is10, been pullished by Wittich, a printseller of Berlin.
111 France, pricked patterns are sometimes used, one for each colour, and coloured powiders are dusted through the holes ulon the fabrie to be worked.

All these deviees render the art of cmiruincry a mere mechanical operation, requiring no further artistie skill or taste than is exercised in knitting stockings; but when the embroidress draws the design in outline ugon the falrie, and works in the colours with her needle under the grudance of her own taste, cumbroidery leeones an art that might rank with water-colour drawing or oil-painting; and it is to be regretted that so much time should he devoteal ly ladies to the mechanieal, and so little effort made in the direction of truly artistie embroidery.
Mustin-mblroidery has been very fashionable of late. This is purely mechanical work. The muslin is printed with a paittern made up of holes of different dimensions; these are ent or punched out, and their edges sewn up with a 'button-hole stitch.' This kind of work is much used as trimming for ladies' elothing, for collars, and chidren's clothes.
Machine-mblroidery has hecun |ractised with eonsiderable success during the last guarter century: A maeline was exbilited in the Frencle ladustrial Exhibition of 1S54, hy M. Mcilmam of Mulhausen, by which one person could guide from 80 to 140 needles, all working at the same time, and prowlueing so many repetitions of the same design. Athongh the details of the construetion of this machine are rather emplex, the prineiple of its action may be casily understond. The needes have their eyes in the midde, and are pointed at each cua, so that they may pass thrugh from one side of the work to the other without being turned. Lach needle is worked by two pair of artificial tingers or pincers, me on each side of the work; they grasp and push the needle through from one sile to the other: A earringe or franze eonnected with each stries of fingers does the worl of the arm, by carrying the fingers to a distance corresponding to thie whale length of the thread, as sum as the needle has passed eompletely througla the work. The frame then returns to exactly its oriminal place, and the needles are again massed through to the onposite set of tinsers, which act in like mamer. If the work were to remain stationary, the needles would thins phss merely backwards amd forwards through the same hole, and make no stiteh; liut by nowing the work as this action pruceeds, stitches will he made, their length and direction varying with the velocity and the direction in which the work moves. If $1+11$ necdels were workins, and the falmie were moved in a straight line, 1411 rows of stitching would he mak ; if the work male a cireular mosenent, 140 circles would be embroidered ; and so on. In order, then, to promuce repetitions of any given design, it is only nevessary to move the falrrie in directions corresponding to the lines of the design. This is done by connecting the frame on which the work is fixed to an aplaratus similar to a common pantagraph, or instrunent so constructed that one end repeats on a smaller seale exactly the movements whieh are given to the other. See Pantagraris.

E'MERSUN. R.hirif Wilio, the must chmated of American philusonhers, was lurn at linston, Tnited States. May 20,180 , enteral Harvard Iniversity in 1817, maduated in 1521 , and herame pastor of a Umarian congregation in Inston m 1829. This oftice, huwever, he resigned in 1830, on acconnt of the gradually inerasing alifferences leetween his own mondes of thomght aml those of his hearers. The next year he suent in Jenelame. Since then, he has lut a quict, retired, matitative hife, chafly at Concorl. Amme the earliest moticeahle protuctions of his ben were two lectures, or orations, entitiod N'aturn real Men Thinkem, deliwend before the Phi Dectir Kapma Kociety at ('ambridye, Unitel states, in 18:7. In the following year appencl his Litwaes Ethices an oration: ant in 1841, The W Whot of Steture, Mon the feformer, the irst series of his Esedy/s, and several lectures, \&e. Thre years later, he issued a second sarics of Exsumg. IL ISt6, be fullished a whane of pomas. lin 1sta, he revisited Enghand, to deliser a series of lectures on Representutive M+n. Whec: pubished, they were generally reckoned the most viquons and intellicille of all the author hat then written. In 1sin? in conjunction with W. IJ. Chaming and J. F. Clarke, he pallished the Acmoiss of Nargaret Fuller (is. vi), Marchesa dossuli. Ebupish Treits alpeared in 18, ib, ant the Combuct of Life in lsco. There is perhats no living writer of mite regarding whom opinions are sin dividea as Fanerson. Sme critics have mat hesitated to phace him among the profoumdest thinkers ledonging to the prent age, while others, equally contident, have fromoned him to be in the main a seinlist amb charlatan. Buth of these dimions, lat espectally the latter, may be dismissed as alsumb. Fio inan who is himede sincere, will doubt the sincerity of the tmerican philnsipher. 11 is entire 'complact of life' womblue otherwise inexpheahle It is trate, howerer, that the sulthety of his intellect, whelh is far mome womberful than cither its lorealth or depth, often deceives him ly the facility with which it disewers divine meanings in mature and the lmman som. E. never panses to harmonise his thandits aul comvictions ; anel, it must be aimitted, has rather a theatrical penthent for paralux. He knows that an inca is more forcible and attractive, and can be elothed in more milliant and pheturespue phasondeng when it is mot pualified, faci, as it were, drageed down from its elevation lye indance of other illas. He lowes to wateli the phay of thenght, and to dream and mase atont it, larne up on the wing of a pmre and delicate imasination, rather than to weigh its signilicance or to buike it up into an dintellectual system' or a creed. E. thas lechougs to the class of minds which are intuitionsl rather than reflective, amb subte rather than sacacions. 11 is thinking chams anmates, and vividly excites the
mental faculty of lis reader, hut it does mot satisly or settle any question conclusirdy: llence his speculations on religion, philusuhy. literature, and life, though stimulating to the young. are coldly regarilel liy men of bature and sage materstanding. E. has movere formally detined the fombantal basis of his speculation. He appears to be what is called a I'antheist, at least he rejects eutirely that kind of Theisor which separates Gend from nature, anil which louks upon him ats simply a living Shiritual Personality. Ife will net recognise a foml who is nut ' one with the blowing chover and the filling rain.' In regard to man and his destimies. he entertains exalted hopes; but rehion is nut in his eses a divindy revealed (in the urdinary senec) on infallitha thing; all crects are merely the nectasaty "mo structural action of the human mind in the comse of its historical progress. Man mote them all (Christianity inchuled), and he lolieves, that from the mexhanstible dejths of our nature thare will come forth in due time new and ever higher faiths, which will supersede those that have warse inefore E. is nften said to have derived a ginat hat of his thinking from Thomas Carlyle. This is triu, but not in any sense that ean justify the volsar criticism which makes him ont to be a 'ranke pocket-cdition of Carlyle.' IIe is essen. tially an original and indepodent genius. Some of his writings have leen translated into French, and have excited consideralle iulmiration amons the F'arisian transcendentalists. Sere Montégut's lissolis de I'hiloso mie Américuine (1851).

FMERI (Fr. ameril, Ger, schmoryl, Gr, wimis: allied to smeror), a varicty of Corualum ( $q$. v.), or ui the same mintral species of which cormehm ant saphire (with oriental ruby, \&e.) are also varieties. It arres with them very perfectly in composition, haviness, and specitic gravity ; but is dull. "home. and not errstallised, sumetimes of a grayish hawk. anl sometimes of a hlue colour. It occurs looth massive and disseminated. Its masses, althongh very eompact, have a somewhat gramular structure it is frumt in several parts of Enrope in Asiir Miner. Greenimit, \&e., senerally in masses seatered through apuens inposits, hat in one lowaty in saxouy in beals of steatite in a schistose rock. The li uf commerce is chiefly ahtained from the island of Nixos. Jieing very hard, it is much used fur griml. ing glass and polishing metals and other hand substances. It is fomed in lumps, having a gramular structure. It is composed of alumina, oxite uf irm, imel silica, with a little lime, in proportions varyind considerably with dibuent specimms. The following may be taken as an average: :hmoma, 82 : oxite of iron, 10 ; silica, 6 : lime, 1 l .
It is preared for use ly first loreaking it into lump alout the size of a hen's ege, then crushing these to punsiler lyy stamers. It is then sifted ton various degrees of fineness, which are numbered aceorling to the meshes of the sieve. Platerglass manfiacturers anl whers seprate E. powidr into diflerent degress of finencss ly the methon of dutriation (o. ©.). A number of copper eylinders of grahuated capraties are flaced in a row, and tillen with water : the E., chumed ul with an ahombance of water, is admitted by a pipe intu the smallest, it then passes to the next in size, and dinally flows from the largest and thus, as is given quantity of water with F . suspembed in it, frases in cural times through vessels of varyins capacities. the anmont of agitation will olvionsly be ereatest in the smallest vessel, least in the larqust, aut in like propertion with the intermediate ; the larest partieles, therefore, simk in the smatler vessel, and so on till noly the wary finest will reach the largest vessel. In this

EDICRIS. ITION is the passing from one fart of the world to another for the purpuse of permanently settling in it. Jemple goinr thus from one district of the sume state to annther-asecially if it he a lestant part, with lifherout hahits and physical peoblaritios are sometimes said to emigrate, and in this way the turm hics leen uiten applied to the Enelish and senteh settlem in lreland. In its establisherl siphtiation, however, the word now refers to thase who leave the state or dominions in which they have heretufore livel, and in this sense the thrm applies to thase roning to the colonies, thongh these are like the United Kingclom, under the antharity of the lisitish conwn. la the conntry which poole lave, they are called emirrants or wanderers ont-in that in whieh they settle, they are nsually ealled immirrants. Jacol amd his family were immigrants to Eyybt, and their descements became emimants from that conntry when they went to inherit the promised land.

The Greeks were addicted to emipration, owing, it has heren sain, to the many political contests which drove the weaker marty from home. Greek emicmants planted colomies on the barlers of the Mediterranean and the Blaek Sen, carrying then as far northward as France. Where they established the city of Aarseille. The liomans were grat colmisers, but hy eonutrest rather than emizration. Thay disliked leavin: ltaly ; and the military ama civil officurs meossary to rule a colony were generally the only homans who almede in it. These eren diel not. in remeral, settle in the colomies with their families, but were realled after a certain period of serviee, the whole arangement much resembling that for the wermant of liritish lndin.

The mirrations of the northern tribes who overan the Roman empire are well known in history : their wamderinge may be said, mulecd, to lave continutal lown to the li3th centitry. Those who wanteral from the north into lrase, where they acquired great territories, lneame known as Nurmans, and were remarkable for entiraly throwing off the language and manners. anl even all the traditions of their orininal homes, and hecoming the most eivilised anl comrtly pritun of the Frencli people. lut thourch thus changed, they stil! continued to wamler. sprealing wior Firitnin, sicily, and the intervening portions of Lurope.

The diseovery of America openod a vast new fidd for emingation, which was takinn immediate alrantage of lyy the Spmish and Portuguese, and later, hy the british, tha Fromeh, the cimmans, and tho lhatela. In the loth c.. many of the Vnglish liwitans, persented in, or discontenter] with, their own comotry, fomm! it more consenial to their tastes to live torether in a new emontry, where they wonld he fren frum the presenee of these who did not sympathise with them, aul they thus fommed the New Fingand endmies. $1 t$ is sincular that, in the lothen son ittampt slandal lo made to revive the plan of andratine for the furposs of maintaining an exclusum ehmrels, as, for instance in the English High 'lareh iolony of ('anturhury, aml the Suteh F'ree - 'hareh colnny uf Otago.

Tlla+ emingition firlils at the present dity are the territory still called the ['meted states of America. the british eolonies in America, and the colonies in

## EMIGRATION.

Sonth Africa, Australia, and New Zealand. 'There is a great distinction to le taken between colomiss fit for emigration and these dependencies of the British crown helle for other pmrposes. India, for instance, the greatest dependency of the crown, is totally unsuited for emigration. The British peophe who go there. with the exception of a few morchants, go to form the civil and military stafle which rules the country. They stay there no langer than they can help, and insteal of living on from generation to generation, semd home their children in early youth, fumilies of British origin having in tembency to degenerate, lonth physically and mentally, by bons residence there. It is useless for working-perple to go there, as every kind of work is done in some way or other ly the natives mach cheaper than it emuld be by Europeans, and the same may be sail of every colony in the lont latitules.

As a question in phatical economy, opinions about emigration have nscillatel violently. At one time it has heen prohbited, at anther encomaged by all kinds of temptire offers hedd ont to emigrants, while teachers of political economy have proclameal that there can umer he ton much emigration. 'Tlue conclusion to which we are coming in this, as in so many other questions in political economy is, that what is good for the imlivithal members of a community is good for the commomity collectively-if people can improve their condition by emigratines, it is as well that they should enigrate; but if otherwise, they had hettor stay at home. It might seem unnecessary to promulgate a doctrine which every man's self-interest should teach him, but mafortunately cmigration is one of the matters on which the Iopulace have been liable to delusions which have produced eqeat mischief. Sometimes poor workmen have crowded in where labour was superabmant and enpital deficient; at others, men have taken their capital to districts where there was no cmployment for it, and the umaturally high price of the necessaries of life has immelintely absorbed it all. loung gentlemen, with nothing but showy aceomplishments, hive qone to the hackwoods of America, where they could only pusper hy ceascless toil in folling and clearing. Ainbitions, discontented artisans. have wandered to the wide pastures of Australia, where they comll ouly wit a scanty subsistence as hut-kecpers or assistant shepherls, not having skill enongh to he intristed with the charge of stock. Such mistakes have originated from people's ignorauce of the fate of those who have gone befire. it leing generally taken for granted that the emigrant has que away for his henefit, whereas it has often leen for lis ruin, and to meet an matimely reath.

The standard difineulty is the want of aljustment of eapital tolahour. This is mbanced by the eirenmstance, that those who wish to emingate are generally ${ }^{\text {nersuas }}$ feeling the pressure of poverty at home. The man, however, who woes to a place where there is no eapital to cmpluy him with-either his own or sume other persom's-is just in the position of a shipurecked marimer cast on the shore. It has been justly remarked, that Ierfect emigration should consist of a transplantation of home-socjety with all its several classes and institutions, meluding capitalists employine labour, artisans of various binis, members of the learued professions, teachers, and elergymen. An ingenious plan for hringing alsont such a distribution was callel the Waketicld system of emiertation, after the name of its innuthor. The foundition of the flan was a high charge for laml£1 per acre, the money so alvancel ly capitalists being employer in exporting labour. The plan failed, however, because penble cond get land in the United States for a quarter of the price; and even
in Australia, where it prowailen. capitalists, instend of luying land, 'sutuattom,' as it was termend, and the govermment had to comatenance the systom, by charging them a sumall rent or squatting lieence.

There was one shan", howner, in which it was fombl nocessary for the gommont to interferethe protection of emigrants, sof fir as wassible, from cructy and imposition. Comincting emigration is a trade in which a large holly of mon are engared. Pefore be lewses his own cmantry, the intemfing cmigrant, thrmun means of agents who take up that line of hasin'ss, cam not only ire shinged for a distant pert, but can contract for his removal inland to his imal flace of settlement, and ean evon contrant fon the parchase of a plat of gromol, or for the salde of his latwor-. The temptations and the opportunitios fur imposition in contracts to be fulfillel so fir away from the place where they are malertinkn, in obwis, and the instanees of ertulty and rapacity exhilited in the emigration trade are among the most atrocions that have ever lismaced human nature. These led to the apmontment of a department of govermment (allen the Enigration Commission, and to the passing of the l'assengers' Aet of IS49, which regulates the lmild and chancter of the vessils which may carry mismants to cortain puints, limits the mumber that may he conveyed, repuires the sutheciency of the provisions and other stores to be certified, and pronvides for monely medical attendance. The British erwermmont cammot, of course, enforce olerlience to their rembations in vessuls lelonging to citizens of the ITmited sitates, after these have gone to sea; lut lonfore allowing such vessels to receive emarants, the owners must find security in this combtry for the jerformance of their undertakiugs, and to a consilerable extent the American government has co-oprated with ours for the protection of emigrants.

The ercatest amome of emisration from any one country is from the [ nited Kinglom. Threre is also a continual stream of emigration from Crmany, which las formed several separate (ioman eome numitios in the Nitates of America, and also in the Pbitish colmics there and in Australia. A new kind of emigration, which has come under the charge of the british athorities, is that of hill corlies from larlia, ani if Chinese, loth for the pupose of suppline free hahome in the sugar-growing and other trupical enlonies where Europeans camot work with safety. A difficulty which nore or less attems all limels of cmigration is peculiarly felt in this kind-viz, that of kecping the two sexes at mything now to an efuality:
'Ihn cammal reports of the Emigration Commissimmers atherl a contimel series of statistics on emigration, "specially from the United Kingrdom. From the 21 st of these, coning down to the end of the year 1860, it alymers that the total number who had cminatm fom the United Kingdom for 46 yearsvi\%.. from 1515 inclusive-was $5,046,067$. Emigration reccivel a yratit inulse from the commercial erisis of 1547, and the potato disease at the same perion. In 1sis, the total number was $93.5(i)$; in 1846, it was 129, 551 ; and in 1547 , it reached 259.270 . The lareest number who emigrated in any one year was 30s,764 in 18:\%. The smallest nunler in any ycar dhring the last 20 was in 1543-viz. 57,2]0. The former (viz, the largest mumber) were distributed thas: to the North American colomies, $32,57:$; to the United States, 244,261 ; to the Australian colonies and New Zealam, 87.851 , and to other places, : 7 49. The other mumber (the smallest) were that distributed: viz., to the North Ameriean colomies, 23.518; to the United States, 28,335; to Ansiralia and New Zealand, 3476 ; and to other places, 1851. The number who emigrated in 1560 was 127,969 ;

ENO'LLIENTS (fimm Lat. mollis, soft), sul)stances used to soften the textures to which thery are appliend, as paltices, fummontions, \&e., exter"nally, and lemmleents (q. F) intemally.

ENOTJOX. This is the mame for one of the comprehensive departments of the human minl. It is now usual to make a threcfoll division of the minel-Emotion, or Fecling ; Velition, wr Action prompted by Fuelings; and Intellect, wr 'I'lumetht. It is nut muant that these can be manifested in absulatu separation; or that we can be at one tine all cmotion. another time all wolition. ant again all thonght, withont eithor of the other two. But althongh our living mind is usually a eonemrence, in Greater or less degree, of all of them. still thig can Le elistingushed as presenting very different append
ances, aecortiner as ane or wher preduminatus. Wender, Anser, Fear, Alfection, are emotions; the lets that we perfomm to promre pleasurable foctines, and aromb prinful, are volitions, or exercises of Will: Nomory and Iteanoming are processe's of Ihmeht, ur Intellect.

Emotion is essentially a comdition of the waking, conscinus minul. When aslectur or a faint, or in :hy "f those states called • beiner unconscions,' wo have no emotion ito say that we have wonld be a controbliction, which shews that 'emotion' is a very wide and comprensive word. In fact, whenever Wh are mentally exeited 'anyhow, we noay lue satel tis le under conotion. Our active mosements and intollectund processes can sumetimes ors on with vary little conseiomsness: we may walk amd seareely le awout of it trains of thomght may lee proveed tu have passed throurh the mind while we are umousemus of them. Now, it is these uncouscions monles of Volition and Intellect that present the Uruatust contrast to emotion; shewing how nearly conextansive this word is with mental wakefnlatess. wr consemmeness, in its wilest signitication.

Fimotion, then. is of the very essence of mind, althongh not expressing the whole of mind. There are three distinct kinds on dinsions of it: l'leasures, Tanns, and Lxeitement that is neither pleasurable nur paimful.

Finer kime of Pleasmre is inchuled meler emotion in its widest aceegtation. The pheasures of the Shases are as much of an emotional chariater as those pleasures that are unt of the senses-as, for

 senses may be make to yeld pleasuralide emotion; aud all those othor suse pithibities, sometimes colled the sperial enotions, of which a classitication is
 pans. What phonsure is in its immost nature, each 0w mast timit trom his own expergence; it is an notimate fitet of the haman eonscionsuess whel cannot be reolved int" anything more fandmental, althourh, as will hesmen, we cin lay down the laws that conmect it with the other manifostations of minil-namely. aution amb thonght, and with the facts af ame corporeal life.

In the mext plaw, l'ain is a gecies of cmotion. Wै e lanne this combtion as beiner the rupusite of l'lasuru, as the somer of activity dimecter to its remoxial or abonement, and as the cause of a [eculiar motwad stpenance. known as the Expression on l'hysinumbuy of l'am. All the inlets of pleasure "ote alse inlets of pain. The varions sensibiluties if the minn, whether the ontward senses, or the more inward emotions give rise at ome time to pleazure, at othor times to pain, the comblitnons of vach lowner venerally well umberstoml hy ns ; we cam Whtine the arencies that camse pleasare or sudlerins thonomh the skin. the ear, ar the eve.
lont it is requisites, further, to rocognise certain mumes of Xentral Lxeitement. in order to exhanst the emmeras of amotion. We are very often rumsed. shockel. excited. w male mentally alive, when we can harily say that we are either pleased or put to pain. The nimd is awakened and engressed with some one thinge othwr things are exchuded; aml the barticular couse of the excitement is impressed upon us so ats tu lie atorwards remembered, while all the time we are remoral alike from enjoyment atud from sutherime. This is a kiul of emotion that has its principal ralue in the syluere of intellect. The "motion "f W"omber or istomishment is not selflom of this nature: for although we sometimes derive $1^{\text {bensure, and smmetimes the olposite, from a shock }}$ of surpuise, we are very frequently afleetert in neither way, being simply imporssed. The strange

## EMOTION-EMPANNEL.

general temor, although with sane seemins exceptimos. Jny makes a tuill spuntaneously active, erect, suin matel, aml unury, tic. It is as if a fluyl of juwser wore difitised thrvidh his members; and the Ceflirts he is then promptell to. lead to no painful rxhaustion. The "uming up of the features, ly the clevation of the cyebrows and the retraction of the murth, indicates thit the stream of cheryy has coursect over the face. In a still sreater shook, the empulsiveness of laughter, by which respiration is quirkined, attests the superaunundance of the animal spirits. The boty stands more crect, anul every act lone is done with nore emphasis. Grivif and delpession are the onposite in every particular. The frame is languid ami stomping, the features liftless, the voice is a fecill wail; and althoush there is a specics of convalsion atteniing on this comidition of mind, it is a markell contrait th the other. The sol, is causell ly the purtial puralysios of the diaphram, which necessitates great voluntary eflorts in urder that hreathing may poceed. The choking sensation at the throt is allso a species of paralysis from loss of vital power. 'The convalsions arising under such circumstances are productive of an exhausting reaction. which is the case with all the cuerertic movements stimulated be extreme pain.
such is undunbtedly the general fact. Fint why should Irain stimulate, "Ir give streu, th th, some spocial mnscles, such as the comragator of the eyehrow, and the depressur if the angle of the month? This has appeared a great hillienty to the ablest physiolugists. It would look as if pleasure coincided with an energetic wave sent to smme muscles, and pain with an energetic wave sent to uthers; so that the opposite conditions of mind are equally acenmanied by an accession of power to sume budily member, Lut if we examine the matter more narrowly, it will probally turn out that the muscles that seem to be stimulated unier pain, are not so in reality, but ohtain the upper hand throngle the general relasation of the system. Thus, take the mouth. We know the state of the month in languor, inaction, and sleep. We know that when we are rousul in any way, the museles of the face operate and draw the month asmber in a varicty aif forns. l'leasure corresponds with our energetic mools, pain causes a collapse towarls the sleery and exhansted conditinn which represents a state of departel chergy: Sin the collapse of the looty minht secm in exertion of the flexor muscles, or those that bund the frume forward; but we are well aware that such collapise takes place when the systom is totally lifeless. A renewed energy, as a matter of course, makes us stand erect.

This is a part of the case in reply to the oljections arising from a specifie expession if pan, but not the whole: and the answer to the dilliculties still remaning is fumished 1 s a fact that, if well anthentheatel, will probally dispose of nearly all the cxecpotions to the general principle buw conteaded fir. It is the arganic functions. morc then the musculer system, whose increased vitality coinciles with pleasurahle fecling, and their diminished action with prain. Mnscular exereise is often highly agretahle, hut the pleasure of rating aiter exercise is still more sn. Now, there can lie bittle dunht that what happeas in the state of healthy repose is this: then amonnt of vital foree stimulated by exercisethe increased enerof derived from flying the lungs ami heart-is now allowed to leave the active nembers, and to pass to the other organs-the digestion, skin, ami various seereting glands-and it is their agmandisement that is associated with the comfortable sensations of rejose and sinking into slece. Thus, the ahating of muscular energy may Le a cause of platare, proviled the organic func-
tions are raised in consequence; lut it may be maintained as a hiyhy probable supposition, that a certain lwalth and energy of some or all of these functions (it is diflicult to draw a specinie line) is essontial to pleasurable fecling. We may donbt whether eren mental eanses can materially raise the tone of enjoyment, if they do not also raise the activity of some of these organs. Not only may a ferson be very happy and comfortalle in the prostration of the muscular energy, even in a sick-bed, but one way of procuring comfort is to imduce a total inaction of the moving membres, to allow all the available nervous power to pass to the viscera and secretions. Hence a forcel reluaction if the muscles gencrolly, by the employment of some of them, is a means of soothing the mind under main. Thas, the active intervention of certain small museles-such as the corrugator of the eyebrows, the orbicular muscle of the month, and the depressor of the angle of the month-by relaxing : much greater body of mnsele, is the means of settimg free vital energy for bohoof of the other parts of the system. This wonll explain the mental relief furnishal by an assumed saduess of feature, ami a voluntary collialse of the body gemerally.

It would aprear, then, that the stimulus of muscle is not necessarly or immediately a cause of pluasure ; while the stimulus of the organic functions is so. Thuz, a bracing cold guickens the activitics, but is apt to cause a shocl of pain, by temporarily checkinf the action of the skin; when the reaction arrives, this chects is converted into stimulation, aud the mental state is altered in like manner. A litter tonie must ide sulprosed to act on the same principle.

The emotions of the human mind may be classificd mader two heads:

First-The pleasures, and pains, and modes of excitement growing onat of the exureise of the Senses, the Dovements, and the $A$ plyetites. Sce Sexses. The five scuses, commonly recognised, are partly sources of pheasure and pain, in which case they yield Emotion, and partly' sources of Knowledge, by which they are related to the Intellect. There are other sensibilities not included in the five senses, but ranking with them in those particulars-as the feelings of Minscular Exercise and Reprose, and the sensations of Digestion, liespration. \& .

The second head comprises the Special Emotions not arising immediately out of Sensation, although conmected therowith. These have been variousiy classified. The fullowing is one more of laying them out: I. Fewlings of Liberty and Restraint; $\therefore$ Wonder ; 3. 'lerror ; 4. Teniler Affections; 5. Enotions of sulf-conplacency, Love of Aprobation, \ⅇ 6. Sentiment of lower; 7. Irascibility ; 8. Enations of Action, incluling the interest of I'ursuit or I'lot: ?. Emutions of Intellect, Lave of Knowledge, Conoistency, and Iaconsistency; 10 . Fine Art limotions, or 'laste; 11. The Noral Sense.

On this suljuct, see Willer's Physiology, Marements dree to the l'ussions of the Mind; Bell's Anatomy of Eopersion: Stewart on the Active Powers; Eain on the Enotions and the $\mathrm{F}^{*}$ ll, \&e.

EMPA'NNEL-Empanellure el ponerp in assisis ct jurutis-to write in a schedule or roll the names of such jururs as the sheriff returns to pass upon any trial. The judges of assize in England, before eommencins their cirenits, issus precepts to the sherifis of the several comaties, calligernon them to smmon as sulficiont mumber of jurors to serve upon the graml and petty jurics. In compliance with this orler, the sherifi pepares lists, callell the Pands (11. ..) of the jury, and the persons named in the hists are therenron smmoned to attend at the assize:
 one of the leaters of the 'panish revolution of 1820, was burn in 1-5. He was the som of lume parents, and coterel the Spanish amy in 170. . It the luad of some or boto men, he carrial on a guerilla warfare aganst the Fromeh durine the T'eninsular strugere, amb acquited arat distiaction. In l:14, he was appuinted colomel in the remar army, and the kime himself created him fieh. marshal: but in consequence of petitioning Ferdinami, in lalid, to rematitute the Cortes, he was

 tork a pemment part on the side of the ennstitutionalists, and on suseral wersinus exhinited great courase, daring. aml circmmenection. Aiter the trimulh of the abshutists in $15-5$, he was arrested, "xpesed in an irm rate to the contumely of the passers-by, and finally wecuted un a commom cilbet, amidst the furiecions yellings of a debased and hinerty-hating formace.

EMIPEDOCLEA, a Greck philusphar of Agrigentum, in Sicily, livel abont tor e.e. so great was the estimation in which he was hed hy his fothow-citizens as a physicim, a friend of the gols, a predicter of futurity: ame a sorcerer, or conjurn of mature that the are said to have offered him the sosercinty. Ihat heins an enomy of tyranny, he declimet it, and was the means of relivering the commmity from the dominion of the aristocracs, ame himring in a demorav. There was a tradition that he threw himself intio the crater of Etna, in wher that his sulden disappearance might beget a belief in his divine origin: this, howerer, can ouly be reguth as a mere fable, like the story told liy Lncian, that Etm threw out the sandals of the vain phinsonhtre. and thus destroyed the popular belien in his divinity. The statement of Aristatle is, that he dien at the ate of 60 ; later writers extend the perinl of his life considerably further, but their testimus is not equal in weirlit to that of Aristotle.

In E., philosmhe thomeht is loume up with pectry and myth even in a higher de.nree than in Parminikes (i. v.). His general point of view is determined by the induence of the lieatic schmol unn the physical themes of the lonie phalosophers. He asumed fonr primitive independent suhstances-air. water, dire, and earth, which hor designates often be the mythical manes Zins, II ere de. These four itments, as they were called, kept their phace till momem chemistry lisloded them. Dlang with material clements, he atlimel the exist -- ace if two mowing and operating luwers love and hate, or friemblip and strife, the first as the uniting primiphe, the secoml as the separating. The contrast hetween matter and luwer. or force, is thas brought wat mome strongy b. Ehan by previons phinsuphers. The misin of the worth, or cosmus. he conceivel in this way: In the berinning, the dements were hed in a sort of homed mity, or selde if, ly the attrative fime of lowe when hate presinaly exterime perntrated an ar repeling and veparating principle. In this process of separation, which gises riwe to the individual alojects of mature. he geems to hare asmand a suries of stages, a arabal developmont of the berfect mint if $1 l_{\text {le }}$ muperact, and ar prindeal retmen of thins to the demental state, in orime to buatin separated, and a new world of fhommen formot. From the frarmonts that we prsacs of his dulaction lom. it is not puite char in lus far he onsibered tire as the sulistratim of trife, and water as the sulistratum of love, and as ribed varius apations to the predominance of one or the other of thes primeiples. If his "pinions on suceial phanman. nay be mentioned his doctrine of cmanathons, which proceding
from one thing conter into comerponling openings in wher thinus. by the assmmption in comnection with the maxim, that like is knom maly lis like, he thenatht to explain the nature of perepetion by the senses. 1he attempted to sive a moral application to the old doetrine of the transmisration of smals, his views of which resembled those of Pythasuras. The fracments of k . have been alited by
 and steiu (bom, Asaz.
 fication of this, which in the momern world has lecenme the highest tithe of sumereignty, can be mokerstomi maly when it is taken in conjunction with imprimm, whin in the liman prlitical system hat a fucoliar and somuchat techmical meaning. The imperinm of a masistrate, le he king (ur consul, was the f"wer which he pussessed of l, riming flysical force into onration for the fulthment of his hehests. This puwer was confured by a lex ruriata. and it required this authorisation to entitle a comsul to act as the commanler if am army. In the case of the kings also, the imperimm was not implied in their clection, lut was conferrel sepratele, by a sepmate act of the mational will. 'On the death of Kime Pompilius,' says ,idero, the populas in the comitia cericter dectel Tallas ILostilins king, upon the rogation of an inferere: am? the king, following the example of lompilins, took the rotes of the populas, according to their cerver, on the question of his inperimm.- Republi, ii. 17. Now, it was in virtue of this imprimm that the title imperator was giventu its posscsaor. Far from being an emperor in the modern sense, he might he a concul or a proconsul ; and there were in fact, many imperatores, even after the title had been assmued as a prenomen ly Julins Casa\%. It was this assumbtion which gradually ave to the title its modern signitication." In repulifan tmes, it had followed the name, and indicated simply that its pussessor was an imperator, or one passessel of the imperimm; now it preceded it, ami simified that he whw arogatent it to himself was the emperom. In this form it appears on the coins of the suceessons of Julius. After the times of the Antomines, the title grew into use as cxpressin the puscesson of the socereighty of the Coman worlo, in which sense Princeps also was frequently cmploved. In the introunction to the Institutes, Instimion uses beth, in siukinus of himself, in the same bampath. From the "mperors of the We:s, the dithe pased to Charlemagne, the fommer of the demain compres When the Carkovimgian fomily expiral in the Geman hanch, the inderial crown lueame elotive, and emontimed to heso till it wemp-Fiments 1I., who in 1804 hal Ieclated himself hereditary Lmporn of Austria, having lath it down in 1siog. In aldition to the Euncror of Anstria, there are now in Europe the Kmpror of lassia and the Empera of the Prenchthe latter of whow, being an elactel momareh, holets a pusition, in one respect at least, resembling that of the whel emperors of the secomd Western Empire, with whom it is sometimes thonght that he is not umbilling to be incentifiel.
 a moth of the same family (Bomberciler) with the silk-wom moth, and of it cems to which the lamper of hepidoperma insets heloms. The E. M. is the largest british lepingotermis insect. Its rxpanse of wings is athout these and is half inches. Fach wing is omamented with a large eye-like ghasy and transprent spot, and such spots are exhlitell by may of the pems. The l'eacock Hoth (s) puronit mepor) is the largest Luropean apccics, and attains an expanse of five inches
across the wings. The cocoons of the E. M. are remarkahle for heingr formed internally of stiff convergent elastic threads, which rumily 1 wrmit the

eseape of the inscet, lut prevent the entrance of intrmers. "lhe ereouns of this genus of wothes are invested with silk. which in thina and India is eollected for use. See Stuk-WOEM.

EMDETRACEA. Sce (rownerivi.
E'MPHASIS. See Aceext.
EMPDIYSE'MA, an unnatural distension of a part with air. Emplnysema of the cellular texture wiften takes place in the meighlmmonood of womuls of the air-passages in the lumes, and is tho conserfuence of an escape of air from these parts. Limpliysema of the lungs is the consequence either of distension or of rupture of the air-vosicles, especially on the surface. It is rarely that romphy suma is prodneed nthorwise than mechanically: lont collecetions of tluid in a state of clecompio. sition smoctimes mive ont gases, wheh puotrate and disteme the textmes with which they are in cuntact.

EMPIIETEU'SIS (ir., an implanting), in the Poman law, a perpectual right in a pioce of land, for which il yearly sum was paid to the superior or original proprictors. The mphyteusis mach rerembled our feudal huldings, su much so, indeed, that Craig anl othor Sonteh writers apply the term to thom. The sum pratel tor the suptrion was ealled the conon cmplegtentions. The tenant hanleal down the right to his heirs, and was entitled to sell, but only on comblition of pivine the tirst otler to the dominus. The consent of the lnd. howerer, was not mecessary to entitle him tu impromate the empliytenta for his deht. Justimian ratt the emphyteusis and the ager rertigulis on the same fontines. The latter is the tem andied tis lands leased ly the Fioman state, by tomas, eerlesiastical corporations. and ly the restal virgins. Ther" were several ways in which the right of enphytensis might cease. If the tenant died witlunt heirs, it reverted th the dominus. IIe night also lose his rieht hy injuriur the property, hy non-pryment of his rent or puhlie burchens, or by alienation without notice to the domimus. It was, of course, also in his power to renounce it.

EMIPILIC (Gr. smpeinikos, an experimentalist or searcher after facts in nature, from privae, 1 try). It is lifficult to say at what jeriod, or in what manner,
this woml luman to dergenerate from its miginal meaning. l'mbably the bleat was, that empricism, or experimental scieluee extlulech. 1reause it dicl not require the reasming tacmities for its enltivation : amel, therefone, the prafessinn of empricisin came to he synonymuns with valerar ismanace. The empries were a regular sect of ancicent physicians in the time. of (elsus and Cialen, who erives us some insight into their monles of thonght amil prantine. They latil great stress on the mupejulieed olnopyation of mature; and thought that, by a careful culluction of observed facts forminer a history, tho coincilume of many observations would lewal to maltorable preseriptions for certain cases. 'l'he later wherents sif the sehool exchuded all theoretical stury, wen that of anatomy, and were guialed solely ly tralition and thein intivitual expericnce. IFy an empiric in mullicine is now understanl a man who, from want of thenretie knowledge, mescrilues remedies by mess according to the name of the disease on to indivilual symutoms, withont thinking of the constitntion of the patient, or wther modifying ciromstances. What are called spocifics are administered on this principle, or want of priaciple.

EMP1RICAL FO'RMELA, in C'hemistry, is the mode if expressines the constituents of a tompoumal in symbols, where the total quatity of each element is witten lown withont reference to any particular wrave or state uf combination. 'Thus, alcohol consists of 4 equivalents of earlmon, 6 of hydroren, and 2 wi oxyren ; and its cmpirical formula is ${ }^{1}{ }_{4} \mathrm{IC}_{6} \mathrm{O}_{2}$. Whan regarden, however, as a member of a fomily uromp, the constituents are arranfed in a more systematic manner, as in $\mathrm{C}_{4} \mathrm{H}_{6} \mathrm{O}$, II O , bepresentin! the thengetieal constitution of aleoliol, which, strictly spaking is the lyydrated oxide of ethyl. Again, the ratmoal formula of Epsom salts, which is Mnoso +7110 , represents it thenntically as a hydrated sulphate of manmesia; while the empirical formula $\mathrm{He}_{\mathrm{g}} \mathrm{l}_{\text {, }} \mathrm{SO}_{1}$ merely tells us that it consists of 1 equivalent of mannesimm (Na), l uf sulphur (心), 7 equivalents of hydrogen, and 11 of oxygen.

EMPIRICAL LAWS are such as express relationships, which may lee weroly aceidental, Hiservel to sulsist amoner dhenomena, but which Alo not sugreest or imply the "xplamation or eanse of the produetom of the phenomma. They are usually tentative, and form staones in the progess of discovery of ansal laws. binke"s luw of the distances of the planets from the sun may be accerted as an example of an empirical law.

EXISOLI, a town of Tuseans: in the kinglom of Italy, is situated in a remarkihly beautiful and fortile district on the luft bank of the Arao, 16 miles west-soutiowest of Floreme. It is a thriving town, is surrountisl by walls flanlend with towers, and althond its strmets are normos, it is on the whole well hmilt, and has some roml squares. The most interenting luilimer is the Coblecriate C'murh, Inilt in loos, the lime wriginal fagale of which hiss sutferal lint little from mulern impromements, although the other purtions of the huilding were consillerably alterel in 17.3 s . This chmele contains several reoul paintinas, amd has also some excellent specimens of senlitire, ammas which is une by Donatell. L. has several manufictories of cotton, luather, straw-hats, anml glas-, a ermsiberalde trade is agricultumal frumbe, and a weckly market of soméimpurtance. l'mp, biono.

NAI'U'I: $11^{+} .11$ (6.r. emperion, trating-place). The word is deriverl frome emporos, which signitied in

warmer parts of the world. They differ more in their habits than in their appearance and structural characters from Land Tortoises. Their caralace, howerer, is more thattened, and their feet are wore expanded insl webled, so that they swim with great finelity. They feed chietly on animal food, as insects and nolluses, aquatic reptiles, and tishes, some of them even dreying upon birals and mammalia, which come within their reach. 'Twn or three species of fianule are natives of the sunth of

Alligator Tortoise in the act of seizing a Water spaniel.
Europe; but two species are particularly abmalant in North America, the Painted Tortoise (Emys pieto), and the Alligator Tortoise (Emysaura serpentina). The tlesh of some, as Cistudo Europrea, is estemen] for food. This small species, about ten inches long, an inhabitant of lalses, marshes, and muldy phaces in the south and east of Earope, is sometimes kept in pouls, and fattened fur the table on lettuceleares, breat, \&c.
ENADLEL (Fr. imail, originally csmuil, from the same ront as smelt, the name given to ritritied substances of various composition applied to the surface of metals. Enamelling is practised (1) for purpuses of utility, as in making the dial-plates of watches and clocks, coating the insides of culinary ressels, \&e., when it may be considered as beloneing to the useful arts; and also (2) for broducing olijects of ornament and beanty-artistic designs, figures, prortraits, \&c., when it l, elongs to the fine arts. Both the eomposition of emamels and the processes of applying them are intricate suljects, besides being in many cases liept secret by the inventors ; and we ean only atford space for the most general imlications of their nature. The lasis of all enamels is an easily fusible colurless silicate or thass, to which the desired colour and the desired degree of oparueness are imparted by mixtures ui metallic oxides. The molten mass, after cooling. is reduced to a tine powder, and washed, and the moist paste is then nsually sprearl with a spatula upon the suriace of the nietal; the whole is than exposed in a furnace (fircl, as it is called) till the enamel is melted, when it allocres firmly to the metal. The metal most eommonly used as a ground for enamel is copper: hat for the finest kinds of cmamel-work gold and silver are also used:

Artistic or Brnamental Enamtling.-This art is of great antipuity: it is proved by the romains found in Egypt to have been practisel there; from the Pogptians it passed to the Greeks, and it was extensively employed in decoration by the liomans; in the reign of Angustus, the Foman architects legan to make use uf coloured glass in their mosaic decorations; various limman anticuitics, omamented with enamel, have heen dug up in Britain, and it
was allopted there by the Saxons and Sommans. A jewel foum at Atheluey, in Somersetshire, and now preserver in the Ashmolean Duseum at Oxford, is proved by the inseription on it to have been made lyy orler of Alfed; and there are rarious figures with draperies partly composerl uf coloured enamel on the sides of the gold chp given by king John to the corporation of lym, in Norfolk.

Enamelling has been practisel from a remote period in the East, l'ersia, India, and China. moder a separate and listinct development: lout there is nothing from which it can be inferrel that the various methols were in use earler than in Europe. As a lecoration, enamelling was more popmar, and attained to ereater lerbetion in tha midule ages, than in classic times. It was extens sively practised at byzantim from the 4 th until the 1]th c., and afterwarls in laty in the Fhensh $1^{\text {monvinces. and at Limoges in the sonth of Eratace. }}$ whore it was suecessindly followed out till a cumparatively late perion, in several ditherent styles. The Byzantine and other early styles of enamel. work down to the lithe. were geverally emplowed in ornansenting mbjects connected with the service of the ehweh, such as reliquaries, pyxes, churels. candlesticks. crosiers. portalile altars, the frontils of oltars, \&e.; the art was also greatly used in ornamentiny jewellery, and vessels male for use or display in the mansions of the rieh, such as saltcellars, cofters, ewers, plateanx, candlesticks, \&c. After this period, the art declined, until a new phase of it was invented in France, in which enamel is used as a cromml, and the figures are paintend with vitrified colours on the surface of it. This is cnamel[ranting properly so callen, the earlier styles leing more of the nature of mosaics.

Listinguished with reference to the manner of execution, enamel-work may be divided into foner kimls: 1. Cluisonce, or enclosed, the method of the Byzantine sehool, in which the design is formed in a kind of metal case, generally gold or copler, and the several colours are separated ly very delicate tiligree sold bands, to frevent them muning into each other. 2. Chump Lere practsed by the early Limoges school. In this process, the ornamental desion, $m$ the figmes that were to be tillod in with colour, were cut in the metal (generally conpry) to sume depth; and wherever two cohnus met, a thin partition of the metal was left, to prevent the culours ruming into each wher by tusin when fired. 3. Transluvent enamel, which had its origin. and was brought to great loricetion in laly, was composel of trausparent conamel of every rasiety of eolone, laicl in thin cortings over the design. which was incised on the motal, generally silver, the figure or tigures being slichtly rasenl in low rchet, and marked with the graver, so as to allow the drawing of the contours to be sten through the ground, insteal of being formed by the coarse lines of the celluer, as in the early Limoges enamels. 4. Surface-painted enamels, which may be livilod into two stages. The first stage, which is known as the lute Limoge style, syrany up under Francis l. of France (1515-150). In this the mactice was to cover the metal plate with a coating of dark enamel for shadows and to Inint on thes with white, sometimes set oll with foll hatchings, sometimes having the hands and Cther parts of the figures completely coloured. The designs were generally taken from well-known 1 nintings or enyravings of the period ; and the style of the designs was strongly intuenced by that of the Italian artists emplosed by Prancis T. This style soon digenerated, anil gave flace to the latest or minuture style, which was invented hefore the

［mber C．anr has lwon riven an account of the manmer in which lomman emmps were construrted．It is probathe that the same general phan was adhered
to until the invention of gimporiles. When cammon came to be uschl, howner, a now arrangement of camp became nerossary to shied the amy from lons-rame pojectike. Brerything, indecd, relatins to attack and elefence, especially to the latter, is taken into account in clussing the locality of a comp, A healthy site, gool water, scourity from thanls, and denty of fuel and forage, are the chicf requisites in a gered encampment.

The British amy, when in the fieh, usnally en-
 arranged hafore the tropis arrive. The infantre, coway, and artillery are soplacel 2 a to defend cach wher in the event of a sudden attack. There is a chain of gaards all round the sfut: anl the park of artillery is placel hehini the thenp. The suttlems aml servants are in the rear of the camp, but mot beyond the limits of the rear-suard, The tents of the infantry are ransent in rows perpentiondar t, the front, each row contaming the tents (If. v.) for one company: The circular tonts, now much used, acommondate fifteen men rach. The eavalry are in like manner encanded in ruws: but each circular tentacommentates omly twolve men. There are streets or roads between the rows of tents, of regulated wiilth; and the othiners' tents are at a given distance lechime those of the men: the subalterns' tents being nearest to those of the compranies to which they respectively belouge. As a general mide, the line of the while emanment is made to correspond as nearly as practicable with that in which the trops are intended to engige the enemy when fightin! is reneweal; to which end the tents of each battalion are not allowed to oecupy a yreater space in front than the battabion itself wohld eover when in orler of hattle.

I mer most circumstancer, in mollem warfare, an encampent is not defempm ly artificial constructions; the comanaler seds sceurity for his tronps in streams, marshes, difisult surfice of comery, and numerons advancel pust. Sumetines, however, more extensive defence.works are necessary ; and then we have an example of an intrencled camp, which lecomes a fortifiod enclusure. The chief uses of such a eamp are-to secure an army while covering a sioge, or in winter-puarters. to acommonate a corps if diservation while the active army is engaserd elsewhere; or to defend a position near a fortitied place. C'are is taken that the site is ont commaded hy ueighbowing hills. All rillages are weetpin, and all obstacles remused, within a distance of halif a mile or a mile. The areat of gromil selocted is hage emonach to contain the necessary store of arms, immmition, food, fucl, frane am water. anl to enable the tron io to manouve. The junction of two rivers is uften solucted as a favomable spot. Viarinus defence-works are constructed aromil ir mere the shot. such as contimans carth-walis. rollmults, therhes, Se. Thu
 the hong int rvals whon the cmmonaling was suspenden, had mans of the characteristios of an intrenched camp.

C'amps of ins/antiom may la wither tempmary or permanent, of the funder kind was the camp formed at Chobham in surrey in 1 sin. merny for the smmer months, to exareise certain remiments in csolutions. Another was formed at shomelifi. in Kent in 185.5. at first to rective trimps of the Fomern Leriwn : but it has since bern improven to the condition of a prmanent camp. The great establishment at Aldershatt is described in a sepmate artiele. Alinershott ('wimp since that article was writton, the total expuratiture has risen to nearly a millinn sterling. the camp has been impreved in all particulars, and the small agricultural village of Ahershott has
grown into an important commercial town, with railway stations, hotels, market-honse, handsmas shops, \&e. A large promanent camp has also been estalhished in Irelam, on a plain called the 'urragh of kiklare, and there are smaller ones at Iembroke and Colchester.

ENCAU'STIC PAINTING (Gr, monsidis, infired, or fixed by fire), a mamer of fainting powtised ly the ancients. As the name implied that fire was used in the exechtion. sume have leen led to sulpmee that cocanstic paintinf was the same as -nancl painting: lat natices ley Play and other witers show chearly that it was a speche of paintins in which the chice ingredient nsen for mating and fixing the chlours was wax dissolvel ly heat. Farions attempts have been math in man mimes to revive it. Abont the milalle of lat eentury, Connt C'ayhs and M. Eachelier, and in 1792, Miss Groenland, mate various experiments with this view. The coment laid the result of his "xperiments lefore the Acalemies of Painting and of Sciences in I'aris; and the ingeninus laty was rewarded with a fold hathet liy the Rociety for the Fnemuragment of Arts in Lomilon; but the success of these efforts seems to have heen but temprary. Encanstic painting was, however, some years ago again taken up in fiermany moter the patronace of the lato king of Bavaria, who had a number of innomtant works executed in this way; The colours are gomm?, and lail on with a rchicle composed principlly of wax. Miss firecmant dissolvel gum-arahic in water, afterwards alding gum-mastic, which was lissolved ly stirring and hoiling, and when the mixture han rachal the boiling point, she put in the wax. After paintine the peture, she passed a thin toating of melted wax over it with a have loush, and then lrew over the surface an iron-for ironing linen-mokerately heated. After the picture conled, it was rubbed with a tine linen eloth. The ficrman methor is sumewhat similar, but some ather ingrulients are uscl; amond these, potash with the wax; and in place of an iron heine basser wer the surface, the wax is hromitht to the surface by a vessel contanins fire boins held at a little distance from the picture. Encanstic painting is not likely to come into gencral use. for mither in imparting luilliancy to the coloms, facility for execution, now durahility, is it to la comparel with cil-prainting.

ENCAT*STIC TILES, ornamontal tiles made of an earthen-ware intermerliate in quality hetween emmon tiles anl porcelain, and now extensively used for paving churches, halls, conservaturies, de. They are of two kinds-phain or 'dry tiles,' and diented tiles. The former are symare or triangular. and of different colones, so that when had they may fomm mosaic. The triangular are most eflective: and ly means of a fuw colurs, a great rariety of chromatie semetrical fatterns may he protuced. 'These 'dry tiln's' are made by phacing the colonred chay in a jewhlered state in strong sticl moulds, amb subjocting it to a pressure of several humbed tons, loy means of a phomer fitting aceurately into the mombl. A Aepth of three inches of powite is enmpressel intos a the of oue inch in thickness. The inotem of the monhl is usually rihned, to give the tile a correspundins surface, in onder to athord a better hold for the mortar. The emmressed clay is then remosed, heated in a hot chamber, lired, and clazed if required. slian and panels of yarisus kimds. shirt studs and bittons, and a variety uf ornamental articles, are made in this maner. See Patpery and lonefatio.

The tienred tiles are made in a different wanner. The chay is worked in a muist state, lint very

## ENCELNTE-ENCRINITES

stiff. tirst into square hocks. These are cut into square alices or shahs ley passing a ware throug then: unn this is put a facing of the clay of the colour of the smome of the patern-amother laver, of a diflemont guality of elaty, is sometimus adical th the lootom, toprevent warging It is then phaced in a moshl, with a plastel of lamis slah forming the toln on the molere suriace of whel is the fatern in relief. ENCORE ("Again'), a french expression, generally used in linglind by the andience of a theatre IIf ennert-rom, when repuesting the repetition of the prommance of a phece of music. It is nut used liy the l'rench themselves, who, in similar cireumstances, exclam his (twice).
 a name fiven to sman emhomiferons limestones, from the great abmutue in them of the caleareons skeletons of linerinites (1). v.), whote masses if the ruck leing athost entircly composed of them.
 fossil Crimeidea, a family of Chinomermata (q. v.). The popular namb, stone Lilies, is given to the numerous fossil species, from the resemblanco which many of them present when the rays are closed to the lily. Dlence alse the name Crinoidea. Crinoids are characterised by having their hodies supported, momes the whale or part of their cxistence, on a longer or shorter jointel calcareons stem. The stem is attaehed either ly the expanded base, or by jointed processes, to the rocky hed of the sea, or perhaps, in sime eases, to floating hodies, like barnacles. Oceasionally, numerous rout-like siderarms are sent out from the base of the stem to strengthen and sulphort it: anl in some species, as in the recent $I^{\prime}$ entacrinus, the colmma throuthont its length is furnished

Encrinite Stems (Mountain Limestone).
with axillary side-arms. The stem is round or firesiken ; in one genus only is it elliptieal. It is composed of a munds of joints, perforated in the ceatre, for the passase of a suft portion of the amimal, and beautifully sculpturel on the artienlating surfaces. The lonly is cup-shaped, and composed of many. sided plates on the under surface to the centre of which the stalk is attached, while the nyper surface is covered with a coriaceons skin, protected ly many smad plates. On this was situatel the month, which was frecuently probuscidiform, and near it was the anal orifice-the alimentary eanal beind turned upon itself, as in the Bryoza. The arms spring from the edges of the cup. 'They are five in number at their migin, hat, with few exeeptions, speedily divide and subtivide dechotnmously. The arms are composed of articulated calemrens joints, similar to those of the stems. Each joint is furnished with two slemperjuinted appulages or cirri, of use to the animal in capturing its prey, which consisted of mollusea and ,ther small animals. The number of joints in some species is truly amazing. Ir buckland calculated that Penterrmins Brierme consists of at last 150,000; and 'as ench joint,' aceorling to 'impenter, 'was fumishenl with at least two hondes of muscular filore-mas for its extension, the vither for its eon-traction-we have $\mathbf{3} 0,0 \mathrm{om}$ such in the body of a

$a$ expandel; ; cloced; $c$, shewing whow the stem has been anjured, and repaned by calcareons secretion
first in the Lias. The earlier seas literally swamed with these amimals. "Whe may julte, says Dr Buckland, of the degree to which the imlivinard crinoids multiplied among the first inhalitants of the sea, from the ennatless mytiads of their petrified remains which fill so many limestone beds of the older formations, and emmose vast strata of entrochal marble, extenling over large tracts of country in Northern Eurome and North America. The substance of this marlbe is often almost as entirely made up of the petrified lemes of Eucrinites, as a corn-rick is composed of straws.' See Crinoidee and Pentacrints.

ENCLCLOPE'LAA means properly a bouk or work professing to give information, mure or lass full, on the whole circle of haman knowledge. 'I he name is compounded of two Greck words, pnkyklios, circular or general ; and paileid, discipline or instruction. These words were used by the Grecks and Tomans to sigmify the circle of instruction through which erecy free-bern youth had to pass hefore cutering on public life. That circle embraced more particularly mramar, music, genumtry, astrol nomy, and gunastics, abl afterwards lecame the 'seven liberal arts' of the mitule ades. The combound name Encychnodia appears to have been maknom to the Grueks, and alsn to the Lation writers of the classic period; and there is no evidence that either Grecks or Limans ever applied the words, single or componded, to desibnate a trook. The short form 'yclopedert has still less classical authority than Eucyclopedia.

Encyclopredias, in the modern sease of the word. are must commonly Alphabretieal ; but sometime's the arrangement is 'rational,' i, e., according to the natural relations of the suljects. An alphabuetical Eucyclopredia is a Dictionary uf Universal Knowledge. Fiesiles this, its proper meauing, of a repertory of universal linowledge, the name Eneychanedia is often applied-less properly prehajs-to alphabetical works whose scone is limited to a particular !anch-works differing in no resject from others which are styled Dictionaries, Gazetteers. \&c. See Hirmosafr: As all works of this kind, which now furm a large and increasing section of literature in every langust have in so far a common character with Eneychnedias proper, we may give some account of the whole class under the present head.

For the sabe of convenience, they may be arranged in threc divisions: I. The earlier works of this kind, having, for the most part, merely an cucyclopredic character, i. e., enabrang a larye range of sulbjects, without distinctly aiming at universality; 2. Eucyclopedias proper, which treat of the whole circle of human knowledge; 3. Pooks 1 rofesserlly confined to a definite lepartment of know. lerlge, whether under the name of encyelopredia, dictimary, gazetteer, or other title. As books of this class profess to tonch on every important print that comes within their scope, they may he considered as encyelormedic in a linited sense. for the following sketch, the distinction leetween the first and second of those classes, which is of a sume what indeterminate kind, is not strictly adbered to when it would interfere with the chronologital segutence.

1. The earlicst work of an encgelopelic character is generally aseribed to Spusippts, a disciple of llato. The great eollections of Vars: (Rerum Iumanarum it Divinarum Antiquitates aud Disciplinarum lifri ix.), of the elder Pliny (Historia Futuralis), of Stoberus, of Suidas, of Isidorus (the (rigines), and of Capella, belone to the same class, lut they exhilit no plan, and are unly confused accumulations of the then known arts and sciences. Vincent of heauvais (1264) surpassed them all. Ite gathered together with wonderful diligence the entire knowlelge of the middle ages in three comprehensive works, Speculum Matoriale. Speculum V'aturale, and sippolum Doctrinale, to which soon after an unknown haud added a syreculum Morale. But these, as well as the other similar complations which appearesl in the later mediesal periol umder the title of summ, or Speculum (Wirror), ate marked throughout by a lack of philosophic spirit. Perhaps the nearest approach to the modern eacyelopandia by au ancient writer, dates two centuries earlier than the time of Beanvais. In the tenth century, flemrished Alfaralins, the ornament of the schmol of Baglad, who wrote au encyclupadie collection of

## ENCICLOPEDISTS-END.

with which their life lad rendered them familiar. Another work of consilerable merit, which becan to appear in 1 Sl 10 , was Jruwster's Eilinhur!h Eurmelupeclia, edited Ly Ir (now sir David) Brewster, amb completert in $15^{\circ}$ volmmes in 1830 . It was, it anything, tow much eriven up to physical science, even for the taste of the loth century. In 1512, a wrat impetus was given to eneyelopedic pmblications by the appearance of the ('omerantion*-Laricun of $\mathrm{J}^{\prime}$. A. Prockhams of Leipsic. It has sinue fone throngla as many as ten editions, the last iscue of it, amonnting to lor volumes, havimer apreared letween 15.7 and lsin. It has been translated into nearly all the civiliser lancuaves of Lurose; no tewer than form English works of the kimp heing professedly; fommell on it : these are the Enerymbulirr Americamo, in 14 vols. (lhilarlelplias, 1 soon -1545 ); the Populd E'ncyclopatia, 7 vols. (tilascow, 1841): the A 17. ricun ('yrlopadior, amd Chamhers's Emeydomadio, loth in course of publication. Oi these, the last-urentioncl is a substantially new work, following in its construction the arhurable julan of the fonmorstiomsJeriron, hut making use of its valualle matter only so far as it is found suitalle.

The next encyclopredic work which apmeared after the Comerations-L Pxicon, was one projected according to an original phalosophic jlan by sammel Tiybor Coleridere, in isls, and tinished in lSt5, in 30) vulumes. "hnis Inevelopetia Metropoliteme was arranged in four rivisions: 1st, the pure sciences; Qu, the mixed aml applicd sciences; Sll, biorraphy and histury : and thly, miscellanems and lexicuFraphic articles. The contributions to the iirst two divisions wero written ly persons of recurnised ability, and they have nearly all been published separately in Srin volumes since the Jotropoliteme appeared. If the luok had any fault, it was that the plan of it was ton ricidy jhilosophical, and therefore unt allapted to lie consulted dictionary fashion ; for althongh in one sense the alphabetic arrangement. ly jts jumble of sulujects, is most heterononoms and irrational, it recommends itself to popular acerptance ly its extreme simplicity; and in point of fact, wo encyeloprelia has evor been thoronghly jopmlar that has not been executad on the plan of a simple alphatet, in which all subjects, however varims, are included. Sext appeared the I'enny Cuploperiar of the somety for the Inffusion of l"seful kinowlellip, which was bergn in $183 B$, and completel in $154 \%$, in 24 volumes. This work was perhaps, at the time it appearel, the most usciul and comveniont, for the purposes of general consultation, of any wicelopelical treatise that haul perer been issued. "Iha inglishe ("yclopmiliz is founded on the conyricht of the Pron?! Pycloparlia, but is rearrangel into foum irroat divisions, which are each given in the order of the alphatet, viz., geography, natural histery, humaphy, and arts and scienees. "This phlidication was benun in ISE:", and was come pleted in 1 shl in $\because=$ volmmes. Among a lanst of abridements anl smaller pullications of this character which have alpured in the course of the fresent centurs, may be auntmond Wilkes's Ency. cloperdia Lendonemsis, in at vols. lto (Lond. 1810
 (Edinlurgh, 1SH) : and the Londen I:neyclopedia, 2at rols. (Lronl. 1S29). The Frewh have likewise Jublisheel an Encyclopmilie des Gens du Monde, in do vols. Sro (Par. 1S:3-1514) ; an Encyclopedie Molorne, which, with its Supulement, occuries 30 vols. Svo (J'ar. 18.7.) ; and a Dictionnaire de la ('onursotion it de la Lecture, in 68 vols. (l'ar. 1839 -1851), of which a new elition, bogun in 1551 , is still in progress. The last of these is to a large extent based on the Conrerations-Lexicon of Brockhaus. The most motahle of the other German
enefclopadias are Meyer's Crosse ComemsutionsLexicm, in is bols, $1 S 40-1552$, besides 6 volumes uf a supplement and $S$ volumes of plates, $\&$ de, in 15:\%-15\%.) ; and Jiertres I"nixersal Lericon, in ist vols. (Altenburg, 1840-1846), a new and improved culition of whicls leuan to appuar in 1851. In amlition to these, there are at present ( $186 I$ ) several encyclogrelias in course of publication in other European countries; all of which are based mpon the fonzorations-Learicon-viz. the Foniflopedat
 Encirlopedia Pomplase Julidno, lueeme at Turin in Is"di; the Almemu. Donssi Kompersutions-Lesicon (Coprulareln, 1 549 ) ; anl the sremst! Kionerrsa-tions-Lestion, begun at stockholm in 15 tir ; besides others in Iussia, Hungary, the Tetherlands, ide.
:\%. We have wow to direct attentiom lriefly to thuse books that are dictionarits on eneyelobadias fin one lranch of knowledge. These works hav: leten always very momerons, both in this conntry and on the continent. Such are the Siouroritie L'nirerselle (commenced in 1511 ; new erlition, 1Sin, still going on) ; (halmers's Eingraphical Dictionary, in 32 vols. (IS12-1SI7): the Dictionnaire des sciences Mridicales, 60. vols. (Par. 1812-1822); Tvurean Ibctionnaire d'Histoire A Jaturelle, 36 vols. (l'ar. 1816-1819); F. Cnvier's Dictionaire res Sciences Faturelles, 61 vols. text, 10 vols plates, (1S16-1545); Dictionnaire de l'Industrie, \&c., 10 vols. (Par. 1831-1841) ; NCulloch's Commercial 1)ietionar! (2l edition. 1834; last edition, 18.59); M'viloch's Geomuphical Dictionary (lst edition, 1S4] ; new edition, 1851); the Dictionary of Practical Mediciue, 3 sols. (Lond. 1844-185s) ; Chanm. bers's C'm! opredia of English Literature (1843; new edition, IS.35) ; Creasy's' Encyclopedia of Ciril Enchnerriny (154\%) ; Juhnston's Gazcttcer (IS50; new edition, 1859). Norton's Cyclopalia of Acriculture, $\because$ vols. ( 1 S 51 ) : the Noutclle Biographie Génerale (begun in 16an, and still going on); Lippinertt's Grazetteer of the Cnited States (Yhilalelphia, 15.4. Liprincott's Cienrmil Gazelter (ISJ̃): Allihune's Dictionary of British amel American Authors (Philarelphia, 1559 ; Nacaulay"s Medical Dictionary, 1 vol. (Edinbursh, 1559) ; and Sehmid's Encyclopadie des Gesimmten Eirithongs-und C'nterrichtsuesen (1859). Nur must we overlook the dictionaries of Dr Willian smith, viz, the Dictionary of Greck and linnan Biogrophy and Mutholowh, 3 vols. (IS43 -1StS; new edit. 1849-1S5l); the Mictionary of Grech and Rommen Antiquitios, 1 vol. (1845); the Dictionary of Gekt and Poman Grography, 2 vols. (1551-1557) ; and the Dirtionary of the Bible, $\approx$ vols. (1960-1861). These dictionaries are the product of the ripest scholarship in britain, and are perhays the most splendid specimen of encycloliwhias devoted to special bramehes of knowlelge that have anywhere appeared. See Dictionint.

## ENCYCLOPEDISTS. See ENCYCLORADA.

END. This familiar worl is concerned in some impurtant discussions, and especially in Ethics. It is in the sense of "the thing aimed at, the object, purpose, or foal of laman action, that we have here to consider it. There is a fundamental contrast hetween Science and Art. Knowledge and Iraetice. Science, or Kawwlelge, embraces the general oraler of the naiverse, and states that order in the form by which we coun take in as much as possible in om. view ; it is the fullest intuldectual comprehension of the phenomema of matnre that the mind can attin to. Art, or l'ractice, on the other hand, selects and appopriates certain items of knowledge, so as to subserve some useful. purjose, some exigency of human life. 'Ihms, Agricultnre, Navigation, Law, Fohties, Eilucation are all branches of Praetice;

## ENDEMIC-LNDIVE.

they involve knowledme, but in strict subordination to their several fmrjascs. The navisater stmbies dstronmmy, nut with a view to endighten his umblerstandin? as the thestaries of the sular system and the starm suluere, lant with a view to the suindance uf his croirse in the sca. Whain the knemblate rematite for adernately paiwomine ach sermate fumetion, But there are some depurtmonts where the rad itself is not agrewd upon, whinh "asty a jeculial differulty un the practico. Thus, it was remarked umar livinisurux, that the end of the whole mechanism of lluman fociety, inclming lolities, de. is differently viswed ly different minds. But it is in the onc special Department uf Norality that the consileration of the end is of most vital consequence. This feature of the ethical prohnm has heen vary little adverted to in modern discussions, while the ancient philosphers kejt it more prominently lefore thenn. Aristutle begins his Ethes by remakiag that cevery art aims at some goor ; most arts, as medicine, ship-bulhar, generalship, having limitad or partial ends; while some comprehend mueh wider ends than others. The largest end of all is the gond of mankind collectively. Hence he rous on to inquire what is the highest Food of man, and tinds that hapiness is neither Pleasure, nor IIonour, nor Virtne (by itself), nor Wealth, but that it is 'an ewergy of the sund according to riatue; activity, is opposition to Oriental aotions of luxurions repose, being an essential in his eyes. He has next, therefore, to inguire what "rirtue" is, aceording to which a man must employ his activity-a question of no easy sulntion. Still, the liscussion brines ont the ane fact. that Morality is a branch of lractice, bat unlike most arts in this, that the cud is peculiarly dithenlt to detemme precisely, Accorlingly, it is necessiny to have in comnection with it a set of disenssiuns, ealled by Mr.J. S. Mill (Loric, conchudins chapter) Teleology, or the Ductrime of Eiuls, correspondines to What the German metamysicians have temmed the Frineiples of l'ractseal lieason. The warjous theorios of Noral Ohimation diefer in their statement of the "He of Aorality: according to one, it is the selfinterest of the imlividual; according to another. the interent of mankime on the whole. Sula punsums are always nbserval to be more vinulent in summer than in winter-hore dangerons at night, when the rapours are concentrated on the surfices of the suil, thian in the day-time-mane ahmulant in the platins, and in cluse confincod macese than at a coutain degree of devationname maily corried in the direction of the wind than in the "Ilusite-:mel very often arrestesl alturether ly water, or ly a lwlt of forest or "ther" lavariant rurctation. In all these partion-
 whirh bear me very nixious rebation to the soil, and arn not ubsurved to le eonsidemaly monditied - Hher ing the proviblug wink or the periond of the diby or ninht at which expmane to then inlinume takes flow. The most marked type of an endemic disesase is A.rbu (ip. v.) or latermittent Fevor, which has all the habits mentiomed above, and is to somarked a deoree a donizen of porticula tracts of eonntry as to liad to thoir being in some instances almost depmomated. Hany places in Italy are a mey to the ariet collien or maluria, as it is primlinly called; and honee, no donbt, even nore than for protectinn from hmman foes, the custom so prevalent in that conntry of building the villages on the tops of hilhs, so as to secure immonity from the poisonous viapours misel by the solar heat from the plains lying on either side at the base of the Abennines. Terrestrial miasms, or sueh puisons as generate emdomic diseases, are usually found in the meirhbourhond of marshy flats, or of uncnltivated tracts of lame at the conflucnce of rivers, or where a delte, or a wide chanmel suluject to wertlow, is furmed at the upper end uf a like. In proprortion, ton, as the heat of the sun is greater, the tenreney to malarious emanatious is increased; and in the tropies, accombingly, large trats of junole and forest are often reaicerd absolutely uninhabitable ane almust impassable at certain scasous, ly the invisible and udourless germs of intermittent, remittent, and even continued Fevers (l. v.), which are more fatal and nomanageable than the most terrible epidemie pestilences to those who are exprosed to thom. Such diseases aro almost always sulden in their mode of attack, and they indicate the ramer of their influence ly the mmaler of persons athacked; but they are wholly frew in most eases from the suspicion of communioation by (ontagion (i, v). which is so frequent in the case ut epidemic discases. The precise nature of the milaribus poison has never yet heen discovered with any appoach to exactness. It is known, howerer, to be ilmost invarially checked by drainage ami cultivation of the suil; and bence many places in Europe, formenly very productive of endemic disuases, have now caased to be so, as in the case of the Tuscan Maremma, and sonne prats of lient and Essex, and of the Lothians in Scotluml.
 18.3, lies in lat. $67^{\circ}$ :in $0^{\prime}$., and lons. $50^{\circ} \mathrm{l}$. It appeared tor the diseoverer to be of ennsideratido oxtent, amd was elosely hound by dield ice, but owing to stress of weather inn the extreme cold, it could mot be aly roached within ob or 30 miles, and liscou was thus malile to say whether the land he liseowem! was an islimal or a strip, of continental corist.
 binmmal plant, of the same , genus with Cbicory (q. v.) said to be a native of chima amd Jajan, but wenich is maturahsed is the Levant, and has long bren in cultivation its a sarden vegetalele; its banched root-leaves lecimg mach used as a salmh.

## ENDOCARDITIS-ENDOSMOSE.

and also sometimes for stewing and in soups. The root-leaves are mumerous, smonth, wavy at the margin. The varictics with minch corled leaves are preferred. Some of the varieties boll of themselves, and are thus blanched; others reguire to be tien up. In Britain, the sced is usually sown from the muldle of Nay to the end of Jume, aul by a little carc and protection. plants may be kepet lit for use thronghout most of the winter.

ENDOCARDI'TIS, inflammatiun or disease of the iuternal suriace of the hoat, rusulting in the deposit of fibrin unon the vilvis. See IIE.Irt, Disease of.

ENDO'GENOUS PLANTS, or ENDO(YENS (Gr. emlon, within, and yenos, lirth or ominin), one of the great classes into which the vagetable kinglom is dividen, the others reciving the corre sponding designations of liropromios "Plents and Acrogenous Plents. The character fram which this designation is derived is found in the structure of the stem, which does not increase in thickness ly additional layers on the matside lile the exoyenous stim, familiarly illustraterl in all the trees of the colder parts of the world, but receives its adnitions of wondy matter in the interior ; and in gencral dues not contiane to increase indefinite? y in thickness like the exogenous stem, but is arrested when it certain thickness has leen attained, difierent in diferent species, and afterwarts increases only in length. When a transverse section is male of an

Transscrse innl Yertical Sections of Enlogenous Stem.
endogroons stem, numerous bunties of vessels are seen dispersed irregnlarly in cellular tissuc, the younger and softer parts of the stem cerhiliting the cellular tissue in sreatest proportion, the ohler and lower parts chiefly abounting in rascular lumdles, which are, lowever, somewhat scatteren in the central part of the stem, and are densely aggregated towarits the circunderonce, there, in the palims generally, intming very hard wool, in some of them wond so hard that it eamot be ent with a hatchet. The stems of endogenous phants in the far breater number of eases proluce termmal buds only, and nut lateral buls, and are therefure unbranchel. From the lasers' of the leaves, detinite bunclles of rascular tissue converse towards the centre: but these extending downwarls extend also outwards, and thus an interlacing of fibres takes place, which contriloutes not a little to the strength and compactness of the wood in the lower part of the stem. As the tilires extend downwards, they also beconec attemuated, spiral and porons vessels disappearing, and nothing lut the most ligneous substance remaining. It is the hardening of the outer fart of the stem which arrests its increase in thickness. Eudugenous stems have not a distinct pith, nor any medullery rayss. When the central part is soft and pith-like, yet it is not distinctly separated from the surrounding wood, and has no medullery sheath. In many undogenous plants, as in the greater number of grasses, the centre of the stem is hollow. This is not the case at first, when the stem begins to grew; and
when any cause makes the prowth of the stem: unnsually slow, so that it is much stumtiol, it remains solid ; the listular character of the stem is the result of its rapil groseth, rupturing the cells of the central protion, which dinally disappear. Eunlogenous stoms lave no combium and mo lnopur bark: "I'here is, indecel, a collular epnibrmion: inul there is also within it, and exterior to the hardest wooly part of the stem, a conmaratively snit layce of a corky sulbstance, which is sumetime:s callerl barle, sametimes faloe bark, which hacs unt suburate from the wood holow it without luaine myrials uf little broken threals, the emils of the filmes which have extended into it from the lardest piart of the stem. In thase exonemons phants which prothee lation huls amb hramenes, the fires of the hranches wa iescending to the stean exteral an the ontside of the proprer stem, between its lanrast purtion and the falsc bark; andin this way a wo ch thickness is sometimes attained, as in the dracontree. In the dirases, a plates of fibres takes place at the nodes, the libres crossing from one side to the other. No Firitish trec-and it may ahoost be said, no tree of tempurate or colder climites-is endorenrus. Alnont all the endogenous trees are pralins, although a few, as the dragon-tree, belong to other orters. Endomenous plants, however, are numbroms in alI parts of the worla. Among endocenons plants are many of tha plants most usefn! to mankinnl, particulifly palms mul grasses, all the true cormphants loing imslumal anome the lattor. Nutritions sulstances are viry "xtensively produced both in the fruit of scert, and in other parts; pusomons prombets are comparatively rare, although found in the Aracer', Lilicucu, Mchenthacee, and other orders. Armatic secretions are characteristic chietly of one order, Scituminer. Besules prabus and grasses, many of the enrlugenous plants are of ereat beanty. and many furnlure most heantiful flowers. Lilies and "rehils may be mentioned as instances.

Endogenous plants are monocotylalonons: and the torns endogranom ann? monorot!ledonous are therefore ofton employen indiscrimimately to designate the elass. Lint Limuley ristinguishes a class of Diohoog"zes (i]. v.), whicls, although monocotyledomous. have stoms approaching to the exogenoms character: The leaves of endurenous flants gencrally exhibit parallel venation, which is indeed strictly confined to them, althangla a vemation resembling it, or wather simulating it, maty he seen in some exugenous plants. The sucil alon remminates in a peculine manner, diffornt from that of exoremons plants, aml to which the name molorliand hats been given, the radicle hemat footruled from within the substance of the embryo and surromeded by a cellular sheath formed from the integoment which it breaks in its egress.

ENDYMOS, in Greck Mythology, was a son rither of Zeus or of Aethlios, and fomowed, aceording tor some acemuts, the ocenpation of a herdsman of hunter, but acoorling to others, was king of Elis. On aecomit of lis maightness. he is said to have receivel, at his won repuest, from Zous, the gift of immortality, wnialins yonth, and everlasting sleep: hat another bersion is. that Zeus having taken him up to (hympors, Fill in lowe with Here (Juno), ant was combenned by her emrased hustand to cternal slecp on Ahme Latmos. Others, again, prottily fable that Schene (the Aloon). charmem ly the beanty of the pouth, convegel him to Caria, and sent him to shecp on Mownt Latmos, that she minht nightly liss him umbliervel. The Eleans, on the contrary, dectared that he died amms them, ant in prove uf it were wont to sheve his monnment. Tho nuyth of $E$ has len happily intermeterl hy Max duller in his article m comparative MythWhaty in the Orfont Pasays (18.it). F., amearling to him, is one of the many mames of the sm, hat with Fwe ial reference to the settimg or dying sum, being fomad fown outur, probahly a dialectic sariety uf who the technical verb in Gretk to express sunset. E., slecps in the wase of I atmos, i. e., of night (from the same ront is Le to or Latoma, the night). So far the buyth protically leseribes certain phenomena of mature, the sinking of the sun in the wert, and the rising of the mon, that swems to follow his departing luams. bat the origmal signitication of the metaphors heonaing lost, as might maturally hapen when the worls expressing them hud nity a local nagan, it was, we may say, inevitable that people should transfor the motaphes to prsons, and invont a history to sumply the phase of the vanished poetry. And this mantion, on, more promery. "xphanation (for it was doultioss mate in all wond faith, is what promery cometitutes the myth uf binlsuin. The story has be n mate the subject of a purn ly keats.

ENEMA (Gre ca, in, and iomi, 1 outer), amedicine or thuil sulntance convered into the haty by injection. nually through the sectum or lower lowet. See ('Lu>DER:
 Delw. 111. st. 5 , e $\because$, it is devared that if a man the allerent to tho kinges amins in his realm, civing them aid and comfort, in the realm or elsewhere,
hu is to bo hehe enilty of treason. I wher this statute. the sulajects of states at war with us are huld to ho memis, though war las mit leen shlmmly proclamed. Divery species of assistance, whether ly jomine in nets of hostility or sending sunplies or intelligence to the comy is deemed an act of alherpere. Tw incite to hostilities the subjuets of a state at amity with us, is not held to fin! unler this porision. Ihat if the subjects of a friendly state make a hostile inmasion. any liritish suhject rembering assistance will ine leemed guilty of treason under this clanse. Sur Tremson.

ENEMY, An omomy, acomang to the civil law, is whe who has puldely dedareb war against nis, or we against him; all others are thicves or roblers. Mosths hi sum! gui notis, ent puibns nos, puldice bullum decrerimus: corteri hatrones aut medones sant. -Digest. i. li, 118 . Tlus, in orlur to ennstitute an enemy, there mast be a publice deciaration of war. This declaration must also be made by a duly organised state or kinglom, for a deelaration of war ly any turbulent boly of men is not sufficient a and a hostile act committed by private eitizens will not justify a war, unless that act be sanctioned by the rovernment. The purpose for which this juhbie leelaration is required, is stated by Grotins to be that it may be clearly known that the war is undertalien not as a reature, but ly the will of the two people. Hostilities having been inmally deelared, every subject of the hostile nations loecomes an memy of the opposing state as do likewise those inlependent nations which attach themsclves to the interests of either party Aceording to ancient usage, the utmost violenee and ernelty was lawful towarls those who were enemies of the state; but ly the hamane prineipes which prevail in modern times, warfare is tu be carried on subject to eertain ceneral rules, which are intemind as mukh as may be to ahridge the calamitics of war, and to protect the rights of indiviluals. Thus, an army invading an enemy's country is louml to suffer, as far as possille, the pemealn, inhanitants to remain numulestel. Tnmeerssary ievastation of the country and the seizure of property are also contrary to the laws of evilised war: a and (irotins lays it down that the use of prisoned weapors, ane of assassinatim, and violence to worn, are to be remobatem. Wh the other hand. imlividuals taking $u^{3}$ amme without the sanction of the stats, in order to amoy an invading enomy, are regarded as lawless maramers. The result of this distinction is, that such persons are not treated as prisoncrs of war. hat are subject to be summarily dealt with by the commander of the invaling amy: As to the right of individuals to fit ont ressels for the annoyance of the enemy, sce Pribateering and Pieaci: It aypars to bin a recoguised mimeiple of international law, that the popmery of an alien enomy residing in - ither of the hostile states maly be contiseated. The Ancricuns, during the war with Englind, asserted this risht in reard to british property found in thoir territory: Int the nsage of civilisel nations for a long period has much montified the stern rule of law. It is provided ly Magna Marta, cap. 30 , that if merchants the of a lanil makin: war with ns, and le found in our realm at the legrinaing of the wars, they shal! be attachori withont any harm of lumy or goods, until it l" known to us, or our chicf juctice, how our merchants be intreated there in the land making war astinst us: and if our mowhants le well intrated there theirs shall be likwise with us.' Amd hy er Blw. 11I. e. 17, morchants of a foreign state at war with us were allowed forty alays, atter proclamation of hostilities, "horain to remise from the kughom themselves and their compls; and if that space of time were not
sufficient. forty days more were to be enceded to them. Vattel (iii. 4, 6:5) denies that the right to confiscate the pools of an alien enemy is a right inberent in a state by the law of matims insistimes that a soverin having permitted foreioners to enter the state, and to contime there had tacitly promised them full liberty and security for their return. What ver be the principle, there is no drubt that the almost miversal practice of modern nations has been to respect the property of intlividuals at the untbreak of hostilitics. I'rovisions are fremumtly inserted into commereial treaties, stipulating that, in ease of war, the subjects of the enemy shall have time to depart, and even that they shoult be allowed to remain and earry im a peaceable trade. As to the practice in recrard to bumargo and Letters of Mafete, sce those articles. The right to contiseate the delits of the subjects of a hostile nation appears to rest on the same basis ad that of the confiscation of other property. Trade between the sulijects of two hostile powers is absolutely suspended during hastilities, mess permitted by express sanction; and the importation of artieles particularly nseful in war is contraband. All such artides, whether sumplied lyy suljeets of the encmy, or of auother state, are soizul amb con-
 and I'misosern of Wir.. On the subject of this article. see Ciratius, Do Jure Delli of l'ucis, lib, iii. re.3to 7. Vattel's Letue of Jettions, I. iii. e. 4 and 5 ; Kent's C'ommenturies. vol, i. c. 3.

ENEAGRCO, an Italian term in masic, meanincs with energy and foree: with strong articulation and aceentuation, and a marked powerful delivery of the single notes, without losing in distinetness of execution.
ENPANTIN. Bartielent Prosfer, the ehies representative of st Simonism, and as such, usually styled leere Enfantin, was the son of a lanker at Paris, where he was born in the year 1790.10 hecame a puril in the Ecole Polytechaipue in $181^{\circ}$, lont was expelled in 1514. in consequence if his laving joincel the purils who left school and furght against the allies on the heights of Nlontmartre and St Chamont. He was afterwards a commereial traveller in linssia, then a lanker's elerk, and in 1820 beeane director of the Caise Mumentuirt. Alout this time, he became a disciple of st simm. whise irleas he develned, after the death of their author, in the Producteur: After the July revolntion, E. associated himself with NI. Bazaril for the ative propation of Simonism. Bazarl prathed it in its relations to phinsumy and pritites: D, mainly in its relations to the social state. Shom, however, a schism hroke ont luetween the two on the question of marriage and the relation of the sexes. Rocogaising the "mbility' of the affections, F . affirmed that they wutht to tee 'free" and rif course pronounced against the ties of marriage. E.'s views were pushem so far, that envernament deomed it necessary to interfure on the grounds of puhlie deconey: The 'Supreme Pather' (as his disciphes were wut rathue profanty to call him) was, aiter a trial of two days, sentemed to two yars imprisoument, and tol ${ }^{\text {my }}$ a tine of 100 franes. Being relensed at the expiration of a few months. E. went to Faypt, and , after an absence of two yeara, returned to Frace, and became a post-master and farmer in the vicinity of Lyon. In 1S41, he eame to. Paris, and was appointed a member of the scientific Commission for Atriers, and on his retura from Africa, wrote a sensible, interesting book, entitled Colonimition de C. Alyérie (Paris, IS43). After the revolution of 1sis, he edited the jonrnal entitled Ie remit l'ublic, a paper retaining muth of the old st simonian
eharacter, lont which hal to stop in 18iol for want of funds. Since then, E. has held an impurtant situation on the Lyon and Melitermanean Lialway: His principal works are his Jortrime de St stimen, in conjunctinn with others (l'aris, 1530): Lis Traite
 Saint-simomione (l’aris, 18:3). Wis most recent prondetion with which we are acepainted, is a pamphlet entitled hépmase on lire Fali, (1805), a peacher wholad attacked him. (Died lsisep. ] 6 (at.)

 whore, in 1820, he was alpminted extramemary

lle dion 1 13th Septombur 185\%. Patristic and medieval dugnaties, and Neophatonima, are the subjects which he has chiefly investigated. In ISo0, be pub. lishend at Erlangen a translation of the first Linnead of llotinus; in 1823 aphearel his translation of the writings ascribed to bunysius the Areopugite. 11 is Kirchengeschiohtichen Abheradungen (ErI. 1832), Anslegung des spradatiren Theils des Evangelinms Tohumis derch einen doutwichen mystichen Theologen (Enl. 1s:3), and his contribution to the history of the mystical thenlogy, entithed lichard von St likion und Johennes liuysbroek (Erl. 183S), are works of grat value, and have thrown a new light on may important points. Very uscful, too, espreciatly on aceoment of the richness of their special notices, are his Mandluch der Kirchempeshichte (Erl. 1834), and Domenteschichte (Neustadt, 1835). E., in the course of his life, wrote many learned dissertations in the Ionemal of Histurical Thotony, among whieh may be specified his lebler the Mesychasten, and Cuiorr Liasmus Siercerius.
evagimen, Louls Antone Meani de Bourbon, Doc d', only son of I'rince Ilemi Lomis Joseph, lue de lourbon, was born at Chantilly. 2d August 1722. In 1789, he quitted France, and travelled throngla several countries of Furone. In 1792, he entered the corps of cimitre assembled by his grandfather, the l'rince of Conde, on the lihine, and commanded the vanguard from 1706 until 1799. At the peace of Lameville, in the year 1801, he went to reside at Lttenheim, an ohd chatean on the German site of the lhine, not far from Stras. hurg, ant within the territuries of the Dube of bation. Here he married the Princess Charlot:e of lahan liochefort, and lived ass a private eitizen. When the ennspiracy of the limurn princes, headed by ('iulondal, l'ipheirm, \&e., arainst the tife and anthority of Bonaparte, was diseovered at Pariz, tho latter chose to believe that the Due d'E. was pixy to it, althom there was not a tittle of cuidence to prown this. lerhaps Bomparte was afraid that the valour and lomanity of the last deseembant of the great Comde might one day prove dangerous to his puwar. De that as it may, he unsermbulonsly resolved to seize the person of then duke. On the night of the 17 th March 180:, the noutal territory of Baden was riolated, and tho chatean of littonhein sumennated with a baly of soldiers and gembimes. 'The luke, at first, enileavoured to defend himself: bat the forec was tro great to be opposed, and he, with several friends anll domestics, was captured, and carried prisoner th Strashory, and immediately after to Vincennes. On the : Doth of Mareh, he was tried before a courtmartial, consisting of eight ofticers, and after an exammation of live houre, was condemned to death. Half an hour later, the sentence was port into execution. So buet and andacionsly erimimal an a.t has fixela a den stigma on the ehamacter of lomaparte. M. lapin has malistom the reands of the trial, ant shewn the ilhwality of the proceedings of the military emmmission. This illugatity was mablicly actamwledged by forneral Hullin, the presiient of the eomat. After the Fistonation, the bones of the judicially murdered duk" were taken up, and internel in the chapel of the eas tle at Vincenes.

## ENGINEER-ENGINEERS.

military. The military engimeer is an officer in the service of pevernment, whose duties are principally to construct fortifications, to make surveys for warlike purpuses, to facilitate the passare of an amy by the cmastruction of roads and bridges; in short, to execute all enginecring works of a military nature; lut he is also, especially in this cometry, called umon to madertake many works which more foperly hedong to the business of the civil engineer, such as the survey of the country-called the Ordnance Survey-the inspection of pablic works, and, in short, all the duties of a govermment encineer.
The civil engineering profession is sublivided into several sections, aceording to the special nature of the employment of its members. The railway engineer projects and superintends the execution of rallways and all the works in comection with them, sucir as the alteration of roads and streams. the construction of rialuets. brilfes, cuttines, and embankments. The hydraulic enginecr constructs the works cumbeted with the sumply of water to towns, the filtering of water, its collection in resurvoirs, and its distribation throma a town or district; the irrigatom and drainage of tracts of country; the protection of low lands from inunda. tion, and the use of water as a motive-power. The dock and harbour engineer has the management of all works connecterl with the s.a or navisable waters, su-h as the construction of phers, breakwater, docks, harbours, ami light-houses. The mechanial engineer is mincipally emoerned in the manafacture of machinery, the working of metals, the construction of slips, steamers, camon, and all the varims structures in which the metals bear a prominent fart. Then there is the mining engincer, who disenvels minerals and manages mines; there are engincess who are specially engaged it the drainage of thwns, ami many other less prominent divisions of tha 1 rufession.

In all concincering works, the contractor takes a very imperturt part: he executes the works from the denigns, and umber the direction and superintendence of the engineer, and on his ability and groml manarement the stecess of umbertakings very materially hepemis.

The engmerines wors of antiguity are both numerons and prominent, many of them remaining while all "ther traces of their constructers have been swept away. The most motable of the works belonginge to very remote antiguty are the harbours of the Phonicians, the palam and sewerage of Nimront, and the pramids of lospt; next in erder come the lartmins of ancient Grecce. the bridge of hoats aeross the Dardandles, make by Nerxes, tw trausput his immense army into lhmope, and his eanal across the isthmns ut the peninsula of Nount ithos. The lmalings of andint lime bext chaim attention-its thensors, temples, baths, aml aqueducts, some of Which emind water irum distances uf more than fifty miles into lome ; its roals, hrideres, and drainacte-works vie in extent and magniticence with the mosit melebrated works of modern times.

From that perion down to the commencement of tide 1 thin e., the most extensive works execnted are the camals, cmbankments, am other hydrankic constructions raed by the Inateh for the purposes of inland mavisation, and to protect their low laxds from the sea : the eanals of North Italy, the cathedrals azul fortifications of melieval Enrone.
('ivil engineering, as a distinet $f^{m}$ fission, may be sail to have originated, in Fingland, about the mindle of the last century; since that time, the innprovenents in the stem-engine log James Watt, its subsequent application to the railivay system by (icorge Stephenson, aml its use in navigation, have
given a great impulse to commerce and civilisation; Which, in their turn, have created the necessity for the numeruas and magnificent engineering works of modern times; such its the innumerable railways, roads, and canals that interscet this and foreigu conntries: the lridges, water-works, docks, harbours, and vessels that facilitate our commerce and increase our comfort and prosperity. Among the most remarkable of theso works may be montioncel the tubular hridges of the St Lawrence and Menai Strait, the Niagara railway surgension bridge, and the electric telegraph system, which covers this country and the seas and conntries of Europe, and may, at some future time, connect us with the contments of Ameriea, Anstralia, and India. Among the more celebrated liritish engineers are the Stephensons, the Liennies, the Frmels, Teliord, Smeaton, aml Locke.
The education of those who would rise to eminence in the profession, must embrace a tair knowlenge of pmo mathematics and of the mixed sciences of natural philosophy, such as mechanies, hydrostaties, hydrandies, and optics. They should acquire a kaowladge of the principles of prijections, and should aim at being enod dranghtsmen and rapid amil accurate arithmetivins.

Bucineering is represented in this eomatry by several institutions and societies, the pmeipal of which is the Lowlon Institntion of Civil Engiucers, established in I818, 'for facilitating the acquiremeat of professional knowledge, and for promoting mechanical philosnphy; there are also many schools and colleses thronghont the kingdom in which encineering is male a special study.

In conclusion, it may be sath that every day opens fresh tields to engincerimg science and labou'; and that as the first heginning of the art are lost in the obscurity of remute antiguity, so we see no termination to its usefulness and necessity.
The more important oprations involved in engineering are treated of unier such beads as Brineer Chyals. Aquencts, Eimanmevts, Tedtiar Pinideen, Rohde, Failuays, livens, Suspersion brimars, de.

ENGINEERS, Tife Rotal Corts of, furms nue component partion of the army of the British empire. A similar corps exists in all regular armies. It is the scientitic and eonstruetive branch, intrusted with the making and defending of all military works, aml the attack and eonquest of similar worls belongine to an enemy. It is true that civilians are often employed to construce the buidings themselves, at a stated pice: lat the military engineers make the plans, and are reanmsible to the country for their efticiancy: At the present time, for instance ( 1861 ), contractors are at work on fortifications at Iontemouth and elsewhere, but on plans and mader vidurs for which the engineer department of the goverument is responsible.

The lioyil Lingineers of the Linited Kingdom form one resiment or corps. The oficers, in time of peace, are seattered all over the world. Their service is continums, mike that of other branches of the army. There is no hali-pays exeent on pormanme retirement; and no memployed list. They have much wear and tear of body aisl mind, and are comsilered entitled to a eompetent retiring allowance at an earlier age than other officers. Their remplar pay corresponds to the active pay no other officers of the same ramk; but they exelusively receive in addition extra pay, amountiag to one hali their ordinary pay when on duty at home, and rymallins their ordinary pay when emploget abroal. There is an establishment of Eucineers in mach colouy, to conduct aad superintend ail the military builings and works. The entire forw

ID N(il. 1 ND, the southern and larger section of the islami of (ireat Britain, and the nost important momber of the Conted Kinstum of (ireat Britain ame helads. The feosraphy of la will be foum muder the head of Gheat libitain, the mesent article heing continct to a sketeh of its history provis to the unim with sontland.
of the inhabitants of E . In fore the Christian era, litthe is known. In some of the ancient geographers, thre re a few scattored motices of a rube popalation, with whom a limited commere in tin was carried on by the l'homieian merchants: and our information scarcely extembs further. What is known of E. under the Foman recubation has already been cmbolied in the article dintarsia. An aecount of the country during the ferien intervening between the witheirawal of the Romans and the Soman Conquest will he found in the article A velo-saxoss.
When Willian of Normandy landed in E . to claim the erown which Elward the Confessor had begueathed to him, he found that the poople hat raised to the, thome Ilarold. the son of a popular nobleman. The resonrees of the saxons, however, han been wasted in dumestic contlicts before the attact of Willian; and the lattle of Hastings ( 1166 A.D.) gare L with comparative ease to the Sormans. The next twenty ycars saw the conquest completer, and nearly all the large landed estates of the haxons pass, on wery pretext excepit the true me, into the hamls of the Normans. William clamen, inleed, to rule as sovereign ly hereditary right, but this male little difference tio the fact of compest. All the high oflices in the state and in the chureh passed into the hands of a uew race. The Dines alone could retain either property or dignity: For long sme of the saxons mantained an whefual resistance, retiring to the furests as the outlaws whose adventures furnished the materials for those favorite primar legends, where, as in Fiotin ILood, the spalmy of the rieler classes is hepieted as one of the chind virtues. In the conarse of time, the Nommas were aborted amons the Saxma, their wiry langage disapmaring, though leaving many traces. From this umon arose the Fonglish people and the English languge as they now exist.
The mam of the Sormans with the Saxuns was not fully cthectel sul lome as the Normans retand their fireign posessions. In king John's reign, the whol if thes were lost execpting Guicme and P'oiton. Land wars under Lemry 11l. and Edward Ill., and his famous son, the jlack I'rince. were continned, in the condeavon to rerain the lost possumbins; yet great vichorics like thase of cressy ( $1: 36$ A.b.) aul Prictiors (13itb A. 1.) secmed to Rewe now roult. for mo somer were the linglish armios withlyawn, than the pophatims returned to their Fremed allegiance. After Agincourt (1415 A. 5. ), Wenry $V$., when he harl forcel himself to be aknowheded heir to the Fronch throne, was virtually hing of france, and loht his court in laris: $y$ ent, in a fow years mure, the rebellion of Iona of Are cane at at the whon lis was weakened with the Wars of the Liss's. ami (l-4.il A. D.) nothing of foretgin amme was leit to this comutry excepting Calais.

Th their eforts to comano Frame, the Norman

 amil had almost mhed secotamd to his dominions. 'The liracery of Wallace and fruce defeated the ambes of liluard 11. las sucessur: and though the idea of the empuest of scotland was always a

## ENGLAND.

farourite one, im oprortmity for attempting it on a great seale never agation presinted itself.

The great strughes of the successors of Willian were with the caclesiastics and with the barons. Sometimes in these the popular sympathies were with, aml sometimes against the crown. The congueror himself and his immodiate successors had no dillienlty in mantaining the superiority of the courts uf justice over the coclesiastics; int even a sovercign so bold and skilful as Weary II. was furced, after the outery necasioned by the murder "f 'Themas-i.]lecket (1170 A. 1.), to yieh the pront. The right to uominate the higher ceclesiastics was also secured by the jropes. The degradation of the English monarchy was at its lowest when king John consented ([213 A.D.) to holl the crown as a gift from liane. The weaknesses of this momareh had gool as well as evil results, for from him the barons won their Great 'harter (1215 a. is). From Henry [1. something similar had alrealy been gained; lnit it was the Magna Charta of John which firmly established two great English principles-that no man should suffer arlitrary imprisoument, and that no tax shoulh he imposed withnit the consent of the comncil of the nation. ITmler Blward J., the famons statute that no manner of tax should be imposed without the commom consent of the bishom, barons, and hurgesses of the realm, was passed ( $1-96$ A. D.) ; aml lufare the time of Hemy V'lI., the foumbations of pirlianentary government had been lail.

The mion of the houses of Fork and Laneaster under Henry VII. hegins a new fertoi in English history. Part of his reign was disturbed by Perkin Warheck and other pretenters to the throne, in subport of whose clams the turbulent mobles found went for their restlessness. But the greater part of his long reign was distiuguished from preceling reigns is a time of peace aml economy. During it, men's minels ripened for the great events of the next reign. Hemry VIII. succeeded, unler the must favourable anspices. 1le foum the alliance of his now important country courtal by loth of his grat contcmararies, Francis 1. and Clarles V. But the interest of the forcion complications of the rign merges in the strugule letwen the comrts of E. and of lome. The origin of the contest was the divorce which Henry desired to have from ('atharine of Aragon, his hrother's widow, to whom he had lecen married by prapal licence. Crammor ame the Euglish Cbureh prononncel the marriage to he null, lont a formal decree of diverce by the head of the church was then thanght newssary in Catherlie Eurnpe. lope Clement and the ennsistory, influenced hy spanish counsels, delayed, by every pussible mans, the decision of the gnestion. F., however, was realy enough to suppert Ifenry. Wieklifle ame his adherconts had done not in little to shake the attachment of the nation to a forefon spiritual authority, hy praching dectrines which eispensed with the necessity for it. A parliament met, when the Commons tork the signifieant stup of presentine a lung memorial of complaints arainst the church. The fope, still shewing no signs of yielding, bills followed, declariag the king the had of the church; rendering the inferior elery amenable to the civil courts; abolishing the fayment of the tirst year's fruits of ecelesiastieal livings to Rome: am perhaps a more important thing than any of these, declaring that no conrocation should mect muless the king should summon it, and that no ecclesiastical eanous should have force excelt with the king's consent. To these measures, the prope replied hy refusing the divorce, and excommanicating the kims ( 1503 A . D.). The breach thus becane irreparable.

A mow act was passed giving to the magistrates the power of julghy in questions of heresy. The next stel was the suppression of nearly 400 of the smaller monasteries. The sulsitlence of an insignificant p"pular reaction, incited by the lower elergy, was followed lyy the suppressing of the great albeys. All these changes, however, hachen only matters of chureh gevermment. On matters of faith, Henry and his marlianents were ats ortholox as the most conservative cond wish. They umbudied the leading doctrines of Comanism, disputed ly the l'rotestants, in an act of parliament, kmom amomig the people as 'the howly six articles, and conforcel conformity under severe penaltics.

Henry was succected by Elward VI. His rcien Was marked ly the general progress which the lieformation now male from cuestoms of government to questions of loctrinc. Nore thonoughly than crer the power of the elergy was sappet. The Book of Common Prayer ( $1545^{\circ} \mathrm{A}$. D.) deprivel them of the mysterious authority which the use of a foreign langnage in worship gave then in the eyes of the people, and the $4:$ Articles of the Church of Ensland ( 1552 A. Ir.), the foundation of the present 30 , denied, among other things, their power to work miracles in the elevation of the mass.
The next reign saw the inevitable reactim. The superstitions of the propuace had becu too rancly hambed, and - as oftert hainens before a erisisthere came a perion of $\mathrm{I}^{\text {has }}$ sical suthering. The conversion of corntiches into shecrwalks, induced by the high value of woul as an article of expont, had thrown many out of employment; anl the conntry was, moreorer, infested with the erowd of vagrants Whom the monasteriws had heen wont to maintain. The pomar dissatisfaction compled these thiners with the licformation. Thas the olprastunity was prepared for the atrecities of the regn of Mary: The queen lerself was interesterl, by in mother:s honour and her owne, to uphold the liomaniot fitith; and her glommy temper, agorasaten hy her whapey chindess marriace, holicred that it elid true survice to Gul whem it gave the rein to the bigutry of lole and Bomer. In lure tirst parlianent ( 10.5 a. a 1 ), the whale legislation of Edwad VI. was repeated, leaving the (lhareh uf England the in ceremonial and finctrine bith the Church of foms: Another puriamont (150.5 A. 1.)
 castablishing the latral sumemacy: Everything that the refomicrs had dome was has malone: still the ailherents of the C (fomation wore mumenos, and when lesislation failed io enamert thom, the fires of smithitid were tried. Howner, ]hishop of Glonecster, was one of the first to suffer: Latimer, Fidley, (ramuer, followel, and the hamber who perished is net less than bof hy tire, and 100 lay turture and the ernoltios of confincment. Nothinis
 amb for ever from the Church of liwne.

The accession of tine I'rotestant wincess Dlipheth came as a raluf to the whole natim. The limmanists themoclues were weary of the phlicy whinh made F. the tool of Nom, and were sichened with the coudties which had heen enacterd. Slizaheth hesan log releasing from prism all ematinel on chartas of heresy: lamianmet followe (layat A. Ib. with acts resturing the royal supremacy over the charch, and retuming in semoral to the legislation of Elward VI. The Irayer-luok and the Thirty-nine Articles were adjutad as they still exist. Fortunately fur the compry, the mimistry of Elizalueth, guatul by the ahbe land of Ceofil. was one "í pace. No "lportumity was lust of aiding the l'rotestan canse thronghout Larnme; but Elizalue th hak ahmost no ofren wars, and her lomg

The , overmment for the next four years was condmed ly pariament. Meanwhile, Cromwell was rising into distimetion, and power gradually full from the hands of jarliament into those of the military. In 1653, Cromwell had himself pro'lameal 'Protector.' He was now absolute monarela. He governed with a tim haml, and never was $E$. more respected ahroal than during his time. In 1654, he conchuled peace with llolland, and employed the gallant Admiral Blake in an expedition against the Sjruniards, which culed briliantly for the English naty. But the nation grew as discontented with the govmment of Cromwell as it had been with that uf Charles. After the death of the Protector in 1655, and a short interral during which his soa lichard hell the aftice, parliament received with acelamations a propusal from Charles II. to return. In May I660, the jopmace elamoured with delight on the royal entry to Lombon of him who, a few years before, hath thed from Worester for his life.

White Clarendon was minister, the government of Charles II. was well conducterl. A war with Hollant was brought to a suceessful endiag in the conguest of New Fork. On Clarendou's resignation, the government passed into the haads of the ministry known as the Cabal. They were as profligate and as carcless as the king himself. A succession of cruelties aqainst the Catholics, for which the pretended revelations of Titus Oate's and his imitators furmishel the excuse betokened rather the wanton temper of the sovereign and the nation, than any zeal for the Protostant religion. The only act wheh reflects mueh credit on any portion of the reiga was the prossing in 167 , of the Haleas Corpus Act, designed mure elfectually to protect the liberty of the person. Strong efforts were made in parlia. ment after that to phass the Exchasion Bill, the object of which was to exclude the Duke of York, as a Roman Catholic, from the succession. To the great satisfaction of the kinc. barliament rejeeted the bill. In 16ss, parliament was dissolved, and Charles II. never called another.

After this there was a chamse for the worse in the character of the government; from leing wantonly indifferent, it focane sulfenly mischievons. Jresbyterians and Nonconfomists were excluded from all oflices. Among other tubitrary acts, may be mentioned the recall of their charters from London and many of the other principal cities, which wero only restored, with diminished privileges, on payment of heary limes. Conduct such as this mide men more than ever afraid of the succession of the king's brother. A conspiraey to secure the sucession to tire Duke of Nommonth, an illegitimate son of the lims, was formed. Lord Howard lectrayed the conspracy, and amony others who sutrered death for it were lond Russell and Alurrnon Sidney.
When the king died, in 16S5. James II. succeeded amil miversal dissatisfaction. Nommonth's attemprt t., seize the throne, however, was mismanaged, and failed. The pumshment of those who had ailed his rising formed an oceasion for the perpetration of ereat ernelties liy Jefreys, then chief justice of Encland. In the meantime, nothing could be fairer than the king's language. He issued a declaration in faveur of general toluration, and announced that the ponal laws against Catholies were no longer to le a coforced. A second declaration to the samo efficet was issued, but he went further, and added to it an order that the clergy shomd read it in all clurches. 'The Archhishop' of Canterbury and six hashops presented an adiress to the throne, humbly sotting forth that their duty to maintain the Protestant estaldishment wonlil not permit them to
give obedience to the royal mandate. For this they were indieted as guilty of selition. The trial of the bishing (165S I. D.) was the turning-piont of James's carcer. It createl immense excitement, and when the jury returned a verlict of not quilty; even the soldiers joined in the tumultuous rejoicings.

William, Prince of Orange, who had married Mary, the cldest danghter of the king, had long been iutriguing with the malcontents. He now landed in E. with a small borly of troops. The soldiers, the leading noldes, even the kings own chikien, joining the prince, the king fled to Prance. larliament then settled the crown jointly on Willian and Jlary for life. James, with the assistance of Lonis XIV., male one effort to regain his throne. He lambal in lreland, where the lord lientenant, Tyroonel, was devoted to his canse, and manager to raise an army. Willian defeated him at the liattle of the Boyne: and the contest was soon after this terminated by the secomel tlight of James to Fiance. So casily was the great revolution of loss effected.

The domestic government of William was marked ly his efforts to introduce a general toleration ; but of his foreing administration, which led the conntry into costly wars, it is hardly possible to spak in very favourable terms. To reduce the threatenin: ;wwer of France, E., in alliance with Holland and Cermany, embarked in a protracted contest. Its termination at the peace of liyswiek, in 1697 , hrought to E. mothing beyond an increase of reputation. Willian died in 170 .

Under Queen Anne, the war with France was renewed, and the Duke of Marlborough's splendid victories of Ondenarte, Blonheim, and Fanilies were achieved. With these the history of E. as a separate state closes. In 1707, the long-wished-for union with Scotland was accomplished; and after that, Great Britain, united nuder one legislature, as well as under one crown, has a common interest among nations, anel therefore a common history.

A table of the English sovereigns is appeuded, leginning with Alfred, and continued, for convenience' sake, to the present time:

## ENGLAND, New. Sec New Wacland.

ENGLAND AND IRELAND, UNited CHUT:CH of. A brief sketch of the origin and catly history, as well as an outline of the doetrines aud form of goverument of this church, will he found muler the heal Axolo-Catholic C'atren. See also the articles Augustine, Dunstav, and Odo. Ub to the time of the lieformation, ecelesiastical affairs would be more properly descrilied as the history of the Church in England; from that perion the Church of England dates her existence. She, however, retains so mucb of antiquity, aud her institutions, latws, and formularies are so interwoven with the history of the past, that it woml be impossible to have any correct or comected view of them, and of her comection rith the state, her characteristic feature, withont at least glancinc rapilly over the learing events hetween the Compuest anl the reign of Henry Vlll. During the three enturies from tho Forman Conquest (1066) to the preaching of Wickliffo (1356), her history can he regarded only as a contimal strughle betweem the ecclesiastical and civil power, and there would be little: लlse to deseriloo than the methons by which the mitre trinmplad over the crown, and the erown invaded the rights and property of the church. In the time of Willim I. nearly half the eountry was in the hands of spiritual jersons. He ejected the English clerge anl supplanted them with Normans: aud althongh he was pussessed of full mower over the elureh, yet in his reign were sown the seeds of future papal eneroachments. Paphal legates were then first introduced into England, and the ecelesiastical courts separated from the civil. From this time, the increased indhence of Thome may be traced to tho defective titles, the usurpations, aml the violent conduct of the kings. Thus, the defective title of Henry I. made him seek popularity by recalling tho primate Anschm. who had incurred the displeasure of his brother William, and had sled the country. Anselm was devoted to the pope, who had esponsed his quarrel, and refused to clo homage to the king for the temporalities of his see, till at length Henry

 hedpenl to atemil it further. he atepptus at grant of
 4f Thoman-it. Finthet, whicharnse out of the question of the punishment of welesianting hy the civil ! mow. For the monent, it sermed that the quarel was halal liy the Conatitutions agrewh on at clarmom (1. v.). lant it lroke mit mure sindently than wer.
 combmand the Constintions. Jowele hand deel from the kinghom; and his subsequent retum, murder, and camonisation, all tembed to strugthen the authrity of the church. It was mot, however, till the reign of duhn, whon Englam was lail under an iuterdict. and the limg resignal his crown to the fop". that the pizual encrobibments ruse to their licight: and the weak rugn of Henry 111., which followed, did nothing to illate them. blward 1 . gave a chack th the forwor of the elergy, subjecteal them to taxation, and passen the statute of Iortmain ( 1,79 ), which prabilitel the transfer of lam withont the king's conscnt. There is little to he said as to innorations in lenetrine during these three centurins ; hot it may loe noted, that abont the midule of this prion, viz, 1213, the council of ct John Lateran dedared transulstantiation, or the Inthly presme of 'lirist in the consecrated clements, Tw tre a tenet of the chureli.
It was in lasis that a new perion commenerd. Wicklifte then Iublistari his first work, entitled The Lost Ay' of the "hurch, directed against the covetuasness of the "hureh of Liome. His dece triues correspund in many $l^{\text {mints }}$ with those now taught loy the Church of England, but he differed from hor in regard to the necessity of Episcopacy, whith he rejected; he also lelieved in Imargatery, ond permitted prayers for the dead. Jlis chied objects of attials wire the paral indulgences, and the dectrime of transubstantiation. It has been wherved comerning the combermation at Oxford of Whblifle's opminms with iespuet to the latter, that 'this was the dirst plenary determination of the ' hurch of England in the case, so that this doctrine, which bourht su many to the stake, had hut with us I to Yars' prescription before the times of Martin Inthe:.' In a limited sense, he upheld the eflicacy of the seven sacraments. Wickliffe had a large body if followers. They were called Lolluels, probahly from al haman wam, lellon, to sime with a low voice. Thu" sturm of pursecation whish lie escaped by inath, fill uno them. Henry IV, thonght it neressary t. fortify his nsurped pasition by assisting the handre manist the Lullards; and from this time to the Roformation, there was an uminterrupted strerssinn of comfessurs aml martyrs. Sir John Ghleath, Luml (\%hham, was the monst illustrivus if theo.e sumbers. fiox gives a dotailed aceomet if nowly twonty imliviluals burned for heresy latwern the thath of Lam thblanm and 7509, when Humy Vlll. asmment the thrme. 'Iar sme extent, Hhe bloml of these martyrs was the seed of the linformal (hanoh; hat we mast mot onerlook the - hidan smed whid was erowine secelly, from

hetwon him and the prope, which ended in the total alolition of the papal anthority within the kinghn. Then began the lifeomathas in carnest. For the details of that great cvent, consult the artich umber that hom, amp the lives of such men as Wolsey, Nir Thamas Nore Fisher, Chment, Juther, Cromwell, 'rammer, latimer, and Ridley, de. From this jeriml may be dated the existence of the Church of Englaml as a separate body, and her timal separation from Iome. For the opiunons of the charedi in hanry's reign, two important bonks which were then puhlished should be con-sulted-viz, the Bistomis Book, or the codly and l'inus Institution of at Cristian Man, and the King's Book, which was a repuldication of the same in a more perfect form in 1543 , and called the Necessary Erudition for any C'hristien Men, and was called the King's Book lecause put forth liy rual anthority. A bouk of Articlis deviset by the Kinges Mighnes Majestir to stablywio Thristen IVitie, should also be consultul. It has bern stated in the artiche Avgle-Chmolic Chemon, that the reformation in doctrine did not make much progress in Menry's reign; from these bows, it will be seen that it was rather retrograle. The mouks, two, who were dispossessed at the dissolntion of the monasterjes, were ilisursed amungst local cures, and kept alive the ohd upinions, and the lower orders were not as yet favouralde to the new doctrines. Grammer was the leader and presithing temins of the Reformerl opinions; and the gouth of biward VI. left the king pliant in the hants of the arehlishop. The Buok of 11 milies, put forth in 1540 , the New Cemmmion Sorvee and Catechism in 1018, the first Book of Common Prayer in 154), and the Furty two Articles in los.3, all lear the impress of his hand, and it was these which adraneed and fixed the doetrines of the devermation. Nor was the temporal authority bille on the same side-bumer and Gardiner were conmittel to prisem, and both were deprivel of their hishoprics. In fact, the way in wheh all the institntions of the Chureh of England were estalhished in Edwand VII"s reign ly the help of the civil masistrate, lave lirmutht upon her the charge of Erastianism. The civil jower had just delivered her from a foreign tyramy ; and when the weak hoalth of the young ling, the known sentiments of his successur. Mary, the ignorance of the commom perple, and the interested vews of the old clergy, are eonsiderad, it cannot be a matter of surrise, still hess of hame, that the same arm was relied upm for the establislunent of the new forms of religion.
Althoneh Mary promised at her accession that she winld put constraint on mo person's religion, her promise was not $k l^{\prime \prime}$. Inomor and Gandiner were restored; the bank of fommon l'rayer and Catechism were delared herrtical; the lingdon was reconcilen to the see of lame; it lersecution of the chief refinmers commenerl-Rogers was hurned at Smithtield, Hooger at dibuerster, smumers at Cwentry, Taydu at Hadley. The pisons were filled with 'hereties;' many ilal beyonl sea; some purehasel safety ly an outward eonformity. Cranmor, Latimer, anil fiblley perished in the flames at Uxforl. Girrlimal lulw was made primate. One lndidit was comfermed on the ehurch he Mary-she surmatered all the chureh lames, as well as the first fruits noul tenthes, which had han seized by flenry, At last the death of Mars, with whiel that of the cardinal was all hol simultamms, delivered the church from its opmassors. 'The passing of the Ace of C'niformity in the first year of lizabeth's reisn, rastured the (bmmon lrayer hook to general use, thul enjomed the s:ame ciresses as were in use at the time of the first Pray rebook of Edward Vl.

## ENGLAND AND IRELAND, CHURCH OF

All the bishops excelt me, K゙itchin of Llandaff, refused to take the cath of uniformity, and were ejected from their soces to the manber of 14 (the eleven remaining sees were vacant ly deaths), and 17.) other benetied chery were dejerived for the same canse-no very consilerable number, when it is rememieral that thate were then ! 4 (h) wenefiees in Englaul. There was some diftientty in filling up the vacant hishopries, and perhaps some slight infomalitics. Dattinew l'arker was male Arehbinhop of 'anterbury. For the refutation of the fable of the Nag'shead Consecrition, sue the article unfer that heal. In I5ti2, the Thirty-nine Articles were finally reviewed and sulsemined These, with the Book of Common l'tayer, are the tests of orthonloxy in the Chureh of Enclani.

But what was done to satisfy the scruples of I'rotestant nonconformists? An attempt in this direction was male in the reign of lames 1. at the Haniptos cocit confelence ( 1. . \%). The result was another review of the Common Prayerbook; and this, with the new translation of the Bible, and the passing of the camons of 1604, were the principal ecelesiastical erents of James's reign. These canons received the sanction of the crown, lut not that of parliament; they are nut, therefore, linding on the laity, lut they are still biucting on the clergy to some extent, and they regulite the practice of the ecclesiastical courts, and are the only rule, on sume points, to which the bishops and clercy can apmal. See the articles Lavd ame ciome of Notlond for the events of Charles l.'s reign. The great rehelion overthrew lontly church and state. The hishops were declared 'delinquents,' robied of their property, and abolished; and the elergy wer: ejected from their benefices. Laml was put to doath in 1645. The Church of Engtand had no corporate existence cluring this interwal. With the resturation of the monareny, I6ion, came the restoration of the church. The reaction from Inritamisn to Prelacy was complete. Attempts were made, but with small suceess, to win over the I'uritan leaders; lishopries were offerel to Baxter. Calamy, and Reynolds'; hut the last only acceptes. Thessur Conferexce (q. r.) was an unsucecssful, perhaps insincere attempt to enmprehend the nonconformists is the Established Church. But the demands of the Preshyterians were most immolerate, Baxter went so far as to propose the substitution of an entirely new hools of lis own comprosition, in the place of the Common Irayer-bokk. After the faihure of the savoy Conference, this was once more reviewel ; and a new Act of Cuiformity in 160 made its use, as it nuw stands, compulsory in all the ehurches.

The Chureh of Englam passed through one more critical perod before rewhing that tranquillity in which, for upwaris oi a century, she slumbered too securely: In 165\%, dames If. pioblished the famous Declaration of lndulsence, which filled up the measure of pepmar diveontent, and tinally cost him his erown. Although by this declaration, which was perfectly illegal, liberty of conscience was permitted to all his subjects, it was clearly understom that the linerty was intended only for the papists. The nonconformists refnsel to aceppt the treacherous boon. Eighteen bishops out of trenty-fiye refused to mbilish the detaration. as ordered, in their dioceses. Seven of them-suncroft, Lloyd, Ken, Thaner, Lake, White, and Trelawny-drew uly a remonstrance to the king; they were summoned before the privy council, and sent to the Tower. The whole city was in commation; and great was the rejoicing when, on being bronght to trial in Westminster llall, they were acquittel. On the 5th of November fullowing, lGss, the Prince of Urange
landed in Englanl. It is worthy of remark, that out of these seven bishops three refused to swear alleriance to him, and were joined ly a considerable number of the elergy; these were called Sonjurors. In the first year of William and Mary's reign, the Toleration Act was pasesl, and discen ceased to be ille, And. Another attempt was make to, comprehend the nonconformists in the church. but the lower house of Convocation was in no tulerant mood, and the attempt failed, but chielly in consengutace of the disturhances in scothont, ln 1717 , Convocation was dissolved. After shmmbering fon nearly lat years, it has leen once more calle in intu life and action in the province of Canterlary. See the article Convocsuress.
'That the Churel of Enslaml, aiter ficheting ir it rery existence ayanst popery on the whe hand, ant against I'uritanism on the cther, shomld have smb. sided int: inactivity during the dull reigus of the Georges, is less a matter of surprise than of regret. The peaceful enjoyment of her temporalitits in a dudl, irreligions, not to say infidel age, may easty account for, though it camot excuse, her illoness. But that in the rise of John Wesley; 1730 , she should have failed to see a grand oprortunity for herself, is a matter of hoth surprise and regret; she, however, lit it pass: nor can she hope that such another will ever again present itself. The utmost that can be hoped is, that she has seen ber error. The next impurtant event in the history of the ehurch is the let of Cuibn, which came iuto effect on the 1st of Jamary 1801, and waited the churches of England and Treladd in all matters of ductrine, worship, and discipline. The lidermation had mate some progress in Ireland under Elward Il. Five l'rotestant bishop were appointed in 1:50, and the English Dible and Liturgy were intruducel in 155l ; but from a varicty of causes, the lieformed doctrines have never fomm moch acceptance with the mative pumation ; and althoneh a Protestant chureh was eotahlished ly law, it wats and is the charch of the minnity (see Jkemani). In 1635, the English Articles were received; and in 1662 , the English houk of Common Praycu was adopted by convecation. Defore the phlitital nainn of the conntries, the two churehes were in fudl communion. By an act of the inperial partament in 1833 , ton of the Irish bishopries were suppresned, and the funts thus ohtained were ayphied to the angmentation of small livings and the loulding and repair of churbes. There are now twelve frivh bishops.

In later times, two ereat controwersies hate shaken the Linglish 'hurch, bat have lad to nothing more thin sume inturnal divisions, and the secession of some mombers to Fome, and a few to the rambs of dissent. These were the Tractarian and the Gorham mentroversies. The former was owasioned by sume Tracts which beran to le pmblished at Oxforl in 15:3:, the olject of which was to revive smothing of the spirit of Catholie antipuity, and reform the olnases and shorenty practices which had erept into every part of the church system. Sce Trates for tiad Joms. The Gurham Controsersy (4. v.) related to the duetrine of laptismal receneration. The Tractarims are accused of limanising tendencies ; and thar views, when carried to extremes, moloul,tedly lead in that sifection, as is muvel by the numerous secessions to that church. With the extreme Low Charch parts, Lpiscomacy is rather an expelient than a necessary form of chureh guvernment. They think lint little of the elficacy of sacraments, and deny that regeneration necessarily takes place in infant hapism. Justitication ly fath, the atonement of the cross, and the Calvinistic ductrines on

## ENGLANTEE-ENGLISH.

election, are their leuling topies in preaching. Se fahric, and the warming, lighting, clanine, de., of the life of sumos and of Vixs fur the viows of this party
What are calleal hom Comen riews are thase which are attumted to men of the Arandel schend, amb the followers of Dtr Mantice (g. ©.). Those who holl them can scarcely lee called a party, whe are, imbed, unwilling to be so consthered: lat is their pesition must le delined. they misht le deserilnd ans a party between, and somowhat antasmistic t", buth the Hiwh atal lan Chureh parties. The Hon Clurch party insint on the anthority of the ehareh and presthmal, the etheary of sacamonts when righty rewised, and the necessity of anmotulical suceession in the matter of omicre, amil in their general teaching they take the l'a ayer-buk at the expmant of Nompture: They are serupulans in observine the rubrics. and hase date much to revice the practice of dally prayer in the charches, and the (hservance of the fowata Order, unity, antiquity, and catholicig are what they profess to have in view.
There are at present, in roned muminers, 11,730 bentiees in lingland and Waber of which 1260 are new elistricts, which are himg continually formed out of the ohl later and orerpentons parishes. Various acts of legisiation have of late years facilitated this. Thase listricts are called lerectual curacies, or innmbencos, and for the most part are hat rery shemberly endowed. The ohd bebetices are aither rectorics, where the incumbent receives the profe or com tithes, m vicarazes. where be receives the small tithe only. The great tithes had anciently been bestowed mon the neighmoring monasteric. whan umbertook the cure of the sonls, and appointed vicars fur the jurpose, who lived on the small tithes and the afterings of the people. At the rissolution of the monasteries, many of the great tithes were given to laymen, ame hamen now extensively bud them, and some to endowed colleges. There are 1 win lupmar errms with respect to church poo furty: one is, that the endowments were in some way mate ley the state; the other, that they are ver rich. Noithre of these is the case. The coblowments were all hy private bencficence, and there is no temure so ancient as that be which the parish church hands her property. In the awresate, the amount is very larice ame was ascortanca by the commission appented in 1830 to be as follows: Bishors, さ1sl.631; deans amd chopters, $£ 360,095$; prochial elerg, ato 251,159 :
 of the Trish loranch are stated at $£ 1,060,000$, lont this is probally in excess of the truth. Since iS30, the English revemes must have rather inereased from private beneficence and the increase in the value of property. Divided equally amonest the whele number of benefices, this would give an average of less than 2 :300 per ammm for the joint support of incumbent and carates. It appears, irom the last consus, that there are in Enelam! and Wales $1+, 077$ churches or chajels, served by 17.320 ministers, or 123 ministers to every leif buikhorg. The fixed chamacter of the chareh ealowments, aul their generally sulstantial buike. ingo, have secured for the poorest and the most secpuestered, and sometimes the most populous meizhburhools, from which wealth and civilisation have cmigratel, ai least a molens, and oftern is fruitful sod of moral aml relinious imprownent: whilst the fixity of the chareh dectrines has been : standard of truth to $\begin{gathered}\text { ratrain the license of indivilual }\end{gathered}$ "pinion. The charel raters, amonatine to diono.000 ammally, are no part of the mininters' endowment; theo are colloctol from time immemorial, ami exclusively deroted to the repairs of the church
the churels: and are noder the exelusive control of the churchwardens; of these there are two in cach parish. whe generally nominated by the minister, the wther clected loy the parishioners.
The thureh of Enghand has thee orders of derege - bishons, priests, am leacons. Generally, a degrece at one of the Enslish miversities, or of Dublin, is raparch in a camidate for orders; but in Wales and smme of the more prphous districts, this condition is dnpused with. 'There are 'ardhishms (Canterhury and Yonk) and 2b bishops in Endtand; besiles 2 archbishops and 10 bishops in lechand. The archdeacoms and rural deans assist the bishops in the manatement we the dien ses.

The patronage of the church is in a great variety of hands-in the crown, the lishopls, the nobles and antrs. ame incorporate bolies such as colleges amb cithedrals. Alvomsons and hext presentations may be sulal as propery, lat a presentation may nat be sole when at livinis is vacant. A chergyman is "presented' to his livine by the patron, he is imlucted ly the hishop or his appointee; he mast 'rod himself in,' i. c., he must real the Thirty-nine Antieles after the moming or evening mayer within two months after imuction.

The Episcepal Churea in seatland is not in mainn with that of Bmiand.

The above sketch has lacen latsely drawn from Short's exedhent Mistory of the Church of Emplame: sce also Marslen's able Dictionary of Chasthene (Thurhes amd ierts, aml Ilardwick; also Fuller's ('lurch Mistor:/, Collier, Strye, Mosheim, Burnet, and Claremhen. Among the areat divines whose works shond be consulted for further information regarding the views of the church, maty le named birrow, Pearson, ILwoker, Jureny Tiylor, Liwhtioot, ILammond, Sancroft, Sonth, Tilhotson, Bishop Butler, Atterbury, Bull, sherlock, anil uthers.

ENGLANTE, in Herahdy, is bearing acoms or other similar ghands.
 an Endi-hman. The jresentment of Engleshery is thas explained, Hate's $P$, of Crom, pr 4te: - Anciently, there was a law introhned ly Camatus the Danc: that if any man were shan in the fiehlo. and the manslager wore mknown, and coud nut be taken, the tuwn hip where he was slam should br amered to sixty-six maks; and if it were not sufficiont to pre it. the humired shombl be charged, unless it comble marle appar lefore the coroner, upen the view of the looly. that the party slan was an Enthislmen: and this making it appear was varims aerominis to the cuntom of several places, hat most ordinarily it was ly the testimony oi two males of the part of the father of him that was slain, and by two females of the part of his mother.' Willian the Conrueror contimned this law. I'resentment of Engleshery was taken away 21 Elw. 111 st. 1, c. 4.

## EN゙GLISII IRA＇MA．Sue Drami．

EXGLISH LA＇YGUAGE，which is now spronen by upwards of 50 millions of the earth＇s inhabitants， is in its rocalmlary one of the most heterogeneous that ever existed；a fact，the earres of which are to be tracel in the listory of England（q．r．）． Its comjosition and frammatical character are thus descrilom by M．Niillew in his foctures on the science of $L$ onemurge（ 1861 ）．＂Thire is，perhaps， no language so fill of words çubently derised from the most distant sumeces as linglish．Every country of the chabe seems to lave brount some of its vertal mamufactures to the intellectual marlect of Lisclaml．Latin，Greek．Helrew，Coltic， saxon，loansh，lrench．Apanish，ltalian，German －nay，even Hiodantani．Malay，and Chinese worls －lie mixel torection is the Enelish dictionary． On the extlence of worls alone it would be impossible to elassify Finclish with any other of the establishom stimetis ami stems of luman speech． Leaving ont of cousileration the smaller inere－ dients，we fiml．on comparine the Tentonic with the latin，or Xeo－latin，＂r Fomman vements in Enalish，that the latter lawe a decidel majority over the hone－grown saxun terms．＇This may seem increvilde：smi if we simply tom a frage of any Enolist lmok．and comnted therem the rorls of purdy Saxun aml Latin uricin．the majonty wonld be no dmult on the sason side．The articles， 1 ponouns．premsitions，aml ausiliary verls， all of which are of saxon growth，ocoir over and over again in one aul the same paze．Thus． Hickes maintained that nine－tenths of the English dictionary were suxon，beeause thore were only
three worls af Latin origin in the Lord＇s Preyer． Sharon Turncr，who exturled his oloservations over a larior fieli，came tor tha conclusion that the relation ${ }^{2}$ Nomman to staxon was as four to six． Another writer，who estimates the whole number of Enolisth worls at $35,(060$ ，assicne 23.000 to a Saxon，
 a more acourate insentory and conting every word in the dietionaries of Liolertson an？Winster，M． Thommerel has estalished the fitut．that the mumber of Tentonic or suxon worls in Enelinl amounts to
 mediately or immediately be tracml to a Latim sonrce．On the evilemere of its lietiomary，themes－ fure，and treating limelish as a mixul languan，it would have to be classithed tusthor with freacha， Italian，and Spanish，as ome of the Fimmumo ar New－ Latin dialects．Languages，however，thomoh mixet？ in thas elictionary，ean never be mizent in their granmar．Hervas was toll liy missionsuries，that in the midrale of the ISth c．the Armeans liwally usul a siogle worl which was nut inmons！，though they preservel both the grammar and the syntax of their own mative spuech．＇I＇lis is the reason why erammar is made the eriterion of the ralationship ahat the base of the elassitication in almust all langrages；and it follows，therefore as a matter of comrse，that in the classification and in the scionce of langugu，it is impossible to almit the exist－ ence of a mixer idions．We muy form whole sentencos in English，consisting entirely of Latin or Romance vords：yet whatever there is left of grammar in Enolish bears mmistakahe tranes of Teutoni：workmanship．What may mos lee called grammar in Enorlish，is little more than the tur－ minations of the renitive singular and mominative numal of nouns，the depres of eomprison，and a few of the persons and tonses of the verl．Vet the single $s$ ，used as the expmont of the thimb jersun singlar of the indicative present，is irrefragable evinlence that in a scientific classification of lan－ guares，English，though it did not retain a single Worl of saxon orion，womll have to be classed as Saxinn，aud as a branch of the great Tentonic stem of the Aryan immily of spoch，＂see Laverace．

In tracins the frowth of the Emelish langune． the history is usually hivided into form leadiner
 A．I．）；the Semi－Niaron Preiond（from lillit A．I．．． 1250 A．D．）：the Eobly Enylish Perion，cumprising the two periuds oi fide and Minklle English（from

As early as the ith e．Tputonic invaliers from the contiment settlol in this country，and drove the aricinal leltic－sperking inhabitants to the uorth ant west of the islaml：so that before the hattle of Ilastings（ 1006 ），the Andr－saxon tongue had been spoken in Englamd fur at least $\dot{\theta}$ on years．The fual absorption．after a lones comflet，by the kings of Wessex，w West siaxmis of the rarious portions of the Heptarelys，in the ！th e．went far to make the rulin：－epecth of the lamd inention with that of Berkstire amd llants．the recognisuld contre of the predominatht sept．The use．Thesiles．of this bunthern Anglo－Tenton speed as the iustrument of liturary eommunication，was permanently con－ firmed by kine Alfrel，a native of Derks．Fiuther lack thin the time of this literary monarch，few existing romans of the lamunap formit no to go ； yet．from the writiner ut（＇edmon，who was a Finth Anglian，amb is fow ecelesiastical MSS of the kinglam of Northumbria，which extended from the Ilimber to the Firth of Furth，it has been generally conelndeal that at least two dialectical jeculiarities must lave existed in the island－a
northen ame a southern one Tho Tnglime or Xirthern dialdert, it has lern presmame was. it some extont, marked with seandinavian features :
 furely !aw iemmane, theneh the Anelian was
 acomatel for the partial andmamation of the Andian dialect to scandinavian by the fact that the Janes, it a later premol, effected it sethement in the mutheast of Fagland: loit, on the wher hamb,

 wen of a las anterion the the trat banish wednpation of at pat of thatimel in the latter halt of

 mane rlialects than two: lant it will he suthicint if the realer buar in mind the two which have leen montionel. Ninw, the question arises, whith of the dialects of the Aurdestron is spedically the parent of the Endish tomen? Two answers have heen given to this question. It has brom alluged that after the Sorman ('onquest. the classical Saxon of Wressex last its temprary shpremacy and gradually gave way to a duferent dialect-manely, that of the Dudland romatios of limgland. This was the distrint where the universities sprung up, and where the ries monasteries and other religions fomulations tom their rise; and in smport of this theory, it is argned ly eompetent seholars, that the dialeet which is most closely allied to the standarl Enclish of our day is that of Northamptonshire amb some mishbouring eountios. On the nther hand, it has lum maintaned by no loss an anthouty than Sir Froderick Mallen, and his conclusion sioms not unlakely, that we munt look fre the real eronentwork of our lammage in a eradual enalescence of nearly all the lembin dialeets of Englimel. So his olition of Layanoris limut. 1847.
The pariol known as Nomi-wtom, in the history of our Enylish tongu, tates from about the Compuest until near the mutale of the lWth econtury. This was at transitum rat, amb, hke moly era of the kint, one of corfusin, loth to those wing tho lime mager, and t" thene hesirons of tracme its histury: The monks of the time, accustomal tor the nese if madival latim, hat in a great measwe forsotem the grammar of the Anelhosuxn langage; and when the attempted to write their menthr-tomene dill so viry ladly: In fact, their langrage is just nugrammatical Anshoriaxna and very poobably had its comatranart in the wess lamponfi of the common IWorle. The surom 'hronich, ass it is calleal, which frears date 1172, ant latyammis Foret, alout 1150 or 1000, whibit traces of the larekingry of the Anglosam. The inflections amp amers of the sulotantives, the dolimite and indefinte dechensions of aljectives. are for the most part disregarded : a mankin fartialaty is shewn for weak promertes and Jurtiondera than is a constant substation of en fom one in the phasals of fertss and the finale is wiften dierarbed; lusilus a ervat uncertainty prevaling in the wevermmen of pronsitions. As regaris the Somiswam womblary itsulf, although employal in lit mature a contury and a half after the Nimman Comment, it axhints hut few traces of Noman-
 diate afferts of that ercat change were loy on
 :

When we cuna to the Lionly binglish Perion, wa
 thansenses the the som-siswn orat of our languaze The priminke of the Findish tomane nuw assert thomsolves andively in cuntrast woth thase of its

infthetions. Which tho English has contrived to get will of. It prafers to expess the varinus molitio. cathens of an beat hy some rational wod or wods
 Siaxon preriod, as we have seen, the verts sullered mulh hass intlectionsl change than the substantives and adjoctives; this will hor found to hold throughout the entire 2.0 yaurs of the rem of reconstruction. $1_{1 s}$ the dine forin of The 'ual and the rightingale. the Anglo-sixno vowels $a, p, u$, in final syllables, are all represented by $c$. and the final $n$ of tho indinitive is lecrimine to disappear. In the Chronicle of tioburt of tioncester, we mommater, besiles, a great number of French worls, which hat gradually Income familiar to the peoble, thranh the presence of their Nomath maters. The I 1 esence of French is, besiles, very noticeable in the pretry of Chaucer and Chwor. What fear conld not accomplish, literary respect proluced: for it is no doult to the literary men of England, rather than to its mastars, that we owe so large an ahmasture of French expressions and of Frewh terminology. Our first complete translation of the Bible belonys to this perind. Piors Plocman has but few French words, while Lydgate and Bishor, Peacock have too many; and Alores Eiduard 1 . (1509), and the Jut Brom Maid (1500), are comparatively modern in their style ami tone. As to Scotland, arain, in the Auglian counties lying sonth of the Forth, the language in all respects was similar to its more sonthern neighbour, and underwent such changes as we have muted in its more Saxon comper. Diarbour, a sicottish contemporary of Chancer, wrote parer English than Chancer did, and his foems resembled in a striking degree the homely phaseology of Piers Phowen. Desarding the north-eastim dialects of Sentland, some diversity of "pinua exists. Some antiguaries are of opinion, that the large infusion of Norse ur seantinavian dements in these dialects is to lee accomatel for ly the fact of a Nurwerian kinghom having heen maintained in the cast of sectland during the 11th c. for a periol of thinty years: while others allege with more probalility, that the haguage of the north-rast of worthme is as decidedly AngluSaxon in its form and sulotance as that of Norfolk or Yondshire.

In the Modirn Limplish Perivel. says Irofessor Spaldins, the orgmisation of the English language may be sulit to la complete. 'Tlur laws determinge the changes to fre male om worls, and regulating the gramatieal structure of sentences, bad been denintively fixed, and were senerally obeyed; all that haul still to be gained in this particular, was an increase of ease and dexterity in the application of the rules. The vocalulary, iloubtless, was not so for alvancer. It was receiving constant aceus. sions: and the thre-and-i-half centuries that have since rlapsen, have increased our stock of worls immensely. but this is a process which is still品ing on, amb which never comes to a stop in the apecth of any people; and the grammar lomg one
 are only secondary, wital the time armes when they wormerate with other canses in heraking up a hamane altengetler:--For further information, the realdep is refermel to such arcessille works as those of hatham, ('raik, an! spading.

LNELLSH LI'THRATVIED, like every other mental prodect, is palition ly the listory of the nation to whith it lowhengs. "The great social eras of a montryss history have always been fomm to corremand with the groat intellectual eras of her growti. It will, lowever, be sufficient for our purpuse to arance the literary annals of Englend anto thren furiods: 1 . The priod antecedent to the

## ENGLISH LITERATERE.

Norman Conquest; 2. The period extending from the Norman Concmest to the English leformation: and 3. The perion extonding from the English Licformation to the present day.

1. The Period Antredent to the C'omquest.-This Parion possessens a literature compused in three distinct languages-the Coltir. the Lutin, and the Aneglu-Sincon. Pegarding the Celtic biterature, see Celtic Nitions, Iersh Literatcee, aud Welsh Litenatces. The introduction of Latin literature into this country was eonsiderably later than the Lioman invasion of it. The cultivation of the letters of lome followed as a necessary eonseipucace on the introduction of Christianity into the enuntry. St Patrick is said to have been the first teacher of Christianity in the Britinh Islands, some time before the middle of the bth contury. Areland was the scene of his labours: and it is well known that it was by Jrish missiomaries, chied among whom was St Columba (q. v.), that the first light of the gosued was attempterl to he disseminated in Soutland and the north of Enclamd. Towards the close of the fith c., St Augustine landed in the south of England. and land the foundations of the Anolo- "atholic: 'lurch. These great evangelists, however, rather prepared the way for hiterary ellert on the part of others, than were themselves literary: The carliest names of importance that we encomer are Alcain and Erigena, becle and Alfred. Aiter the immigration of the Anglo-Naxms into Iritain, this lump began tu furm a literature of their own. Their three historical poems-the filceman's song, the battle of Finnesburgh, and the Tale of Beowulf-are mainly versions of events which hapqened on the continent hefore the descent on the shores of England. The last, which is essentially a Norse tale, is the only poem resembling an Iliad which the Angosaxnes possess. Except the remarkable relighons bems of the Northumbrian monk ('eilmon, in the Fth e., little more of any moment in vise has been handed down to us by the Anglo-Naxom people. But this peope, though eomparatively poor in poetry, are eminently simple and straiuhtforward prose writers. King Alfred sliscarked Latin in all his commmications with his sulijeets, and in conserguence the Anchriaxon mate an imprestive start throughont the whole of Englanl. From the Saxnu Chronicle, which is made up from the Ns. of sereral conventual records, montern selintars have derived special and valuable information. I'ntions of the saceral soriptures were translated into this language, sereral of the learling men of the time, such as Ahhelm, Bede, ant Aifrot, lembing their as-istance, Sermons aut yrammars, ghossaries and medical treatises, gengaphers and dialomes letween Solmon aud saturn, make no the file of this perion of the literature. This notice of the fisw perind must be concluderl by an allusion to the iflastrious name of Alfref, who, hy his chlightenment and his virtue, has rendered the ! 9 th e., in which he flourished, one of the limghtest sjuts in the whole range of English literature. Klis favourite literary employment was remlering works written in Latin, a language which he only know imperfectly, into his mative tongue. He did mot scruple to add a picturespue story, a lit of gengraphy or a devout prayer, when oecasion suited. to the original text of his anthor. Even in his rersion of the last of the philosophic Iomans, he sometimes vies with Boethius in passages of sobemn cloquence or of speendative meditation.
$\because$. The Period ertending from the Forman Con. quast to the Enuglish Rejormation. -The Conquest had the effect of ehangiag the language and manners of the court; it took but little effeet on 161
those of the obstimate imbabiants of the country. In a few econturies, the English people compelleil their Norman mastim to aequire the lespisat Ando-Saxm; and if there was a consilerable importation of Norman-French into our literature, it was owing much more to sheh writers as Claneer and drower, what tow what suiterl them from whatwer puartor, than to any lomily inftumen of the Nomman nobility dmoineerine wer the abject necks of their Tentonic enemis. In a nenation or two after the Conquest. classical and theological learning made very eoneiderable promress. Monasteries were busy, ani the English muversties were both by this time fommed: while an interchande of teachers and 1 mpils constantly went on between the Euglish sominaries and those of France and wher comutries. Lamfrane and Anselm, Hales and Duns Sentus, Dichael Sent and Iinger Bacon, hart attained to a meat cminence in speculative amb in physical 1hilusphyy. Ionltless their thinking was more characterised by its hair-sIlitting ingenuity than lev it soliclity, hat the lBth e. stants ont in a dis. tincuished manner in Endland, and indeed thromgh-- hat Europe, for its peculiar devotion to speculative studies. But all there philosumers wrote in Latin, and so did the historical writers of the time. These were William of Malmesbury, Geoffrey of Nonmouth, Girahlus ('ambrensis, Matthew l'aris, ant other chroniclers. Gne of the most curious and amusing thases through which our literature passed was the composition of local squils, generally of a fereonal character, in rhymed Latin crmplets. The ecclesiastics frequently came in for more than their share of this rude abuse. It is to Walter Napes, a man of wit an! fancy, we owe a hithly l"pular drinking-song of this perioel, beminins Mihi ist propowitum in thberna mori ('I devise to enl my days in a tavern drinking:' see Leigh Hunt's fulicitons translation), which almost rivals in spirit and visenur tine Jolly fiome ille and dhl of two centuries later. The satire passed from the clergy, and was directed arainst the focthle king (Juhn). We Montfint and the other great barons who distinguished themselves at Linnoymede, are the miversal theme of mpular praise. The tiestu hommumum, a malley of the most dissimilar elements, compiled by noljudy knows who, contain tales and amolownes, falles and satires, stories of pathos ant of himmor, worked up into a form chosely resembling the French Fallianx. These Geste have lwen instrumental in surgestinor some of the mollest thenes to our nore recent hiturature, and thus posess double clains on our affictionate regarl. The arirciant of Tonice, Mrumion, de. nwe much to these rude tales of a hygone ace The French Fahliaux affected our litcrature but little before the time of Chancer. Excent the mortwetions of a metess, Barie of France, ferw of these compositions have come down to us uf very ureat merit. The romances of chivalry, rule and spritenl, pathetic and imarinative, are w.ll worth the attention of the stukent of Eaglish litroture; such are the time oll story of Ihiotlok the Drune, the Gest of King Morn, Brais of Mamptoun, (fing of lourcick: amil last and host if all are those romances written in french, but compused by linglishmen, that celebrate the ghory and fall of Kings Arthur and his knigles of the liound Table, of which shemtid use has recently been made by Alfred 'Tenuyson in his Iflylls of the Nimg. Dut what during all this time has become of the old vemacular tompue of England as a medium of lite. rary expression? Driven from the monasteries ant universities, for the most part, and only slightly retained in poetry, it might have been expected to decay and die out. But such was the native vitality of the people who sproke it, that it kept its place,

## ENGLISH LITERATITRE.

almost without a literature, only undergong such changes as thne inevitally effects mon a masernt langutw. 'lhas the Aughosaxo merged into the samisaxan, which gew and flourishel, althugh it contoins sery little literature of mush importance, except the Bret of Layamon, "the Finglish Enmins, "The 1 th and 1 oth "ecaturies (the perind of the Early laglish) are of areat importanes, beth in the progress of Enclish history and of English literature for although the age of Edwatd I W. was inglurions in both. yet in the next refige the victorics of Creey and Poitiers herablad ats with trumpet-hast the age of thousht and of pactry, represented ly Wieklific and "hancer, both of them lorave-hearted gemane Endishaten. The tramshation (the first (wer exeruted) of the Lible into Doglish, which was completed loy Wickliffe ahont 1350, is a work of great valac. not only as a memment in the religions history of our nation, hat in a philolugieal penint of riew, lwing, as it is, "all but tirst among the prose-writing in our ohd tongue. The principal lwok which precedes it, and the very oldest written in Early Enghish, is Sir John Mandeville's account of his eastern travels ( 13 Bi ), somewhat later (between 13.0 and 1400 , ceotfrey (hameer, the genuine father of Endish poetry pulblished his Conterbury Tales. A shrewd and saqacions observer, he has left hehind him in these Toles a series of sportive and pathetic narratives, told with such a womderful power of temberness and lummur, in such a simple, healthy style (althonch his English is largely monlined liy French innoristhms), that they have been the winder and delight. of all sneceding times. Laurence Minot, Richari Rolle, Langlind or Longlinte, autlene of Piow Mownan, and Gower, fitly chose rom (hancer as eontemporaries who wrote more or less vigoms verse. Alout the some period flomished in scothand dohn Parkmr, whose epic narrative, The Brace, was written about lisid. The lanarge of this pem risembles that cont morancously employed in the south. In the fullowiug e. (the 15th), and in the tarly part of the latin, weur in Englaml the names of Tohn I wdeate ( $14: 3$ ), whose Lendon Lyekromy is still asrevabe rading; Alexander larelay, whase ship of Fouls was printel in 150, ; luhn skelton. author of the semrilous satire of Cutin Clout (herd 1029) ; Thowant. Earl of Siurey (heheaded bub1.57) : and kir Thomas Wyatt (ilied 15th). The jrose writers of this perion are Sir John Fortescue, chieffustice of the Kine's lawoh muler lemry VI., who Ammished $1430-140$, and who wrote, among other thims, it tract on the Difirence beteren of A lisolute tan? Limited. Monapory, as it more particalarly ragards the Englisk Constitution: William Caxton whe introluced printing inta Britain in 1.5 the fint look aver frinted in this country being the fiome of chess: Fabian, author of the Courordane of ctomies, dimi lild, JIall, an English lawger (died 1.5:), who woute a chronicle of the llats of the fown: and Tputale. burned (1530) for heresy. In bontand, durins the same period, we enconater in buctry the nanes of fames J., king of Scothom (mmoned 14: ib), anthor of the Kings 'uhair, \&c.; Ambrw Wyntma, winn of Lachleven, whose Orams

 indy fopular with the Sertish peasantry; lowert Henryson (Hiol 150 s , author of The 'rastament of

 have possessen ereat holdness and vipour in his delineatinns of charader' ; aut (iavin Dondas (hime 1.igh, whose lust work is a tauslation of Virgil's Fine ill into benttish verse.
3. The Poriod extending from the Linglish lieformation to the Prexent Dag.-Among the brilhiant works of the Elizabetinan age, there is probibly nome of which we may not detect germs in some of tha. "thonts which were made in the century that preeded. In thonlongy, the names of Latimer inurned lison, of (ramaer (birned lisab), and of lidley (burnell limat, shme forth onspicuonsly: and it is suthenent to mention sir 'lhomas More (hobermed lisis), author of ropur, a curious phomophical work, and Hoger Ascham (died 156S), as exedent misedlameons writers of that time. As we have already taken ui the English drama under the article Drami, we ned arly mention here Sackilla (died ldos) author of Mirrour for Matinfortes, de.; Brovin (hownet 1.663), anthor of the Tragial Ihistory if Iompors and Jutict; and the sootchmen, sir lhavid Lymdsay, Lyon
 Nelville, and, above all, Goorge Bathanan (died 158 ), who is miversally admitted to have been one of the finest classical scholars that ever appared in Christendom. The fommeng of the scottish miversitics, and the dissemination, maindy through the inthence of the ereat reformer John Knox, of grammar and barish schools throughont the country, bade fair to give to Sootland an important phace in the literature of Great Britain; a result which anforesen ceclesiastion-politicaltronhles long frustrated. The cra on which we are next to look. the Elizabethan, is the most brilliant in the litorary listory of Eingland. We may puote here the worls of Lord Jeffrey: In point of real force amb originality of genims, neither the ase of J'exicles, nor the age of Augustus, no the times of Leo X., or of Sonis XIV, can come at all intu compaisur. Fur in that shont jeriond we shall find the manes of ahnost all the ereat men that this mation has erer producen; the names of Shakspeare, amd Sacon, and Sbenser, and Sidney; of Rialejgh, amd Hooker, and lidyor : of Xipier, and Dilton, and ('ulworth. and Hobbes; and many others-men, all of them not merely of treat talonts and accomplishments, hat of rast compriss and reach uf undustamine aml of mimes truly creative: not men whon frefeeted ant by the delicacy of their taste, or digusted linowhorge liy the justucss of their reasonines; hat wen who made vast and sobstantial alditions to the materind now which taste and reason must hereafter be employend, and who enlarged to an incrolihh and mparalleled extent both the stores and the resources of the bumm faculties.' Even the minor dramatists of the thme, such as Marlowe and Chapuran, Heamont and Fletelier, Jonson and Drummond, are all nearly the equals of any sucecoling poets that havo apreared. In the latter lalf of this period a new class of petic writers started up, who were lyrieal rather than dramatic, and whose occasiunal verses, sometimes descriptive, sometimes amatory, and smmetimes religions, are characterised by a bricht and delicate fancy, as if morning sumbeans glittered on their pares. These are George Wither, William Browne, Frances (barles, and George ) Ierbert, the sweet $\mathrm{p}^{\text {salmist }}$ of the 17 th century' (as limerson calls lim). The last forty years of the 17 th c. are generally kuown as the age of the liestoration and thi" lievalation. Inming this perionl, the literature of the stage was disgrated hy its indecency. Charles 11. aml his court laal brourlat back with them from France a lowe of polite pootigacy, which fonm its must fitting expurssion in the comedy of intrigue. Four hames stam out cmapicuous as 'simers alme all men in that generation'Whererls, Congreve Vimbruh, and Firquhar, Yet theolory coulh boast of such names as Baxter,

Owen, Calamy, Collier, Leighton, South, Tillotson, aud Barron: This was also the epoch when the creat Milton, driven into the shades of olsseurity by political alrersities, fultilled the uttered hope of his youth, and wrote 'something which posterity will nut willingly let die.' Absut this time, too, Walton angled, and Butler barlesqued dissent; Marvell turned his keen irony against the High Chureh; Locke and Newton speenlated and discorerel: ans John Dryden, the literary chief of the time, found the English language (according to Dr Johnson) of lrick and left it of marble.'

The literary history of the ISth c., and of the reign of Qucen Anne, has been variously estimated. If it was overvalued by those who lived in it, and in the age that succeeded, it has assuredly been undervalued in our own day. It was loug glorified as the Augustan age of English literature: lut amons ourselves it has been set aside as a sceptical, utilitarian ase, when poetry could tind no higher tield than didactic discussion, and prose found nothing to amuse lont comic and domestic narative or bitter and stinging satire. The trnth, as usual, lies in the midulle. This age was far from being superior to every cra that had gone lefore it, and it was not quite so low as some of its hostile critics have represented. One thing, however, is beyond dispute, viz., that the form, buth in poetry and in prose, hul come to be much more regarded than the matter. Addison, Swift, and Johnson, may be taken as types of the prose writers of this century. The first for ease and grace is unmatched in any age; the second stands equally high for rough and pointed rigour: and the third is famons for his ponderons, finely balanced sentences, the dignity of Which not unfrequently surpassed the sense. The prectry of the time is represented loy Pope, and it has been gravely askel whether he was a poet at all. He certainly tersified with brilliant clegance, and the terror which his polishel epigrams excited in the breasts of his enemics, shewerl him to possess a force of renins which at least demands our admiration. Fuing and Akenside were perhaps animated by a higher pretic sense, but they accomplished much less; and the same may also ve said of Thomson, Gray, Collins, Beattie, and Cowper. Incomparally the greatest poct, however, of the ISth $e$. was Iinbert liurns. Lichardson, Fielding, smollett, Sterne, Goldsinith, and Macknazie are its novelists; Hume, Fobertson, and Gibbon, its linstorians; Luther, Berkeles, Clarke, Shafteshury, Hume, I'aley, and Adam smith its phifosophers.

The 19th c. though full of iuterest for us, is, from the novelty and the variety of the intellectual character emplayed in it, one of the most difficult to analyse of the whole range of English literature. It has been a time of extraordinary activity, hooks have been multiplich to an unprecedented degree, and readers have increased in an equal proportion. It cannot be doubted, however, that the first quarter of this century is greater in literature than any subsequent portion of it. It is greater, hesides, in lmetry than in prose. The early names of Colcrilge and Wordsworth, of Scott anil Byron, of Shelley and keats, of Camplell and Somthey, are higher than any now prominent except that of Tennyson. This is the age, besides, of novels and romances, of reviows and periodicals. Jeffery and sydney Smith, Hazlitt and John Foster, Te Quincey and Carlyle, are the great names in review-literature; Hall, Chalmers, and Irving in pulpit oratory; Stewart, Mackintosh, Dentham, Brown, Hamilton, and Mill in philosophy; Dickens, Thackeray, Bnlwer Lytton, Miss Bronte, and Diss Evans, as muselists: Hallam, Macaulay, Thilwall, Grote, Milman, ami Carlyle, as historians; Ruskin, as a writer on art;

Tennyson, the Brownines, Mathew and Elwin Aroold. Dobell, and Smith, as poets; and in the New World beyond the Atlantic. Waskington Irving, I'oe, Longiellow, Cooper, I'rescott, Emersom, Bancroft, and Hawthorne, with many more, rise lefore the mind when one tries to seize upon the great living authors of this age or those recently Tead. A considerable protion of the literature of the 1Sth and 19th centurics is deveted to science, which can shew a crowl of illustrions names too numerous to mention. llesiles, in scientifie works, the motter is of somuch greater importance than the form, and so little attention is latid in general to the latter lis scientitic wraters, that it is not customary to include them in a survey of literature proper.

ENGRAILLED, in Heraldry, a bine composed of a series of little half-moons, or semicireles,

Engrailed.

Invected,
supposed to have been made in it by hail. Engrailed is the opposite of inveeted.

ENGIANING, in its widest sense, is the art of incising designs, writing, \&c., on any hard substance, such as stone, metal, or wood. Diany branches of the art are of great antiquity; such as gem-engraw. ing, eameo-cutting, and die-sinking. The mare important of these omamental and useful kinds of encraving are described under their proper heads. But in a narrower sense, engraving is the special designation of the art of cutting or indenting the surface of metal plates or of llocks of wood with designs, for the purpose of taking off impressions or mints of the desicms on paper. This department of the art arose as late as the 15th e., the earliest woot-engraring with a date beine 142 , and the earliest dated engraving from a metad plate being 1461.

Wood-engraving differs from engraving on metal in this, that on a metal plate the traces or marks which are to appear on the paper are ent or suak into the plate, and when lirinted from are filled with ink, while the rest of the surface is keyt clean; whereas in wood-engravines they are left prominent or in relief, and the blank parts of the design are cut away. Hence a wood-cut acts as a type, imol is inked and printed from in the usual way. See Phintiag. This makes wondengraving preculiarly snitable for the illustration of looks; as the blocks can be printed from along with the letterpess; white the impressions from a metal plate must be taken by thomselves, and by a slow process. The further treatment of the important art of Woodenghavisg is reserved for a separate article; onr attention at present being confined to engraving on metal.

It is beyond onr seope to enter into the practical details of the varimes processes; we can only aim at enabling a reader altogether ignorant of them to conceive low the effects may be produced, and to understand the terms currently used in speaking of this kind of art.

The metals most commonly uset for engraving are colper and steel, the former having the advantaze of hoing anore casily worked, the latter of greater durability. The jrocesses of working are
esentially the same in both. The several manmers or styles of andavine are distimgished as lime (nyravinz, Mazatinto, Stppling, aml Apuatinta,

it upon a fresh steel-plate; and thus the design may be multiplied at pleasure.

Mistory of Entroring.- This most important invention, hy which the productions of art are diffused without limit, is said to have heen atevidental, and is elamed for Tommasn Finignerra, when first took impressions on praper abont the year 1440. His cmployment was executiner ormanental engraving, chiefly on artieles used in religious serviecs, such as small portable shrines, or altar-pieces. These were gonerally made of silver, and the designs engraval on them were filled ul with a black composition, that hardenen in a shomt time. This composition was called in ltalian zello (from Lat. nigellus, dim. of niter, Dack), and the workers in it nielletori. It was the 1 ractice of Finiguera, in the course of executing his work, to pure it ly ralbing lamplack ant of into, and persing laper wer it; he thus olstainet an impression of his whr up to a particular stage, anal was enabled safely to carry it on till it was completed. Finiguerra's title to the iurention las lwen disputed; and in a recent work by J. D. Passarant, Le l'cintre-Grectero (Leip. 1860), a strons case seems to be mate ont for its Geman origin. lie that as it may, the principal early Italian enmarers who followed Finiguerra, were baciolbatini (horn ahout 1436, died 1515) ; Samlro Batticelli (horn 1487, died 1515) -he embellished an edition of Thante's Iajerno, hrought out in 1451; Antonio I'ollajmeli (born 1426, died 149S, at Flurence) ; Amdrea Manterma (born at I'adua 1431, died at Mratna 1505); and Mare Antonio liaymomeli (horn at Bulogna 1487 or l4ss. died 1539), who exechted his thief works at home. The most celebrated early German engravers were Martin Schoengaucr (boris at Colmar about 1455, died 1499); Israel van Mecheln, or Mecken"n (torn at Meckenen on the Meuse about 1450. and died 1523); Michel Wohlsemuth, who tiet in 1519 ; Allsert Dürer (born at Nünberg in 147, died in 152S) ; and Lucas vau Leyden (born at Leyten 1494, thed 15:3). The engravings of all these artists are very valuable, not only from their searceness, and as illustrating the early history and progress of the art, but as exemphifying many hiph ifualities that have never been surpassed in later times. The most of them were painters, and engraved their own works, except Nare Antonio, who engraved chiefly thase of Raphael, by whom be was employed, and whon oceasionally overlooked and directed him. All those engravers, and their inmediate followers, executed their works with the griver; but soon aiter, engravings eane to be gemmally executed by two processes-etching, and conting with the graver or the dry-pint. The works of these early masters are oiten renarkable for character and expression, as therso, for instance, by Mantegna; and for the correctuess ame high style of the drawing, for which gualities Mire Antomio has never been surpassal ; also for finish of the most carefal ant clatomac lind, which has been carried fintlier by Albert Diirer and Lucas van Leyten than by any other engravers. The styles of these early engravers were cultivated by numerons successors, several of whom followed their masters as elosely as they coult, while others divergen into something like originality: the chicf names are Agostinn Yeneziano, about 1620 : Niedas Felin da Mudena, and Ciov. Ghisi, 1630; Lac. Damesz. who died in 1533; Gins. Giac. Caraglio, and Mareo da liarenna, about 1640 ; Giul. Bonasone, born at Bologna in 1498, died in lome in 1564; Encus Viens, George Vens, Henril Allegraf, and Jean Subast. Belm, about 1550 : Altrim, Charles, William, and John Collert. Adam and George Ghisi, Sutermann, Virgilius Solis, Cornelius Cort,

Martin Rota, and others, ranging from the midide to the end of the l6th centiny. Agost. Caracei. the celebratel waiuter, executed many spiritel engravings. Saenredam, De bruyn, dalle, Keller. thiller, Alberti, De (tomet, C: de Yass, Sadeler, are names of well-known engravers that enter on the 17th century. Heny Gultzios is notel for the number and variety of his works, and his imitations of the styles if the older masters. In the phates of engravers towards the mikdle of the 17th, and hegimains of the 18 th c., a large proportime of the work consists of etching the graver being elietly used for deepening and elearing mo the etching. This aruse from the maner of working heing well atapted for rembering the style of the painters of that perien, whose works were distinguished for fredrom of execution or tonch, and clearness and transparence. Tlae most noted engravers of this periol were the Viselers, who thourished between 1610 ambl 1650 , and engrased many of Burghem's pietures; Bolswert, 10:0) : Ancas Vustermau the Elder, 1630; Suyderhoci, alumt 1640. These engravers rendered mayy of the works of liubens in a rery spirited manner. 'oryn livelWhose curavings from Teniers are in some respects surerior even to Le Bas-Troyen, and Van Kessel, are wortlyy contemporaries.
In the age of Lomis XIV., a race of engravers of portraits arose, who carrieal execution with the graver almost to perfectinn. The works of the artists they engraved from were tlorid in style, with a great display of drapery and lace, and accessories in the baekgrounds elaborately executed. Amony these engravers the following rank highest: Gerard Edelinck (b) Antwerp 1627, d. J'aris 1707)he was oue of the best engravers of the perime, aud specially patronised ly Louis XIV.: Masson (b. 1653, d. 1790 ) ; Larnessin (b. 1640, d. 1654); Drevet the Elider (b. 1664, d. 1739); Drevet the Yomarer (b.1697); Gerard Amlran (b. 1640, d. 1703). There was a large family of Andrans engravers, lut Gerard was the most celebrated, indeed lie was one of the best of the French engrapers. Among eugravers of talent in England may be mentioncel Pabert Walker (b. 15:2) ; William Faithorne (1). Londn between 1620 and 1630, (l. 1694) executed many excellent engrasings of 1 ortraits: Groorge Vertne (b) Lomdon 165. (d. 1756), a ghot engraver, and a man of general information and taste in matters of art:
 mezzotinto a ribst number of interesting portraits. ln the 18 th $c_{\text {. }}$ there were numerous exeelleat eugravers, by whose works the taste fur the pictures of the Dutch school of the 17 the e las been widely extender. Two of the most listinguishet of these were John Philip le Bas (b. I'aris 170S, a. 1789) and Juhn George Wille (b. Kiniusberg 1717, th. 180S). Their styles are totally dissimilar. Le Bas's plates are chiefly ctched, and remarkable for spirit and sharpuess of touch and trimspreney; accordingly, mostly all his works are after painters who excelled in these qualities, bartientarly Teniers. Wille's engravings, again, are of the most eareful and claborate descripion, and his best prints are after (ierarl Dow, 'Terburg, Mieris, and Mctznmasters distinguished for the high tinish of their pictures. Ile wirked with the graver ; and his plates are distinguishen by the precision and clearness with which the lines are cut.
It was about the mildle and latter portion of last century that ongraving reached its hichest pwint in England. The works of William Ilagarth (1. London $1698,4.1764$ ) are of world-wite eelebrity, but that is owius mainly to the excellenee and dramatic interest of the pictures from which the engravings are mikde, though, no doult, his
prints are enmavel in a firm clear style, similar to that puationd hy the French engravers of the time. sereral of whont were empleyen hy him. It was sir lobert strange (b. Orkney $1=01$.

 a daudsapeongaver, who imparted to English ondraving those yualities and chancteristice that enathe us to clam a style of engrasing that is mational, ditioring from wher styles, and that has arisen and been lest carried out in this comatro. In drawing and form, strange was rather defective; lat he execlled in what engravers call colnur, wr the art of peolucing, by weins of variety of linc, a texture or quality that compensates for the want of collour, log eiving to the engraving sonvething of the richuess produced ly enhar in a pieture. His imitation of the softness and semi-transparency of thesh was particularly successful, and sumerior to that of the French engravers, whe works, thongh in most respects admirahle, failed in that respect, and had, in the more delicate parts, a hard or metallic look. Woulct treaterl hodseape-chgraving in a manner tutally new, imparting to it more firmoness and decisim, ly making great use of the graver. IIf works have more tinish and foree than former land-seape-eniravers, lut they are in some degree liable to the objection of hariness, in the treatment of follage in particular. The works of these two engravers have hal a marked intuence on art, not only in this country, but abroad. The merit of Strange's style was acknowledged on the contineut ; he was elected a member of the Academies of Fhrence. Bologna, Parma, and Jome. At the end of last century, art had falleu very low on the contiuent, but a regeneration was beginning; and in Italy, engravers were then arising. such as Volpato and Cunero, who studied and imitated the soitness and, techmically speaking, fleshiness of texture that distinguishen the works of the liritish engraver; those, again, were fublowed by laphael Morghen, Longhi, Itercurii, and uthers, in Italy; ley loneher Desnigers, Furster, de., in France; and ly Miller, Feller, Gruner, ant numerous other engravers in Gemmany. By them, engraving has been carried to the highest pitcli. Amonsst their works, the folllowing are chofol'rames: "The Last sumpr,' after Da Vinci, by M. Morthen; the "Spozalizia,', after Liahael, by Longhi; 'La Belle Jarliniere', and other works, after Liaphacl, ly Roncher Desmoyers, who has engraved the works of Liaphael perhalis on the whole leetter than any other engraver; "The Madoma de San Sisto,' by Mialler, ant 'The lispute on the 'sicerancut,' aiter Laphate of Kelles. No engravings executed in this country come up to the works of these last-named masters, who have encravell works of a higher class than the majority of thase done hy Strange, while the drawing and zencral treatment of ther works are in a purer and imore correct style. However, the entravints of bumet, Kambach, stewart, and others after Wikie an! contemprary linitish painters, deservedly hold the lighest bace among works of the elass to which they holone, and hetoken clearly the reat inthence which strange expreised on their style. At present, fow firure-subjects are execntei in the line-mimur, ame that art has certainly fallen in this conatry. This maty lee aceountal for, pernaris, hy the great use made of mechamical aphances, in purtims of the work, to save time, and by the frefereme shewn for mezzotintoengraving as mactised at present, that is, with a mixture of lining or stiphos. The greater number of Landsctis work have been engraved in that way, and it is mow alopted for rendering the works of Johm I'hillip and shllais, and the leading
artists of the day. Several, however, of Landseer's earher works have leen encraver in the line manner, particularly his pietures of 'Drovers leaving the Crampians,' and 'The W"atering-place,' by Watt, which are capital examples of line-engraving. There is no gonl modern sehool of landseape-engravins on the contincat ; the intluence of Woolet was cutirely confined to this country, where landseape--hyraving, particularly in illnstratel works atter Thumer, has attaimed great excelleme.
'Jowards the elld of last eentury, mezotintocograving was protised in linglam with great sucuess; arising from its being peculiarly alapted to rember etfectively the works of Nir Joshua lieg. molds. Il'Aruldl, Earlum, W゙atsm, smith, Valentine freen, and W'ard were among the best engravers of his works. The invention of this process is generally given to Jrince liment, whers ascribe it to Dr Wren. I66a and state that l'rince liunert merely improwe on the invention. It has been practised very generally from the time of its invention, lout attained its highest position in Sir Joshun's time; and it is very successfully carried out now, in an altered manner additional foree being aimed at, by means of stimpling and etching. It is well caleulated for producing hroad effects: 'Tmmer's Liber Studiorum, and the landscapes after Constable, are admirahle examples of its capabilities in this way; the effect in Turners plates, however, is heightened by etching.

Etching has been already deseribed as a part of the process of engraving; lunt as practised by painters, it is elassed as a disfinct art. The phate is prepared with a ground, and corroded in the same way; but the treatment is more free. Not being tied to the task of literally eopying or translating the idea of anothor, like the engraver, the painter has seope to impart a spirit to lis work peculiarly suggestive of what he intends to embody; bis itea is represented directly, and mot at second-hand, as it were. The ctehings of lhembrandt, Panl Sotter, Karl du Jardin, Adrian Tandevche, T'miers, Ostade, Berghem, Backhuysen, Yan Jyck, Clande, Salvator Rosa, Canaletti, and other painters, are very highly valued, as convering more completely the feeling of the painter than the best engravings. Etching was more practised by the old than loy modern minters: yet Wilkie, Landseer, and other molern artists, have etched varions plates, remarkable for character and spirit.

English Works on Engraving-Sculpture, or the Mistor!y ant Art of Chateo!rophyy and Engrawing on. Of late years, many inventions have been introdued, haviny for their ubject to supersede the slow and laborions manal operations of engraving by means of molonery ame cother aplianees. It is, l:owever, fo busibess and ornamental purposes that they are aplicahle, and not the probluction of artistic engravings of the kind treated of in this article. Th: subject will he noticed under Macmine Livgiame, Mmbus, (ilaes, de. With regard to the reproduction of plates, and other aplications of
galvanic electricity to engraving, see Galvasism and Magneto-Electrictity. Sue also Photographe Esgrativg.
engratings, Property of. The property of engravings and prints is secured by statutes similar to those for the protection of literary property: By \& Geo. II. c. 13, the property of historical and other prints was declared to be invested in the inventur for it years. The proprietor's name must be affixel to each print, and the statute imposes a penalty on printsellers and others pirating the same. Thoc prowisions of this statute werc extenled hy 7 Geo. 111. c. 38 , which secures to the widow of William Hugarth the sole right of printing and reprinting his works for the perion of $\mathbf{0} 0$ years. The other acts are 17 Geo. 1HI. c. 57,6 and 7 Will. IV. c. $59-$ which extends the former acts to the whole United King-dom-and 15 Vict. c. 12 . The latter act-the uiject of which was to enable her Majesty to carry int, effect a convention with France on the sulject of copyright, to extend and explain the internatiomal copyright acts, and to explain the acts relating to coryright in engravings - reluces the duties on foreign engravious, and exteuls the protection of the acts to prints taken by lithography, or 'any other mechanical process by which prints or impressions of drawings or designs are capalle of being multiplied iadefinitely'-a clanse which has now been found to cover phutngraphis.

ENGRO'SSING and REGRATING. An engrosser, reqrater, or forestaller, is a person who buys grain, flesh, fish, or "ther articles of food, with the intention of selling them again at an enhanced price, either in the same fair or market, or in another in the neighbourlood, or who purchases or contracts for corn while still in the fiell. These practices were regarded as eriminal in most comtries, lefure the laws l,y which trade is regulated were properly understood. In England, they were forbidlen by varions statutes, from the time of Edward V1. to that of Queen Ame. These statutes were repeated by 12 Geo. III. c. 71, on the preanble, that it hath been found by experionce, that the restraints laid upon the dealing in corn, meal, flour, eattle, aul sundry other sorts of victuals, hy preventing a free tranle in the said commodities, have a tendency to discourage the growth, and to enlance the price of the same. It was found, however, that engrossing was not only a statutory but a common law offence, and a prosecution for it in the latter character astually took phace in the present century. The Act $\overline{7}$ and 8 Vict, $c_{2} \geq \pm$, for ahulishing the offcuces of furestalling. regratior, and engrossing, was consequently passed. Besides decharing that the several offences of balgering. engrossing, furestallin', and regrating be utterly takea away and abolishect, and that no infornation or proscention shall lie either at common law or by virtue of any statute, either in England, scotland. or lreland, this statute repeals as whole host of earlier enactments in restraint of trale, which had lwen omitted in the statute in the time of George Ill., alove referred to. The rulrics of these cnactments give a curious picture nut only of the trading errors, Dut in many other respects of the obsolete eustrims of our ancestors. The first, for example ( 51 Henry III.), is called a ' Statute of the l'illory and Tumbrel, and of the Assize of Breal and Alc.' Then there is an act passed in several reiyns which provides for the punishment of 'a butcher or cook that luyeth tlesh of Iews, and selleth the same to Christians.'
Notwithstanding the doctrine of the Scottish law, that statutes may be repealed by mere desuetude, it
was thought safer to include the Scottish statutes to the same effect. The carliest is 1503, c. 38 , and the latest 1661, c. 250.

The statute 6 and 7 Vict. c. et loes not apmly to the sureadiag of false rumours, with the intent to enhance or decry the price of merchandise, or preventing goods from being brought to market ly force or threats, which continue to be pmoishable as if that act had not been made.

## ENGROSSING A DEED. Sce lxgrossing.

ENGUE'RA, a town of Spain, in the province of Valencia, 43 miles south-west of the town of that name. It is poorly built, and has narrow and irregular streets. It has manufactures of linen and woollen goods, and some trade in cattle and arriedtural produce. Pop. 5250.

ENGUICHÉ. A hunting-horn, the rim around the mouth of which is of a different colour from the horn itself, is sail herahlically to be enguiche, uf the colvur in question.

ENHARAO'NTC, a term applied in ATusic when the name of a note is changel withont any scnsible
 Correctly speaking, there is, or ought to be, a difference; but on keyed instruments, such as the organ and pianoforte, there can be noile, as the same key serves for both sharp and Hat, while with a just equal temperament the ear is in no way oflended. In larmony, the pincipal scat of enharmonic change is in the chord of the liminished sereath, which, by a change of the notes, may he treaterl fuudamentally in four different ways, without any sensible difference in the intonation.

ENKHUISEN, a fortified town and scaport of the Netherlands, in the province of North Holland, is situated on the western shore of the Zuider Zee, about 30 miles nortl-cast of Amsterelam. It is Luilt with great regularity, and is of a circular form. The most important public builiting is an elegant town-honse, surmouated by a lofty tower. There are also umerous ecclesiastical edifices, several saltrefincries, ship-building yarts, and a cannon-foundryFormerly, E. was a town of some importance - 400 vessels used to leave its harhour annurlly for the herring-fisheries; at present, not more than 7 vessels are thus employed. It has still some traule in butter, cheese, timber, cattle, and fish. P'op. $5 x(3)$.

ENLI'STMENT is the mode by which the English army is supplied with troops, as distinguisherl from the Cosscriptios prevailing in many other conntries. Enlistment was in private hanuls until the year 1802 , middemen procuring recruits, and receiving a profit or commission for their trouble. This system being subject to much abuse, the matter was taken into the hands of the government in the abrive-named year, aud is now managed by the aljutant-general. Furmerly, a soldier enlisted for life, and could neser look forward to a perion of frecdou; or, at best, he could not retire on a Irension white still possessed of a fair share of health anil strength. This system was changed in 1847. ly an act relating to limited enlistment: which proviled that a man should eulist for 10 years for the infantry, or for 12 for the cavalry or artillery. At the expiration of this perion, he conld either quit the army, without pension: "r re-enlist for the remaindor of 21 years for the infantry, or $2 t$ years for cavalry or artillery. This second perion of service entitleil the soldier to a pension for life, after his discharge: :and, in 186S, twopence a day was auded to the pay of every soldier whoreenlisted (or re-engaged). This system of enlistment proviled soldiers: but did nothing for the growth of trained reserves, with which to loring the army to
fighting strength in the event of war. The 'Amy Enlistment Let, of 19.10 , secks to remedy this defect, ly allowing men to enlist for 10 gans, with the umberstanding that o years or hess hall be passen with the coloms, and the romander with the reseme. This is known as 'short service '' ant, under the system, fiom Isjo chward, a reserve of trainel suldites will lo formed. It is extimated that with an army of 180,000 men, of whem threefourtha are to sente only six years with the colnurs, thate will aterne ly lose, a resure of 1 an, omo trained men, all moler sty yars of age. If apprentices enlist, the mater may reaver them nome certain exmbitions fotaled in the Matiny Net (II. . .) (which is passed every vear) The Mutiny Act also provides that seriants colisting bofere the term of their engagement, are valinlly enlisted. ami are entithen to wases me the the date of eulistment. l'crials of imprisoument are not reckned as part of the time of limited enlistment. A rerruit enlists into either one of the 70 sub-district hrigatus, bach of whin comprises either a twoblattalion regiment, or two swalelattalnom rewments, or he enlists for feneral servee in any resiment to which the Adjutant-general may bust him; but artifiers, as amoners, de., are usually enlisted for seneral service, so that their services may be male avalable where most reGinimel, Every recruit is asked whether he belongs to the milatia, and whether he enlists willingly: He has to a!puear befure a magistrate, and make declaration that the colistment is voluntary on his part. Seval other questions are put to him; some of the Articles of War are real to him; and he is expected to understand his real position before the with is auministered. If, at this interview with the magistrate, the youns man repents of his frevims engarment with the reeraitingofficer, he may buy himself off by payine twenty shillings as "Smait-mon'y (II. v.), anil ilefraymg any other expense he may hate occasionch. He chmot retract withont jaying this tine; a simple refusal to take the oath is fullowed by imprisonment.

ENLISTMENT, in the Nary, is mamatel ly tho Admiralty, and is changed from time to time "in its dutails, according to the dentre of willingess among seafaring men to enter the service. In 1s:0, an act was passed to sive wertain alditional alvamtages to voluntecr seamen. In 183in, amother act empmered the crown tol domble the amonnt of luanty given to a woluntere, if lee was already a seaman. In 1847, it was macted that such persoms as were antitlen, if conlisterl, to domble lemuty, slould form a solect class: and that shipmoners shmaled mot be allowed to hire such fursoms als crews fin morchint-ships, if the govermment thamet prener to issue a proclamation to that ethe t. At the commenoment of the war with liussia, in 185t, it was deconel expatient not omly to wive extra buntios to seamen willing to enlist, but to make a moncy-present to seamen alreaty in the navy, as an equivalent alvantage. The bmuty given to seamen baries from time to time, ace rifinge to the exirencies of the sprvice; bat recent 1. risfation hats rstaldisholl a distinction lutwren limited amb ronthutus servier. A seaman may culint for dive ur for ten yars, or for the ferimid the shig he enters is in commission; if for the longer jerioni, heremeres higher pay and ether adrantages. At the" "mol of this lonser insion, he may demand his dischan" ; and, if almand, he may clam to he brought tompe free of expense. Ilis commandingofticer maty, in "moryency, retain his further sorvice for six munths, on fayment of another increase of tay. 'the crown, besiles, leossteses a power of
comporliag renewod service from seanon under vertain cunfitions, in ease of invasion or other national $1^{\text {rem. }}$

ENNEMOSER, Jushm, knewn as a memicophilnsombe writer, was In+m lith Nowenher 1787, at llintersee, in the Tyrol, an! emmenced his academic studies at lmasluche in 1806 . On the risime of the Tyrolese agamst the French in 1809, E. followed Andreas Inofer as his sectetary, and honourally distinguished himsilf in lattle on several uceasimis. It the close of the war, he went to Erlangen, and subsequently to Vionna, for the purpose of conclading his studjes. Here, howeser, be experienced the preatest difliculty in bromping the beans of subsistence. hat fortumately fill in with a merchant from Altuna, in whase company he travelled for some time. When Napoleon dedared war against liussia in 1812, E. was despate hed to Enghand, to solicit aid for the Tyrohse in their meditated insurrection against the l'remel iemination. He was afterwards apminted loy Friedrich Withedm [IL, king of l'russia. an oflicer in a regiment of voluntecrs, and swon gathered atront him a company of Tyrolese marksmen, who were of great service during the canpaigus of ISI: and 1814. After the peace of I'aris, E. Went to Berlin, where le tinisleed his curriculam, and in 1816 took lis degres of Doctor of Medicine. In 181!1, he was mate l'rofessor of Molicine at the new numersity of limm, where he lectured on Anthrombery, Physical Therapeutios, and l'athology. A love of his native comatry induced him to settle as a physician in lmoshrnck, but in 1841 he went to Munich, where be ubtained a great reputation by the apllication of magnetism as a curative power. Amtong his writings way be mentioned, IPr. Metmotiments in st iner gradichethehpn Entwichelemy (Leip, 18I9), which is reckoned his prineipal work: Mistorisch-psphologishe l'marsuchunfen uber. dent irsprony und des IFsen der Menschlicken Seels (B6mn, 1504) ; Anthropolonfische Ansichen zur bissern Kinutnisz des Muschen (Kionn, 1ses) ; Der Magnetismas im 「orhaltniss anr. Nutur unt Religion (Ntuttg. 1842) ; Dre (icist des Menschon in der Sutur (Stattg.
 and Ahlifan! zur Mesmer'schon Porrvis (Stuttg. 16.io). He ded in 18.54.

ENNIS, a parliamentary and manicipal borough, chief town of comaty Clare, lrclam, on the Fergens, 20 miles W.N.W. of Limorick, is a neat town, with sme groul houses. Pol. ( 1571 ) 6.54, of whom 6102 were Coman latholies, and fol of all other denominations. It returns une member to pariament. It has the ruins of a monastery fomaded in 1240 by Olicu, I'rince of Thomons. Near the town is Lumis Comlege, foumed by Erasuas Smith. E. has a valuable Timestone puary, larse flomemills, and some trale in grain and catele.

HNN1SCOHTHY, a maket-town in the middle of Wexford comaty, Treland, on a risine gromed on the Slaney, it mies N.N.W. if Wexfori. The Naney is here tidal and mavighle for barges, and thows through a fertile and heantiml valley. Pop. (1571) sidy, of whom flate were Lioman Catholies, and 6is of all wher demmintions. W. has a large com-trade. It arose in a Noman castle, still enthe, fonmed by haymond le Gros. ome of the early Angh. Norman invalurs. C'romwell tow E. in 164! ; ant the lrish rebels stomed and lmand it in 1795 .
FNNISKILLEN, a padnmentary :und mmicipal hormgh, chief town of cmanty Fermanagh, freland, abont 75 miles W.S.W. of belfast, is bean-
tifully situated on the Erne; the greater portion on an isle in the river between the Upuer and Lower Loughs Erne. It consists maimly of one undulating strect running E . and $\mathrm{NI}^{+}$. Around, are richly cultivated emincnces and many finc mansions. Its two forts command the only pass for 50 mules into Ulster across the EMe. The chief monntactures are cutlery and straw plait. I'ol' (1571) 5 s 36 , of whom 3:-2: were Loman C'atholics : 2040 Episcopar lians, anse the rest of other clenominations. It returns one member to parlianment. E. is famons for the victory, in 1659 , of the troops of Whlliam HIL, nomer Latd Hanilton, wer a superior force of James Il., under Lurd (ialmuy. 'The bauners takon in the battle of the Boyne hang in the town-latl. The regiment of Enniskilleners, or tith Vrauronns, was tirst instituted from the brave defenders of tice town.
$\mathbf{E}^{\prime} \mathrm{N} \boldsymbol{N} I \mathrm{~S}$, one of the earliest Roman puets, the father of the Lioman Epos, was born at Rewlies, in Cababria, abont 240 years before the Christian era, and was probably of Greek extraction. Ite is said to have served in the wars, anl to have risen to the rank of a centurion. In Saridinia, he leceme aegnainted with Cato the Elder, and returned with him to Jiome when alront the age of 35 . Here he gained for himself the frientship: of the most eminent men, among others that of Seipin Africams the Elder, and attained (what was then exceerlingly rare in the case of an alien) to the rank of a Rimman eitizen. He supported himself in a cleecnt lont humble manner by instructing some yonner Fiomans of distinguished families in the Greck langtase and literature, his accurate linowledge of which explains the infmence he had on the develomment of the I at in tongue. He died when he had attained the age of 70 , or ahout 190 b.c. Itis remans were interced in the tomb of the Scipios, and his Lust was placed among those of that great family, F. has tried his powers in almost every species of peetry, ami although his language and versification are rought and unpolished, these defects are fully compensatiol by the energy of his expressions, and the tire of his poetry. IIs [owms were highly estemed hy ( icero, Horace, ansl Virgil: the last, indeed, frequently introklnces whole linas from the poetry of E . into his own compasitions. Wis memory seems to have been lovingly cherished ly his comitrymen; Dostop E'mius, 'Oue Ennius,' they used to call him. If lis tracedies, comerdies, satires, and particularly of lis Amalios, an aros in 18 looks, moly travments are still extant. What adds to onr regret is, that it is believerl his wholo works were extant as late as the 13th c. (1. (i. ('ramer, I/eroshronich). The frasnonts have heen collecterl and edited by varimbs scholars, among othors ly Hessel (Amst. 17iT). The fragnents of the Anmele have bexen emlited by span-
 orem Annalinem Fretmentis (13omn, 15:39). The ifw fragments of his dramas that have cump down to us wore collereted ly Puthe in the Joctarom Leutii Scenicomem F'ragmente ( 5 vols.).

ENNS, a river of Austria, rises at the northern lase of a branch of the Noric Alps in the erownland of Salzhurg, 12 miles sonth of Iandstait. It first Hows north to Radstalt, then north-north-east to Hieflan, after which it procenls in a general direction morth-nonth-west, passes steyer, and joins the Danulue 11 miles below the town of Linz, after a course of alout 120 miles. lts chief afluents are the salza and the steyer. For the last 15 miles of its course, the $E$. forms the boundary between Tiper Austria (Ober der Enns) and Lower Austria (Unter der Enns). The scenery on the banks of the E. is in gencral hold and romantic, as it tlows, for the most l $^{\text {art, between }}$ barallel mountain-chains,
which are lofty and preeipitons, In its lower course, it lecomes navigable, but it is chietly impurtant from the valuable water-power which it sulplies.

E'NOCII, the name of two different individuals in scripture.-1. The eldest som of ('ain, who buitt a city which was called after his name.- - . The son of darcel, and father of Methuselah. A peconliarly mysterions interest attaches tos him on acconnt of the supernatural manutr in whilh his earthly e:areer terminated. We are toll loy the writer of iemesis, that E. 'walked with (ind :0U years . . . and he was not; fror Goul tomk him.' Whait the statement be was not' signified to the later Jewa, is explatined by the writer if the lipistle to the Melrows: 'Enueh was translated that he should not see death.' E. and Elijah are the only human bethors on recond who lid not rerpure to diseharge the delit which montals wse to nature. It may uaturally lee supposed that $E$. was a character on whom the extravarant fancy of the later Jows womlal fasten with mmanal pleasure. As they came more and more into contact with Crecian and otlier culture, they foll the necessity of linking on the ants and seiences of tientile nations to their own history, if they womlal contmue to prescrve that feeling of sumemacy which was su dear to their pride as the chosen penple. Hence, E. alperars is the inventor of writime, arntlemetic, astronomy. Re., and is athimed to have filled 300 bouks with the revelations which le reeeived, the number 300 heime whriously suggested hy the mumber of years daring which he is sad to hate walked with Gienl.

ENOCII, Book or This book, from which, euriously enougl, St Jude quotes as if it were history, shews how richly mythical the bistory of the mysterious antedihuian Luoch had hecome! It was probably written oririnally in Aramaic, by a native of Palestinc, in the od e. B.c. The precise thate is mot known. At subserpucnt perimes, it woukl scem to hive been enlarored ly additions anl intermolams. It is divided into five parts; and the fowt iliscomrses of stuch sulijects as the fill of the ancrels, and the journey of E . throngh the earth and throngh laradise in the eompany of an ancrel, hy whom he is intiatell into the secrets of nature, de; the sfoond contains li.s aeenunt of what was revealed to him concernines the hearenly or spiritual region; the third treats of astromony and the phenomena of the seasmos; the fouth repres sents E. Jehnldinef, in prophetic vision, the enurse of Divine Provilence till the coming of the Messials; ame the lost consists of exhortations basen on what has precule l. The bowk was current in the primitive chmreh, and was quoted ley the Fathers. hint was lost sirht of ly Christion writoss alomet the elnse of the sth centary, so that matil last century it was anly limown liy extracts. Fortmately, however, the traveller Grued discoveral in Abyssinia three complete N心夊. of the work, which he hrounht to Lineland in 17\%. These NSS. proverl to be an lithulic version made from the Greck one, in use amonir the leathers, as was evident from the coincilence of languas ${ }^{\circ}$. The Ethiopie version did not appear till 18.35, when it was publisheal by Areh. bishop Lawronee. An English trenslation. howevor, hy the same writer, hat alpearml in $1 \times 21$, which passed thround three editions, and firmeal the basis of the (serman mition of Hoffmamn (elema, 18:3)-18:8). In 1840, (ifriner mblisherl a latin translation of the work; lont hy far the best elition is that of $1 \mathrm{~b} A$. Dillmam, who, in 18.) , mblished the Ethiopic text from tive Msi, ; aml in 1853 , a Cremen translatinn, with an intiodnction and commentary", which has recently tumen the attention of many fierman seholars to the subject.

## ENOS-ENSIGN.

Fios (an iontly, Fnos), an ancient town and seaport of buromein Turkey, in the posince of Limmili, is situated su a rocky isthmus at the mouth of at sulf of the same name, about 35 milus West-borth-wost of (iallipoli. It is the port uf Alriamople, amil has some trate in wonl, camels' hair, cotton, leather, silk, fie. Its harhour is commonhons, but so shallow, from luing chobet nu with samb, that it admits only small ressels. Top. 6000, jrincipally Greeks. "The Gudf uf Enos is abont ad miles wide at the entrance, extomes int" the country for about If miles, and is on an average 5 miles broad.

The town of E is very anciont. Vimal nomtions it (.Wn. iii, 1S) as being one of the towns fommeled ly Encas, after the sack of Truy; and IIomer also attests its antipuity by alluling to it in lis great prem (Il. iv. 5l9).

ENRIQLEZ. Gomez Axtosio (properly, ENRIQuEZ LE PAZh, a Śpmish poet, the sum of a biptizerl Portughese Jew, was born at Sesosia early on the 17th century. He entered the amy in lis 2oth year, and rose to the rauk of captain; lout in 1636 , hat to the the country, to escape the persecution of the monisition, which snspected him of a secret leaning ta the ereed of his father. E. settleal at Amsteriam, aud latterly frofessed the Jewish faith; in consequence of which. he was burned in ettigy by the pions Catholies of Seville, $14 t^{2}$ A pril 1660 . The date of his death is not kbown. During his residence in Spain, E. lad considerable reputation as a dramatic poet. Aceording to his own acconnt, he wrote as comedius, which met with grat success on the stage, in consequence of which, several of them passed as Cahleron's. Le prudente Abiqail, Enguñar pare reinas, Cilos no gevelen al wol. and it lo que coldifin los celos, were phblished moder the name of Fermando de Zarate. E's. comedies shew him to have possessed much iuventiveness, but in other respects they deserve little praise. Among lis nthur writings are Las Acalemices morales (Inmen,
 are primer moyrino (liouen, 164t), a mysticotheologic poem ; El vitho Pitugivico (homen, l6ti), a series of sativical prortraits partly in prosp and
 1656 ), an abortive epic. For a notice of F . amb his writings, see Listudios historicos pwliticos y litrorios saticre los. Judios de Lispuña, ly José Aurador ale los Lidos (Madrid, IS48).

FNROLAIENT, entry upon a register or record.
binalment of Deedr.-In order to present the Sceret transfer of lands which was etfecteri in Espland by means of a Bargain aut sale ( $1 . v$. ), it was providul by 27 Hen. V1ll. $\because$. 16 , that no transter of band shomil be edoeted by barcain amd salc. anless the deed were curolled within six months of the date of the deet. By the lines and Tecoveries . Det ( 3 aml 4 Will.  ley the whole jisures or oljeets in a pieture, the
latrons and pot of a drama, or the varions parts of a masical performance.
biNsiciN was, until 1s\%I, the title of the lowest combatant rank of commissioned officers in the british army, and is derived from their leane charfod witi the aluty of carying the regimental colones or ension (lir, rnsticme, lat, imsigmo). In the hamd-to-hand melés of the midhle ages, the preservation of the colours or standare, as the rallying point of thase lightinio under the sane lealer, was an matter of vital importance, and was only intrusted to the bravest and most tristworthy. The coldurs were committed to him with imposing ceremony in presence of the assembled regiment, aml he had to take an oath to defeme them with life and limb, and if need were, to wrap himself in them as a slarome, and devote himseli to death. The man who untertonk this perilnus post received sometimes as much is sixfolul the usual pay, it was donbtless in this way that the point of limome aruse respectiner the culonrs. llistory reconds repeated instances where the wath was kept to the letter. In the modern system of warfare, the regimental colours are seldom exjosed to such danarer, and the otice of cusign is of less accomnt. In the infantry, there were two kinds of subalterns bielow the capitain, via, the licutenint and the ensign. In the cavalry and artillery, the duties of eusign were taken hy uffecers who had the titles of cornet or secoml-lientenant. When in wentleman cutered the army, he beqan as an emsjen (if in the infantry), and from this rank he rose by purchase on senionity. The price of an rasionis commission is stated undier Commbsioss, dram, as well as the extrit price to be paid on rising to the rank of lientenant. The pay was 5s. 3 l. per day. and the halforay $1 \times 10$. 1 . to Bs.; althoush it was most mon-mal for an ensign to be on hadf-piy. An eusign in the foot Gumits ranked as a lientenant in the army, and, on transferring lis services to an infantry or eavalry regiment, exchanged with an officer of that granle.

The rank of ensign having been abonlisbed in the British army, the number of lientenants has been broportionately increased; lut for three years the oflicer only receives the same priy as the ensign formerly hanl. The oflicer enters in the prohation. ary grate of sub. bientenant, which is converted to lieutemant as sonn as he proves himself pualified to command soldiers.

In the late Last ladia Company's army, a eadet became an ensign, in rank and pay, directly he lanred in lndia.

Whins is also the name of one of the llags betonsing to the british theat ; aml, uncer that or some other name, to most other fleets, it is a larese
 erceted over the poop, "r at the gaif when the ship is maler sail. Its chici purpose is to denote the mation to which the ship loclongs. 'Jhe English ension has for a framolwork one of three calonrs red, white, wr bine-and luars the Inime domble cross of st ficorge and Lit Andrew, or L'mion- Jack
 chimf. The white rasign is also dividee into fond quarters by a red uross of st cheurge, and is limited
 (a) cary the red cusicu; hat rachos, if of chabs arkmowhertere by the - damimity, eolonial armed vessels, ships commected with government aleprortments, and merchant-wossols commanded by officers uf $1 l_{12}$ Ninval lieserva, are permited to nse the blue
 shapion all other nations to day their cusigns to the lunden has: the relamal of the louteh to comply "uth this rustom, was the signal for one uf Lilake's Hooliest encunters with Van l'rout].

## ENTABLATURE-ENTADA.

ENTA'BLATURE, that part of a design iu classic architecture which surmonnts the Columns (q.v.), and rests upon the capitals. It is usually abont two diameters of the column in height, and is divided in every style of classical architecture into three parts-architrave, frieze, and cornice. These parts vary in their relative proportions in dillerent styles. In Doric architecture, for example, if the entablature be dividerl into cight equal parts, two of these form the height of the arehitrave, three that of the frieze, anl, thre that of the enruice. In the other styles, the relative proportions are as thres, three, and four.

The tern entablature was not used till the 17 th c., the members eomposing it leing previonsly simply designated the comice, frieze, and architrave.

1. The Arehitrare is the horizontal portion which rests immediately upon the ahacus of the column. It is usually ornamentel with hurizontal monhlings, with that spaces or fucice betwecn. The mper moulding always projects futher than the whers, so as to throw off the ram. This mouldine varies in different styles. In Doric (fos 1), it is a pain square

Fig 1.-Example of Doric Entablature.
projection, with small pendants or quittre under the triglyphs. In the other styles, it is generally an ogee or talon moulding. These mouldings are freguently enriched with leaf ornaments, and in very florid designs the facio are also enriched.
2. The Friese is the middle portion of the entablature, between the top of the architrave and the bed of the cornice. In the Doric style, it is ornamented with triglyphs or slight projections, divided by angular grooves into three parts. The spaces botweell the iriglyph (ealled metopes) are sfuare, and are cither plain or enriched, either with figure-sculpture, as in the Parthenon, or with liulls' hearls, patera, or other ornaments. In the ather styles, the fricze is never cat into fortions, hat is either left quite ldain or ornamented with figurescul, ture or seroll-work. The former is most isual in (ircek art, the latter in Roman. In late Coman works, the frieze is sometimes sueplled or male to project with a curve.
3. The Cornice forms the upper portion of the entablature. It is divided into several parts. The lower moulding or mouldings resting ou the frieze are called the bed-mouldings-the upper projecting part is ealled the Corona ( $q . v$.), and between the two there are frequently introduced modillions aud dentil bands. The bed-moulding is generally of an oval or echinus form, and is frequeutly enriched with the egg and tongue or leaf ornaments. The upper moulding of the corona is generally of a cymarecta form (sce Column, fig. l), and is often
ornamented with lions' heads. These represent the openings through which the rain was at first led off from the roof-gutters, which were cut in the top of this moulding, and were retained as ornaments after their original use was discontinmed. The corona projects well over the frieze and architrave, and protects them from rain, while at the same time, by its bromi shatow, it sives repose and varicty of effect to the lmidins. The soffo, or under side of the coroma, is freprently panelled and ormanented with patere.

Origin. - The component parts of the entahbature are sail, with some appearance of truth, to owe their origin to the forms of the constraction of the oldest temples. These were of wood, and were put together in the manner most natural for that material. The square leams lail across from post to post are represented by the architrave; the triglyphs of the fricze are copied from the ends of the cross-beans; the comice is taken from the loarding which covered the rafters and ties of the roof-rrojected so as to throw off the rain; and the dentils and modillions shew the ends of the rafters left uncovered.

Whaterer the origin of the entallature may have been, it is a remarkalle fact, as connected with Greck and Lioman art, how persistent the entahlatrure was as a feature in the decoration of these classic styles. So Jong as buildings consisted of one story in height, this was quite natural ; but after this simple system was abandonenl, and when, as in Loman architecture, series of evhmos and entablatures were piden one above the other-not used emstructionally, but simply apllied to the face of the

Fig. 2.-Example of Composite Entablature.
building-the cornice, frieze, and architrave still retained their places and proportions. In the revived limman art of the lGth e., the entahlature was userl in a manner still further removed from its original parpose (fig. 2). The strict proportions of the various parts were entirely lost sight of. The frieze was increased in leight, so as to admit of small windows, to light the entresol or Nezzanin (q. v.), and in the French and English forms of the renaissance, the various members become still more attennated and altened from the original design (see Revarsancel. But in no modification of classe architecture, however debasen, is the entablature awanting. The architrave, frieze, and cornice are essential portions of every classic design.

ENTMIL, or, als it is frequently mallad in seotlame, tail:e from Jir. failler, to cont, properly simpities any hestination ley wheln the lewal connse of suceession is ent ati, whe or more of the heirs at-law beine exeluhad ar postpumed, and the settlement of hand mate monn at pationlar hefo or series of heirs. Tha desime ta luceste in ant own family land which we have either mberitel or acipurad. appears to he inherent in the hmman mima. The finst distinct trace of the existence of entails, is to be fomud in the Foman law. Tlue freeks, indeed, permitted persons to namp suceessors to therr estates, and to appuint a substitute who slomel talke the estate on the fallure of lim tirst named. The substitute, as apminted, was prernitted to suceced on the death of the institute (as lue was called) withont learing issme or withont alienating the estate. lint this limited risht fell far short of the power of entailines whiel has since mevalled in varions conntries. At fome, under the later empeross, the practice of settlinif land upon a series of beirs, by means of $F$ Fidedermmisore ( 9.5 ), frew up, and was smetioned by the state. 'These deeds, which were oriomally simply a trust reposed in the lonour of a frienin, to whom the promery was conreyed, to carry ont the will of the grantor, by degrees received the sanction of the Law. Ia their ealy form, they contaned mercly a substitation of heirs. Thas, "homo ne frolemontume feciut, elone liburos susmparit.' 'Pano at testermentu

 s. 6.5. But ley the later law, a much fuller form of settlement was almittel, wherely the estate was portectenl from every sont of alination. V Volu

 hate an example of the principul clanses of a strict contail is sulsompently more filly carried out in siontaml. It is immossible to donbt that this Jioman form must have been athoted by the Sentiol law yors in framing their denels of entail. The limitation to a partienlar luse of descent, the problibition to aliemate or hmman with deht, and the still more pecalar feature of the dectaration of forfeiture in case of wom-eonpliance, are to be fenme in hasth forma. There are, however, two points in whiels the lioman law derlared from that wheld frovalad for anmy ycars in seatland-vi\%.. that the formardisi wod recornise the rioht of primogroniture, and that the limitation of the deed was restricted to four wom rations. For the right of prinuogeniture, as reconnised in domes of ental, we are indebted to the foudal law. 'Ihat system, which las united with
the eivil law to furm at basis for the codes of modern Enampe, did not, in its Miminal form, recognise the rionte of a hohler of lame to alienate las fembal luendice. Fint the right of the elolest sme torepresent lis father, buth in the datios and priviluges of the liod, if mot an micimal phamiphe of the system, was mubrasally reoguisel in tle thys of its greatest power. Wie shall presently sce low this principule Wats emborlical in a Beattinh deed of rentail. We come nos to consifor antals as they have existed in modern nations.

In Einglamd, the saxoms, it is saml, prolnhited the alienation of lames by thome who had succeeded tw them under eondition that they shonld not
 Among the soxons, the law of primogronture was not recerenised. fint on the establishment of the fombal lirss in lastand, a proctice benan to prevail wherelsy an extate was settled urom a praticular series of lacirs, is "to a man and the heirs of his bonly." This is the first werm of an entail in England. It was ealled a fee-simple conditional, beenuse the judges refused to remonise an alsolnte limitation of the estate to a prarticolar lime of heirs, but hedd the destination to be conditional on the birth of an heir, and that that combion having been proined, the donee was free to alienate the estate. 'The comunon law thus refusing to recognise entails, a statnte was passed which hand the effect of introducins that pracetice into Fingland. This was the fanmons statute De Domis (4.v.), whereby it was declared that the estate shond be hede secunden formerm doni. In ouler to the creation of an entail numer this statute, it was not enomgh that the estate was limited to 'a man and his heirs,' as thuse works were lach to constitute ink estate in fee; it was mecessary that the estate shond be given to 'a man and the heirs of his body,' or 'to a man and the lieirs of his buely hy his wife .Jom.' The former was ealled a quacoal, the latter a special entail. Another form whoreby lands miont be entailed umber the statute De Domis, was by settlement in
 the passing of this act, lands settled in the form which it prescribel continum to be held under the fetters of a strict cutail. Jint the tendency of the law, which in Kootlonk, as we shall presently sen, was to strengthen the power of entails, wits, in Englaml, in the upposite direction. For a loner tiluta, tenants in tail, taking anwantage of lesal teclanialities, were able pactieally to defeat the limitation in tail by means of a Discontinuance. Bont it was not till the time of EAlward IV. that an etheetal moans of evalmer the provisions of the act wals brumght inta use; this was achered by means of it process called a common recovery. Bee lises anb libouvianes. by this process, a temant in tail conld bar the entail, and confert the estate intio a fee-simple. Anther monle of harring an entail
 hy the statute $D_{e}$ Omas, that levyinir a line of lands should be no bar to the entail: but ly 32 Men. VIII. $\varepsilon$. ink, it wis emacterl that a lime of lands, when duly levied. slambe be a complete bar to the temant in tanl, and thase claming nulder him. It is to he obsorved that the operation of a dine was eonfined to those claminer wamor the temant in tait ; those wha hand liorlats of revorsion on remainder. maker the errator of the entail were mot excluder by this specios of assuramee ; so that by moans of a recosery only conlal an estate tal la: eonverted into a ferosimple. From the introblaction of common reconries till the pussing of the lines ant liceoveries Ant ( 8 and 4 Will. $1 V^{\top}$ c. 74 ), a period of more than Bun years, it was inmossible that an astate sond bu frelit muder the fetters of an continl, if the tenant
in tail and the next heir chose to combine to defeat the entail. By the Fines and licoveries Act, the technicalities formerly necessary in ordm to har an entail were removed, and tenant in tail may now, ly a simple converance, alienate his estate at pleasure. An estate tail is a frechold of a limited description. Tonant in tail may commit Waste (1, vol. Fommorly, an estate tail was net liahle to the ilmits of the temant, hat lyy 1 and 2 Vict. e. 1111 . this witriction has ben remowed. Coprhold lands haw heen held not to fall unler the operation of the statute $D$ e Donis. A limitation, therefore, which in a trechold creates an estate tail, in copyholil lanis creates a fee-simple conditional, accorling to the old common law, except where the onstom of the manor is to, the contrary:

In brolleme, as in England, entails aypear first to have taken their rise from the fendal usages. It has leen observed by Lurd Kimes, that while the feulal system was in its vigour, every estatc was in fact cintailed, becanse no proprietor had any $1^{\text {nower to }}$ alter the orler of the succession. Lat when the stricter feudal rinciples gave way, and the puwer of alienating land began to be recingisent, the lubders of estates songht to secure, by deed, in them own families the lands which they possessen? The form tirst alopted for this purpose wass the simple destimation, wherely the estate was simply limited to a partionlar serics of hars, withont prolahition to alienate, or declaration of forfiture for contravention of the will of the grantur. In this form, the deed must have resembled the early English entails. The feudal law of primogeniture hiasing heen recervel as a priuciple of common law, the estate would naturally descend from father to son in the line indicated by the deed. But, as it was held that those succeeding under this deed were not restrained from alicnating, the practice of adding prohihitory elauses was introluced. Eutails in this form were hele to bind the heir from granting gratuitous alienations; lut he was not restrainel irom selling the estate, or burdening it with debt. Early in the 17 th c ., a further addition was made to the form of the deed by the introluction of irritant and resolntive chanses, i. e., clanses deelaring the act of alienation to be mull, and to infer the forfeitare of the estate. The form thes alopted, which resembles closely the form of the lioman deed already noticel, was fortified ly a decision of the Court of session in the Storment entail, M. 13994, holding that an estate so protected could not he attached by cretitors. This decision created much differences of "pinion amongst lawyers as to the power of the grantor thus to patoct an estate from the morens act of the heir. in consergenee of which the fanons Seotch Entail Act, lisis, c. ․ㅡㅇ, was passed, hy which it was enacted that an estate conveyed by a deed fortifiel by prohbitory, irritant, aml rosolutive clauses, and recorded in a ]artienlar rugisten, shomb le effectanlly secured in the line of destination. This act has always been most strictly vieweal by Scottish lawyers; and entails which have been found deftient in any of the preseribed requisites, have been regardel by the courts as utterly ineffectwal. The first Lord Headowhank, in a juigment which has always been regarded is a leading authority, laid it down that entails "are the mere creatures of statute,' and that where the interests of third martics are concerned, every part of an entail is liahle to the strictest interpretation (IIamilton $\mathfrak{r}$. Mardowell. 3d March 1815. The operation of the old entail act was foumd, notwithstanding, to be of the most oppressive character. Statutes were in conseguence passed from time to tince, empowering heirs of entail to grant leases of their lands of longer duration than could be granted
under the act 165.5 , mul to make provisions for their families. But at luntl?, hy the llth and leth Yiet. c. 30, the power of fettering lands by a strict ental has been timally mistroyed. liy this act, heirs mulur an existing entail may disentail, with the consent of certain heirs next in suc⿻esseon ; and in all cutails marle after lst Jugunt 1414 , and also in old (nitials where the heir in pussession was hom since lst August 185s, the heir if entail in porsessinn may, hy means of a shulle dech of disentail, free his estate from the restrictions of the entail.
In A merice, bicure the retriliom, the English law as to estates tail prevailel. But in the Cuited States, the law of entails has heen mranally abanflawl hy the soveral states: and property ean now le fettered, to a limital extent only, liy means of executory Dovises (1. r.). In France, the powr of creatines entails has varisl much at different INienls, from tho right to make a perpetnal ental, whirh alpours to have loen the original pindiphe to a limitation to four, ami at ome thme two derees. but by the (imle Naplem, ss, $8!16-897$, entals are now ibeolutely malibitel. In inain, also, entails, which were permitted norler ectain restrictions, have heen entirely abolishend in a law of the Cortes in 1820. Thas it will le scen that the right of scominy land in a partichlar family, which enmmends itself to the natural ferlines, has leen found so ulphessive in oreatiom, aml sa injurims to the publu interest, that after an existence of more than 600 years it has been practically discarted aluost smultaneonsly by the general consent of modern nations.
ENTASIS (fir.), the swelling outline given to the shaft of a Conum (c.

ENTELLTS MONKEI, (M. HONUTAN (Semnozitheces Lifeflus), an East Indian species of monkey, with yellowish fur, face uf violet timp surombed witla projectins hairs, lone limbls, and very loge muscular and puwerial-though not we-hensile-tail. It is held in superstitious reverence by the Hindua, and is often to be seen exhibiting woch impmant familarity in the precincts of temples; imleed, tomples are often ppocially delicated to it: lompinals are erecten for its reception when sick or waruded. Mindu laws athix in far more severe punshment to the slangter of one of these sacret monkeys than of a man; the peasant

Entellus Munkey (semmonilhcus Entclus).
estecms it m honomr when his garmen is phandered or his honse redied by troops of them, and would cmasider it an act of the greatest sacrilege to drivo them away. They take their places with purfect confilence on the roofs of homses, and gaze at the passing crowl. This is one of the very few species

## ENTERITIS-ENTOMOLOGY.

of monkers fomm in the northern proviness of India, and in summer ascents the llimalaya to the pine-forests, and alenst to the snow-line: it has even succonled in crossing the monatains, and oceurs in bhentan.

FNTERITIS (Gr, enterom, the intestines), indanmation of the bowels, and eaperially of their masenlar and serons wat. leading to Constipation (4. v.) and pain, with Colie (q. ro), and sometmes llens (9. v.). Wateritis is distinguishol from these last affections, inded, only ly the presenme of inlammatery smotoms-i. e., phin, temberness, fever, \&e. from a very early stage of the disease, and in sonlechled a form as to regnire special attention. If enteritis thes not depemd upm mechamical ohstruction, it may he combated by hot iomentations, with monderate leching and counter-iritation, and the internal administration of opiom. hojections of warm water, or of asafoctita and turpentine (see (Ifstar), should be at the same time given to clear the lower bowel; and all purgatives, execpt in some cases castor eil, should the aroided. The disease is, however, one of great dauger, and shouhd never be incantiously treated with domestic remedies. It is elosely allicer to Peritonitis (I. v.), ame fiten elepenels mon intermal uechanical eauses, on on external injury:
In the Lonert indmals.- Indlammation of the bowels, among the heavier brects of burses, Hentally results from some error of thet, such as :t long fast folluwe ly a lares, hastily devared monl, inhicestible or asily fermentable foom, wr lare dranghts of water at innmper times. When thus prochiced, it is irequently preceded hy stomath etacrers or colic, affects dhelly the mieons coat of the large intestines, and often runs its course in from eyht to twelve homes. With increasing furer and restlessones. the pulse sum rises to 70 or upwaris, and, unlike what ohtains in colic, comthmes throughont comsiderally alnowe the matural standand of tol beats per minnte: The pain is oreat, hat the aminal, insteal of recklessly theowing himself about, as in colic, octs up and lies ilown cantiously. Liespination is quickenel, the buwhs forpie. Cold sweats, stupr, and oecasiontly ihlirima, precmle death. Whea emmectel with, or ocenrims as a seruel to inthonza, laminitis, and other complaints, the small intestines are as mond affectel as the lares, and the pritmeal as well ats the mucons coat of the howels. This fom is more common in the lighter breats. Whan the pratient is seen early, whilst the pmise is still clear and distinct, and nent above Got, and the luss and ears wam, hlootletting is usefnl, as it reliews the overloatenl vessels, and prevents that exulation of hood which speetily becomes purned wit in the interior of the bowels. This discase shoulil be treated as follows: In a jint of wil, of an infusion of two drachens of aloes in loot water, five : sernple of calomel and atu ounce of laudirfum, and repeat the calnmel and laulanm every homr in gruel until the bowels are opened, or fuse or six doses are given. Enconrame the action of the bowels by using every half hour soap amb water elystora, to which ald laulanum so lones abs pain innl strainine continuc. If the animad is nallsatel and stnpid, with a cold skin, and a
 are way injurinus; aut the moly hope lies in followinf up one dose of the calumel and aloes with small loses of landanm amb swect spirit of nitre, or other stimulants, repeatiol every forty minuters. In all stane, womllen clotlis wrong nat of hot wator and applies to the bully cnemmerge the action of the bowels, and reliew the pain.

Enteritis in cattle is mostly produces liy coarso
wet pasture, acriel ar peisonous plants, bal water, and everdriving. The symptoms are fever and thirst, a quink lout rather weak pulse, restless twitehiny up of the hime limbs, tenderness of the lochy, and tomplity of the lowels. Calves generally dio in three or four days, other eattle in a weck or nim days. Bleed iarly, open the howels with a pint of oil aml a drachan if calomel, which may the repated in eight on tha hours, if no eflect is prombect. Give erory hom fifteen trops of Fleming's tincture of aconite in water, until six or seven duses are wiven. Allow only sloppy and laxative food, such as treade pruel, or a thin hran mash: employ clysters amb bot eloths to the belly, and use twomace ilues of landanum if the pain is great. Enteritis in she mostly oceurs in coll exposed localities, and where toeks are subjected to sreat privations or improper feeding. The symptoms and treatment rescmble those of cattle.

ENTOMO'LOGY (Gr. entomon, an insect, logos, a diseourse), the science which has Inssets (q. v.) fur its sulject. The mere collector of insects may be one of the hmollest lahurexs in the great field of natural history, hat his labours contribute materials for the more phinuspphic naturalist who stadies the structures of these creatures, and eomprares them with one another accordins to the mity and the variety of design which they exhibit. And when we hegin to take into accome the vast number of different speeies of insects, their great diversities of structure and of halnits, their great complexity of organisation, the wonderful transformations which many of them malereo at afferent stages of the ir existence, ant the equally wonderful but extremely various instincts which many of thom display, we find entomulogy to le a scicnce worthy to engago the moblest mind. lint besides all these things, we numst remember that insects serve most important purposts in the graeral economy of nature: and that some of them are directly nseful to man, somo directly injurins, at least when their mombers are at any time excussively multiphed.

Entomulory, alnis with the rither branches of natural history, was cultivated ly Aristotle and nother Greeks. Aristatle is the mont ancient anthor uf when works any thin relating to this science now romains. Pliny bas little on this suliject hat what is eophed from Aristotle: and it can scarely be said to have becus agam studied as at scienee till the 16th -., whell attention legan once more to he directed to it, althoush it was not till the lith c. that much progress was made, or that any important works on entomology nipeared. Insects then began to be describel, not ouly those of Enorpe, but also some of the curious and splemtid insects of tropical countries; hees and other insects of pirticular interest received attention ; the metamomheses of insects began to In stadied, and their anatomy to be investigated. The names of Goulart, Malpighi, Swammerdam, Leawenhnek, and hay deserve to lie particularly mentioned; but the infant stato of the seience may he illustrated ly the fact, that abont the enil of the 17th c., liay estimated the whole number of insects in the workiat 10,000 species, anmber smaller than is now kown to exist in Dritain alme. In the 1Sth c., the name of limerus oevplies as high a phace in the history "f catomolong as in that of kindred lotanches of science. "The progress of the scienec was much promoted ly his arrangement and exhibi. tion of the discoveries of previns ame contemporary maturalists; and ly his system of classification, fonnuled on eharacters taken from the wings, or thur absonee, a system professedly artiticial, yet so hammising with the most natural distrihution into gronps, thit some of its orders were indicated by

## ENTOMOSTRACA-ENTOPHYTES.

Aristotle, and that it has retained and seems likely to retain its place, modificd, indeed, lut not essentially changed. De Ceber and Fabricius are perhaps, after Linneus, the mest worthy to be named of the great entomolegists of tha 1 Sth century. At the elose of the 1 Sth and loginning of the 19 th $e$, the name of Latreille is pre-eminently conspicuous; and in the year 1815, a new impulse began to be given to the study of entumdogy in Britain by the fublieation of the aiminalle Introduction to Entomology of Alessrs liarby and spence, a work eumbining in a remarkable degree the marits of being at once proular and scientific. Sinee the heginuing of the I!th e., the number of insects known and described has prodigiously increased; many entomologists have with great advantage devoted themselves patienlarly to the study of partienlar orders of inseets; and many valuable monographs have antrareal. Entomological literature has now hecome very extensive. The progress of the science has owed not a little to entomological societies, of which the Entomolngical Soclety of London may he particularly mentioned. We eanot attempt to enumerate the distingnished entomologists of the 10th e., but perhaps the names of Leach, Macleay, Curtis, Stcphens, Westwood, Smith, Walker, Stainton, Swainson, and Chmekard, deserve particular notice among those of Britain; Meigen, Jurina, Gyllenhal, (eravenhorst. Hulner, Jufour, Buistural, Erichsen, and Lacordaire amons thuse of the continont of Europe; and say among those of America. It is to le regretted that we have not yet any eomplute work on the inseets of Britain. The Inecta Britemuich, of whieh sume volumes by different authors have been published under the auspices of the Entomangical Society, is intended to smply the want.

ENTOMO'STRACA ( Gr . insect-shells), a term introduced by Muiller, and adopted by Latreille, Cuvier, and other natmalists, to designate the second of their two great divisions of ('rustaceans (q. v.). The number of species of E. is very great. They are all of small size, exeept the King-erabs (Limulus), which in many respects differ from all the rest, and have recently been formed ly some naturalists into a sub-elass of emstaceans ly themselves Many of them are minute, and exist in great monivers hoth in fresh and salt water, partieularly in stagnant or nearly staguant fresh water, affording to many linds of fishes their prineipal food. They difler rory much in geveral form ; the number of organs of locomotion is alsu very varions - in some very few, in some more than one hundred-usually adapted for swimmins only, and attached to the ahhmoinal as well as to the thoraeis segments; but there never is a fin-like expansion of the tail, as in some of the malacustracous emstaceans. The autenne of some are, however, used as organs uf locenotion. Some of the E. have months fitted for mastication, and sone for suction. Not a fuw are parasitic. The heart has the form of it long vessel. One or two nervons knots or globules supply tho plaee of a lrain. The organs of respiration are in certain species att:ched to some of the organs of locomotion, in the form of hairs, often gromped into beards, combs, or tufts, or blade-like expansions of the anterior legs are sulservient to the purpose of respiration: in others, no special onvans of respiantion are known to exist. The eyes are sometimes confluent, so as to form a siugle mass-one eye-in the front of the heal. The mane E. has been given to these creatures in eonsequenec of most of the species having shells of one or two picees, rather horny than calcareous, and of very slender consistence, generally almost membranous and transparent. In very many, the shcll consists of two valves, eapable of lieing completely closet, but which, at the pleasure of the
little animal, ean also be opened so as to permit the antennes and feet to be stretched out.

The stuly of the smaller crustaceans has reecutly been proseenter with great assiduity and suceess, hy Milne-Ldwards and others: and in eonsefnence of the great differences existing among them, new elassitieations have been proped, and the name E. has liy some been restrictel to thosu which have a nontli formed for mastieation, int no special organs of respiration, forming a section which is subdivicled into two orders, Ostrigorde and Copmpoute, the former having a bivalve shell or shield, the latter destitute of it.- But the name E. is still eommonly employed in its former wider sense.

ENTOMOSTRACA, Fossil. F. attained their maximmm size in the palaozoie waters, which they tenanted in vast shoals. The Silmian Trilubito (q. v.) was a phyllopol, and the I'teregotus ( $q . \times$.) of the old red sandstone was nearly allical to the modern limulus. Small livalvnlar sjecies are fomme in ill strata, sometines, as at liurlie-House, near Edimburgh, forming layers of considerable thickness, at whers scattered in enomous numbers in the drien seliments of hakes, as in the fresh-water clays of the Wealden, or forming in some plaees a large projurtion of ehalk, with the multitudes of their thin calcareons coverings.

E'NTOIIIYTES (Entombyter: Cr. enton, within, and phyton, a plant), a term usually employed to denote those parasitic plants which grow on living amimals. It is seldom extented to vegetable parasites which frow on living vegetalles, whether on external or internal parts, nor is it restricted to those which are fomm in the internal cavities, or within the substance of ammal budies, but ineludes all whieh have their seat on living animal tissues. It does not, like the analogous term Entosoa, denoto any particular class of crganised beings: some of the E. are 1 lone, and some Fungi, but to these two orders they are limited, and all of them belong to the lower sections of these orders: some of them to those lowest sections in which the distinguishing eharacters of the two orders cannot easily lee traeed, so that they are referred to the one or the other on very slender gromods; those in which a coloming matter is present being reekoned algre, although it ean be olserved only in masses of aggregated cells, and uot in the eells when vicwel seprately, and those which even in the mass apmar entirely colourless, being considered fungi. Many of the alga and fung parasitic on phants are nearly allied to those which occur on animals; thas, erget and tho kind of mikew which has proved so destructive to viues, are referred to the same genus (Oidimen) to which is also referred the fungus fomel in tho diseased mucous membrane in eases of aphthe or therush: and another genns (Botrytis, q. v.) containg the frugus called Museardine, or Silkwom Iiot, so destructive to sillworms, together with the fungns which accompanies or canses the potato disease, and many other species which infest plants. Common monld is even supposed to oeenr on amimal tissues tending to deeay, during life, as well as on dead animal and vegetable substances.

Vegetahle parasites necur both in man and in the lower animals: not a few of them are peculiar to fishes, and more are peculiar to insects than to any other class of animals. The fungi which grow on the bodies of insects sometimes attain an extraordinary development: Spherria Sinensis, which grows on a Chincse caterpilar, and to which medieinal virtues, probably imaginary, are ascribed in China, attains a length greater than that of the eaterpillar itself. A similar species (S. Robertsii) is found on the eaterpillar of a New Zealand moth.

The situations in which E. oecur are very varmes. Some, lak the thrush fungus alrealy moticon, aphar in discased comblious of the morous memhrame : sume find their place in the lumes. the ear, or wher ureans: some on the skin, in the har folliches and in as well as on the ham itself. 'llan' - fur" when aplearson the whene when the stomath is disurbereh, almomb in the extremely shouter
 funcolia. Whech also vequetatos luxuriantly in cavities and eoners of the tecth not suthementy visited by the towth-brosh. The lumge of birds, the gills of tishos, the intestmes of insocto the wins-athers of
 veretable parasites by which they are smmetimes infested.

It is often by mo means cosy to say whether the presme of E . is to lor regarded ats the consequence or as the causo of disase: somutimes it may he both. Sometimes it apperars to be eertainly a comsequence, as whet the fiomince (br Merismonnetia) rentrinli necurs in the contents of the stomach and

 to 10 repardeit as the eause of the diseased state, and the cure of the disease sums to he accomplished Wy killing the prasite, often a thing of no little difficulty.
Whence the germs of E. are deriver is often a question to which it wombl not be casy to find an answer. Their sjores are extremely mimute; but there are nu plants which frentuce sects ur spores more alnundantly than some of them do; the growth of the plants themselves is very rapid, and reproduction is 'very intense and rapull.'

It has sumetimes been imacined that equmemic discases may be cansed loy spores of E. conveged through the air; no wrifuce has, howerer, been produced to remer this opinion probable. An attempt was made to establish the existence of cholera funsi or alse, but it completely faled.

ENTOZAA. This tema isapfich to all the animal forms wheh live cither in the natural cavities (as, fur example, the intestinal canal), or in the sulal tissues (as, for example, the liver) of other animals. The number of thene prarasites is so great (there being at least 20 distinct species of worms fomm in man, 14 in the dog, for in the horse, 11 in the common fowl. \&e.), and their ocourrence so frequent. especially in some of the lower animals, that we must regand their fresence, at all events in many species, rather as the pomal condition, than as a morlinl state due tu accidental cunsis.
It is worthy of notiee, that many of the animals inclubed anmost the E. moly enjoy a parasitic "xistonce duming a part of their total life, which often, as in the well-kmon case of perfect insects, pesconts wry varied and distinct phases. Thus, for example, the larye of the kaltiy (dextm: rqei) matrint their entire dovelomment in the stomach of the horse, attreding themselves by mimute howks tu the wasticu mecras membrame; they then detach thomselses, piss along the intestimes. and in due thu" are discharged, and undergn their further chanses externally ; and many similar instances micht $\mathrm{ln}_{\mathrm{w}}$ putent. Four this reasm, and addition.

 of E : and a reforence to the Vermas intestime in tho. Sightment liolurte, or to the lintozoaires in the Reque" Iniment, at mee slaws that these illustrings naturalists \&rminel together anmals with few or no true natural aftinitios.

Athongh most E. helong to the elass of l'ermes, or liform, this, as has been alrealy olserved, is by nu means exchasiyely the ease. 'lhus, even tixhes may land a parasithe existence; at fish of the gemus for rastio heing frepuently fomm in the respiratory
 amd suall tishes having herof frepuently observed in
 (rustucans, instames of parasism are by monans rave ; different spreies of Lormone being aloundant in the limehal (ar gill) wavity, and on the surface of mumerons fiskes, whin the Limgutulo infest mammals, reptiles, and fishers. lemer fomm in the olfactory simmes, the larynx, the lungs, the perithmeal eavity, \&e. The instances in when molluses are fomul to live parasitically are few; certain gasteropends, howerer, inhabit the bodies of echinoderms, holothurias, anel comatulas; and amongst the lanmllibranchiates. speles of momiolaria and mytilus live in the bodies of ascilians. There are several cases of pulys which have heen ohserved to alupt a parasitic existence : and fimally, varions protozo are not minequently mot with in the animal thants; for example, ecrtain species of librio, Cercomonas, and Paremecium, have becn found in the intestinal evacuations in cholera and diarrhea; Monthls lave been fomm in the urine in cholera, and certain infusoria aml rhizoporia in the lood of the dug, the fres, and many other anmals. See Hzalıtuzos.

The more common kinds of l . appear to haro attractel the notice of the carliest physicians and naturalists whose opmons or works have reached us. Hippocrates speaks of several worms, especially the tienie and ascirides, infesting the homan intestinal canal: and l'ythazoras learned in hulia that the hark of the promegramate actel almost as a sluecitic in cases of taln-w+m. Aristotle noticed both the tape-wom of the doy and of man, and the (ystirmus chlulose (see Cestold Woras) if the pirs; lint atterly monseions that the eysticercus, under faworable conditions, weame Anvelopel into a tape worm (see Tafewnius), referred the origin of all intestinal woms to spontaneons generation -a doctrine that seems to have been generally alopted till the Joth c... when Redi pmblished (in 1684) a work on Helmintholosy, in which he distinetly shewerl that the gencration of various L . followed the same laws as in higher amimals, and that in many instances there were distinet males and females. The wrat recent discovery, that the wesicular or hambr-like parasites, such as the different suecies of eysticercus and comurus, are cestoid woms in an early stage of derelopment, is alluted to in (expond Wotis, and will be more fully neticed in the article 'ape-worms.

Another point of gencral interest in comection with L., is the part of the boty in which they are fomml. Whale most live in the intestinal emal and other upen cavities (as the largnx, lononchal tubes. se.). others are foma in the chosed cavities and in the parenchymatons tissue of the liver and other sothel organs. Thas (confining nur romarks to the E. occurrins: in man), Anchplostamit duodenale,
 Orymbin rermicularis, Trichocymatus aisiner, Distoma heterothyes, at least fonr suceies of Tiemia, and Bothrimephinles lothes, have bern fomd in different parts of the intestinal canal; whike Notromplus giyas inkahits the kidney, another species of istrongiphs the lougs, a speces of Hepiroptrathe blateder, two species of Pilirria iml Monestoma Lentis the eye, I'richinu spuralis the voluntary muscles, two speeies of behmococers and eysticretes cellalose, various paremehymatons tissues, two species of Distomat the gall-blabler, another species the portal vein, and
the Filaria Medinensis, or guinca-xorm, the subcutaneous tissul.

Davaine, who may be regarded as one of the lighest living authorities on this subjeet, gives the following synopsis of the E. oceurring in man and the domestic anmals (see his Traité des Entozotires, Paris, 1560$)$.

Type 1. CeotozoA, ineluding the genera Deecterium, Jibrio, Monus, Cercomonas, Trichomonas, Puramecimu.

Type 1I. Cestomet, including the famities of Teniulee and Bothriocephalide. 'lhe T'eniadee oceur (1) in their undeveloged, cystic, or vesieular form, constituting the genera Comurns and Geysticer. cts; and (2) in their perfeet, ribbon-like shape, constituting the genus Tanin, of which about 20 species lave been described. The Bothriorch>lalidee eontain the single genus bothriocmplulus, which embraces varions species. Their eully or vesicular stage has not yet been leseribed.

Type III. Trematodes, ineluding two wellmarked secondary types: (1) The Polystomilde, whieh live as epizoa on the skin or gills of aquatio animals, and which do not eoncern us here; and ( 2 ) the Distomide, ineluding the genera Monastoma, Distomer, Molostomet, A miphestoma, with the doubtful genera of Totrastoma and Merathrylizum.

Type IV. Acantionepinsla, with the single genus Lichinorhynchus.

Trfe V. Nemitordes. Passing over two eases in which these worms have been diseovered, apparently in their larval or imperfectly developed state (once by Rainey in the hmman traclea, and onee by Vulpian in the kidncy of the dogh, Davaine gives the following genera, Oryuris, Ascuris, spiroptera, Trichina, Trichosoma, Trichoceqhalus, Filariur, Dochmius, Sclerostoma, Strongylus, Anchylustome, Dactylius.

Trme VI. Acanthotnecs, including the genus Pentastomet.

Alarming as the above list may seem, comparatively few of the worms contained in it do in reality give rise to dangerous or severe symptoms. It seems to be a condition of parasitism, that the animal upon which the parasite lives must not be destroyed by it ; and it has been suggested by one of our highest authorities on this subject, Van Benerlen, that in many eases the parasite cloes not so mach attach the organism in which it exists, as its superabundant moduets. Dujardin and other hetminthologists have described cases in which woms were developal by thousauds in persons apparently in good bealth. The symptoms oeeasioned by Asearides, Trenie, \&e, are described in the articles Ascaris, Tape-worns, \&c.

The multiplication of worms is most rapill in delilitated jersons, especially ehildren living in cold and damp situations; and impure water, unripe fruits, and raw or imperfectly cookel meat, have considerable influcnce on the development of these animals. For the description of the medicines used for their destruetion, see the artiele Vermifuges; and for information regarding the strueture and habits of the most important L., see the articles Asciris, Bothriocephiles, Cestoid Vorms, Filaria, Monostona, Nematorden, spiroftera, Strongyles, Tape-worms, Trematoidea, Trichina, 'Tieichocephales.

ENTR'ACT, in Music, is an instrumental piece, composed in the form of a little symphony or overture, to be performed between the aets of a play.

E'NTRE DOU'RO E MI'NHO, or, as it is frequently ealled, Minho, a province of lortugal, in the extreme porth-west of the conntry, is lounded on the N. hy Galicia, from which it is separated 162
by the river Minho; on the E. by Galicia and Tras os Montes; on the S . ly the Province of Beira, from which it is separated by the river Domro; and on the W. ley the Atlantic Ocean. It has an area of about 3094 square miles, and a population of 985,985 . It has been called the Paradise of Portugal, and indeed it may be doubted whether any territory in Europe of erual extent exhibits so mneh beanty. It is traversed from north-east to south-west by three mountain-ranges, which, however, sink down as they approach the eoast, laving a considerable tract of modulating conntry abong the sea-margin. The chief rivers, besinles those already mentioned as forming the northern and sonthern boundaries of the province, are the Lima-a portion of the vale of which is said to form the loveliest landscape in the world-the Caralo, and the Tamego. The elimate is agreeable and healthy. The chief productions are wine, oil, flax, maize, wheat, barley, oats, and vegetables. Wine, which is shipped at Oporto, is largely exported. Aloug the coast are numerons fisheries, at which great numbers find employment. The province of Minho consists of three districts, Braca, Tianne, and Porto, with the town of Braga for the eapital.

ENTlRE RI'OS (the Spanish for Betucen Rivers) takes its name from its ocenpying the space between the Parana and the Uruguiy, immediately alsove the point where they unite to form the Plate. It is one of the states of the Argentine Confideration. The area is estimated at 32,000 square miles, and the population at 134,271 inlabitants. The eountry is almost entirely pastoril-its principal productions beins hides, horns, tallow, and jerked betef. The soil is not well fitted for cultivation, for, besides heing rather swampy throughont, it is subject, in the south, to anuual flouds. The eapital is Pajada de Santa Fé or Parana, the other prineipal towns are Gualeguay, Gualeguarchu, and Concepcion de la China.

ENTREMETS, ENTREEES, French terms now used in England to designate certain eourses of dishes served at fashionable dinners. The chicf dishes are entrées, and the lighter dishes are entremets.

## ENTRESOL. See Mezzanin.

ENTRO'PIUM, or ENTFO'PION (Gr. ch, in, and trapo, I turn), inversion of the eyclashes, or even eyelid, eonsequent either on loss of substance, or on intlammatory swelling of the lid. If confined to one or two eyelashes, they shoukd be plueked out by the roots, and the bulbs should be eanterised; but the radieal eure of severe entropinm requires a eareful adaptation of the surgeon's art to the circumstances of the particular ease, and should not be attempted by unskilled hands.

ENTRY, RIGHT of. A person is said, in English law, to have a right of entry who has been wrongfully dispossessed or ousted of land and tenements by Ahatement, Intrusion, or Disseisin. See the several articles under these heads. A right of entry was formerly lost by suffering a descent east, i. e., where the tenant tortionsly in possession is permitted to eontinue momolested till his death, and is sueceeded ly his heir. This result of suffering a descent east is removed, 3 and 4 Will. IV. e. 27 , and right of entry is now lost ly not asserting it for twenty ycars.

ENTRY OF AN HEIR. In the feudal law of Scotland, this term was applied to the recognition of the heir of a vassal by the superior or dominus. Strictly, the whole rights of the rassal in the property return to the superior on his death, and

81

R'N゙LLOPES. Until the introduction of the
 were very little alogitel : it was far more mistomary to sectre, hy wafer or seatins-wax, the she of prpur on which the letter was written. When the postage was rendered uniform for all distances, and prenament enforced, or at least recommended, it was supposed that stamped thvelnpes would be convenient corcrings fur letters, scaling the letter and prying the $p^{\text {mistage }}$ at one pration. Such has indeed been the case; but the envelope-manufacture has since taken a new direction, and to an extent that no one could hare contemplated. Several large firms in London aud elsewhere can make envelopes more cheaply than the govermment, and can vary the size, shape, colour, and tuatity to an indetinite degree ; as a conserpence, althoudh envelopes bearing the government impressed stamp are still in chanam, the unstamped rarieties are used in very much larger cuantities. They are made by two methods, involving tifferent amounts of machinepower. The paper is first cut into quadrangular pieces rather lunger than wide, by a cutting blade brought to bear upon a pile of shects at once ; and then cutting-dies reduce these pieces to the proper shape, generally lozenge or diamonl form, but sometimes with curvilinear edges. For some linds, it is found to economise bath time and paper to stamp the lieces cut at once from the rough sheets. The suluserquent folding and gumming are performed generally by hand, sometimes by machine. In the hand-methot, women and girls fold with almost incredible yuickness, laving very simple guide. pieees to aill them in griving the proper oblong chadrangular shape to the fold. The gom is applied with a suall brush, either all along the overlaphag edges, or in spots here ant there, accorling to the quality of the envelope.
The envelope-machines, however. such as those of Dlessrs De la Rue, are beantiful examples of antomatic mechanism. In the kind invented and used by this celebrated from, a cutting-machine severs the blanks or papers; and dies are cmployed to stamp the device on the spot where the seal would ntherwise lic. The blanks are then fed into the fulding-machine, where they pass through a eurions series of processes. Lach blank is carried down into a lox, where a plunger makes four creases in it; two short levers fold lown two of the Haps thus made; a gumming apparatus comes up, and applies a line of wet sum to each flap-edge; two small levers then fukf down the other two flaps (lont only fasteninc one of them) ; and finally, the envelope is shifted aside to a pile, and makes way for :nother. All these processes are gone thround in one second, enabling the machine to make sixty envelopes per minute. Where twelve of these machines are working at once, it will he seen that a million envelopes are put out of hand in a very short time. Nearly a million ame a half of envelopet letters frass through the post every day in the United Kingrlum, most of the cuvelopes for which are of home manufacture : ont liesides this, a large export trade is mantained. The stamped envelopes all so to comerset House, to have the stamp impresseal apon them, which is clone by a beautiful machine, chiedly invented ty Nr Edwin llill, in which embossing and conor-pinting are ingenionsly combined. These envenpas are sold by the Stamp-office,

Inctween which ant the Post-office a monetary arjuothent lucomes necessary.
FiSVOS, a diplomatic minister of the secomat ordur. i. e., inferior in rank to an ambassalur. Fonoys orlinary and extraodinary, ministers Heminetentiary, the intemuncios of the pue, and all wther inferior diphomatic ministers, differ from ambassathirs in this, that although they receive their credentials, like ambassators, immediately from their sovereign, they represent not lis personal dignity, but only his allairs. They stanl to liun just as an ordinary agent does to his principal, and their acts or promises are his in a business, though nut in a prrsomal sense. It is said that this class of liplomatists was first introduced by Louis XI. of France, towarls the end of the loth century. The envoy is superior in rank to the charge daflaires, whose credentials proceed from the ministers of the stato from which he is sent, and are alliressed to tho ministers of the state to which he is sent ; or are a mere delegation from an amhassalor or envoy to condnct the affairs of the mission in his alsence. Consuls ( (q. v.) are not generally reckonel among, diplomatic ministers, thongh, where they have diplomatic duties to perform indepentently of an ambassador or envoy, they are accredited, and treated as ministers. According to the division of diplomatic arents into four classes, which was made by the great powers at the congress of Viema in 1815-viz. 1. Ambassadors, legates, and nuncios; 2. Envoys, ministers, and other agents accretlited to sovereigns; and 3 . Chargés d'affaires, aceredited by and to the departments of Foreign Affairs-an envoy would be of the second, and a charge d'alfaircs of the third rank. But the practice of this comntry has interjected between the ambassador and the envoy a second class, callell envoys extraordinary and ministers plenipotentiary, which, of course, throws the ordinary envoy into the third, and the charge d'affaires into the fourth class. See Chafgé d'Affaires, Anbassador, Embassy, and Consul.

## ENYED. See Nagy-Exyed.

E'OCENE (eos, dawn, and kainos, recent), a term introduced by Lyell to characterise the Lower Tertiary strata, from the ielea that the fossil shells of that period contam an extremely small proportion ( 31 per cent.) of living species. He accordingly lonks upon these bels as indicating the damn of the existing state of the testaceons fanna-no recent species having been detected in the older rocks. The gradual approximation of the living inhabitants of the globe to the present forms is the chief characteristio of the Eocene and newer deposits. The Eocene beds rest on the chalk. Like the other Tertiary strata, these deposits occupy small and detacherl areas when comparel with the older measures. It is not difficult to determine the relative position of Primary or Secoudary strata, becanse of the great extent of particular beds, being freynently continnous over extensive districts. But Tertiary deposits are more isolated, and occur in smaller and more retached patches; hence it is elifficult to determine the contemporaneity of the sections of the various periols, oecurring as they do in clifferent isolated localities. Their relations must be determinet from the petralogical strncture of the berls, which, however, is very inconstant, or from the more satisfactory evidence derived from their fossiliferous contents.

In the following table are given the generally received divisions of this period, with the maximmu thickness (in Enothish feet) of the English strata, and the Fremeh and Belgian equivalent leds:

## EOLIAN HARP-EPACRIDACEA.

## eólian harp. See Eollin Hafr.

EON DE BEAUMONT, Charles Genevteve Louis Auguste Anoré 'Trmutife D', known as the Checalier de' Eon, was bom at Tonnere, in Burgundy, in 1723 , stadied law, and becane an advocate. lie attracted the notice of the linince of Conti by some politieal writings ; and in 1705, was introduced by the latter to Louis XV., whe empoyed him in diplomatic missions to Linssia and Anstria. After serving a short time in the army, not without distinction, he was sent to London in 1761 as secretary of embassy, aml shortly after was made minister-plempotentiary. Eecoming the rictim of a court cabal, howerer, which deprivel him of his oftice, he took his revenge by puldishing his seeret correspondence with the French court, which contained, among other things, libels on various hersons. For one of these, he was prosecuted in London ; and to avoid judgment, Hed to the continent. He, however, returned to England again ; Jut, on the death of Louis AV., the French ministry deemed it mudent to recall him, as they were afraid he might betray their secrets to the Eaglish government, which made him brilliant offers. The pretext laid hold of for this purprose, was the scandal excited in London by his having assumed the gath of a woman, which he had done at the reguest of Louis, the better, it may be presumed, to hade his designs as a 'secret agent.' On his return to France, however, Eon was very favourably received ; anl Lonis X'V゙I. even orleyed him to make use of the feminime fands in future. In 1783, he again proceded to Lonton, nut, however, in any visible official capacity; anl, thongh dressed as a woman, gave lessous in fencing, of Which art he was a complete master. On the outlreak of the french hevolution, he bastened home, and offered his services to the nation; but as nothing came of his offer, he tinally retmrned to Lomim, where he sank into the greatest miscry, and dich 21 st May 1810. An examination of Eon's remains by Mr J. Copeland, a surgeon, settled the question of his sex, and put an end to the curiowity of the English public. His writings appared at Amsterdam 1775, mader the title of Loisits du Cheralior d'Eon. The Mémoires which bear his name are not genuine.
EOO'A, or MI'DDLEBURG, one of the Friendly or Tonga lslands, is 30 miles in circuit, and coutains 300 inhabitants. It is in lat. $15^{\circ} 19^{\prime}$ s., and long. $175^{\circ} 37^{\prime} \mathrm{W}$. The surface, which is rocky and barren, rises 600 feet above the sea. The group, as a whole, was discovered by 'Fasman in $1643^{\circ}$.
NÖTVÖS, Jozsef, a highly distinguished Hungarian author, was born 31 September 1813 at Buda; educated at home by a tutor of republican sentiments, and studied philosophy and jurisprudence at the university of Pesth during the years 1825-1831. He became an advocate in 1533 , but soon resolved to devote himself exclusively to literature, in which
field he had already won a great reputation by his comedies frritikusok (The Critics) and ITürusulito (The Weddings), and also liy his tragedy Bowis (lieveng. . Atter his return from a jrumey through Gemmany, Frauce, England, Switzerland, and the Tetherlinds, he published his Prism liform (Cefën! nissreform, I'esth, 1838), which was instrumental in bringing about many wholesome inprovements in regrat to prisons. This was followed (18:38-1841) by his novel entitled The Carthusium, which excited great interest, and was pronomesi to be one of the best productions of Hungarian liturature. E. now hegan to distinguish himselt in folities. When the Liberal party split, in 184, into \$uniojpalists and Centralists, he became onc of the must eluquent anvoeates of the policy of the latter party, and wrote numerous articles in favour of it in the Pesti Mirlap, which are marked by varied learuing, fulness of thought, and elegance of expression. They were issued in a collected form at Leipisic in 1846 , umpor the title of Reform. The Filluye Nokery (A' Faln' Jegraije, 3 vols., Pesth, 1844-1516; English loy Otto Wenckstern, 1850; (German by Mailith) is : work of the highest order of merit. For varicty of incident, easy vigour of style, humour, hiveliums, and freshness of descriptive power, it has lyeen jronounced equal to the liest of the Wreroly Vovels. It was followed in 1547-1545 by bis Hetemertoracíy 1514 --ben (Hungary in 1514), which describes the insurrection of the peasants that haprencel in that year in a masterly style. When the revolution of 1545 broke out, E. was appointed Alinister of rublic Instruction, but soon becane aware of his nwn incapacity for the work of a practical statesnan, and alamdoning his comtry, which he deemed it impossible for lim to serve, retired for some time to Munich, where he employed himself exclusively in literary pursuits. The most important fruit of his resintunce here was Der Limpluss dor Idecte des 19 Juhrh. anf Staat wab Ticsellschatt. In 1851, E. returned to Hungary. In 18\%), he pablishe 1 anonymously his Gurcutien der Macht whe Einh it (Eistor rertes. In 1857, he was appointed Minister of Wership and Education, and in that capacity encraged actively in the work of reform. He dical at Pesth on the 31 of Felruary 1571.
F1PAClLIDA'CEF, a natural order of exogenons dants, colsisting of shrubs and small trees, which,

Springelia Incarnata:
1, flower and calgx ; $\because$, anther; 3, stamens and ovary.
both in appearance aud in botanieal characters, much resemble the Ericece, or Heath family. The

 gencrally a tubular corolla, dividing into five-rarely four-segments ; which, howeber, sometimes hecome separate petals. 'The ealyx is persistont, often coloured, lats the same nomber of sersments with the cornlla, amb is smrombded with small lracts. The stamens are fewer than in the Eiricer, nsually equal in number to the serments of the comollit, and altermate with them. The fruit is sumetimes a capsule, sometimes a berry, sumetimes a drupe, The leires are simple, gencrally slternate, aften crowled : the flowers in spikes, in terminal racemes, or axillary and solitary-About $f(10$ species of E. are known, all natives of the Indian Archipelago, the Sonth sua Islands, and Australia; in which regions they seem to occupy the place of the beaths of other parts of the world. some, particularly of the genus Epactis, are well-known ornaments of our Ereenhouses, and are tlowerings shrubs of great leanty. Some prodace elible berries resembling the ranberry. See Cranberfy

E'PACT, in Chromoloty is the exeess of the solar month above the lumar syodical month; or of the solar year above the lunar year of twelve synodical monthe : or of several solar months above as many synoulical montlis : or of several solar years above is many periods, each consistime of losymotical months. The menstrual epact is the excess of the civil ealendar month above the lumar month. For a month of 31 days, this epact is 1 diy 11 hours 1.5 minutes ${ }^{\circ}$ sceonils, if we suppose new moon to accur on the first day of the montl. The anmal epact is the excess of the solar year above the lumar. As the Julian solar year is (nearly): iffe dins, and the Julian bumar year is (nearly) 30t lays, the anmal epact is nemly ll days. The epact for two dulian years is, thervore, nearty 20 days; fur three yoars, dis days; aml so on. When, however, the equet prasses : 3 days, 30 falls to be deducted from it, as makiag an intercalary month. For three years, then, the epract is 1 nopery 3 ; and for 4 years, adding 11 ratys, it is l-1 lays; and su on. Fullowing the eycle, starting from a now moon on the lst of January, we find that the epact lecomes 30 ur 0 in the 190 h year. The efract fur the "oth year is again 11 ; and so on, The years in thr eycle are marked by Lioman Bumacrals, 1. 11. 111., \&e. eallol the Giohden Numbers; and a table of the Tulian epacts "xhibits each year in the cyele with its golden number and epact. As
 is an advance off, the Inhan ly 11 days (the number lust sin the oblian accomat lefore the Greqorian computation of time was introduced in England), and as 11 lays is the diflerence between the sotar :uml lume peirs, it follows that the Gregorian epact for iny yoar is the same with the Julian epact for the year precaling it.

EI'AMINOND.NA, the most eminent of Thebad
crimman and statesmen, aml one who fur a long perionl clevatal his country to the lighest point of homour and jrosperity, was horn 414 Jac . Ile was Wemonded frum an ancinnt but imporerished fanily, ant $l_{10}$ a retimed life till his 40 th year, pronting ly the instructions of lysis the Pythatorean, who inspired him with enthisiasm for the elevated ideas Which it was the oligeet of his life to realise. I. first becomes prominent during the periot when the Lacedemonians sarrisoned the citalel of Thebes, and kept the inhabitants in subjection. Thongh low took no part in the lesperate but successful stratagem ly whieh his follow citizens reeovered the Cadmeit in 379 n. 6 , he stepled forwarl immecliately aiter into the ranks of the pratriots; and when sent to №rta in 371 e.e. along with several others, in urder to nerotiate a peace between the two countries, E. displayed as much dirmess and dignity as $\cdot$ loytucnce in the debate which ensucd mon the question whether 'Thelres should ratify the treaty in the mane of all Bootia, the result of which ratification wonlul have been equivalent to a reengnition of leer claim to supremacy orer the Bmotian towns. To this the Lacedemonians demurred, adel the war was again resumed; $E$. was appointed commander-in-chief; and, in conjunction witl his frient Pelopidas, with an army of 6000 men, defeater doulle that mumber of the enemy at leuctia (37 P. C.). Two years later, lic and I'elopblas marched into the Peloponnesus, incited several of the allicel tribes to fall away from Sparta, and then turned his arms against that city, which, however, was bravely elefended by Agesilaus. On his return to Thehes, E. was aceused of haviner violated the laws of his enuntry, by retaining the surreme pawer in his hands heyonil the time appointud ly law; lut was acquitted in consequence of his open amel amimated defenee. In the spring of 36 s n. C , the war was renewed with increased fury hetwen Theles and Sparta, and E. once more marehed into the Peloponnesus, but did not accomplish much: and on his return home, received a check from thabrias at Corinth. To atone for this unsuceessful undertaking. he illvanced with 33,000 men into Arewtia. ane jomed battle with the main body of the enemy mear hantincia, in the year 362 b. C. E., at the heat of his troons, sueeeeded in breaking the spartan phalanx, but was mortally wommed in the breast lyy a javelin. Jeing told by the physicians that he would die as soon as the weapon was extracted, on roceiving intullirence that the Buntians hat gained the victory, he is sail to have torn ont the javelin with his own hand, exclaiming: 'I have lived loug enongh.' IIis mornl purity, justice, and emmency are extolled by the ancients as much as his military talents ; and it is expressly recorded of him, that be never told a lio, even in jest. Compare Batuch. Epaminomeles uml Tholiens K'emp) un die IIcgemonie (Brestan, 1531).
 shoukler), in siege-works, is a portion of a battery or eartliwork. The siege-hatturies are generally shichled, at one cond at least, ly ejaulements, forming an obtuse angle with the main line of the hattery. The object is to protect the guns and grmmers from a fiankins, fire. 'The mame is often given erroneonsly to the parapet of the lattery itsclf, hut it applies properly to the flanking return only. Sometines the whole of a small or secondary carthwork, incluting the lattery and its dlanks, is called an epaulement; and sometimes the same name is given to an isolated breast-work intended to shielle the cavalry employed in defending a body of lewsiwers.

An iprale is the shoulder of a bastion, where

## EPAULETTE-EPIIEMERA.

one of the faces and one of the flanks meet; and this points to the proper meaning of epaulement, as a shoulder or flanking work.

E'PAULETTE, from the same French source as epaudement, is a shoulder-knot woru by commissioned officers in the naval profession, both as an ornament and a distinction. In the British navy, the oflicers of and above the rank of heutenant wear epallettes of goll lace, one on each shoulder, sub-lientmants wearing one ouly. Ranks and degrees are marked in a very systematic way loy means of crowns, anchors, and stars worked in silver on the epaulette, and also by the size of the cords of the epralette itself. This decoration was formerly universal in the British army, officers wearing those of gold, men of worsted; luat they were abolished at the time of the Russian war, in consequence of the danger to which officers thus easily marked ont were exposed from the enemy's sharjshooters. Militia officers wore epaulettes of silver cords.
epée, Charles Michel, Abbé ne l', one of the founders of the system of instruction for the deaf and dumb, was boru at Versailles, 2uth November 1712. He studied for the ehureh, and entering into holy orders, became a preacher and eanon at Troyes, but eventually, on aecount of his Jansemist opinions, was deprived of this appoint. ment. He now lived in retirement in Paris. In the year 1750 , he first hegan to occupy himself with the education of two deaf and dumb sisters; and, as he asserts, without any previous knowledge of Pereira's etforts in the eause, invented a lancrage of signs, by which persons thus athieted might be enabled to hold intercourse with their fellowereatures. His lirst attempts being crowned with success, he determined to devote his life to the subject. At his own expense, he founded an institution for the deaf and dunb, and laboured with nnwearied zeal for its prosperity. His favourite wish, however, the foundation of such an institution at the public cost, was not fultilled till after his death, which took place 23d December 1759. He wrote a work, entitled Institution des Sourels et Mutss (2 vols, Paris, 1774), which afterwards appeared in an improved form under the title, La leritable Maniere d'Instruive les Sourls et Muts (Paris, 1784).

EPEIRA, a genus of spiders, the type of a family called Epiovidue. 'llaey are of those spiders whieh have only a pair of pulmonary sacs and spiracles;

Epeira Diadema.
construct wels with resular meshes, formed by concentric eircles and straight radii ; and are furnished with a pair of almost contiguous eyes on each side, other four eyes forming a quadrangle in the eentre. Many of them are remarkable for the beauty of
their colours and of their forms. Several species abonud in our garlens, particularly in autumn. $L$. diudema is one of the largest British spiders. It is found in moors, the borders of woods, \&e. ; lut it is in tropieal conntries that the Epeiride exist in greatest numbers, and attain the greatest size and beauty, extending from branch to branch their laeework, remarkable for gracefulness of design. The net, when loader with wings, wind-covers, and Limbs of inseets that have heen preyen nyon, is often loosened, and falls down upon the ceutral nest or den of the spider: and successive nets thus falling duwn, form at last a ball sonmetimes as large as a man's head. Some of the spider cords, carried horizontally from tree to tree at a considerable height from the gromnd, "are so strong as to cause a painful check across the face when moving quickly against them; and more than once,' Sir J. F. Tennent says, 'in ridins I have had my hat lifted off my heal by a single thread, -Tennent's Ceylon.

EPERÏES (Lat. Fragopolis or Eprresintm; Hung. Eirerjes, Sloval Pressura), an alla town of Hungary, in the county of saros, of which it is the cajital, is aqreeably situated on the left bank of the Tareza, about 150 miles north-east of Festh . It is surrounded with walls, is the seat of a lishop, and contains some houses of the 1.5 th and 16 th centuries, built in the style of those in Naples, with which E. was much connected in the middle ages. Its principal buillings are the Church of st Nicholas, the communal college, with 500 students and a library consisting of 14,000 volumes, and the county hatl. It has manufactures of earthen-ware and of linens and woollens, and has some trade in linen goods, corn, and Tokay wine. 111 the vicinity are the Sovar saltworks, which produce 5000 tons of salt annually. I'op, in $1560,10,72$, , almost wholly slavonic.

EPERNAY, a town of France, in the department of Marne, is the head-quarters of the Jins de Clampagne, and is situated in the midst of a rich vinegrowing district, on the left bank of the Marne, 19 miles rest-north-rest of Chalons. It is well built, clean, and well paved. Its environs consist, for the most part, of elegant villas, with vaults attached, belouging to the Champagne wine-merchants. $E$. mandiactures large quantities of earthen-ware from a elay oltained in the neighbourhood, and ealled Tome de Champagne: also hosiery, retined sucar, and leather. It has a brisk trade in bottles, corks, wire, ehampagne wines, \&c. Гop. 9316.

EPHAH, a measure of capacity for try goods in use amons the llebrews. It contamed tbree Eaglish pecks and three piats.

LPHE'MERA (Gr. lasting for a day), a Linnæan genus of neurop,terous insects, now forming the family or tribe E'phemeride. They are allied to the Libclutider, or Dragon-flies, but differ from them in many very important respects. They have received their name, to which corresponds the English Day: FLI, sometinues also applied to them, from the brief duration of their existence in the perfect state, in which, very unlike the dragon-thes, they are beheved to take no fool, merely propagating their species, and dying. From the seasou of the year in which they begin to be seen, some of them are also called May-rly ; and by this name are well known to anglers, who use them, and artificially imitate them as excelient lures for tront. The egets of the ephemere are also a favourite food of tishes; they colere together in a gelatinous mass. The larver and pupe are aquatie, and in these states tho ephemere have a much longer life than in their

## EPIEMERA-KPHESUS.

Ierfeet state, exteuding even to years. The larvo and pupe are suthiciently voracions. The abdemen of the lanva is furnished on each side with a set of leatlets, whide surve instead of gills for respiration, and are also used in locomotion, although there are six feet attached to the thoracic segments. The pmpe differ little from the larve except in having rudimentary wings enclosed under scales. Joth larve and jume have the ablomen terminated ly two or three jointed filaments, which the jerfect insect also has, sometimes very long. The lendy of the perfect insect is soft anil slenter; the wings resemble in form those of dratob-thes, but are sott and tilmy: in repose, they are elevated vertically above the body; the sevem pair of wings are much smaller than the first, ame in some specics are altogether wanting ; the organs of the mouth are so soft and small as not easily to be discerned, and to le ajparently unfit for any kind of use. Ephemere, in thejr larva and pupa states, livo chietly under stomes in water, or in burrows which they make in the banks of streams. When ready for their final change, they creep out of the water to undergo it un some plant or uther object by the water-side, gederally towards sunset on some fine day of summer or autumn. After having attained their winged state, however, they cast off a complete slough on envelope. so perfect, that it exhbits even the limbs, alndominal filaments, and antenne ; and these 'ghust-like exuvie' are sometimes so almmiant in the neighbounool of streans, as to cover in 'a pearly layer' the hat amb basket of the angler. The multitndes of "phemerre are often very great, filling the air as a clond: nay, so abmonat are they at times. that their horlies have been known to cover the gromed in ectain districts of Franee, and have been gathered from particular spots in cart-loads to be used as manure.

EPHE'MERA, or FEBRIS IHARY in Latin (from Gr. opi and hemera, on a day), a fever which lasts only a single day, or part of a tlay, and is generally dependent on some slight local irritation. It bartly requires any other treatment than the removal of the canse, if known.

EPHE'MERIS (Gr. 'for the day') is a name aplied to abmanacs from their containing notices for each day. It is mostly confined to astronomical talbes siving the daily plices of the sun, moon, am phancts, and other phenomena of the hearens. Such tables have become common since the days of Kequer: The tirst were pullished by Purbach for the years 1450-1461. Those of liegiomontanus, for lith $^{2}$, were much more accurate, and his Ephemeriles met with universal acceptance. Similar publications were afterwards made by Leoritius, Orimans, Kepler and others. The most important works of the kiml at present are the Freneh Conneissmec des Temps, the English Xrouticil Almanac, the Effemeridi di Hilano, amd the Benlin Astronomischen Juhorbuicher.

FbHE'SIANS, Eristee to the, is a letter whenessed hy st Paul, during his first imprisonment at lome, to the ehmrch whieh assembled in Sihesus (is. $\begin{aligned} & \text {.). This church had been Ifanted by the }\end{aligned}$ alnstle himsilf, and, as we infur from various ciramotances mentioned in thas Acts of the Apestles, was an ohject of his special affeetiom. The cpistle wat writern almost at the same time as that to the Colosmians, and consernently breathes the same fyinit of exalterl piety and forvid faith, besibles contamine many similar thoughts and exhomentims. It may le divided into two grand parts, the tirst of which is for the most part doctrimel, and the second practical. The proofs of its genuineness
and authenticify have generally been considered napuestionable ; lat recently $\mathrm{D}_{0}$ Wette, in lis Introbuction to a commentary on the Eiphesians (2d calit. 1547), has trien to sliew that this cpistle is simply an expansion of the grander epistle to the colossians, though he admits that it has the appearance of having been conpiled in the apostolic age

E'PHESUS, one of the twelve Imic cities of Asia Minor, was situated in Lydia, near the month of the river Caystrus, in the midst of an alluvial plain. It does not appear to have been as old as tho Trojan war, but its primitive history has been confusel by myths. It hore a great varicty of names at different times, the pincipal of which, besides E., were Ortygia and Ptelea. According to Stratoo it was founded by Androclus, son of Corlrus, and this is the most probahle of the accounts which have come down to us, thongh others held to the tralition of its Amazonian origin. It was long before E. acquired any jolitical importance, in spite of leing a sacred city from an carly perioh. Subduel first by the Lyilian, and next by the Persian kings, it was included, after the death of Alexamer the Great, in the territories of Lysimachus (281 B. c.), by whom it was greatly strengthened. Ultimately, it came into the possession of the Romans; and in the time of Augustus, when Strabo wrote, it was the greatest ylace of trale of all the citics of Asia west 'if the 'Taurus.' 'This was also its condition when visited by sit Paul, who resided bero three years; but the destruction of its great temple hy the Guths, in 260 A. D., gave it a blow from which it never recovered. In 341 A. D., it was tho seene of the third general council of the Christian Church. Its general history, while a city of the Byzantine empire, was unimportant, and before the days of Tamerlane it had alnost completely perished. - The ruins of E. comprise a stadium 687 fect long, fragments of a great theatre (alluded to in the account of St laml's preaching in the city), of an odeum or music-hall, and of varions walls and towers, belonging to the Greek, Roman, and Byzantine eras. Near the western extremity of the town are also some massive structures, which oyerlook the swamp or marsh where was the ancient harbour. These are regarded with much probability as the site of the famous Temple of Diuna. This marvellous brididing, one of the seven wonders of the world, was originally huilt by Chersiphron; but after its lestruction hy Herostratus on the night (as is said) when Alexander the Great was born (350 e. c.). it was rebuilt by the inhabitants in a style of greater splendour than hefore, the very women contributing their ornaments to secure the necessary funds; yet, notwithstanding this enthusiasm, more than tro hundred years elansed before the new cdifice was completely finished. It waz the largest ireek temple ever constructel. Its leneth was 405 feet, its wilth 200 , the number of its conlamms 125 , of which 30 were carvel, and their loight 60 feet. It had an area more than four times that of tho Parthenon at Athens, and even the Olympeium was only about two-thirels as great. But eren more wonderful than the temple itself were the monheriess statues and bictures which it containel, exceuted by the best mathers of Grecec. 'Tho altar of the goditess was pincipally adurned with the works of lraxitcles. Thumered of its treasures ly Nero, and hurned (as hats been mentioned) ly the (iothe, it was most hikely timally destroyed by the iconoclasts, in the reine of Theotosius I., who issued his celebrated alict against the ceremonies of the jagan religion $3 S 1$ A.D. The sito of E. is now occupied by some wretched villages, the principal of which is

## EPHOD-EPHRAEM SYRUS.

Ayasaluk.-Certain eabatistic words or sayings are said to have been inseribed on the figure of Diana, which being copied and earried about as charms, became known as Ephesce litore (Mason's Anatomie of Sorcerie, 161:).
EPHOD, a vestment worn by the Jewish highpriest over the $M \check{Z}$ il or second (purple) tunic. It consisted of two shoulder-pieces, one corering the back, the other the breast and upper part of the borly, not unlike the Greek eponis. Two onyx stones set in gold fastened it on the shoulders, and on each of the stones were engraved the names of six tribes, according to their order. The matcrial of which the cphod was wrought was extremely costly and magnificent: 'gold, blue, purple, crimson, and fine twined linen.' A girdle or band, of one piece with the ephol, fastened it round the boly. Just above this girdle, in the midule of the ephod, and joined to it hy little gold chains, rings, and strings, rested the square oracular breast-plate with the mysterions Urim and Thummin. Sce also High-Priest and Urim and Titmimim.

Originally intended to be worn by the high-priest exclusively, ephods of an inferior material seem to have been in common use in later times ly the orlinary priests. Eten David, when bringing the ark back to Jerusalem, appeared in one. There is also mention made of an ephod in several passages of the book of Judges and Samnel, where the worl must needs stand cither for the whole priestly apparatus of an illegal service, or simply for a statue or an idol. The Talmud understands this ephod to have been a colossal shoulder vestment of gold, to which divine honolirs were rendered.

E'PHORI (Gr. 'overseers'), an orter of magistrates in ancient times which appears to bave originated at Sparta, and to have been peculiar to the Dorie governments. When or by whom the ephori were first instituted, is a point of great nncertainty. Herodotus attributes their ereation to Lycurgus, and Aristotle to Theopompus (750-790 B.c.). Their duty was to superintend the internal administration of the state, especially affairs of justice, for whiel a particular building was assigned them, ealled the Ephorion. One of their most important functions was the oversight, at least in part, of the education of youth, for we are toll by Atheneus that they inspected the elothing and berding of the young men. The ephori were five in number; they were electel by and from the people -on whieh Aristotle olserves, that through them the demos enjoyed a participation in the highest magistracy of the state-and held their othee only for one vear. Their influence gradually increased, for their powers were so ill defined that it was diftieult to say what was not under their cognizance and anthority. Cicero draws a comparison between the ephinralty of sparta and the tribunate of lome, which is not altogether unwarrauted by the farets of the ease. Cltimately, the king themselves became subject to the supervision of the ephori. Cleomenes, for example, was brought hefore them for hribery; Agesilaus was fined, and Pausanius imprisoned; and in extreme cases they could prefer charges against them, and hare them tried before the supreme eriminal court. They also transacted the negotiations with foreign powers, subseribel treatios, raised tronps, 'intrusted the army to the kinit or some other gencral,' and, in faet, aeted as the exentive of the state. Iuller regards the ephoralty as the principle of chance in the Spartan constitution, and, in the end, the eanse of its dissolntion.' In the hands of the ephori, the constitution of Sparta
certainly ceased to le as genuine aristocracy, and became a sort of wigarehy; but this point is involved in much oliscurity and perplexity. Their authority, however, was at last destroyed by Asis and Cleomenes, who murdered the ephori for the time being, and restored the old Spartan constitation ( 225 в.c.).
E'PHRAEMI SY'RUS, one of the most celebrated and prolific ecelesiastical writers of the Syrian Chureh. Several accounts of his life have been handed down to us, but they all hear more or less such a legendary charaeter, that the real faets to be gathered from them are but scanty. It appears, then, that Ephraem (Hel. $E_{l}$ hrain) was horn in the carly part of the reign of Constantine the Great, somewhere between the Euphrates and 'Tigris,' most probably at Nisibis. His parents were, accurding to some, heathens ; and E., repudiating their idolatry at an early age, had to leave their roof. Jacob, Bishop of Nisibis, took eare of the boy, and undertook his education. His frogress in learnines was so satisfactory that the bishop was som able to make him teacher at his own school; and when in 395 A.d. Jacol went to the council of Nicara, E. accompanied him thither. In 363 , Nisilis was celed ly Jovinian to the Persians, and E. first retired moto Iioman territory, then went to Anill, his nother's birthplace, and finally settled in Lelessa (Orfa), where he remained mutd his leath. He is said to have leen so poor when he first arrivel at Edessa, that he was chliged to take service at a puhlic bath, but he son wecame aequaintel with hermits of the neighbourhood, and achpitec their habits: he retired into a cave near the town, and led the life of a rechuse. Bnt so great were his piety and asceticism, as well as his readimess to help the poor and tend the sick, that he was lonked upon as a saint, and his day is still eclebrated, at different dates, in rarions churches. Amons his usual denomimations, more especially raferring to his teachings and writings, are 'l'chmet of the Syrians, Column of the Church, Harp of the Holy Spirit,' \&e.; and his name is never mentioned withont the 'Mor' or 'Mari' (Lorl, My Master) being prefixed. But for all that, he hat no lack of enemies. His burning zeal for prathing and converting led him to attack most tiorcely almost every one beyond the pale of his peculiar creed. He spoko and wrote meeasingly arainst llolaters, 'Chatdees,' Jews, and heretics of all kimds, especially Arians, sabellians, Manicheans, Novatians, \&e. Towards the end of lis life, he paid a visit to Easil the Great, in Cappalocian Casarea, who could not prevail upon him to acepit of any higher office in the church than a deanery, though he spared no effort to make him hishop. Lieturned to Edessa, he fombl Ilague and famine raging there, and to his overexertions for the relief of the sufferers his death is attributed by some. Ife expired in the same year with Basil, in 375 , not before havins given the strictest injunctions that his lomial shomil he of the very simplest aleseription. With respect to the Testament which he is reported to have dictated in his dring hourmuch as it has been used for bingraphical purposes -we can talie no notice whatever of it, as it is entirely spurious.

The visit to Lasilius, unimporiant as it seems, has been of verr great moment. The legend which surromuds this, as all uther incikents of his life, with a halo of miracle, records that the two men, although previously ignorint of each other's language begran to speak them thently at this interview-lasilius Sytac, and E. Cireck. This wonderful cireumstance first induced the learned to enter ujun tho question, whether E., half of whose voluminous
works are in Greck, diu really understaud that languag ; and further, whether the unkerstoml any laguasi but his own, syriac. If he did not, whit riew was to be taken of his Commentaries on the Buble, of which the Hobrew and Grock texts, as well as the Septnagint and the Greek lathers, must have beco a seafed look to him. There were, and are still. great diflerences of opinion on these points. but it is generally taken for granted now, that he did not mulerstand any language but his own; that he mate nse of the common syriae version, the Feshito; that his grammatical and limguistic notes are taken from different Syiac Commentaries, and that the Greek portion of his works consists partly of translatious made from his syriac after his death, or even chuing lis lifetime and lartly of interpolations. looth the praise and the blame which have been indiscriminately bestowed upon him as a writer are exaggerated. His chief merit lies in the glowing ferrour and the deep piety which he infused into all he wrote, more particularly into his elegiac hymns. Diction and form are poetical throughent, and when not soaring into the indinite, of no mean beautr. The effect is heightened ly the matchless simplicity and awing grandeur of the Syriac idiom.

We will now enmmerate his principal werks and their editions. Those (under bis name) in Greek. consist of Sernens or Homilies, and Treatises of an exegetic, dogmatic, and ascetic nature. Photing records that he wrote more than a thousand snch sermons: Sozomenos speaks of ' 300 myriads ;' but, as we said before, of those that base come dom to us, some are spurious, and others at least suspicions. Gerhard Vossius translated 171 treatises from Greck Mss. foum in ftalian libraries, into Latin, and published them at Rome, 1589-1598, in 3 rols. (There is but one piece in them translated from the Syriac.) They were reprinted in Colome in 1603 , 1619 ( 1675 ), and also in Antwerp, in 1619 . The first Greck edition appeared in Oxford in $\mathbf{1 7 0 9}$, edited frem is Oxford MSS., by E. Thwaites. The most important of his Syriac works are, besides an infinite varicty of homilies, sermens, poems. \&e, his conmentarics, or rather scholia, on parts of the Oht Testament. Their value to us, however, is limited to their aiding us in explaining and fixing some readings of the Peshito (sce Pesinto), and in enriching our critical apparatus. That he also commented on the Gospels is certain, but no MS. has been found as yet, not cven in a Greek or Arabic transhation. As to the songs and prayers in the syrian Liturgy ascribed to E., they are simply composed in his manner, and betray their comparatively recent orimin at the first glance. The principal edition of lis works in Syriae and Greek was published in 6 vols. in Fome, nuder the papal autherity (1732-1746).

The principal writers on E. are: Sozomenos, Mist. Lecl. iij. 16; Assemani, Proleg. and Bithioth. Griont.; Crelner, De Proph. Min. Fros. Syp. (1897): Leagerke, Comm. de Ephr. Sym. S. So Interprate (Halle, 182s); and De Ephr: Syr. Arte Ifermen., \&e. (1531). Some tastefut German translations of hymns, by Zingerle, are to he found in the Zeitschr. d. Dentschen Morgent. Gesellsch. passion.

A'PIlRAIM, the younger son of Joseph hy his wife A senath, and the founder of one of the twelve tribes of laracl. It is possible that he may lave received his name, which signities 'double fruitfulness,' from laising been born during the seven years of plentry. Ilis srantfather, Jacob, shortly before bis death, mophesied the greatness of his posterity when giving him hiv bessmig: 'His seed shail become a multitude of nations ( Gen. xlviii. Is). After the Israehtes had left Egyit, the tribe of

Elhraim numberel 40,500 (Numbers, i, 32,33 ); hut from canses not specitied, and not discoveralle, it han sumk, forty years later, on the eve of the conquest of Cimain, to $3: 50$ (Numbers, xxvi. Bi). Y'e it was ander the lealership of an Ephramite, Joshan, the son of Nun, that the Cananites were subjuqated, and the land possessel. This sems to have given the tribe a much ligher influence than might have been expectes from its numerical strength. We find Judah and Ephrain classed together as taking their inheritance first (Josh. xy. xvi., \&e.). The precise boundaries of EIhraim, as of the other tribes, it is impossible to determine. It occupied the centre of Yalestine, was bounded on the south hy Dan and Benjanin, and stretched from the Jordan on the cast to the Mediterranean on the west. From seattered notices of the Ephraimites in the earlier ammals of the Hebrews, we infer that they were, on the whole, jealous of their brethren. This feeling of dissatisfaction at length broke out into rehellion in the reign of $\dot{\text { fehobeam, and the }}$ new kinglom of lsrael, ruled over by Jeroboam, was for the most part merely the kingdom of Ephraim, for the land which lay to the north of it could lardly be sail to be actually in the possession of the tribes whose mancs it bore, the original inhabitants keeping stubbern hold of their cities and strongholds. See Israel, FingDOM OF.

EPI, or CiROUETTE (Fr.), a species of ornamental ironwork with which the concs of pavilions or pointed roofs are sometimes surmounted in the renaissance style of architecture. One of the finest examples is that which surmounts the Tourelle aux Pistorals at the Hötel de lourgtheroulde in Rouen.
EPIC POETRY (Gr. epos, a word, a disceurse or marrative). The two chief kiuds of poetry, are $\mathrm{E}_{\mathrm{l}}$ ic pootry and Lyric poctry. E E ic poctry has outward objects for its subject, of which it gives an imaginative narrative. The events thenselves may be partly real and partly fictitions, or they may be altogether fictitious. Lyric poetry, on the other hand, sets forth the inward occurrences of the writer or speaker's own mind-his feclings and reflections. No composition, perhaps, answers. in all its parts, to the one of these descriptions, or to the other: but a picce or foem is classed as epic or lyric according to the element that 1 redominates. Under each of these grand divisions, or genera, there are subdivisions, or species. The longer poems of the epic genus cmbrace an extensive serics of events, anl the actions of numerous personages. The term heroic epic, or heroie poem, is properly applied to such works as the Ilicul and Odysse? of Homer, Virgil's Encil, Tasso's Jerusalem Delierach, Ariosto's Ontando Furioso, and others, which describe the achievements of the gods and heroes of antiquity, or of the little less mythic knights of metieval chivalry: Pocms, again, like Mitton's Paradise Lost and Dante's Dirina Commedia, are sarral cuics. Byron's Chille IIarohl, with the length and narrative structure of an cpic, abounds in reflection, sentiment, and satire. and thus is, in substance, as much lyric as epic. I'roluctiens like those now named form the class of grand epies, or epic poems, ly way of eminence. But there are several species of minor poems which, frem their nature, must also be ranked as epies. One of these is the $J\left(\frac{n}{\prime}\right.$, a term applied to what is ealled pastoral poitrg, or to descriptions in seneral of natural scenery, aud of the actions and manners of men in enlin, ordinary life. Burns's Coter's Saturday Nieght, Goldsmith's Doserted Village, and most of Crabue's poems, are illyls; so are poetical cpistles.

## EPICHARMUS-EPICUPUS.

The ballad ( $\mathrm{q} . \mathrm{v}$ ) is another species of minor epic.

Attempts at epic poetry are now rare, the spirit of the aye being against that form of composition. Instead of epic jocms, we have novels, which, so far as sulbject is concerned, may be considered as the epics of modern civil and domestic life.
FPICHA'RMUS, a famous Greek poct, was born in the island of Cos, in the 5th c., e.c. At first, he studicd ]hilosophy under Pythagoras: but a residence at Megara, the native soil of comedy, gave him a taste for that branch of the drama. After the destruction of Megara, in $4 \$ 4$ e.c., he removed to Syracuse, where, at the court of IIIero, he speat the remainler of his life. From this circumstance, he is often mentioned by the ancients as a sicilian. Almost nothing else is known of his personal history except that he died at the age of 90, or, as some say, of 97. The date of his death, as of his lirth, is unknown. E. is callel by Theoeritus the father of comedy, and Plato assigns to him a place among comic writers as high as that of Homer amone elic poets. He certainly did a good service in exeluding, to a large extent, from his dramas the vuluar huffoonery which disgracel all previous comedies, and in introducing a regular plot in which the comus or band of revellers sustainetl the dialogue. None of E.'s works survive entire; lut we possess several fragments and the titles of thirty-five. They embraced a wide variety of topics, mythological, social, and political. From one of them, Plautus borrowed the plot of his Mentchmi, which shews a great amount of constructive skill. The fragments of E. have been collected and edited by H. P. Krurmann (Harlem, 1834). C'ompare Grysar, De Doriensitun Comoclit (Colon. 1828), and Inviler's Dorians.

EPICTETUS, a celebrated disciple of the Stoa, was born at Hierapolis, in Phrygia, about fifty years after the birth of Christ. He was at first the slave of Epaphroditus, a freedman of Nero, at Liome, whose abusive treatment he is said to have endnred with the composure characteristic of the sect to which he helonged. He was afterwards manmmitted, and devoted himself to the Stoic philosnplyy. Bonitian hated him on account of his principles, and hanished him, along with several other plinosophers, from Fome. E. settled at Nikopolis, in Epirus. Under the pressure of the times in which he lived, his serious moral views receivel a character rather of self-denial than of energy; to renounce, to endure, and not to set the mind upon anything beyond the power of the individual to attain, being the points chiefly insisted on. His pupil, Arrianus, collected the maxims of E. in the work entitled Encheiridion ('Handbook') and in eight hooks of Commentaries, four of which are lost. The peculiar excellence of the writings of E . consists in their simple and noble earnestness. That real heartfelt love of good and hatred of evil which we are in the habit of supposing an exclu. sively Uhristian feeling, does manifest itself very finely and beautifully in these, yet, as I'rofessor Brandis says, 'there is not a trace in the Epictetea to shew that he was acquaintel with Christianity, and still less that he had adopted Christianity, either in part or entirely.' Some of his opinions, moreover, are essentially Christian in their nature, though, of course, they are nnconnected with the facts of revelation. E. believes in our 'resemblance' to Gorl, in our 'relationship' to him, and in our "union" with him through the coincidence of the 'will' and the 'soul;' he recognises the contest between good and evil, the life-struggle in the heart, the divine lifo against which the law in the members wars; and he affirms the necessity of 'invoking

God's assistance in the strife,' that the inner life may hecome pure as Gonl is pure. There are several soorl editions of the works of E, the most complete of which is that of Schweighaiser (Leip. $1800^{\circ}$.

EPICU'RUS, ANDEPICURE'ANISM. Epicurns, an illustrious Greek philosopher, was born in the island of Samos, 341 R.C., scren years after the death of Plato. His father, Neocles, is said to have been a schoolmaster, and his mother, Charestrate, to have practised arts of magic. At the age of 18, he repaired to Athens, where it has been supposed that he may have had for his teacher Nenocrates or Theophrastus, or perhajs both, but he himself used to declare that he was self-taught. Of the older 1hilosophers, he was most attached to Anaxasoras and Democritus, his system of 1 hysies being evidently built upon the atomic specnlations of the latter. 'E.'s stay at Athens on this oceasion was short. At Mitylene, in his thirty-second year, he first opened a school; and there and at Lampsacus be tanght for five years. In 306 w.c. be returned to Athens, and establishet a school of philosojhy in a garden which he purchased and laid out for the purpose. From this circumstance, his followers were callet the 'philosophers of the crarden.' Although E. laid down the eluctrine, that pleasure is the chief goorl, the life that he and his friends led was one of the greatest tem. perance and simplicity. They were content, ve are tohl, with a small eup of light wine, and all the rest of their drink was water; and an inscription over the gate promised to those who might wish to euter no better fare thau barley-cakes and water. The chastity of L. was so incoutestable, that Chrysippus, one of his jrineipal opponents, in order to deprive him of all merit on the score of it, ascribed it to his being without passinus. The ealumnies which the Stoics circulated concerning him are undeserving of notice. and were at no time generally believed. E.'s success as a teacher was signal; great numbers flocked to his schoul from all parts of Greece, and from A sia Minor, most of whom became warmly attached to their master, as well as to his doctrines, for E. scems to have been characteriset nut less ly amiability and benevolence than by force of intellect. He died 270 b.c., in the seveaty-second year of his age.
E. was a most voluminous writer. According to Diogenes Laertius, he left 304 volumes. Among others, he had 37 books on Natural Philosophy, it treatise on Atoms and the Vacnum; one on Love; one on Choice and Avoidance; another on the Chief frood ; four essays on Lives; one on sicht; one on Touch : another on Images; another on Justice and the other Virtues, \&e. Almost all these works are lost: the only writings of E. that have come down to us are three letters, amd a number of detached sentences or sayings, preserved by Dingenes Laertius, in his life of the philosopher. The principal sources of our knowledge of the doctrines of E., besides the above letters, \&c., are Cicero, Seneca, and, above all, Lucretius, whose great poem, De Rerum Aratura, contains substantially the Elicurean philosophy.

Although the majority of E.'s writings referred to natural $]^{\text {hillosophy, yet he was not a physicist. }}$ properly speaking. Ne studied nature with a moral rather than with a scientific design. According to him, the great evil that athicted men-the incubus on human happiness-was feaf: fear of the gods and fear of death. To get rid of these tro fears, was the ultimate ain of all his speculations on nature.
The folluwing is a bricf account of his riews. I:

## EPICURCS-EMICYCLE

regardon the universe (To Pan) as eorporeal, and as intinite in extent, and ctermal in duration. He recognisell two kinds of existence-that of lwodites, amd that of rucumm, or space, or the intanyible nature. Oi his balies. some are compomide, and some atoms or indivisible elmments, out of which the compoumb are formed. The world, as we now see it, is prodoed by the eolhision and whirling together of these atoms. ITe also held the doctrine of prevertion hyo ampos (Gre eidola), which are incessantly streaming ofl irom the surface of all boilies, aml which are necessary to bring us into rapport with the world without. In like mamer, he believed that somuting boties threw of emanations, by which we are brought into sympathy with them; and that perception by smell took phace in the same way. In pychology, E. was a decided materialist, holding, for various reasons, that the sunl is a bodily substance, composed of subtile particles, disseminated through the whole frame, and having a ereat resemblance to spirit or breath with a mixture of heat.

In secking to muderstand the phenomena of the heavens, E. has no scientitie end in riew; his sole ohject is to enable the mind to account for them to itself, without the necessity of imagining any supernatural asency at work. "The phenomena of the heavens,' says le., 'admit of various causes being assimed for their production, equally conformable to the facts learnel from the senses. If, then, in thinking of any appearance, we suppose it brought abont ly the same eause that produces another appearance which gives no alarm or nneasiness, we are as much delivered from uneasiness as if we saw that such is the cause of it.' E. did not deny that there are gods, but he strenuonsly maintained, that as 'happy and imperishable beings,' they could have nothing to io with the affiairs of the universe or of mea. 'Beware,' he says, 'of attributing the revolutions of the heaven, and eclipses, and the rising and setting of stars, either to the original contrivance or continued regulation of such a being. For business, and eares, and anger, and benerolence, are not accortant with happiness, but arise from weakness, and fear, and dependence on others.'
E. next proceeds to deal with the fear of death. Having proved in his psychology that the dissolution of the body involves that of the soul, he argues that the most terrible of all evils, death, is nothing to us, since when we are, cleath is not; and when death is, we are not. It is nothing, then, to the dead or the living; for to the one class it is unt near, and the other class are no longer in existence. Whether E. actually sueceeded in removing the terrors of death by his syllogism, may he doubted.

The positice part of E.'s system may be noticed in a few words. He held that pleasure was the chief good, and it is from a misapprehension of the meaning of this word as nsed liy E. that the turn Epicurean came to signify one who indulged his sensual appetites withont stint or measure. At the same time, it is easy to see that the use of the wisd 'pleasure' ras eatculated to proince the mischievous results with which the later Epicureanisin was charged. Aecording to E., the sources ant tusts of all ethical truth are the feelings (pathe), ane these are two. pleasure and pain. We delight in the one, and awid the other instinctively. "When we say that pleasure is the end of life, we do not mean the phasures of the debanchee or the sensualist, as some from ignorance or from malignity represent. lont freedom of the boly from pain, and of the sout from anxicty. For it is not contimous drinkings and revellings, nor the socicty of women, nor rare
viauls, and other laxmies of the table, tlat constitute a pheasant life, but sober conteraplation that searches out the gromuls of choice and avodano.. and hanishes thase chimeras that harass the mind. bint, on the other hami. E. says: 'If the means to which sensmalists nwe their pleasmres dispetled the anxicties of the mind
. and enabled then to set limits to their hesires. we shouhl have no grounds to bame them for taking their fill of phasure, whereve they could find it, provided it were attended with no pain or grici from any quarter; for that is the mly evil.' The whole (1uestion of cthies, then, comes to a calculation and balanciner of pleasures and lains; in other worls, the cardinal virtue is prulnce. E. rests justice on the same prudential lasis as temperance. Denying any abstract and eternal right and wrong, he affirms that injustice is an evil, beause it exposes the individual to disquietude from other men; justice is a virtue, because it secures him from this disquictude. 'Injustice is not an evil in itseli, bat beeomes so from the fear that hanuts the injurer of not being alle to escape the appointed avengers of such acts.' The duties of friendship and goodfellowship are inculcated on the same grounds of seeurity to the individual.

Among the Romans, the system of E. was adopted by many distinguished men. Horace, Atticus, and Pliny the Younger, were Epicureans; and the spleulid poem of Lucretius must hare recommended the system to many. In modern times, Epicureanism was resuscitated in France by Pierre Gassendi, who published an account of E.'s life and a defence of his character in 1647. Many eminent Frenchmen have professed his principles; among others, Moliere, Saint Exremont, Count de Grammont, the Duke of Rochefoucault, loussean, Foutenelle, and Voltaire.

EPICY'CLE. The earlier astronomers assumed that all the motions of heavenly bodies took place in cireles, the circle being held to be the most parfect of all curves; and a necessary consequence of this assumption was, that the motions must have a uniform velocity. Auother part of the hypothesis was, that all the heavenly bodies moven round the earth, which remained at rest in the centre. The observed phenomena of the hearens, however, were soon seen to stand in glaring inconsistency with these assumptions: and to remedy this, it was necessary to have recourse to alditional assumptions. For the sun and moon, which manifestly do not alwars move with the same velocity, the Liccentric Tircle (g. v.) was imagined. The ease of the planets, whose motions were seen to be sometimes dircet, sometimes retrograle, and sometimes altogether arrestel, offered still greater difficulties; to get over which, the idea of ppiryedrs was hit upon. According to this hypothesis, while a planet was moving in a small circle, the centre of that small circle was describing a larger circle about the earth. This larger circle was ealled the deform, and the smaller, which was loorne npon it, was called the apivale (Gr. epi, upon). In this way the motions of the planets albout the earth were conceived to be sumething like what the motinn of the moon about the sun actually is. By assuming proper proportions hetween the radii of the deferent circle and the pricycle, and between the velocities of the two motions, it was fman possible to acconat pretty satisfactorily for the abovementioned apparances and imeqularities in the notions of the planets. But it is only the irregularities arising from the revolntion of the earth about the sun that ean be at all explained in this way, ancl not those arising from the ellipitic motions of the planets about the sun, nor yet the inequalities of the moon's motions. The

## EPICYCLOID-EPIDEMIC MENTAL DISEASES.

successors of the Greck astronomers, down to Tycho Brahé, continuel, therefore, to increase the number of epieycles, setting one circle upon another, until the bypothesis, in itself complicaterl, hecame still more sn, and male the simplicity of the Copernican system at onee striking.

EPICY'CLOID is the name of in peculiar curve. When a circle moves upon a straight line, any point in its circumference describes a Cycloid (q. v.); but if the circle moves on the convex circumference of another circle, every point in the plane of the first circle describes an cpicycloid : and if on the coneave circumference, a hypucyelinil. The circle that moves is the generating circle; the other, the base. The describing point is not necessarily in the eircumference of the generating circle, but may be anywhere in a radins or its prolongation. This curvo was first investigated by the Danish astronomer liömer. It has many remarkable properties, and is even useful in the practical arts. The teeth of wheels in machinery must have an epicycloidal form, in order to secure uniformity of movement.

## EDIDAMNUS. Sec Depazzo.

EPIDAU'RUS, a town of ancient Grepce, on the castern shore of the Peloponnesus, in the district of Argolis, was sitnated on a small promontory, 15 stadia in circumference, in the Saronic Gulf, in lat. $37^{\circ} 33^{\prime}$ N., long. $23^{\circ} 10^{\prime} \mathrm{E}$. During the most prosperous perioul of Grecian history, E. was an independent state. It was colonised first, it is supposed, by Carians (hence the older name of Epicarus, according to Aristotle), aud afterwards ly lonians, but was subsequently invaled by a Dorian army runder Deiphontes, the son-in-law of Tements the Heracleide. This force lethroned Pityrens, the Ionian king of E., compelled him and lis citizens to retire to Athens, and inangurated the Dorian rule, which preserved the ascendency at E. during the whole of the historical periol. The form of government was origimally monarchical, but after many vicissitudes, it eventually became and remained nligarchical. At an early period, E. hecame one of the chief commercial citics of the Peloponnesus. It colonised the islands of Cos. Calydnus, and Nisyrus, ns well as the town of Egina, which, during the 6th c., attracted all its commerce from the then declining mother-city. E. was chiefly famous for its temple of Esculapius, to which patients resorted from all parts of the Hellenic world, seeking cures for their diseases. The site of this temple was a phain surrounded by mountams, about 5 miles west of the town, and which is still called Itieron, the sanctuary. E. haul also numerous temples, ameng which were those of Artemis. Dionysus, Aphrudite, and Heri, and a magnificent theatre, at present in a mure perfect state of preservation than any in the P'elopomnesus, and with sufficient accommodation for 12,000 spectaters.
E. (modern (ireek, Ebidetro) is now a small rillage, with scarcely lof inlalitants, employed for the most part in raising recretables for the Athenian market. The phain surronnding the village is productive and highly cultivated. Here, in Jinuary 1son, a congress from all pats of Greece asscmalled, and promuleated the constitution, known as the constitution of Epidaurus.
IPIDEMIC (Gr. epi, upon, and demos, the people), a disease which attacks numbers of persons in one place simultaneously or in succession, and which in addition is observed to travel from place to place, ofteu in the elirection of the most fruquented limes of communication. Many epilemic diseases are also contagions, and all of them suggest the necessity of careful inquiry into the rentilation, drainage, food,
drink, and habits of the persons liable to be affected. Iu presence of au epidemic, it is proper to take unusual precantions to preserve the public health (see Ilealiti, Poblic), and not unfrequently the organisation of a regular house-to-house visitation of the locality is calculated to do much suod, hy directing the minds of the poor and ignorant to their duties in respect to themselves and to each other. Sce Endemic for further ohservations on this subject; also Coxtigion, Lifection, Fever, Cholera, \&c.

EPIDEMIC MENTAL IISEASES. When re consider bow orlinary and normal thoughts and emotions spreal from one man to many, and sway multitudes to the same views and actims. it is no longer a mystery that morbid conditions of the min! should becone at times no less epidemic than pllysical diseases. Such, at least, is the fact. A mental disorder may spread from man to man, amd may involve whole mations. It depends for its rropagation, like an epidemic disease, first upon external circumstances, and secondly, apon the peculiar condition or constitntion of the individuals affected. Like the bodily affection, the canses which provoke the insanity and the temlency to be affected may have been in process of developwent for vears. Both attack the weak rather than the stroug; both exist for a season, and disappear. In the ease of the mental malady, the external influ-ences-those which constitute the moral atmosphere -are ignorance or imperfect knowledge, the jower of cone miml over another, the influence of language, the diffusion of partienlar opinions, the tendeney to imitate. It is probable, howeyer, that physical causes exercise an important influence in the pro. duction of such general mental conlitions. In 1842 and IS 44 , there occurred in Germany and France, among the military, epidemics of meningitis with delirium, or inflammation of the membranes of the brain, when no moral factors were at work, but when diet, temperature, \&e. were. But even where the origin eamot be so distinctly traced, the ce-operation of external as well as psychical agents may be legitimately predicated. It would accordingly be illogical to limit the production of the Dancing Miania ( $q$. ऊ.) , which occasionally, during several centuries, swept over Earope, to the reaction succeeding the dread of the end of the world, which had previonsly prevailed epidemically. An examination of about a hundred manifestations such as that alluded to, collected from varions sources, demonstrates that not merely the intoxication of joy, lint the most alisurd forms of belief-that dreams, delusions, superstitions, corruptions of ladguage, all instincts and passions, even movements and crics, may assume the form, and, to a certain extent, may follow the laws of epidemic diseases. In far-distant ages, there are records of a histrionic plague, when, after a summer of intense heat, all conceived themselves players, and traversed the streets, and sunk and died, repeating verses, and exhibiting extravacant gesticulations; of whole communities being stricken with nightmare. Which was so general as to be supposed and called contagious. There have been epidemics of homicidal and suicidal mana. In one age, hundreds are found possessed by Satan; in another, larser mulbers converted into wolves; and in recent times, the leaping ague of Foriarshire, and outbursts of pyromania in carious places, remind us that there may be still in the constitution of tho lnman mind, aul in the education and the labits of life prevailing, elements capable of realising the catastrophe suggested by Bishop Butler's question: What is to lrevent a whole nation becoming mad? The instances of epidemic mental disease recorded in the following table, have been selected from a
rast mumbe of others, with a view of showing not range of the fhemenon through the powas and the frequency or extent of surh affection, but the promsitics of om mature.

EPIDERAIS fir. fin, upon, and derma, the skia), a semi-trausparent membrans, containing neither vessels nor nerves, and everywhere forming an external covering to the corium or true skin. See sivx. The "pidermis is called in orthary lanouare the scarf-stin. It consists of two layors. chemically and morphologieally distinet viz, the mucous layer, which lies inmediately upon the corium, and the hormy loyer, which furms the ontermost surface of the booly.

The muous luyr (known formerty as the rete mucosun $\therefore$. Malpighicmum) is of it whitish or slightly brown tint (in the Negro, dark gray or hack), ant is composet of small soft cells. The

Hemendicular section of the Sikis of the Lefo of a Nogro: Alagmatide diancters.
$a, a, p$ phlter of the cutic; $b$, tlecpect intensely columed bayor of
 ehathan of the same layer ; $"$, horny lager.
innermust of these colle, resting on the surface of the corium, are Ghngatod and armaral perpendicularly; unan these foblow elongated or rommish cells in many hyers. Whech, in proportion to their distance from the corim, aceuare, from their mutual
pressure, a polygonal form, whith may even be recognised in individual cells.

All the cells in the mucous layer are meleated vesicles distender with thun, anl likewise contaning mimute grames, which diminish in number in the more exteraal cedis.

The homy leycr forms the external semi-transparent part of the epudermis, which in the white races is edourless, and is composed almost wholly of uniform cells, metamorplused intu plates or suales. The deepest plates in some degree resemble the uppermost cells of the mucous layer; but in the second or third layer we dind the flattening commence; till at length, after a gradual scries of modifieations, we have the hard, horny seales which occur on the surface, where they are remandy cast off with more or less rapintity, and rophaced ly those beneath them.*

The colour of the ephermis Jiffers in different persons and in different pants of the lody. It is depest aromut the nipule, especially in women durime pregnancy and after they have borne children. A more or less dark pigment is often deposited, in proms who are exposed to the sun, in the face, neck, back of the hands, \&e. These tints are not prolued by special pigment-cells, but are seated in the common cells of the mucons layer, round whose maclei gramular pigment is eleposited. In the Negro and the other coloured races, it is also ouly the chilermis which is colonred, while the corivem eompletely resembles that of Luropeans. The perpendicnlar cells (see $b$ in the figme) are the larkest, and form a sharply marked fringe at the edge of the clear eminnt. To these sueceed limwn cells, which aceumutate in the depressions between the papille, and as we anproch the horny luycr, we have yellowish cells. The horny layer of the Negro also inclines to a yellow or brownish tint.

Morbid coloration of the epidermis (freekles, mother's marlss, \&e.) is protuced in the same way as the colour of the Negros skin. Numernis instances of partially or entirely white Negroes and of hack Europeans, not as a consequence of chango of climate hut as an abormal condition of the skin, are on record.

The thickness of the epikmis sarnes exlremely. White umon the cheeks, brow, and eyclids, it varies from r't th to ${ }^{\prime}$ th of a line, on the prim of the hand it ranges from $\frac{1}{3} d$ to $\frac{1}{2}$ thim, ant on the sole of the font smmetimes even excects a line ln some parts of the body the horny lityer is thicker than the numens: in other, the mucuns is the thicker of the two. As the chiof use of the epidermis is that of

* In reptiles and amphibians, this layer is periodically cast off in a more or less cntire state, a new ome being pevinsly formed bencath it: and in man, desqumathon in large patches often occurs after ectain diseases, especially searlatina.
affording protection to the soft and tender subjacent parts, it attains its greatest thickness on those portions of the body (the palm of the hand and the sole of the foot) which are most exposed to pressure and friction.
In plants, as in animals, the epidermis is formed of flattenel cells, of which also new layers are continually promech from the lark below, whilst the outer cones dry up, lose their vitality, and peed off, erack and sylit uff, or otherwise become separated from the living erganism. The cells of the cpidermis are often culargel outwards, so as ty form projections, sumetines very slight, sometimps elongatel intn Hairs (q. v.). Glands (f. v.) are also connceted with the chidermis, sometimes by the intervention of hairs, sonetimes without, and in this way it contributes to the seretion of substances formed in $1^{1 / 2 u t s}$ by the wonderful chemistry of nature, and on which their ralue to man often greatly depends. The cells of the cpidermis are usually fillet with a colourless fluid, hut resinous and waxy sulstances are sometimes found in them, and sranctimes silica (as in grasses and Equisetacear), sonactimes carlonate of lime (as in the Cheres.s). The epiedermis is pierceet lyy Stomater (4. v.). When the epilermis of $1^{\text {lants }}$ is subjected to prolonged maceration, it can often be made to separate into two parts; one, which is more strictly ealled the epidermis, being the inner, lower, and thicker memlrane ; the other, which is called the Pellicle or C'uticle. being very thin, and extending continuously over every part of the phat $^{\text {a }}$ except where it is piercel by the stomata. Thus, this superticial pelifle invests even the finest hairs. In some of the - llyme, it seems to constitute the whole integument. In the greater number of plants, the epidermis is thin and soft, but sometimes it is thick, and sometimes hard.
E'PIDOTE, a mineral allienl to garnet, emmposed of silica and alumina, with a considerable propartion of lime, or of peroxide of irn, or of preroxide of manganese. These diversities of compnsition constitute three very distinct raricties; and of these there are sul-varieties, differing in colnur and other particulars (Pistacite, Bucklonditr, It thamite, Zoisite, \&c.). E. is sometimes foum massive, foliatel, columnar, granular, or incrusting: often erystallised. Its crystals are prisms, variously modified. Its prevalent colours are green, yellow, and gray, but some of the varicties are red and black. It is found in gneiss, syenite, trap, and other rocks in a number of localities in Scotland, and in many parts of the worl!
EPIGASTIIUM (Gr. api, over, and gastio the stumach), the phrt of the Ahdomen (I. . . ) which chictly correspmonts to the situation of the stomach, extenting from the sternum (1. .r.) towards the Navel or Cmbilicus (q.v.), and houndel ou each side by the llypochumters (q. x.). It is called in popular language the pit of the stomach.

EPIGE'NESAS (Gr. $\mathrm{cq}^{2}$, upon, and tenesis, a furmation), a formation upon, or in aldition to, previonsly existing parts. The word is appliell in physiology to that theory of new formations in organised beings which sulproses them to spring from superadded centres of wital activity, as olpmsed to the theory
which presumes that the nuw is formed ly which presumes that the now is formed ly a develophent or modification of the oll structure. See Orent.

## eriglottis. See Larynx.

EPIGRAM, a word derived from tho Greek, and literally si, nifying an 'inscription.' In point of fact, the ephgrams of the Grecks were simply inscriptions on tombs, statues, and monuments, written in verse, and marked by great simplicity
of style, Tout having nothing in common with what now passes unter the name. It was amons the Romans that the eliuran first assumed a satirical character. ('atullus and Martial are reckoned the lest Latin equigrammatists. In molern times, an epieram is umecstuon to be a very short poem, generally from two to eisht lines, containing a witty or ingenious thought expressed in pointed phraseology, and in gencral reserving the essence of the wit tor the clise, as the serpent is fabled to keep its sting in its tail. The French excel all other nations in this kind of pretry. Their carliest eligrammatist of any note was Clemeat. Marot ( $1495-1544$ ) ; their lest are 10oilean, Voltaire, and Firon. The enigrams of German writurs are for the ninst part happily expressed moral proverls, but the Xonien of Scliller and Goethe contain not a few sharp and hiting verses of a satirieal character. In Britain, Pope, Btirns, Byrm, Morre, and other writers have shewn a remarkalle power of epigrammatic satire.

E'PIGRAPII (fir. opi, upn, and arapho, I write), a terse inseription placel upon architectural or other monuments, for the purpose of denoting their use or appropriation, and very frequently wroded in and forming part of their cornamental details.

E'PILEPSY (Gr. qui, upon, and lambang. future, $\left[e_{1} \ell^{s, 5}\right.$, 1 seize) a form of disease characterised by sudden insensibility, with convulsive movements of the voluntary muscles, ant occasionally arrest of the breatling, owing to spasm of the muscles of respiration, and temporary closure of the flottis (4. v.). Elilelsy was called by the ancicnt Greeks the 'sacred disease.' Owing th the mysterions and extrandinary character of the convilsion of erileqsy, it was always, in ancient times, supInsed to lie due in a very slecial mamer to the intluence of the gods, or of evil spirits; Hippocrates, however, combats this idea in a slecial treatise, in which he maintains that epilepsy is no more and no less divine than all other diseases. The same ilea of the specially supernatural character of epilepsy is shewn forth in the deeply rnoted oriental notion of demoniac possession. See Dcansiacs. Epilepsy is oiten ealled, in modern languare, the 'falling sickness', and this name is not only descriptive of one of its most striking phenomena, but also prints distinctly to the most obrions danger of the fit. The patient is seized, without reference to his condition or oeculation at the moment, with insensibility, often so commete and sudden as to lead to serious accidents and bodily injurics; in the most aggravated cases, he has no premonitory semsations whatever, hut falls down withont any attempt to save himself, and usually with a will inarticulate cry of some kiud, imme. diatcly after which the face is violently disterted, the heal drawn towards one or other shoulder, and the whole body convulsed. These conrulsions follow in rapicl suceession for a few minates, and are attended ly foaning at the mouth, and by great lividity, or, in some cases, livid pallor, which, with the irregular spasmodic movements of the lips, nostrils, and eyes, give a frightfully ghastly expres. sion to the cointenance, and almost invariahly lead the bystanders to an exagyerated idea of the immediate danger of the fit. The immediate danger is, in reality, not great, excepting that the sudlen attack may leal to an injurious or fatal fall; the tongue, however, may be listen if protruded daring the convulsion, or the patient may be so placed as to injure limself serionsly by the repeated and uneonscious movements of his body, or he may suffocate himself ly accidentally falling with his

## EPILLEPSY.

face in water, or otherwise closing up the month and mostrils, ur by drameing mon a tiohtencd nedchotl. ('are shomhl he alwiys taken to avoid thene acerients ly kepring the epileptic as mueh as bussille within riew of persons acpuanted with his ondmithon, aml able to give such assistance as may he dequired; as well as ly warning the bationt himsedt to avoid all places in which it fitl wonle he espencially elangerous. Lit when an mskilled person liappens to withess a tit uf epulejses, he will do well toremember that lieyond the simplest amd most obvious precuntions aquinst the dangers mendoned above, there is litomily nothing to be clone: and any attempt to rouse the pationt by volent stimuli, as ammonia applied to the nostrils, or ly dashing water in the fince, or, still more, by alministering meticines hastily recommented by the jgmomant and thoughtless, is almost certain to do more harm thin goorl. The tongue should lee looked to, a piece of eork or other gag beins, if necessury, inserted between the tereth; the prationt should be then placed on a wattress of other suft place near the grounl; his neckeloth shouk be removed, and the firess lowsened romd the ehest; the heal should be, if possible, a little mased, and a free cirenlation of air inaintained (this last precaution being very apt to be nesfected in ease of a crowd) ; with these thinges done, it may be safely aftirmed that in the vast majority of epileptic eases nothing has been left undone which widl conduce to recovery. The ordinary course of the fit (which nsually lasts from five to twenty minntes altomether) is as follows: the convalsions gradually diminish in intensity, and the patient passes into a state of deep but motionless stupor, with dilatel puyils, and sometimes, but not always, with snoring or noisy breathing; the foaming at the mouth ceases, the colow sralually returus, and this state leals to recovery through a more or less protracted, lut apmarently matural slecp, the patient, on awakins, being often quite unconecions that he has been the subject of any anxiety, or, indeed, in any umusual condition whatever. Although in all cases of true epilepsy there is a stage of contlete Coma ( 1 . v.), or unconscionsness, yet the fit is often very transient, and lout little attended by convulsion, being also less sudten than above described, and not necessarily cansing a fill to the gromud; in some cases, also, fits of greater intensity are preceded by certain premonitory symptoms or peculiar sensations, which act as wanings to the patient himself, and lead him to phace himself in a pusition of safety on the apprach of the paroxysm. Haring in view these distine. tions (which are certainly of consisterable puatical importance), thr French language, hoth pojndar and seiuntitie, has alopted the terms of grand mal and getit mal (i. e., great and little evil), as characterising the more anil less dangerous forms of epilepsy resuretively. The sensations which precenle the tit in some epilepties have been termed in Latin the aure (i.e., lreath) epileptica, from their supposed resemhlince to a current of cold air passing owr the louly, and proceeding from the extremities towards the heal. This deseription does not, however, hold gond in all cases; and not unfrequently, as mentioned ahove, there is no cerra, or unusual sensation of any lime, preceding the fit. It must be mentiomed, luwever, as bearing on treatment, and as being quite within the bomels of popular medicine, that some of the nost ancient authorities assert strongly the power of a tiofit handage, placed sumbenly upen the limb in which the aura begins, to ent short, or even to provent alturether, the fit of epilapsy. Althonerh this allered fact lasw often leen reararied as doubtful, it bias mever hen altorenther diseredited, and has of late yuars lecan lomatht into ramew notiee
ly forl ohservers. It is even maintained that
 whor "f the limbs, and tightened on the apronels uf it fit, hes been found etlective in some eases in which there was no distinetly local sensation; and -pileptica have been repeatedly convinced of the propnciety of halnitually waring a bandage loosely appled uron the arm, whieh they have been ablo, ly carefully watehing their own sensations, and by being watched in turn ly othem, to get tightenced at the proper tince. 'Ihere is no donbt room for fillacy in these obscrvations, but they may safrly be commented to notice, as involving no possible risk of mischief, and as far mome worthy of extended trial than the great majority of popular remedies in epilepsy.

But the fit and its treatment form only a part of the anxieties which arise out of a case of epilepsy. The ultimate danger of the clisease has little relation to the severity of the indiviulual fits, except in the modified sense explained above; the frequency of the attraks being apparently much more ajet to influence the duration of life than their character. Indeed, although epileptics may survive several severe paroxysms at distant intervals, and recover in the end with an apparently unbroken constitution, it rarely hapuens that very frecuently repeated attacks, even of the potit mal, are umattended by some permanent depreciation of the powers of mind or of boily. The most frequent, perhajs, of all the more serious consequences of confirmed epilepsy is Insinity ( $q . v$ ), sometmes assmming the form of acute mania or monomania following the attacks, but quite as freruently tending to gradual imbecility without any acute seizure. Sometimes the a leveloprment of the epileptic insanity, or dementia, is attemded ly palsy, and other indications of struc. tural disorder of the brain; in other instances, 10 sueh eonseduences oceur, and the brain after death may be fonnd to have very little tangible disease, or only such disease as is fonnd in momerous other cases of functional deramement. Very often, even when the mind rematins tuleralily entire, there is loss of memory, and a restan want of acoteness and depressim of spirits, which moft the individual for the rectular lusmess of life. Disorders of the digestion are also not meonmon; and there is frectuently a want of tone and virour in all the borlily functions, which communicates a hahitual expression of languor and reserve to the epileptic. Adiled to this, it cim harily be natter of surprise that the know. ledse of his infirmity shomal devply infanence the mind of the epileptic, und produce a distaste for active oceupations, especially for such as expose him to more than ordinary ohservation.

The causes and the rulical cure of epilepsy aro almost egually involved in mystery. It has lreen supposed by sume to be dependent on an increased aftus of blool to the brain; while by other ohservers and pathologieal anthorities it has been attributed, with about equal force of reasoning, to precisely the opposite condition. Certain cases undoulstedly deprol upon orqavic eliscase, as tumomes or injuries to tha brain and its membranes, more especially near the surface. Local sources of irritation in other barts of the bonly have also been sulphosed to be exciting causes of epilepsy ; ancl eases are recorded in which the disease las been eured by the amputation of a finger or the division of a nerve. '1 he attention of recent observers has been especially dirveted to the medulla ohlongata and Spinal Cord ( 1 . N.), as being the most probable physiological seats of a disuase so recidedly marked by convulsivo movements. but as yet little more than the most vance theoretical inferences can be hrawn from their reseavehes as to the canse either of the morbid

## EPMEPSY-EPILOBIUM.

temdency in epilepsy or of the paroxysm. One of the most eurions and suggestive of these recent facts is the experiment of Brown-Sequarl, shewing that epilepsy, or a state closely resembling it, may be indueed in certain animals by division of certain fortions of the spinal corl, the artificial disease contimuing long after the primary effects of the injury have cuased. A still more curions am inexplicable phenomenon has resulted from the multiplication of such experiments; for Brown-Sequard has shewn that in guinea-pigs this artificial cpildry is sometimes propagated to the offspring, becoming, like the natural disease, a hereditary and congenital moridd tendency: On these strange facts it wald be premature to indulge in speeulation in this place, but their great importance can harlly be overloukel.

The condition of the epileptic seems to be favourably affected by everything which conduces to a quiet and hopeful state of the mind, and to a vigorous condition of the borly. The treatment of the disease should thprefore, in general terms, he of the kind termed Tonic (q.v.), and shonld he adapted with care, and after very minute and careful inuury, to the removal of all the special bad habits, and oceasional causes of depressinn, which tend to loring the system into a condition belou par, in the individual ease. The intluence of a happy and quiet domestic life, withont whealthy excitement, anl with proper oecupations, varial by amusement and exereise in the open air, can hardly be overestimated. The marriage of epileptics is, however, not too readily to be sanctioned, as it has been known to be followed, not inly by an increase of the disease, bot by its transmission to a consinerable portion of the family. On the other hand, a too absolute rule on this subject is not withont its dangers, and perhaps the practical difficulties of the question are not to be met by any defined or dogmatic expression of opinion, founded on the general pathology of the disease. If the tendency exist, even slightly dereloped, upon both sides in such a connection, it needs hardly be stated that the dangers of transmission to the deseendants is incressel in a rery great degree. Hence, intermarriages within epileptic families must he regarded as alway's in the highest degree imprudent. Parents and guardians are undoubtedly justified in malking this disease an object of special solicitude, and reserve or concealment on this snliject on either side, in the case of a proposed marriage, should be regared as equally dishonourable with any other form of deception in a matter so important to the welfare of socicty and of the parties eonecrned.
According to one of the oldest and most respected of American physicians (Dr Jackson of Boston), the equileptie tendeney may often be successfully treated by the systematic use of an exchusively vegetable dict, or by a very eonsiderable reduction of the propertion of animal food. Among the inmemerable remedies recommended by authorities, the salts of iron and zine have perhaps the largest amount of experience in thoir favour; and Counterirritants ( $q, v$ ) applied to the nape of the neck, or between the shoulders, either by blistering, the use of tho seton, or even actual cautery, has been often followed by prolongation of the intervals, or decrease in the severity of the fits. Almost all the aecredited remedies, however, have been observed to produee a temporary relief of this kind, even when without any permanent inflnence on the course of the disease.
some of the Lover Animals are sulbject to epilepitic fits. The discase is eommon in dogs and lighly bred pigs. The ereatures writhe with involuntary spasus, and are for the time withont sight or hearing. Sometimes the muscles of the
throat are so involved that fatal suffocation occurs. The attaek is gencrally preceded by dulness, and lasts from ten to thirty minutes. It is generally traceable to tornidity or irregularity of the bowels, worms, debility, or plethora. In dogs, it is a frequent sequel of distemper. In eattle, it usually oceurs in comection with the engorgement of the first or third stomachs; they throw themselves violently about, bellowing londly, but seldon die. It is rare in loorses, and differs from megrims, for which it is often mistaken, lout in which there are no spasms. The treatment consists in frecly opening the bowels, removing worms, if any aro present, enjoining lleding amo spare liet, if the patient's condition is high, and generons feeding and tonics where it is low. The best preventives are carefully regulated diet, an oceasional laxative, with a course of tonics, and especially of arsenie.

EPILO'BIUM, a genus of plants of the natural order onapracece, baving four deciluons calycine segments ; four petals; a much clongated, 4-sidel, 4 -eelled, 4 -valyed, many-seeded capsule; and seeds tufted with hairs at one end. The species are herbaceons perennials, natives of temperate and coll conntries, and very widely diffused both in the northern and in the southern hemisphere. Some of them are very ornamental, from the beanty of their flowers. Nost of the British species have small tlowers, and some of them are very eommon in moist 1 laces. E: angustifolium, which differs from all the other British spucies in having the petals

Epilobium Angustifolium :
1, a fower; 2, a longitulinal section of a flower, thewing tho arrangement of the ovules in the germen; 3 , a seed.
dissimilar in shape and size, is frequently planted in grarlens and shrubberies, on account of its numerons and beautiful rese-coloured flowers; but its creping roots are apt to overrun a flower-garden. It is sometimes called Frencii Willow, from the resemblanee of its stems and leaves to some kinds of willow, and the name Willow-mers is often cxtended to the whole genus. It is found in very northern regions, and its leaves and young shoots are sometimes a grateful addition to the meals of the arctic traveller, although not likely to be relished in almost any other eircumstances. The pith, when dried, yidils a quantity of sugar to boiding, water, and is used in Kamtchatka for making a kind of ale, from which also vinegar is made.

## EPILOGUE-EPIRUS

Elpllofily (lir. epi, mon or atter, and lopos, a speech) moans, in arators, the smmming up or cune rlusion of a cliscomrse; lont, in emneetinn with tha drama, it demotos thite short speech in prose or versi which fregnently, in former times, wats sulboimel to plays. wsercially to comedies. The epilogue was abwas unary amil familiar in its tone aml was internded to estahlish a kindly understanding betwen the actur and the audience, as well as to eoneiliate that latter for the finlts of the phay if 1here were any, and to semd them away in gomil-humomr. Che of the neatest and prottiest cpileghes aver written, and one which completely realises what an oforige shombl be, is that spuben ly liosalind at the

BPIMEFIDES, a Cireek poct aml priost. loma probably at Phastus in Crete. in the Gthe or The c . v. C., and lived at (nossus. His history has only reached us in a mythical form. ITe is said to hare fallen asleep in a cave whon a boy, and not to have wakened for forars. Like Tiji Van Winkle, lee was naturally much astonished amd perplexed on his return to hroad daylight. Jis perion of shmber, however, had not passed away unprofitably: FJis smol, disengaging itself from its theshly prison, betook itself in the interval to the study of medicine and matmal philosoply : and when it had shutiled on arain its mortal coil, E. foumd himself a man of great knowledge and wisdom. Goethe has written a poem on the sulject, Des lipimenides E'racturn. E. went to Athens about 596 B.c., where, by the performance of various mystical rites and sacrifices, he stayed a jlague with which the inhalitants wore atflicted. When he died is not known, hat we may be certain that he did not live (as is fabled) for 299 years. 'That he wrote the flic poems attributed to him, the bongest of which was on the Aromatic expedition, is considered Jinfly impobable. Compare Meimrich. E. aus Kretri (Leip. 1s0l).

EIPINAI, a town of France, in the department of Cosges, is situated in a delightful district at the westem liase of the Vosyes mountains, on both lanks of the Moselle, abont 200 miles east-smoth. cast of Puris. Lat. $45^{\circ} 10^{\prime}$ N., long. $6^{2} 26^{\prime} \mathrm{E}$. It is a well-hailt, bamlsome town, with dean, regular, though ladly pared streets, aml is surmonnted lyy the ruins of an old castle, the gardens attached to which are muth admired. Amone its chied builhings are the farish ehurch, an antique Gothie structure; the hospital, formerly a Capuchin convent : a musemm of pictures, antiquities, and notural history; the barracks; and the residence of the profect of the department. E. manufactures chemjeal prolnets, lace, block-tin, wroneht-iron, juttery, cutlery, paper, and leather, and has some trade in graim, winc, timber, \&c. Jop. $11,076$.

EPIPIIANIUS, Sr, a Clristion lishop, amd writer of thr 4 th $c$, was born of Tewish prarents in balestine. Jo was baptized in his 10 th year, aml was educated among the Egyptian monks, who inspired him with an avarsion to all liberal science. 11.0 mose sralually to the rank of Jishup of ("mm stantia (formenly Salamis) in Cypuos, and eontimuca] in that wffere from 307 till his death in $50: \%$ His polnmical zoal wats conspicuously manifesterl arginst Grigen. IJo had proclaimer him a hevetie in his writiners, and in :ist he went to I Palestine, the focus of 1 rigan's atherents amd called umon John, Dishon of Terusalem, and the two monks, fufinus and dorome, to condemn him. A nore lecritimate olyject of his vinlent oprosition was the increasing worlhif of images. Jeromo relates how he imbinantly tore down an image in the precinets of a chmels in Palestine, as beimg eontrary to the divine liw. Among
lis writings, collected hy l'etavius (? vols., Paris, I $6=2=$ ), the most immortant is his Penerion, or catahnote of all leresies (so in number), a work which strikingly shews his unditness for being a histurian. Ilis credulity ancl want of honesty are "reessive.
 lenoted, amoner the heathen queeks, a festival held in commemoration of the sppearance of a gool in any particular place. The word sulsemuently passed into the usage of the ('hristian Clureh, and was used to designate the manifestation or appearance of Christ mun the earth to the (ieatiles, with especial referconce to the day on which he was seen and worshiped ly the wise men who eane from the East. This occasion is commemorated in the church on the 6th of Jamary, the lath day after Christmas, and hence the Epiphany is also called Twelfth Day. The Epiphany, which is said not to have been observed as a separate festival, lut to have been included in the frast of the Nativity till 813 , is whserved as a 'scarlet day' at Oxford amd Cambridge.

F'PIPllyTES (Gr. fpi, upon, phuton, a plant), often and popmlarly, but less correctly, called Are. PlANTS, are plants which are not rooted in the groumd, but are attached to trees, from the decaying jortions of the bark of which, or of mosses and lichens which grow upon it, they derive their mutriment, probably, also, depending upon the air for it to 2 larger extent than wther plants do. Nosses and lichens themselves, growing umon trees, may be ealled E., but the term is generally used of phanerogamons plants. E. are not connected rith the trees on which they grow in the peculiar maner of the misletoc, Bulanophore, and other true parasitesnot semdiner roots like them into the wool to suck the juice of the tree. It is chietly in warm climates that phancromanous $E$. are found, and in thoso Which are also moist. Nost of them prefer shady situations. Within the tropies, they often form an interesting and remarkalle feature of the regetation. Some of the Bromblatert (as Tilloudsia). Cuctacee, Aracee, Gesnerueper, and other natural orders are E. but the order to which they belong more than to any other is Orekidacep. Hany of the epriphytons orehids, as well as other İ, are remarkalile for their beanty; and the attention which has recently been given to their cnltivation in hothouses has been rewarded liy the most perfect success. See Orchids. I'lunts which usually oceur as L. are sometimes also foum growing on rocks. Althongh seldom fonnd except in moist climates, E. are generally capable of roduring a considerable amount of trought, parting slowly with the moisture which they have once imbibed.

EPI'RUS, the ancient name of a part of Greece, bommed on the E. ly the cham of Pindus, on the S. by the Ambracian Gulf, on the Wr. ly the Ionian Nea, aml on the N. ly fllyria and Macelonia. It formed the southern part of mondern Allmain, or the pashalic of Jamina, a wild and momatainous rovion, the haunt of robbers and semi-civilised tribes in all ages. The chief town was Dodona (q. v.) ; tho chinif rivers, the Acheron, Cocytus, Arachthus, and Chamirus. Anciently, it was celebrated for its cattle and its lured of Molussian loms. Its earliest inlarlistants were prolahly l'elasgians. In the historic wrim. 'Theopompus speaks of fourteen trihes, most of whom were belicvell ly the Greeks themselves to be not of Jlellenic origin. The principal were tho ('hames, Threspoti, and Nolossi, the last of whom finallyobtained the entim sovereignty of the country. (If the Molossian kings of L., the most clistinguished wias I'yrrhns, who long waged successfnl war against
the lomans. But after this race of lings loceame extimet (239-229 B, (.) by the death of Ptolemy, grandson of l'yrmos, a repuldican constitution was alopited, whereunm parties spuston up among them, and the neighlnominis Nacedonizons the upper hamd. On the comquest of Nacomonia ly the liomans ( $164 \mathrm{~s}, \mathrm{c}$ ) , tho birots wore arensed of havines assistol l'erseus, the Macmlonian kiner, amt the most revenerfal measures werp put in foree against them. . Builins Panlus, the lionnan general, phuder"d and razal to the grommed tla* Tot towns of E., and solel into slavery low,000 of the inlalitants.  tho mant maprortant are that in the l nitend Sitates, that in Sootland, and the Nomaian (lamoh. Nee

 1Hsschop), the luad of the Arminam jarty aiter the death of Amanins, was hom at Amsteralim in $1590^{\circ}$, studied at Leyden, Lork his derree 1 Lhof, and was "rrained pastor of the village of bleyswerk near liotteratim in lifll. In the frillowing year, the Ntates-general, with the intenton of putting an end to the anitations created hy the controversies twetwen the Gommosts or ('alvinistue party and the Amminans or lemonstrants, odered a conferemee (o) be leeld in their presence at the Harme botwen six mininters of each party. K. was one of the six chimere with the alvocacy of Amminianism, and highly distinguished himself by his grood temper, ability, and loaming. In 1619, the eurators of the miversity of leyden apmointed him professor of thewlogy in the room of Gromar, who had gone to Sceland. 'This cnraged the leators of the orthodox party, who unserupulously aceused him of Socmianism, and of having eutered into an alliance with 163
thr. lioman ('athulies for the destruetion of Protestantism. Jiy this mems the fantieism of the pombaee was roused auainst him; hewas insulted and abused in the street, and on whe wecasion narrowly escaperl being stomed to death. '119. lanse of his lirother in Amsterdam was also sackol, muler the pretoxt that it was a remlezvous of the Jimmonstrants. In 1618 , oceurbed the famoms symul uf 1 bort (1. s.). F. was present, along with several othor Arminians. The (alvinists, who happentel to be in an wrewhelminer majority, womlil not allow him to speak: they tuld him that the synonl was met mot to diselss. fint to juliee; and, in fact, the whole procereliners exhilited as revolting a specimon of high-hambed tyranny is any on recond, even amoner ecelesiastical tribminds. Expelled from the chareh, and bansled from the comutry, lo hetook himself tirst $t_{1}$, Intwerp, ancl aterwards to Ionnen and Paris, but in 1620; returneal (1) liotterdam, where the alimm theostoricum asainst his party hal become less virulent. Here he married in Jbab, and fond years after was mate primatins professor of divinity in the newly established college of the Fomomatrants. Jtw died in J6t?. R. ledil enlishtened principles in resarel to religions tuleration. Nut placines a high value m morely doctrinal vious, lout rather betwoing in the etticacy of the Cloristian spirit to chevate and pmrify the character, amd secines, momeover, the presmee of this spirit in men loblines the most comtlictine opinions (when not inflamed wath eontroversial hates), lee would have wished a broader and more catholic lonod of unity immor ('lnistians than the opinimative ereeds of his diy bermitted. His chicf works are
 ('onfrestome (1629), and Imstitntiones Theolrofite, incomplete. A complete edition of his worlis apl"ared at Ansterlan in 2 vols., $1(6,0)$.

EPIsTLE. 'lhe lesson in the ehmoh serviee callul the Epistle, derives its name from heing nost fremently takin from the Apostalic Epistles, althrugh it is sonetimes also taken from other marts if reripture. This part of the sirvice is Pelievel to lee as ohd as the Gth eentury.

EPLSTLE SIDE OF TIIF ALTAI, the left
 it, at which in tlue elmele surviee tha "phistle of the day is rean. It is of lesser distinction than the richt or gespel side. and is oceupnol by the corerman uf
 was in fommer times called the Epistler.
 (Lat. Letters of ofmeure Nen) is the title of a coblectiom of satimeal lettors which alpeared at the commencement of the fith e, and jrofessed to be the emmposition of certain ecelesiasties and professors in loborne aml othor phaces in lithenish fermany: 'They were directed agrinst the sehot. asties and monks, aml lashed with merciless severity their doctrines, whitiass, morals, modes of speceh, manner of life, follies and extravagances, and thus helpeal in no small degree to hrimg about the Jeformation. The eontroversy of lenehlin with the laptized Jew, I'fotlortorn, conecrming llebrew punctuation, gave the tirst wecanion to the Ejpistoler, and it is probalole that their title itself was sngsested by the Épisfolur Cletrormon Virorwm ad Rewhlimun Phorcensum (I:, 4). They were addressed to Octuin (iratins in leevonter, whow was by nu, means so complete an ignoramus as might be supposed from this cireumstance, but who hat made himself oulious to the liberal minds of the time by his arrugant pretension and his determineal hostility to the spirit of his age. On the tirst arpearance of the work, it was fathered on Renchlin; afterwards, it was ascribed to lienchlin,

Drasmus, abl Mutten. More reeent investicators have inclined to the lelief, that the firse part, whels appared it 1 hagnan in 156 (hat professently at Venice), was the proluction of Wolfgag Anest, it lamed and witty bookeprinter of that town: hat, latterly, doult has alse been experssel whether (even he had anything to der with the E'pistoler: In the compsition of the secomb part (pablishat in 1.39y, after Ulrich von Hutten, Frotus linleanus han the most considerable shate. 'Ilne circmastane of the Epinstue beine phated in the catalogue of
 it not a little. Amones the numeroms elitions of the work may be mentioned those puldishel at
 (Leip. 1827), aml liotermmad's (1lames. 1s:2).

E'PITAPII (Gir. equi, upno, and tuphos, a hillock, mond, or other monument placed over a grave). From originally sifnifying a monment, this word is now used exchavely to designate the jnseription commenorative of the deceasd which is phaceal apon the monment. This perversion may in some measure have arisent from the rememhrance of the fumeral orations whech the ancients were in the lathit of promouncing at funerals. But the epitaph, in its stricter sense, was well known to the classical nations of antiquity ; and, indeed, by every people a bricf commemoration of the hevie actions or peromal virtues of their illustriuns dead has the en regarided as me of the worthiest uecupations of the faculties of the living. As epitaphs were not only maraved on the most enduring sulistances, hat from their bevaty were casily preserved in the memory and orally transmittel, wherew we dime the literiture of a peole at all we are pretty sure to diseow $r$ specimens of their epitaphs. Petticrew has trans. lated several from Ewspian sarembui (Buhns wdition, p. 5). lant they are of no grat interest. Herndutus (vii. 2os) has preserved to us those which the Amphictyons caused to be inseribed on the columns wheh they raised in honomr of the heroes of Thermopylee, and that whielt simonides, from fersonal fricirdshin. placed on the tomb of the prophet Megistias. The general inseription for the whole of them was to this elfect: Four thousand from Foloponnesus unce fought on this spot with three homired myrians:' and that whide was special to the Spartans was still more memoralle: "Stranter, go tell the Lacedemonians that we he here wheliont to their commands.' The Anthologia Grarce, vedited By Jirunk, amb sulsegnently by lacols, contains the largest collection of (ircek ipitaphs: of these many were translated and pullished by Jomm in 15nt, under the editorial care of Mr tiemge liorges. of liomin epitaphs every antipuarian musiom "wen in this comentry urescrits momerns examples; for the form in which they wore conceived was alonited ly our uwn Comanisel forefathers, and bumy a stone bearing the well-known D. II. (hits Menilnes), ur Sistp Fiator, pubally conered the romains of those whose veins never contained a Arop of Liman blool. A very interesting collection of early (lhristian epitaghs will he friml in 1 br Gharles Matland's Church in the Catacombs, published in 1si6. The maturally epigrammatie than of the French mind peenliarly alapts it for this species of composition, and in French eollections, such as the Proncil d Epituphes, very felcitons examplas arp to lie fond looth in latin and in Frenth. Of the former mayle mentioned the 'TanAm folix!' which the Count de 'Temia, who hat cujnsul wery form of temporal prosperity, cansed to be rarawal om his tombla and of the latter, the touching epinaph to a mother. 'La premiere an render-bons.' A large prothon of the cirlice momuments, and consequently of the epitaphe of this
comery, wore destroyed at the lieformation, and subsen uently ley the denomelastie rage of the Puritans and Irestymians. But when we come down to a later date, the literature of no feonde, either ancient in malern, can vie with our uwn in this peonliar hranela, for whilst Linglish epritaphes prossess the mant and tersemess without which no epitaph can fre sucerssful, they exhibit a feature almost unknown in those of other matims - that, vize, of wit, or more poperly speakims, propas of humenr. It secms as if the wittiest peoplu in the word, as the Finglish naquestionably arc, had fonme it impossible to combine their raillery to the livines, and aecorlingly we tind that the harmans peculiarities of the deal Lave often been hit ofl in is tomlistone, with a felieity which has remered immortal what otherwise the next acneration must have forgoten. (If this class of epitaphs nur collections present an almost infinite variety. Thare are many execllent whe eollertions of epitiphs, such as the Thesumes Epituphiormen of Plailip Lablre, l'aris, 1666 . Of modern ones, the lest is that of l'ettigrew, p mbl Lishel loy Dohn, which is so arranged is to mark the diversity of taste prevailing at different periods of our histors: See also the works of Ciruter, Arasins, Reinesins, Muratori. Mazochins; the Monumenta Anylictm, Lomton, 171!; Weever's Ancine R'uneral Momumonts, fe.

FPlTHALA'MIU hat a species of pem which it was the custon anomg the irecels and homans to sing in chorns nar the latal-chamber (thatemus) of a newly married couple. Anacrem, Stesichorns, and Pamar composed perms of this lime. lat only scanty fracments have been preservel. The cpithailamiun of Pelens and Thetis by Catullus is one of the finest specimens of latin pretry extant; but frobably the most gorgeous epithalaminm in all literature, is that of the bughish poet spenser. A collection of Greck and Latin cpithalamia is to be formd in Wernsdurf's Pute Lateni Minores ( (thls vol., part - ${ }^{\text {) }}$.

EPITUENAUAT is the term apmien in anatomy to the cell-tissue wheh, in layers of varions thickness, invests mot only the inter surface of the lonly, and the monens membranes comented with it as, for example, those of the nose, lungs, intestimal camal, \&e.- inat also the chosed cavities of the boly, such ass the great seroms membrmes, the ventricles of the lomin, the symorial membran's of joints, the interior of the lueirt and of the ldomb. vessels proevding to and from it, the rlucts of glands, de.
The thickness of this tissuc varies extremely with the pusition in which it onems. In some parts it comsists of mumeroms strata of edls, collectively forming a layer of more than a line in thickness; in wher prarts, it is composed of only a few strata, (1) often of only a single strathon of colls, and ean only he detected liy the microseone.
Tho cells of which the epithelium is composen are usually soft nueleated cells; they may le roumber, polygonal, fusiform, cylimatical, or eonieal in shape, anf sometimes they possess vibratile cilia, the alyearance and uses of which will presently be explained.
In his Manual of Humen Mistology, Kialliker aropts the following arrangoment. Ihe considers (it) epithelium in a single stratum, and (b) copthelimm in many layers.
(a) Aipithetiun in a single stratum mity bo compersel of

1. houndat, polnmonl alls, constituting the variety known as purement or tessclateal epitheliun, and occurring is an investment of the serons membranes, of most symovial membrames, of the linine

## EPITHELIUM.

membrane of the hent and of the veins, of the canals of glanels, \&e.

4. Cplindrical or conical ciliated cells, as the epithelium of the more minate homehial tubes, of the nasal cavities, and of the uterus.
5. Founded cilicted cells, as the ciliated parement epithelinm of the ventricles of the brain in the footus.

Fig. 5.
Laminated parement epithelium investing a simple papilla (with blood-vessels in the interior) from the gums of a child. Mag. 250 diam .
(b) Epithelium in many layers may be composed of :

1. Cylindrical or rounded cells below, and more or
loss flettened cellis aloure. 'Ihis is tommerl laminatod payement "pithelimm, and oceurs in the month, lower part of pharynx, wephenoths, blabler, \&e.
 the middle, aurl ciluted commal omes aboer. This is termed laminatid ciliary elithelinm, and oceurs in the laryux, trachea, wail larger bronchial tubes, in the greiter lart of the nisal eavity, \&e.

Fis. 6.
Cobiated cpithelimm from the tratheatif mand Mag. 350 dian. ", outermost purt of the thastice lonftudimal fibres; $b$, homogencons outcrnost layer of the mucous membrine; $c$, denpst round cells; $d$, median lung cells; $a$, ontermont conical caliated cello.

In all the varieties of epithehim, the layer of external cells is being constantly lisintegrated and replaced loy the layer inmediately beneath.

The uses of the chief varietios of epithelium, especially of ciliated epithelinm, require some notice.
The polysonal on pavement epithelimmanly acts like the epidermis, as a proteeting melium tos the suft parts bencath.

The eylindrieal epithelinm additionally takes an active part in the process of secretion. Hmstrations of the function of the cells forming this variety of epithelium are gisen in the articles Cells, Animal; Digeriton, Ofgins and Phocess OF: and the subject will be further noticed umblow the head secretion.
In connection with eiliatel elithelium, we mast notice ciliary motion gencrally, in so far as it ocenrs in the animal kingdom. Certain surfaces which are lubrieated lyy thuid, are covered with a moltitude of hair-like processes of extrome dulicacy and
 of an inch), which from their shape are temed ciliu, from cilium, an cyclasin. Ihring life, and for a ecrtain leriod after death, these filaments exhibit a remarkalle movement, each cilima lending rapilly in one direction, and rapidly returning to its original position faceorling to kramse, these mivements rame from 190 to 230 in a minute). (on examinimy a ciliated surface with a high mamifying jower, the motion presents an appearance somewhat resemhing that of a comfichatatated by a stendy brecze. Any minute chjects coming in eontact with the free extromities of the eilia are urged onward in the direction of the predominant movemeat; and the best method of olservine the enurse of the ciliary current is tuspinkle the surface with a littlo powdered chareoad, grains of which may spechly be scen to move onwards in a detinite direction.

An easy way to olserve this phenomenon is to detach. liy scraping with a knife, a small juicee of epithelimm from the baek of the throat of a livines frog. Tlue scales, moistened with water or serum, whll continue to exhibit the movement of their atherent cilia for a very eonsiderable time, provilerl the phece be kejt duly moistened. On one oecasinn a pieco prepared in this way by Mr Bowmau and Dr 'ludd exhibited motion for seventecn hours; and it would

 time, han not the mosture aromd it mapmated : and if the "ghthetima is mot ramosed from the hanly of an mimal that has been killed. the mothen
 derapitation, it lasted, in the menth, mine das: in the trachea and longs, thirteren hass: and in the

 smmer. The necessary comditinfor their moment appars tu the thenerity of the colls to which they
 wat of nevisture of umhen any physical chane the cilia cease thar characteristic action. We know nathing with certanty rezarding the medanism on souree of ciliary motan, except that (as it contimus
 vasentar and borvons systems.

IThis flemmenm exists wery whely throughout the amimal kinglum. forthirpey, in has article ('1ant* (pulblished move than a quartor of a century aunh, notices its enemrence in the lufasmia, in F'ulys and their asa, in Acalopar, Actimies. Eehnosdermata, Aundida, Noflusea, ame the Molluscomeds
 sime the date of that article, it has hen discovered in Nromes, and in one or two exegtional cases in Fishes; but it has never heen fomm in any part of the boily of Articulata (Crnstaceans, Insects, or Arachmilans). The parts (1) whinh it ocenrs are (1), the skin or surface of the lowly, (2) the respiratury, (i) the alimentary, and (t) the Henitn-urinary systems; and it has been alserved in the ora if numerons clases of ammals, trinn Reptiles downwards tel Infusoria. In most of the parts in whel we observe it, its use alpeatis to he of a mechanieal nature-viz, to consey the fluids or other matters along the surfaces on which the cilia exist, or, as in the lufusoria, to carry the entire anmal throurh the water.
I. Cilia have been foum un the extermal surface in Batrachian larva, in Mohlusen, Amelila, Eehinodermata. Actinia, Mchusec, I'olypi, amil Infusora. In most cases, their function is respantury, hat in many instances it is also locomotive or predensile.
2. Ciliary motion has beon observed on the lining membrane of the air-passages of Mammals. Divis. and laepiles, where, whaterer may be its uther uses, it serves to conver the serctions along the membranes, turether with any foneign matters that may be present. It exists also on the extemal gills of Batrachan larsa, and on the respinatory organs of Mhblusea am Amelina. The cilia which exist externally on still lower amimals withont separate respratury orman, assist in the respiratory pucess, by renewing the water on the suface.
3. It occurs in the mouth, throat, and mullet of varims reptilos, and in the almentary canal of the Dowhsea, Echnombermata, may Amelida, and Acahephat It is mot easy, as Ir sharpey ubserves, tu see the purpuse of the motion in all these cases. In shme, it may merely convey secertel matters alomg the surface of the liming membrase and in others it ssmons to serve in liace of ordinary lomatation. to carry fowl into the stomach.
4. It is wharem on the surface of the repmone. tive emgans of Mammals, Limis, an Reptiles. Krom the elincetion of the curront beine from withont inwards, the oflee of the cilia may lne to hury dewn the avm, in adilition to removing the mucons sectetion of the matmbrane.

In heptiles and Fishes, wiliary motion exints at the neck of each urimiferons thbe. The mose ment is dhrectel towards the tulbe, amb favours

 luster to Lonelin. Eppina lísyal Fireato formerly molne the nam, of Waltham Fument. whore sir ancient kinge enjoyed much vart, cobremi all Essex, and extemited almost to Jomolon. It is num limiteel to 60,000 acres in the south-west part of the comonts. Of this tract, only 12,0100 acres are in wastes anit woods, the rest loung mow rmelosed as private property. In the furest. iJ miles irom ti.. is (!neen Flizalneth's huntiuer-loden. Sepurated by the river Fonding from Wryme Furest is Hamault Forest, lately lisforester. Here for many renturies a fair was held under the enomens Famplo dak, not now existing, and a stace was yoarly turned out in the Forest on Laster Donulas. for the amusement of the pulblic. Ta this day, a stan is turned out juarly for the amusemmen of Cockney lmontsmen.

EPROUVETTE is a machine for proving or tosting the strenerth of gunpuwder. It was invented or sureqested in the last century by liobins, fut was greatly improved hy Dr Huttom.

The ofen eprouvette determines the strength of gunpowder by the amount of recoil producci. A small gum, usually a lanfopmandes, is fixed to the lower end of an won rod ; its hase leeing adjusted to an arm projueting from the ronl: er else it is suspenaleal from an iron frame. A lemrizontal sterl axis is tixal to the mon or frame about whicle the mum may vifrate. A pointerl iron roul or strle projects dowuwards from the lower sirle of the genn, ind tonches a groore fillad with suft wax; the eroove is so slaperal that, whon the grin revils, the proint ents a path fro itsule almog this wax: and the length of this path metermines the tumont of recoil. Somutimes a brass wradmatel are witlo an intex is used instend of tle pmintod style and the waxal erome: fot the principle of action is just thee same. On thee are the recoil anombleary
 1rwider of enarse urain. This system of jumo is ressurted to ammally at mino anil foresu atations for the: prout of all purlar in stare, to asecertain

 grayity hy werobing mot lass than in Ius. to the cuble font.

The morom eprombotte dotermines the strength of gumphoder by the distance to which a hall is projected, instead of the listance to which the picee recoils. It is remorally a mortion of $\delta$-inch boree, in Which 2 to 1 mimees of powder is amphored to propel an aceurately turned iron sloot to a distance uf about $1: 3$ ganis. Other thanes lreine equal, the stroncest mumowicr sends the shot to the areatost Aistance ; and this is thw ambal monde adopted in testian fumpowder stixplael ta the guvermanent by Vitrinus contractors.

The ordinary rpouvette is an imstrment shajeal like a small pistol withont it larucl, and havinge its breale chamber closed lyy a dat plate combected with a stron* sprug. On the explumiun of the
pownere against the plate, it is lriven back to a distance indexen accornling to the strength of the

Powder, :ind is retained at its extreme state of lrenpulsion by in ratelet wheel.

E'PşoM (said to have originally leen IMhashan) is a sumall marknt-town on the margin of the lianstend fhowns in smrey, f.3 miles sontlesonthwest of Londen Iy romd. anil It miles by the Lomdon ani siontlu-W estern Sailsay. The faned sulphate uf maghesia springs of L . gave their mame to the bivon sialts fommerly mannfactured from them. This manditeture has been abandoned from thee Case with which these salts can lee mate artiticially. The lasal Nudical ('ollege erected on the Downs, anl cotablished in Is.7. ] wovides cducation for about 170 boys, the sons of medical men, and affords a home to decayod mombers of the profession and their winlows. l'op. ( 8571 ) 6276. On the Duwns, 1 ? milo suntlo of the town, the famous l. horse-races are Jelf yearly. They are said to have leen institutal ly Charles T., but have lecome of greater importance. since the institution of the Herby sitakes in FTso (see Deinis Das'). The races last four diys, and as many as lon,out persons uften asscmble to witness the most impurant of them.

EPSOME SILT, or SL'LPIIATE OF MIG: NENTA $(N g O+S O \cdot H()$, occurs not mly in the water of mineral springs, is at Eusom, Scidlitz, au! many btherplaces: lut alsos as an athoresceuce on the swrface uf varions roeks, sometimes along with almm, is at IJurlet, in leufrowshirn and on the bround, as in sume parts uf shain amd of the liussian atelりme. It sombetimes neelurs sluw-white and rery ImFe, sometimes diseolomed by jmprities: and is cither in the form of fine the "illolke crystak, or in crusts, tlakes, 保anles, de. Itserystals are prisms, almost rectancular. for jurpuses of commeres, it is obstained by the action of dilute sulphuric acid

Epismm salt is a wroli-knomon [umpative remedy mach in use in lonschodn maticine. It may be given in dusce from twor drathoms to one ofnea, ateordiner to the edfeet requiren, in a tumbler of water: The disasrecable bitter taste is mush relieved be atidulatins with uearly a toatmonful of dilute sulpharic acid to ead ounce of salt.

E'IWORTH, a town in the motlu-west ni lincolnshire, Englanl, :i) miles nortli-nortle-west of Lincolu. It dhafly consists of one strect, aluse two miles lones. EQLATION, Lesar. Se tomar Theors.
EQTATLON OF E'GULNONLS is the differ"nce between the true msition of the equimeses, and the position calenlated on the supposition that their mution is miform. Se l'ebcesions.

EQU.ITION OF IJCHIT. In astronomical olbcreations, the visual ray log which we see any londy is not that which it cmits at the moment we look at it, bant that which it did emit some time hefore, viz. the time menured ly light in traversing the interval wheh separates it from us. If, then, the booly lue in motion, its aberration, as due to the carth's velocity, mut lue applied as a correction, not to the line joining the earth's place at the moment of abservation with that occupies ly the boly, (as seen) at the same moment, hat at that autecelent moment when the ray ruitted it. Hence is derived a ruke appled by astrommers for the rectitication of ohservations made on a moving haly. viz., from the known laws of its motion and the earth's, calculate its relitive ancular motion in the time taken ly light to pass from it to the earth. This motion is the total amont uf its apparent dinplacement. Its. rffect is to displace the fody in a direction comtrary tu its apparent motion. an effect one part of which is due to aluration. properly so called (see Aberiation), resultine from the composition of the motions of the earth and of light, and another part to the fact of the passage of lisht occupgine time. The equation of light is the allowance to be made for the time oceuped lyy the loght in traversing a variahle space.

EQUATAON OF PATMENTS The problem considered moder this head in hooks of arithmetio is to tind a time when, if a sum of money be paid by a deltor, which is equal to the sum of several dults pryable by him at diflirent times, no loss will the suataincel by either the delion or crelitor. The rule senerally given is as follaws: Multiply "wh sum due by the the at which it is payable, and thon divide the sum of the promets ly the sum of the dults: the gluntient is the rquated time. Fir example, if $t$ lolne the at one month, and $x=0$ at

monthe 'This mone is, howewre inemrect where the rolots ate hmonal, breatise it takes no account of the halance of inturest and discoment. A corred rule for the rase of two delits and simple interest
 T the thate of fryment, and rone yar's interest
(an 1). Then if $\mathrm{A}=\mathrm{T}+\boldsymbol{t}+\frac{\mathrm{D}+\mathrm{d}}{d^{2}}$, and $\mathrm{B}=$ $1 t+\frac{10 T+d t}{d_{i}}$, the winated tine will $=\frac{1}{2} \cdot t-\frac{1}{2}$ ( $\left(A^{2}-4 B\right)$. Whon three or more delts are conerrucd, the flan is to fimi ly this formula the equaterl time for the dirst two, and then for their sum payable at their equatol time, and the third, and so un. The rommon rule is, howerer, sullciently correct for orlinary use.

BuUATHON OF THE 'reNTRES. If the earth movel uniformly round the sun in a circle, it would be casy to calenlate its longitude or distance from the line of equinoxes at any time. One year would be to the time siner the vernal equinox as Bof to the are of longitul. passed wer. But the orhit of the earth is not circular, nur is its motion unifum: the ont is slightly diputical, and the motion is quicker at perihelion than at aphelion. The true rule then, for ascertaning the earth's longitude is contained in the following proportion: one year is to the time elipespia as the whole area of the earth's orbit is to the area swept over by the radius vector in the time. "This is a deduction from Kupler's law (see Cextail Forces), that, in plauctary motion, equal areas (not anflex) are swept over in equal times. The area swept wer being ascertaincd from the laws of the earth's motion, and the dements of its orbit, it is a question of geometry to ascertain the cende corresponding to the area, or the true longitule. In astrunomy, the longitude, as calculated on the supposition that the carth moves unifurmly in a circle, is called the mean longitude of the earth; and it happens, from the orbit being as we said, but slightly different from a circle, that the mean and true bongitule difler but slightly. The quantity ly which the true and mean longitudes differ is called the equation of the contre: and this is sometimes to be adder to, and sometimes to be sultracted from the mean longitude, to obtain the trone: and sometimes it is zero.

EQUATION OF TINE. It will be seen from the article Equation of the Centre (I. v.) that the earth's motion in the ecliptic-ur what is the same thing, the sun's apparent motion in longitude-is not uniform. This want of uniformity would of itself whiously canse an irreguarity in the time of the sun's coming to the meridian on successive days; hut besides this want of miformity in the sun's apparent motion in the ecliptic, there is anotber cause of incquality in the time of its coming on the meridian-viz, the oblipuity of the ecliptic to the equinoctial. Even if the sim moved in the equimential, there would be an inequality in this respect, owing to its want of minform motion ; and even if it moved uniformly in the ecliftic, there would he such an inequality, owing to the oblipuity of its orbit to the equinoctial. These two independent canses conjointly produce the inequality in the time of its appearance on the meridian, the currection for which is the equation of time.

When the sun's contre comes to the meridian, it is apmarent nom, and if it moved unifomly on the efumoctial, this would always coincide with mean noon, or le' oclock on a geod solar clock. but from the eanses alove explaned, mean and apparent noon dhlfir, the latter taking phace sumetimes as much as 16,1 minutes before the former, and at others as math as $1+\frac{1}{2}$ minates after. 'lhe difference for any diay, called, as we have said, the equation of time, is to he finhed inserted in phemerides for every day of the year. It is mothing or zero at four differcnt times in the year, at which the whole mean and mequal motions exactly agree--riz., about the lath of April, the 15th of Junc, the 31st Angust, and
the 2 th Dewrmber. At all other times, the sun is either too fist or too slow for clock-time. In the ephemerides alme referred to, the signt + or - is prefixed to the equation of time, according as it is to be added to or sultracted from the apmarent time to give the mean time. Soe Namtiche Almande:

EQUATIONS. An equation may be idfined to loe an atheloraical sentence stating the equality of two alrobraical expressions, or of an algelnaical expression to ecro. From amother point of view, it is the alyebraical expression of the comlitions which conucet known and nonkown quantities. Thus (1), $x y=-24$, and $(2), x^{2}+y^{2}=52$, are two cipuations expressing the relations lietween the unkmown quantities and ! and known quatities. (fencrally, cyuations are formed from observations from whith an olject of inquiry may be inferred, lat which do not directly tond the ohject. Thus, suppose we wish to ascertain the lengtlis of the sides of a rect. anchan board which we have no means of netasurime, and that all the information we can get respecting it is, that it corers (say) It square feet, mol that the square on its diagonal is (say) 5as square fect. Frum these facts, we can form equations from which we may determine the lengths of the sides. $T_{11}$ the first place, we kimw that its area is equal to the product of its sides, and if we cill these of and ?/ we have $x y=24$, the first of the equations above given. Again, we know that the sum of the splares on the siles is equal to the equare on the diuromal; hence, we have tho second equation, $x^{2}+y^{2}=52$. From these two muations, we shonh be ahle to determine the values of $x$ and $y$. The duturmination of these valnes is called the sthlution of the equations.
Equations are of several kinds. Simple equations are those which contam the unknown quantity in the first degree; thus, $\frac{2 \pi}{2}+3=4$, is a simple equation. Quadratie equations are those which cratain the mknown guantity in the second degree: $x^{2}+5 x-36=0$, is a quadratic equation. Cubic and hiquadratic "quations involve the unknuwn in the third and fourtly powers respectively. Fur the himher cquations, there are no special names; they are said to he equations of the degree indieated by the lighest power of the unknown wlich they contain. Simultancons equations are those which involve two or more manown guantitics, and there must always he as many of them, in urder to their detcrminate sulntion, as there are monkinwn quantitics. The equations first mentioned-viz, $z y=24-x^{2}+y^{2}=52$ are simultancous cquations, It may be mentioned, that in the course of solving sueh equations the principul difliculties encountered are always ultinately the same as in the solntion of equations containing only one mknown quantity. For instance, in the equations just given, if we substitute in the secom? the value of is as siven by the first, or $y=\frac{24}{x}$, we have $x^{2}+\frac{(24)^{2}}{y^{2}}$
may be solved as a quardratic equation. The general theory of equations, then, is principally concernod with the solation of equations involving one unknown quantity only, for to this sort all others relnce themselves. ludetorminate equations are such as do not set forth sutficiont relations letween the nuknown quantities for their absolut- determination, and which acoordingly admut of various solntions. Thas, $x y=$ of is an indeterminate equation, which is satisfied by the values $x=3, y=8$; or $x=6, y=4$; or $x=2, y=12$. We require some other relation, such as $x^{2}+y^{2}=52$, to euable us to tix on one of the sets of values, $x$ and $y$, as those of $x$. For other
kinds of equations, see Expunential, Functional, and infferentar.

The object of all courmitation is the determination of numerical values for muknown quautities. Jy means of the relations which they bear to other quantities already known. The solution of equations, accordingly, or, in other words, the evolution of the unknown ynantities invelved in them, is the chef lonsiness of algelma. But so difficult is this business, that, cxcept in the simple cases where the unknown quantity rises to no higher than the secund dagree, all the resomees of algelna are as yet inadeduate tocflect the solntion of equations in general and defmite terms. For equations of the second degree, or quarlatic equations, as they are calleld, there is a rignous method of solution hy a peneral formula ; but as yet no snch fomula has heen discovered for equations even of the third degree. It is true, that for equations of the third and fourth degres general methods exist, which furnish formalas which express under a finitr form the values of the roots. Sue Cardas, and frbe Equations. liut all such furmalas are found to involve imatinumy expressions, which, except in particular cases, make the actual computations impracticalde till the fommulas are developed in intinite series, and the imaginary terms disappear ly mutually dustroying one another. What is called (arlan's formula, for instance (and all others are reducible to it), is in this 1 redieament whaterer the walues of the maknown chautity are all mal ; and accondingly, in pearly all such cases, the values are not olutimable from the fimmula directly, but from the infinite series of Which they are the compact expression. But thonch such fimmule as c'ardan's are nseless for the 1 mpose of numerieal computation, the search for them has lue to most of the truths which comstitute the general theory of equations, and through Which their numerical solution may be said to have been at last rendered "ffective and ereneral. This method of mmerical solntion is a purely arithmetical process, performed upon the numerical roffictents of equations, and it is universally applicalne, whatever the degree of the equation way lue. With this method are comnected the name's of Tudan. Fonier, Homer, and Sturm. We camot here enter into an account "f it ; the reader should consult on the subject Young's Theory and Solution of Alyebretival Equations of the Ilipher Orlms: Peacock's Trentise on Alffine; and La Grange's work on Vumrical Solutioms.
The rules for the solntion of the simpler forms of erpuations are to loe found in all elementary textbomks of alcelra. It must sullice to notice here a fow of the lealing gencral propertics of equations Liy the roots of an equation are meant those values real or inarinary of the unknown which satisfy the "quality: and it is a property of every equation to have as many mots and no more as there are units in its derrees. Thus, a puadratic equation has two ronts ; a culic cuation, three ; and a bignalratic, four. 'The quadratie equation $x^{2}+5 x-36=0$ has two roots, +9 and - 4 , whieh will be found to satisfy it. Further, the expression $x^{2}+5 x-36=$ $(x-9)(r+4)=11$; and generally if the roots of an equation

$$
\begin{gathered}

 hoofed), a family of mammalia of the order Pudydermath, contaning unly a small mumer of species, which so nearly resemble each other that almost all natmalists agree in referring them to one genus, E'futs. Thay are distinguished from all other quabrupels liy the complete emondidation of the lones of the toes, or the extratinary develomment of one tore ahme in each foot, with only one set of finalancal and of metacarpal or metatarsal bones, and the extromity covered ly a single undiviled homf. There are, howerer, two small montulerances (aplint hones) on cacle side of the metacupal ar metatarsal bone (comon or comon bome), which reporsent othur toes. The E. have six incisors in each jaw, and six molars on each side in each jaw; the males have alsu two small canine toeth in the uper jaw. sometimes in buth jaws, which are almost always wantine in the females. The molars of the E. have square cowns, and are marked loy lamine of enamel with ridges forming four erescents. There is a wite space between the camine teeth and the mulars. The stomath of the E. is simpo the the intestines are lones, anl the ciecum extrenely large ; the digestive urgans beins thas very dillerent from those of the rominants, fout exhibiting an "qually perfect alapation to the same kind of not easily assimilated fonl. Another distinctive peculiarity of the E. is, that the females have two teats situated on the pulies, futween the thighs. Put motwithstanding these characters, so dissimiar to those of the ruminants, they approach them rery much in their general conformation, anel may le regarted as a connectimg link lxetween pachyderms and rumimants. The largely developed and thexible upper lip is a character whinl belongs to the former mather than to the latter order.

The E. are now fomm in a tenly with state only in Asia and Africa. Fossil remains exist in the newer gendogical formations in !reat abmonate in many parts of the Ohl Work; rery sparngly, however, in the New, althourch the boues of a jecoliar and tistinct species. (Equas corviders), betonsime to the Plencene period, have been fonm in sunth Amrica.

The lurse and the ass are hy far the most important slucios of this family: The dziggethai has also bermilomesticated anul mate useful to man. Of the other species, the zebra, quagya, and dinw, it is genemaly believel that they are incapable of usuful domesticartion.
bogithatemal, having equal sines. A square is equilateral. The equiateral hyperthola is that Whose axes ant conjugate tliameturs are equal.

EOPILITBHIN M. the state of rest or balane of a bobly or system, solid or fluil, acted upou by varions forces. Shee sextics amblymbostitics.

EQUINOCTIAL is the same with the edestial equator, see Equator, Cdieminal. The epunoctial prints are those in whin the equinoctial and the ediptic intersect. See ECLIrTID. Eipuinoctial time is time reckonel from the monnent when the pant of Ari"s passes the Verual Equinox. See Equ﹎oxes. 'This justant is selecterd as a couvenient central point of a mifform reckoning of time for the purposes of astrummical ohservers.

EOUINONES. Sometimes the Epuinnetial Points (see Ludnoctinl) are called the equinuses. Nore commonly, ly the equinoxes are meant the times when the sim cuters those points, viz., olst March and wed soptember, the furmer being called the Vermalur spring Equinox, and the latter the Autumnal. When in the equinoxes, the sum, through the earth's rotation on its axis, scems to describe the circle of the equator in the heavens, and the days
and nights are of equal lewath all over the worlet. At the vernal emumos, the sum is passing frem somth to north, and in the northern bemisphere the days are lengthening; at the antumanal. le is passing from north to sumth, ant the days are shortening. As the earth moves more mpindy when hear the sum, or in winter, the sun's ajparent motion is not noiform, ann it hapmens that he takes eight days more to pass from the remal to the autumnal equinox, than from the latter to the former. The equinoctial puints are not stationary: See Eeliftic.

EQUIPMENT, EQUIPAGE, in Military matters, are names given tu rertain of the meressames for ofticers and soldiers. I buring tha 1 'rimem W'ar. many othicers applied for an! obtainat muncy as compensation for the loss ur injury of tha ir equip. ment, comprising horsos. lorseappomtments, has gase, subllery, and accoutrements. Eyluipments ismual to private soldines are expected to last a certain number of years, and small deductions from their bay are mane in the erent of the articles mot lastiner the moner time. In those cases (in the English army) whore a bon-commissiumat oflicer reccives a commission on the gromal of meritotions service, an allowance of eloo, if in the infantry, or
 equipment. The equipment of a private somlier is nften useal as a name for the whole of his clothes, arms, and acourtrements collectiv! perf of an army is of two kimds: it incluries all the furniture of the camp, such as tents and utensils, mater the name of comp-civiznte; while ghth-equiputge eomprises stulde-horses, laggage-horses, amb haggage-wasmens.

EQUISE'TUAT, a genns of ('ryntogamons plants, the structure and aftinities of which are not yet well understonl, hat which many botanists regard as constituting a sulb-urder of ferns, whilst others prefer to make it a distinct order, Equiveterer. The English mame Honse-time is often riven to all the species. They have a loatlese, eylimirical, he, low, and jointel stern, -ach joint terminating in a membramons and tonthed sheath, which cheluses the hase of the one abore it. The fructifieation is at the summit of the stem in spikes. which stimewhat ro. sembles trobiles (conest, and are formed of seales lowing spore-cases on their lawer surface. The speres are minute, "val. or commi, green, and tarh accompramed with form chastic and hytrometrical threals. These threals are sometimes called cuters, hut it is by no means certain that they are of the sime mature with the spiral tifaments sur callen, which are mixul with the spures of many Heputicer ( s . v. ) Each

 tration of justice in England is dividen into two arrat lramehes, usually known as common law and muity. These terms sorve suftiontly to inticate the character of the primejpes which requate the practice in the sevoral conts; fror although within its own sphere the common Jaw pays regarl to culutable principhes, yet it is in the equity couts that principles of cruity have beon matured into a separate science. 'l'he supreme conrts of equity in England are the Lord Chancellors Comet, the Daster of the lioll's Court, and the conarts of the three Viurchancellors. Thar urim of the separate amitalbe jurisdiction existing in Enghand is to be fome in the early adoption ly the conts of eommon law of ecrain set forms for the reatess of grimances, amt their refusal to apply any remerly to cases which din not fall within those limits. Suitors timding that in mumerons cases rentress was not to be whataned in the ordinary lemal tribumals, had recourse th the king as the femman of justice, who. sitting in combil, hoard the eomplaints upon their merits withont reference to the teremicalitics of law. As carly as the reign of Ehwaml 1., the practice began (t) lie adopen of delematios to the chancellor the petitions rofered to the king. In this reign, an attompt was made to devise a method whercly the common law comets should le made the sole tribunal for the radress of grierances. by the statute of Westminster the second (13 Elw. 'I. c. -4), it was enacted that whenover a case necurbed refuiring a new writ, the Chamery (in which all suits tork ther rise) shomlid [rame a mew writ to suit the ease. This statute was nover acted upon to the furpose intended; fout in the reign of lilward 111. its provisions were mate nse of by John Waltham, who was then chancellor, to introiluce the writ of Subpurace (r. - $)$ ), returnahle to 'hancery only, wherely the Lord Chancellor's court was maile the formm if a large class of earses. 'From this time.' says Alr Spence (Chancery, Iuristiction, i. 335), suits lys petition or bill without anv prominary writ became a common course of poedure lefore the chancellos, as it harl been in the conncil. On the petition or bill being presented, if the case called for extraordinary interference, a writ was issned by the command of the chancellor, lut in the name of the king. ly which the party complainel asainst was summoned to ajpear bufore the Court of Chancers: to answer the complaint. and abide ly the order of the court.' Thus was introtuced into Chancery the practice of examining upon oath the party in the eanse, a practice unknown at that time to common law. The cases heard in the Chancery conts were decided unom the prineiples of honssty, cquity and conscience. The next step which tembed to willon the ergitalie juristiction of th. Chanecry conrts, was the exchasion of the Romin law from the courts of common law. This was atieterl by a pro. hibition of the judges in the reign of lidhard lI. One result of this prohibition was to exclude altogether from the common liaw conrts the question of trusts. There can be little doult that the common linw joulses had this am in view in the course which they adopted. Trusts were repugnant to the fendal Iaw, the principles of which wero acted upon in the common law rourts. The Court of Chancery at mone proceeled to give a remedy in this class of cazes, which has crer since formed the most imfortant liranch of the equitable jurisdiction of that court. The juristiction of the Count of Chancery in matters of fram, which also forms an important liranch of the empitable jurisulaction of the court, is to be traced to the abolition of the Star Chamber

## EQUITs.

(q.v.) in the reigu of Charles I. Thus has sprung up in England the equitable jurisiliction of the Court of Chancery. Owing its existence to the jealnusy and exclusiveness of the common law. whieh ailuered to ancient customs and feulal usages, it has not inapitly receivel the title of Equity. It is "ymitable inasmuch as it aptlied a measure of justice inaccessible loy the urdinary frocelure; and equitable in the prineiples alministeret, which hal reformee to the horil question of right minftered ly the techmicalities of law. Yet is it a great error to supuse that the syan andministerel in courts of equity is an arhitray one at the pleasmre of the presiding judge. Such promally was the case on the first introluction of such a tribmal; lout as time progressed, the decisions of presions jurges formed preealents for their suceessors, amp the precepts of the lioman law were early abopect as a conle for the rerolation of the courts. The indepenslent existence of the equity courts in England has called forth the animaluersion of rither mations. A practice directly oppret? to that pursuci in nearly every other cirifisel state could hardly fail to wecasion such a result. The inconvenicnce oceasioned to suitors by the necessity of sceking in differat courts the remedy for civil injuries, and the allowed confusion of julicatories. lave been strongly dwelt uman he the enemins of this system. Yet are these evils more inarginary than ral. The rilative jurstietions of common law and equity are now so clealy detined as to leave a suitur little doubt in which court to seck his remedy. In plite of opposing jurisdictions, the courts of common law and equity are rather independent tribunals established each for alministering a seprarate branch of a julicial systom. On the other hand, it is eontendel hy Enerish lawyers, and not without grom reasun, that by the existence of the English eduity courts as an indipendent tribunal, a system of erpity has been gramally evolvel and established as tixed and certain in its prineiples as a code of laws, and one which is frequently resorted to for guidanee by for iom tribumals. The popuar delusion, that equity courts alminister an arbitrary system remgnant to law camont le too strongly controverted. The English couts of law and equity had for many yoars past hesh marked out for recoastruction with a view to the emsulidation of the prineiples and practice of louth courts, umler the name of a High Court of Jnstice, and this arransenoent has ocoupued the attention of parliment for some years. Mr Justice fory remarks, that ernity 'was principally applicel t remmly defects in common law procelure, anl therefore that equity juriselietion was mantained on the same grom thich now constitutes the principul cause of its interference-riz, that a Wrand is done for which there is no dan adegnate and complete remely in the cousts of common law.: The juristiction of the equity courts is divided mater three mincipal heads-exclusive, concurent, and aszistant. The first consists almost cutirely of tho alministration of trusts; the secom ramprises questions of frath, of aceront, and also. it is saill (Nmith's Principlos of Lipuity, 217. of squectic performance of agrements. This matter atpars, howerer, to fall more naturally under the assistant jurisuliction. In orler $t_{1}$ appreeiate the inmain of the equity courts, it unast be borne in himil that common law confines its remedy uswally to the awarding of damares, and to the promuncing a judgment absolutely in favour of cither plaintiff or defemant; equity, on the other hand, alone goes into all the merits of the case, and will deliver in moditicel judgment where circumstanees demand it. The judges of the equity courts at
present consist of the Lovi Chancellor, two Lords Trstices of Amral. the Mastor of the Iools, and three Vice-Chamedlors. C"atil 1sli3, almost tho Whole business of the court was discharged by the Iord Chancellur. liy 53 feen. Ill. e. E4, a View Chancellor of Euglimel was apmointed; io 1833 ( 3 anl 4 Will. 15.c. 49), the Daster of the liolls was required to hear motims, \&e. : and in 1841, two additional Vice-Chancellors wore appented. The Loris Justices of Apreal were crated in 1s.7. The ordinary husimess of the equity courts is transactal by the Mastir of the lionls and the three Vice-Chancellors. The Lord Chanceltur also may loear eauses in the lirst instance, lut he is mont usually enmarel in hearing appeals. The Lorl Chancellor and the Lords Justices constitute the conat of appeal. Appeals may be hoad either by the Lorl Chancellor alone. by the "haneellor and une of the Lords Justices, or by the two Lorts Justices. From this court a further alyeal hes to the llanse of Lorts.

EpUITY, Pancmetes of, in their widest sense. are the principles of etemal justice, of which all hmman laws are lint alapitations. "Equity" says Lord Stair (i. I. s. 17), 'is the buly of the law, and the statutus of men are lut as the ornament: and vestiture thereof.' In this sense, equity coinciles with the Loman precepts of law - -honeste rivere, alterum num ladere, summ cuique tribuere'(Inst. .. I, s. B) and with the principles of justiee as laid down ly the inspired writer - to do justly, to love meres and to walk humbly with thy Goil.Nicah, vi. S. As the object of humam taw is to give expessinn to these principles, equity is thus the hasis of law. ljut it is impossible, in the nature of things, that any conle of laws should provide a remedy snited to every particular case; it has, therefore, been found necessary in every civilised natiom, tor estahlish some form of anthority which shoula emantrol the rigour and remedy the clefieicucy of positive law. Thus, it is the function of the law to lay down a colde of rules whereby the rights of property and the transactions of commerce shall be regulated: but by the diversities of life it happens that varions eireunstanees will oceur to canse these fixed rules to iprerate harshly or unjustly in particular cases. A party may complain that a contract duly entered into with all legal formalitics bas been obtained ly frand: the cwner of an estate is incapable from infancy or lmany of managing his aftairs; a person ostensildy the owner of large property is fonmed $t$ ? le placed in possession in trust only for the benctit of others. In these and many other cases, the larty who, in enmpliance with every rule of the law, is in possession, is not in fact the person who should in justice exercise the right. Here equity steps in. While, then, all law may be sate to be cyuitable, inasmuch as it is the purpose of law to dispense justice, yot, in the teclmical sense, the term equity is embined to those cases nat specially provided for by positive law. But, wn the other hand. expurience has shewn that it would be most inconvanicut, and sulwersive of order, if equity should arhitrarily interpose to remely erery apparent srivanee, and therefore it is that the operation of erfuity is checkel within certain limits. - There are many eases against natural justice which are left wholly to the conscience of the prarty, and are without any redress. cuputalide or legal; and su far from a cout of equity suphlying miversally the defects of positive lacislation, it is governed by the same rules of interpretation as a court of common law. and is citen cumpelled to stop where common law stois. It is the duty of every court of jostice, whether of law or of ernity, to consult the intention of the legislature.' -stury, Principles of E'quity, s. lt.

It was fomerly cousuterel that an alteration, erasure, wr intertineation (11. 8. , would woil the whole instrument, even in those eases where it was male by is stranger : but the law is now otherwise, as it is clarly settled that no alturation made by a strango will prevent the contents of am instrument from retaining jts original effect and operation. where it can be painly shewn what that effect and operation actually was. To accomphish this, the matiated instrument may the given in wilence as far as its contents appear: :m intrimic widence will be anmitted to shew what portions have bean altered or craschl, amb also the worls contained in such altered or erased parts: but if, for want of such erideace, or any deficieney or uncertanty arisins out of jt , the original conitents of the instrument cammet be ascertained, then the ohl ruke would lucome :11plicath, or, more correctly speaking, the mutilated instrument would beemen wid for nucer. tainty.'-lhughes' Prettice of conmorncing, i. 1:24,
 the attention of the withesses mught to be directed to the prarticular parts in which each alteration occur, anl they misht to place their initials in the margu opposite, lefore the will is executen, and t" metice this having bend done by a memorminm, addel to the attestation clames at the and of the
 l:und, the role as to crasure is somewhat stricter than in Englan-the legal inference lwine that such alterations were mate after execution. is t. necessary or bone fiele altcrations which mes be cesime ly the parties, corrections of elerical cormes am the like, after the demi is writen ont, but before signature, the rule in Sonthan is, that the deed must show that they hwe been adrisedy adopted ly the party: and this will Iue effected ly mentionin' them in the body of the writing. Thus, if some rorls are crased and Uthers sun rimhed, you mention that the superindmed words were written on an emsure: if worls are simply delete, that fact is noticed; if woms are adted, it ought to be on the maryin, :ull such aditions signed by the party, with his Christian name on one side, and his surname on the other; and such marginal addition must be noticed in the luply of the writ, so as to specify the pase on which it cecurs, the writer of it, and that it is

 was, that the alturations shmuld be male ly the farty limself, and a furmal clause was introduced into their deenls to this effect, 'lituras, inductiones, suprimiluction's, ipse feei.' As a gencral rule, alturations with the $f^{\text {en }}$ are in all eases to be profered to erasure; and suspicion will be most eflectually remmed by not abliterating the works altered sin completely as to emocal the uature of the corrotion. 'The worst kint of deletion,' says Lorl itair, 'is when the worls deleted cannot be 110
rend that if they are scored that they can lie real, it will appear whether they he de whostemtialidna, for if they cannot lee read, they will he esteemed to be such, unless the contrary appar by what pre cedsand follows, or that there loe a marginal note, luaring the deletan, from such a worl to such is ward, to be of cousent.

ElidTO'STHENLE, an eminent Greek writer, callow, on accoment of his varied crudition, the Plutdogist, was born at ("yrene 0 of rac. Anong his teachers were Lysanias the grammarian, anel Calhmachus the poet. Liy L'tolemy Energetes, he was called to Alexadria to mperintend his grat library: Here he died of volmantay stamation, at the age of 80, having becom: lind, and wearied of life. As an astronomer, l: lohts an eminent rank among ancient astronomer. He mensurel the obliguity of the ecliptie, and the result at which he arriwel
 very fair observation, consid ring the aye in which he lived. Hiplorchus usel it, and so did the celebrated astronomer f'talemy. An astronmical work which gres under the name of E , but which is certainly net his, is still extant, and is called hatessterismof ; it contams an accume of the constellations, their fabulous history, and the stars in them. It is Dediewal, however, that E. did "Iraw ul, a catalonue of the tixed stars, amonting to 65 ; but it is lost. A letter to l'tulomy, hing of Eapt, on the eluplication of the culve is the only complete writing of his that we fossers. L.'s reatest claim to listimetion, however, is ass a cemueter. In his attempt to meature the bunatude of the earth, he introdacel the methul which is msel at the present day, and
 stadia; which, atcoordine to lliny, is 31,500 homan males. but as it is not known whet stadimn E. used, it is fussible that he eanse noarer the actual circumference than the abuse tigures inticate. His work en geography must have been of geat value in his times: it was the first tuly scientite treatise on the subject. E . worked up into an orgmic whole the scatterci information regarding blaces and combrios related in the buoks of trabels, \&e., contained in the Alexamhtian Litharg. Ile also wrote on momal fhilesoldy, history, grammar, \&c. Hhis work on the 0hl Attic "omedy allyars, from the remains which we possess, to have heen a learned and bery judicions perimmane. Sueh fragments of E.'s writings as are still extaut have been enlheted by Bernhardy in his Lertostheniea (Berlin, 1swes).

J'RBIUM (symina E) is a rare metal, the compounds of which are fomm in a few scare minerals, "specially in ${ }^{2}$ uldotinite. obtained from Ytterly, in sweden. In its empmonds and properties it resembles the metal aluminmo.
 Luct, was lwan at Madril. August 7, 1533. He was the third som of a spanish jurist, anel at an
 sun of thates V', accmpanying him on his journey thrumh the Nethorlands, ant some parts of Germauy and laly, and in lint, to England, on the wecision of the eclehration of Philip's nuptials with Queen Mary. Shortly after, E. went with the arny dispatched to America to quell the insurrection of the Auracanians on the coast of Chili. The difficultics with which the Spaniarls hal to eontend, the luroism displayemby the natives in the mequal contest, and the multitule of gallant achievements ly which this war was listinguished, suggested to b. The idea of makins the sulpocet of an epie pom. $11 \cdot$ beran his jumen the spot, aluont the year 1558 , weasionally committing his verses, in the ilnsence of bapr, to pueces of leather. An monomber suspieion

of his having plotted an insurrection involved him in a manful trial, and he had actually aseended the seafluh before his innocence was proved. Depply wommed, the hrave soldier and bet turned to 'luain, but lhilip treating him with great collness and nerket. E. made a tome throngh Franee, Italy, Germany, Bohemia, and Ilungary. For some time be held the oftice of chamberlain to the emperor kinkulf 11, but in 1550 returned to Antrin, where hee in vain exertad himself to realise an independrnce. The latter years of his life were spent in obscurity and poverty at Matrid, where he died, at what period has not been ascertained. His historic equs, written in the octo-sylabie measure. aml cutitled Arucuna, is, with the axception of a fow unisudes, a faithful deseription of actual wents. Cervantes, in his Dom (uriobo, empares it with the best Italian epies, and it has unAnombenly mot a little of the elice style amb spirit. 'The first part is the freshest in eharacter, having bren completel before the authors return to Farope, where it was first published separately (Madrit, lobil). The second part appeared nine years later. $l_{1}$ it. E. by the intrometion of episoles. Fielded more to the taste of the time; and this was still more the case in the thind prort, which wats first pullished. alones with the two others. in bogo. In Nain, and likewise in other enntries, many reprints of the jwem alpeared the most elerant, 2 vols, Madrid, 1726 ; the most recurate, 2 vols.. Nautriu, 152s). A contimation was pullished by bom Dicen Santistevan Osorio, of Leon (Salamanea, 1597). A German translation has been published by Winter: ling (2 vols., Xuremberg. 1531).
FIFEDUS-the mane of one of the sons of Chaos -signifies darkness, and is uscal specially to denote the dark and gloomy cavern beneath the earth. through which the shates mast pass in going to Hades.

## ERECHOHELS or ERLCHTHO'NILSA, Ani

FRECHTHE'UAL. Ereehthens, an Attic lemo, is said to have been the son of Hephaestus and the Earth, and to have been rearel by Athema. One form of the tradition states that when ac elhild ha was placed by Athena in a chest, which wab intrusted to Agraulos, I'anlrosos, and Herse, the danchiters of Cecons, with the strict charge that it was not to he qpened. Auralos and flerse. however, unable to restran then cariosity, openem the chest. aml diseovering in ehill entwined with serpents, they were seized with manlness, and thees thenselves down the most 1 recipitous part of the Acromplis. Afterwarls Erechthens was the chief me:ns of establishing the worship of Athena in Ittiea. He is regarden as the fommer of the Lrechtheum, the temple of Athena Pulins, guardian of the eity. This orisinal Erechtheum, whiel eontained Erechthens's tomb aiter his reath, ant which was called hy his mame, was burned by the lersians, lut a new aul mamificent temple was raised upon the same site-north of the Iarthenou, and near the northern wall of the Acropolis-in the bagimning of the th e. b.c. The seeond Ereehtheun was a splendid structure of the fonic order, of au oblong shape, extending from east to west, abutting in side chamhers at the western ent, towarls the north and south, and having portieves adorned with colmms at its eastern, its worthern, and sonthern extromitios. It is now a comphete ruin.
ERECTION, Londs of, those of the mobility in Scotland to whom the king, after the Reformation, granted lames, or tithes, which formerty belonged to the eburch. They were also called Titulars of Tithes; the gifts being by no means confined to the
nobility. These titulars laul the same rights to erected benctiees, both in lands and tithes, which had formerly belonged to the monasteries aud other religious houses. 'Tl'le grants were made under the hurden of providing competent stipends to the reformed elergy-an whigation wheh was very little attented tor hy the grantores, prior to tho decrees arlitral of Charles I.. in 1629 . Eirsk. D. ii. tit. $\mathrm{I} 0, \mathrm{~s} .1 \mathrm{~S}$.
 combnstion) is aterm originally 1 mposed by Lichis to indieate the shw rocess of eomlustion at ordinary temperatures, whieh ensues whon oryanic eompounds, such as wood, are left expusel to the air, and gradnally rot away or decay. 'Ihe pootes ensists in the wxgen (O) of the ar combining with the hydrogen (H) of the wood foming water ( 1 l (1), and in less quantity with the carben (C) forminer cartonic acit ( $\mathrm{CO}_{2}$ ), leaving a brown monled of lowder, called by ehemists ulmin, wh lumus, in which carbon jur panderates.

E'REURT, at town and fortress of Prnsian Maxony, capital of ohl Thuringia, stamb in it hinhly eultivated plain, on the right hank of tho Gierio. It miles wost of Wemar. It is surrommed ley walls, picreed hy six eates, and is strenethenell liy twin citahles, the Petershery and the Cyriakshar, luoth formerly monastiories. Amons the mumerons churches, the eathedmal and the Church of St Neverus are the fincst. 'The eathedral is me of the most venerable Gothic billings in tiornany, and possesses, besides a very rich juntal, sculphams dating from the 11 the to the loth century. of the convents, omly that of the Ursulime mas remains. The monastery of st lugnstine famens as tha residence of lather, aml in which his cell is stibl pointed ont, was converted in the year 1820 into ath asylum for daserted chibluen. The wher remarkahbe louldings aro, the miversity, fombled in 15: amb supressed in Islof the royal mademy; the limary; contaniner 50,000 volumes; mumerons enincational estahlishments, infimaries, \&o. Pop. in 1571. 43,616. ERGOTLAM, the constitutimal effect of Frgat

E'RIC is the seandinatian form of the mane Hamicus, Earico and lhay of sonthern mations. Many kings of tho name reignol separately in hemmark and Nweden, amd some ruld exer tha Whole of scandinavia after the miom of "aluar. The memory of the two carkest rukers of the mame in bemmark merits our motice from their associa. tion with the introlaction of "lastianity. Ericel., wha died in se6, protecteal the Christians in the latter fart of his reign, and under the direction of the missionary Anser on Auscharius, fommed the "athelral of lible, the firet Christiau chumeh in thas lam, In his time the Northmen bega these bumsions into nume sonthem comotries, which were
 Eurone:m history. Wric II. followed in the steps of his father, and promitton Anspar to prosecnte tha latmor of comverting and civilising the forme. whinh won for him the title of the Tutelar saint of the Nowth. To Eric 11. is ascribel the remsanisation of thomenters when fimally meresed in the mmicipal comprations of the midide ases, lat which wore, at first, a mere moditiation of the latathen lonather lowe of than hemanarian home agen, ane tomstithated asamiations. Whane members wate a juivilened dase, somated loy distimet laws, rights, and duthes from the rest of the prophe Demmark sulfered in the loth ©. in an equal deate from tha twa brice who rabal wer hur, for white bric, surnaned Eman, xhansten the strencth of the land by the inkmit.
 force of amos, to mannel the Vimilals and "ther giratial mighlours to aceppt the christimity which he throst upen them, Erise 'the Lam,' 'ripplend the forwers and resomens of the crown ley his pusilanimms sulserviney to the chery. The thace Sries (Lrie VI. V'll, and V'lla.) who wechpied the throne, with only the intermission of a fow yeurs, from lotl to lisila are assoriated with obe of the most disistrons proiods of bamish histury: Lame minmities, the sumbal pactice of dismemberme the crown-lands in favour uf gouger larandees of the roval lonso, and fatile altempts to restrain the war-increasing encroarhments of tha chareh, emm. binel tolrine the country to the brink of a strinction. Sric V1. (l'dopeming) and Bric V'll. (thiphing) were inth assassimated, tho fomer at the instigation of a hoother, amb the lattor in raveng for a private ingury, Rrie V'lll., the list of the mane hefore the maind of (almar, dieal childlesis, and was succeded, in l:B!!, hy his mbitims brother Christuhacr, who saw himself compelled to repay his partisime at the "xpense of almost all the prewnatives and apmages which still belomed to the crown.

In Sweden, the tirst of the name who merits one nothe is King liric, surmmel the saint, who was
slain in lattle in 1161, after a shont reion, which was signalisel, in that ast of anarchy, ly the foundation of many churdhes and monasteries, and by the prommluation of an excellent conde of laws, known as st Ericis Loty. This law centained provisions by which a higher status in society was secured to women, ly manting thon a dixer proporion of the leritage of their male relatives, and ecrtain definite privileges within their houselulls. Sit Eric waged frequent war with the Finus, and compelled them to adopt the outward forms of Christianity. The two namesakes and descentants of St Eric, whon ruled in Fiweden during the 13th ce, and Eric Xill., who reigned from 13.50 to 1359 , have little clamm to wur notice, for internal disturbances and wars with thoir mighbours hrought alout the same fatal results as those which are associated with the reigns of the linics in Demarark charing the midulle agos. In $1+12$, on the death of the great Mirgaret, Iher relntive, Eric of lomerania, succeded to the triple crown of cieamlinavia, in accordance with the articles of the fanous treaty of Calmar. The noble beritare that had been berpuathed to Firic required a firmer hame and a liraver spirit than his to keep it in chock: and his reckless disregard of treaties and raths, his neglect of his duties, ant his misdirected amblition, led, after years of dissensions, maladministration, and disatfection, to the ineritable result that Eric was drelared to have frorfeited the respective thrones of the several kinghoms, which proceeded to elect rulers of their riwn. The intestine wars to which this conlition of things gave rise, pluyged the whole of Scandinaria into anarchy. ant sowed seeds of dissension among the three kintred nations, which bore fatal fiuts in subsegnent ages. The last ten years of Eric's life were spent in the exercise of piracy in the island of Gothland, whither he had retired with his mistress and a band of followers, and from whence le sent furth piratical expeditions to pillage both friends and foes. Eric married Philipha, daughtir of Henry IV. of Englaml, whose memory is still cherished in the north, on accome of the many noble deeds with which local tradition associates her name. Eric XIV., the last of the mame who reigned in Sweden, had the distinction of loing at once one of the worst and noe of the must umhapy of the name. He sucerercal, in 1560 , to the throne of his father, Gustaf Tasa, who was perhaps the greatest and worthist monareh that ever reignd over sweden, and immediately on his aceessim, he made known the diffrence that was somfavomaldy to dintimglish his reign from that of his father. by quarrelling with his lorathers, thwarting the nobles, and ophosing the lower orlers. His fickleness and extravagane were displayent in a shecession of embassies, which were in tum sent to almose every European enurt to demand a comsort for this vacillating monarch, whe usually changel his mind lwfure his enroys had time to fulfil their missions. Elizabeth of England and Mary of sontland were mare than once the oljects of his matrimonial schemes; but when the resources of the conntry had been seriously crippled by these costly and absurd expeditions, Lric married a swedish $\mathrm{l}^{\text {reasant-girl, who }}$ ultimately aeguired an influeuce over him which was ascribed lis the snperstitions to witcherait, siuce she alone was able to control him in the viulent paroxysms of hlind fury to which he was sulject. It is prolsable that Eric laboured uader remittent attacks of insanity, and that to this cause may he attriboted the blood-thirsty cruelty with which he persecnted those of his own relatives or attenulants who full under his suspicion. His capricious eruelties at length alienated the minds of his subjects, who, wearied with the continuous wars and disturbances in which
his evil passions involved them, threw off their alleniance in 1.26s, and solemnly elected his brother John to the thrume. For mine years, the unhapry Erie suffred every indignity at the hams of the kecpers apmintell ly his hrother to shari him, and in 1577 , he was compelletl to terminate his miserable existcuce !y swallowing poison, in olodience to his brother's arders. Singular to say, this half marlman was a person of cultivated mulerstanding, and be solaced his captivity with musie and the composition of pasalms, and in kueping a voluminus journal.

ERI'CEA, or ELICA'CE.E, a natural order of exogimons phants, consisting chictly of small shrubs, lut containing also some trees. The leaves are mposite or in whorls, entire, destitute of stipules, often small, generally evergreen and rigil. The Howers are sometimes solitary in the axils of the leaves, sumetimes groupul in diflerent moles of infturescence, and are often of great beanty, in which respect uo order of plants execls this; the beauty of the smallest species, and of those which harw very small Howers, rivalling that of others which are trees prufusely covered with magnifieent clasters. About $!00$ species of this order are known, of which the greater momber are matives of South Africa, which particulandy abounds in the gemus Erier, and its allies-the true IIeaths (4.v.)althongh some of them are also fomend to the nemost limits of northern veretation. They are rare within the tropies, and only vecur at considerable elevations. Few species are fmmi in Anstralia. Many of the E. are socinl $1^{\text {dants, and a single species some- }}$ times covers great tracts, constituting their pincipal regetation. This is most strikingly exemplition in the heaths of Europe and the North of Asia. Medicinal properties exist in some of the E., as the liearbertis (see Arbetrs), and the Grotyd Laciel of North America (Epipfer repens), a pop, war remedy in the United states for affections of the bowels and nrinary organs. Narotic and pisonous qualities are of not unfrequent occurrence. See Anfromeda, Azilef, Jilmia, Lefoh, hiododeshion. The berries of some species are edible (see Arbetes and Gatimbin), althagh none are much estemen. -The limamberbices have sometimes been regardel as a distinct orler, but are gencrally consibered a subord re of E, containing the genera Phododendion. Ȧifora. Killmiu, Lalum, \&e. The larer leabes ant flowers, and generally also the larger phants of the orler, helong to this suloriter; which, howerer, comtams also many suall shruls of subarctic and elevated monitainous regions.

ERICHT ur E'TRIROCIIT, Locin, lies in the north-west of I'erthishire and sonth of Inverness. shire, in an minhabited distriet, the willest and most inaccessible in scotlam, annid the Grampian imonatains. Its lanks rise steeply from the water's edge. It is fourteen miles lons and nearly no mile broal, and it cextents in a sunth-west direction from near Dalwhinnie on the Dunkeld and Snverness roanl. I'y wne ontlet it juins Loch lamnoch, and by awother it runs into Loch Lerloch, its waters ulti. mately reaching the Tay. Its surface is abont 1500 feet ahove the sea, and it never freezes. In a cave at the sonth end of the loch, Prince Charles lay hid
in I 746 . in 1740 .
ERPCCSON. Joun, a distinguished engineer, was born in swerlen in $180 \%$. Aiter serving for some time as an ofticer of engineers in the Swedish army, he removed in 1896 to England, and contimual to occury himself with improvements ehiefly on steam machinery and its applications. It is to E that steam narigation owes the Screw-propeller (q. $\because$ ). In 1839 he went to New Lork, United States, Whare

 vamia, and New Jork on its richit. It is the most sumtlern of the five, recoriving at its sunth-western exiremity the waters of Lakes suphrin, Nichisan. aml Huron by the river betroit. inn diselnaroms them at jts northenast ly the Niagran intes lake Ontario. With at Ienotli of 240 males, E. lase a lreadth varyine from iol to nearly 60 miles, with an are uf otion sipure milas. ]t is 16 feet below thu* Humn, am! 3ow and $\therefore$ aje respectively alowe the Ontario aml the Atlantic. At its sonth-western extemity are several womed and partly edtivated islamb, the largest of which is about 14 miles in circumforenee. It is by fiar the shallowest of the tive great lakes. Its mean depth is stated at 120 feet: and from this comparative shallowness and the consequent liakility to a heavy groumd-swell, as well as on acconent of the small number of wool harbuns, the naviration is peenliarly ditheult and langerons. The clief harburs on the south, or Inited States shome, lessides the natural harbour of Libe itself or l'resque lsle, are those of Cleve. land, sundusky City, ano Toledu: and on the north or Caudian shore, Ports I)over, Burwell, and stanley. Lalice receives no rivers of any consefucuce. Its commercial importance, however, has heten largely increased ly art. It is conmected ly one comal with the lludson, and hy more than one with the thio: while, on the British side, it coumunicates with the chotario lig means of a still more arailable work, the ship-chamel of the Welland. Its navigation eremarally closes in the hegimming of Incember, and the lake remains more or less fiozen till Narch or April. The commercial importance of this lake las leen greatly enhaneed the last few ye:ars by the estalishment of mmeroms lines of railway ennocetine its ports with the interim. The anmont of tratfie on the lake and on these mailwars is enurmons. Lake d . was the scene of a naval cherament letween the Lritish and Americanc, September 31), 1S13, in which the latter were victorinus.
larIE, a port on the lake of its own name in tho state ui Pennsylvania, stamels in lat. $42^{3} \mathrm{~S}^{\prime}$ N゙, and lowr. $S 0^{2} 10 \mathrm{WF}^{f}$. Its limbur, one of the largest and bent on the const, is formed by an island of four miles in lenath, which, moler the appellation of l'resque Isle, still presurves the memory of its haviner becu a freminsula. "Jhe belt of water. which is thus Ghakered, is known as Presque lsle bay, and forms it natural harbour for the city. It is now protected ly a loreakwater. It is "tr miles long, and 1 mile wiole, and raries in depth from 9 to 25 fect. While mond lias loen done to improwe the natural alvantrues of its l $^{n s i t i o n, ~ E . ~ J a s ~ b e e n ~ c o n n e c t o d ~ b y ~ m o m s ~}$ of a rand with the Geaver, a fealer of the Ohin: and this work, indepradently of its navigable facili tios, atlords extensive water-power to mills of difforont linds. It is the trminus of the I'hila delphat and lexio lailway, and is by other lines commectel with New Sork, C'leveland, \&c. 'lhis port is lestind to beconte an important centre of tride. l'opl (1860) 9419.
 1nw of the minlly ages, was born probably in Treelant, aul flomished during the oth century. Viry little is known regarding his history. Ho appars to hibe resided principally in France, at
the cont of Charles the Pald. In the controversios of his time, regrardine predectination and trabsiflsstantiation, he took furt. His philesophic opinions wre those of a Neo-l'latonist sather than of is sobolastic. Ilis lose for the mystic doctrines of the "ld Alcxandrian philosophers was shewn by his thanslation of the writimes aseribul to Inonysins the Arenpagite, which proved to lse a well-sbring of mysticism duriner the mildle ages. E. lachd that tred is the essential gromul of all things. from whom all things emanate, and into whom they return again. Pantheism, therefore, lurles in his system. II principal work is De therivione Nature punhlished by Gale, Oxform, lGsl). One of its leating thoughts is the illentity of plinosulhy and religion, when both are proprrly apprhembed. E. uttered his opinions with great lukiness, and he exhibited no less subtlety and strength of intelleet in their defence. Je expressed his contempt for theological dogmatism, amd rimlicatend the anthority of reason over all other authority. Ilis words are: Authority is derived from reason, and not reason from authority; and when the former is not confirmed by the latter, it possesses no value.' Consult 1 [jort's Joh. E. oder rom l'riprumge einer Christlichen Philosophie (Copenh. 189:), Stindemmayer's Joh. E. und die Hissenschaft seinor Zeit (Frankfurt, IS34), and Taillandier Sioot. L. it la Philosophie Scholastique (Strasburg and l'aris, 1813).

ERI'GERON, a semus of plants of the natural order Composito, suborder ('orymbiferé, baving heads (tlowers) of many tlorets, the florets of the ray numerous, in several rows, of a different colour from those of the dise. Two or three species are matives of Britain, the most common of which, $E$, acris, has it stem $16-15$ inches hiegh, narow entire leaves, Hower-stallis formine a kind of corymb, howers with yellow lise and palo-ble ray. It las a powerful odour, which is sajd to kecel away leas, and the name FuEd-bnse is sometimes given to the plant. Its ashes contain about $\overline{3}$ per cunt. of potash, for the sake of which it is sometimes collected and lurned. E. Philadelfhewm, a mative of North America, with pale-purple ray, aml a fetid smell, is valued in the lated States as a dinuetic.

## ERINACEUS and ERINACE'ADE. See

 1)EDGELOG.ERI'NNA, a Greek poctess, conceming the date of whose birth the most dillerent statements are advanced. According to some, she was the intimate friend of Sappluy (hinee she is likewise called the Lesbian singer), and was born at lhotes, or on the little island of Telos, sitmated west of Ihoules; while others maintain that she lived in the age of Ibemosthenes: and others again, perplexed by such a wide difference in point of time, have recourse to the hyprothesis of two poetesses of this name. E. act ${ }^{\text {puiral }}$ snch celebrity by her epic, epigrammatic, and lyric poums, that her verses were compared with those of fomer, although she died at the early age of 19. l'he genmaness of the framments that still exist muler her name, has been disputed on good gromels. These have been collected by schneidewin in tho Detectus Poesis Graece Elegiacop (iottingen, IS3S). Compare Malzow the Erimue Lesbia vita et Relinuiis (?'etersburg, 1836).

## ERIOBOTTRYA. Sce Loqcat.

ERIOCAULA'CEAL, a natural order of endogenous plants, nearly allied to Restiacerr, and containing about "00 known species, many of which are aquatic or marsh plants. The E. are chictly matives of the tropical parts of America and Australia. One species, Prionaulon septantmlare, JoInted PIPENORT, is found in the west of Ireland, and in some of the

## ERIODENDRON-ERLKONTG.

Hebrides ; a little grass-like plant, growing in lakes which have a mudily bottom, and exhibiting small globular heads of Howers. From its botanical affimities, and with reference to geographical distrilution, no British plaat is more interesting. The E. form a remarkable feature of the vergetation of some parts of South America; lut many of the species lear little respmblanee to their humble northern congener, being almost shrubhy, 4-6 feet hish, with' leafy, mueh-branched stems, - each branchlet turminated by a larar white ball, eompustal of a vast number of smaller heads, placed on petancles of unerual length.' Many of them also grew on aril mountamous resions; athers in that sandy gromul, which are flomder in the wet season.-Giordner's Truvels in Brazil.

## ERIODENDRON,

 a genus of trees of the matural order stercu. lierece, native's of trunical countries. the thick wroty capsules of which a contain a limed of wowl surromating the seeds. These trees are therefore sometimes called Wool-trees. The wool of F. Sumunna is used in Erazil for stuthing pillows f. cuniructuosu, of which one variety, fonind in the Wast Indies, is sometimes ealled E.: Indicum, and another found in Afrien, $E$. Guincense, is a tree of great height, 150 fect or more. The African variety or species is called limin and Bentavg. Tark mentims it by the latter name. Barth says it is generally to be seen growing near the principal gate of large towns in Hansa. Its wood is soft and slongy, chictly used for making eanoes. The seeds of $E$, Indicum are eaten in Celebes. They are roundish, ant of the size of peas. The trees of this genus have palmate leaves. The Howers are large and beantiful.ERIWAN (Persian, Reram), the fortified eapital of limssian Armenin, situatel to the north of Ararat, in the elerated plain of Aras or Araxes, lat. $40^{\circ} 10^{\circ}$ N., lung. $44^{\circ} 32^{\prime} \mathrm{E}, 3312$ feet above the level of the sea. It eonsists of the town, properly so called, and the fortress, which is surromded on three sides ly high walls, and provided with aqueducts; a stone linlge over the Zenga, whieh here falls into the Araxes; a barracks, three mosques, one of which has been converted into a Hussian church, the palace of the Sardar, aud a bazaar. Pop. (185s) 9510, who are engaged in arricnlture and commerce. E. was formerly the capital of the Persian province of Aran, celchrated for its sak. In the beginning of the 16th c., the khan Fiewan, at the command of Ismael, the shah of Persia, erected a stroug fortress, which he ealled after his own name. An Armenian sehool was established at E. in 1629 , but transferred to Ejmiadzin in 1631 . During the
last war hetween Russia and Persia, E. was stormed by the Lussian general, Paskewitsch, who received the sumame of Eriwanski ; and lyy the treaty of peace concluded at Turlimanjai, 29 d Febrnary 1525 , it was given up hy l'ersia to liussia, along with the province of the saue name. It is now an important liussian post, as in former times it formed the bulwark of Persia against the Turks, and afterwards against Inessia. In the year 1840, it was much devastated by an earthquake.

E'RLANGES, a town of Bararia. is situated in the midst of a well cultivater district, on the right bank of the Regritz, 10 miles north of Niurnburt. It is a handsome town, and is surroumded by walls liercal ly seven gates; its streets-a reat mumber of which were crected after the year 1706 , when a fire consumed a large portion of the town-are straicht amd regular. It is divided into the ond amd New Towns, the latter founded in 1696 ly Ghristian, markgraf of bayrenth. E. is the seat of a unisersity, of a gymnasium, of agricnatural and inmustrial selools, and other institutions. The minversity, however, is the chief building. It was foumbed in 17.2, and is celehrated as a schomel of l'rotestant theology, is attended by between 400 aml ion students, hass a library containing 100,000 wols and 1000 mannseripts, anil also zoological and mineralogical conlections, de. 15 . cwes its prosperity tor the migration thither of a number of refugmes from France, who were complled to Hee on the revocation of the Edict of Nautes, ad who introduced many now lranches of manufacture at Erlangen. Besides its cxtensive stucking and glewe manufactories, which provile the ereater mart of Germany with their goods, E. las great mirror and tolacco factories, and nomufactures of comls amd horu-ware. E. became a Bayarian possession ly the treaty of 1809 . Iop. $10,9 \%$.

E'RLAU (Hung. Eytr), an epriscopal city of Hungary, in the connty of IIeves, of which it is eapital, is situated on both banks of the river Erlan, in a delightful valley skirted with vine-clitl hills. It is surmomided liy old walls, piereed los six gates; has fon submbs, in which the greation portion of the inhabitants dwell; and although in general its strects are narow and have a neslectol aplearance, it is rich in the public buiklings. The principal of these are the Lyeenm, with a valuable library, and an observatory 172 feet high; the recutly built eathedral, the episeopal palace, the Franciscan and the Ninorite monasteries, a richly embellished Greek chnreh, a county bail, anil the new barraeks. E has also a gymnasium, at episeopal seminary, a nurmal and drawing school, a hospital founded in 1780, which possesses a capital of nearly 400,000 guillers, and other important institutions. The two baths, the Turkonkerl am the Bischofsbced, both of which are muluch resorted to during the bathing-season, are supplied from two warm springs whieh rise from the lank of the Erlan. The eultivation of the vine is the principal occupation of the inhabitants. The L. wine, the best red wine of Mungary, is producel in considerable quantities, and is in request crea in foreign countrics. There are also manufactures of linens, woollens, hats, \&e., and an inmportant weekly market, which has a benetieial effect upon the indus. try of the town. Pop. 19,815 , most of whom are $\mathrm{F}_{\mathrm{F}}$ man Catholic in religion, and Dagyar in race. E owes its importance to the very old bishopric fonnded here by St Stephen in the beginning of the llth e, and which, in 1SU., was raised to an archLishopric.

umpr parts chance to a yellowish-white or amost phas shte. the tip of the tail, however, cluat, remmana hack. Thas chatre takes phace more fremuntly in the mortherm than in the southem parts of Britain, hat sumetimes even in the sonth of lingland: and when it is only partially accomphishol, the animal presents a phelaha appearance, and very often remains so during the milder winters
nf liritan. It is in its winter dress that it is called fin, and yidets a highly valuel fur ; more valuable, however, when ditainal from the coldest northern rations than from mone sunthern and temperato comatries. In jts shmmer dress it is called stoat. It dinplays imbomitahle perseverance in the pursuit uf its preto which emsists very much of rats, watervolus and other such small quarmpeds; with yound hames and rablits, gronse. prortridees, de. The enges of hirds are as welonme to it as the birds themsolves. The E. is a matise of all the morthern parts if the worth. Jis range extemds even to the sonth if Eurone. It delights in morish districts, and is thlarably ahumbant on the meth of seotland. It is from Nomav, Laplend, Siluria, and the Inudson's loy teritories that the L. skins of commerce are (n)taineh, which are nsed anot anly for litlies' winter caments, lut for the rohes of kinus and moldes, and for their crowne and cornots. E. has thas ontatined a distinct recomitiom in luralelry. In makimen m L. fur, the tails are inserted in a regnlar maner, so that their rich liack shall comatrast with the phe white of the rest of the fur.

FRENE (HIflierifus), a gemis of birds of the family Fatemidte, anl of the eagle gromp; differing from the true cagles in the greater lemeth of the lill, in the toes and lower part of the tarsi being destitute if feathers, and gencrally, also, in frequenting the sea-conat and the banks of lakes anl rivers to feed on fohs, in fectimer like maltures on carrion almost as reatily as on newly liflod prey, and in inferior ronare. The only liritish spectes is the Common E. (II. albicille), also known as the Sea Wagle or

Fommon brae (Hethe tus allicille).
White-tniled Sea Fagle. It is mach more common in diratain than the Golden Fargle, is sometimes secn "wn in the south of Euglam and in inlam districts, "wcasionally visitind deer-parks to prey on very young fawns or to devorr lean dece : hat is of more ftrament occurrace in the moth of Neotland, doing rensiderabie jujury to flocks in Sutherlandshire, purticulaty during the sensu of younc lambs. Its favourite jannts, where it roosts and makes its nest, are the sholves and lemes of stuprendous preeipiers on the const, where its screan often mingles with the moise of the pryetual surge. It sometimes alsu lureeds on crags leside inland lakes, as at the lakes of Killarner, and more rarely even on trees. Fishes are cortainly its fayourite food, although its mule of pronaing them is not well known ; but water-fow are also its very frequent prey. It is
found in most parts of Enrope, aml even in the islames of the Mediterranean, hat is mure ahmodant in the north of Europe and in siberia. It is not known as a native of America. In size, the E. is inferior to the dadden Eayle, beiner seldom more than 33 inches in its whole length. The weneral colour of the phmage is bown, the heal havins a paler yellowish tinge, the tail in the alult bim is pure white. The youns, sometimes callew the Cinerems Lagle, has a grayer phumse amb mottlenk tail. Another motalide species of this gemus is the White-hendeis E. (If. tomocthotus) of America, also called the White-headel Whende, liant bathe, and Sea Eaghe, the chusen symbol of the Initer states. It is a hird of about the same size with the Common la, with dark-brown phmate, and-ia an ainlt state - the heal, neck, tail, and bully white. It is fomm in almost all parts of Noth Ameriea, visitiner the arctic regions in sumner, hat aboumbing chobly in the sonthern states letween the Atlantic ami the Mississippi. It frequents lowth the sea-mast and the lakes and rivers, amd may bo ofton seen satiog through the eolumn of spray at the Fills of Nianarat. It is very fomb of lish, which it procores thy wating in shallow streans, and also by compelliner the usprey to relinguish prey jnst taken. The suaring and evolutions of the hiriss in the air on such oceasions are deseribed as sublime. The White-headent E. feeds also on lamks, fowns, poultry, \&e. kills swans, geese, and other water-fowl: and dues mot dishain to compel woltures to diserre for its use the carrion which they have swallowiml. On account of its habits and clispesitions, Franklin expressed his regret that it had leen chnsen as the symbol of his country.-Nore nearly resembling the Common E. is another North American species, the Iinid of Wasmentos ( 1 . Witshimftonii).- Anstralia prochees a bratiful species ( $/$. irucogester), and mumerons species are formul in other parts of the work, amongst which are some of comparatively small size, as the Pondenfary Kite or Brahmany kite (II, ponticericmus) of Inlia, which is comstantly to be seen lishine like a sull in the rivers of that cemotry, and is by the IIindus consiterth sacred to Vishm.

ERNE, a river ant lake in the sontlo-west of Ulster province, Treland. The river rises in the south of ('asian comaty, in the small but beantiful Langh ('ownat. It runs murth anl morth-west, merging in bund onghter, in Cavin comuty, and in Lomeh Dine in Fermmarfl connty, and passos Emiskillen and Bullyshamon. It then thas themug the sonth corme of Doneral comenty into Donegal liag. It has a tutal course of $2: 2$ miles. On the river, at liallyshamon, is a salmon-latp fall, wer ar roky ledge en feet ligh and 150 yards lowd, and the river leaps over another rowliy lealoe near lidheck. 21 miles behw the lower and if the loch. Luogh Erne, ame of the fourst luchs in the kinglum, is the must attractive fature of Fermanauh amonty, which it bisects bongthways, ant alnost entirely drains. It catomes 4 (1 miles from south-cast to north-west, and consists of two lakes, the uper amb lower, juined by a natower part 10 milos hase and assuming in pirts the character of a river, with Pmniskillen minlway between the two lakes. The I'pher Lomgh is 10 Ley 4 miles in extent, 10 to 75 foet deep, 151 feet above the sei, and has 90 green hilly islets. The Lower Lough is 20 by $7!$ miles in extent, 100 to 266 feet deep, 145 feet abure the sca, and has 109 similar islets. On one of the islets is a romme tower. They contain salmon, tront, pike, bream, ame eels. The scenery aromm is singularly varied and beautiful.

ERNESTI, Johf. Avge, the fomader of a new school of theology and philosophy, was born at

Tennstald, in 'Thüringia, th August IJO7. He studied at I'forta. Wittenlere, and Leipsic; but after hatwing bem alpminted rector of the Thmasschonl in Lupsic, in 173!, turnect his attention chielly to the old classic literature, and the studics
 extramelinary of ancient literature in the miversity of Leipsice, in $17 \%$ professon of rhetorie, in 1759 professor of theolngy, and diod llthe september 1751. E. paveal the wity to thend sical manence ly a thorough stady of philolngy, and was thas leal to a more correct exegesis of the liblical authers, and to mone libeal siews of theoloy in gencral. In fanet, it is mainly to him that we one the proper methom of theolonical exposition, in so far ats it rests mon correct grammatical clucilation. Ile showed his alihty as an aremate critic and !rammarian, in his editions of Xemorhun's Jemombition of simerates: the elouds of Aristophanes, Ifomer,
 above all, by his atmirable edition of "icero ( 5 rols., 1.eip. 17:7-17:3!), to which he alleal a flomis 'rimeonio, by way of suplement. Ife was also the first revivir of true and manly eluquence in cormany. His thendocical writins are numernas. The must remarkahe are the Intied Inctrime botidions, the Institutio Intermetis Mori Ti otementi (which has been tramlated inta English), the Anti- $1 /$ uratorius
 pare Baner Fombler "c disiptiue Ernstion" in-
 Leipsic (Leip. 1s:9).

ERNST, Elector of Saxmy, the founder of the Eruestinian line, or the chler liranch of the princely Ilomse of Saxuny, was the chler sum "f the Dhector Frifelrich the Nihh, ami of Marearet. Arehmehess of Anstria. When unly it years of age, he was seized and carried oll from the castle of Altenlourc. along with his lorother Allmeeht, Int was speenly recalitured. This incident, known in German histury as the Steating of the I'rinces (Prinzentold), has heen describell with extraondinary vivilness ly
 He sneceeder to the electoral dignity on the death of his father in 146. lut governad in common with his brother for ol years. In lds. hawever, Le, and Allrecht diviled the paterual possessions, when the former ohtaned as his share Thmringia, the half of the alistriet then called Isterland, with Vingtlanel, the Francomian estates of the IIouse, the electoral dignity, and the mukedom of Soxany. J. was a man Who tork a great interest in the weliare of his penple. Against injustice, tyramy, and lawlessmess, he was infulacalle IIe diem at Kullitz in 1485. It is next to imporsille the trace the course of the Ernestinian line throuch the labyrinthine mazes of the ewiless tarman genealogies ; it is sutliciont to say that after 16int the Erastinian line was represented hy the Bukes of Weimar, whe gralually oltatinel the whole pussessions of the Inouse. Johann, Duke of Weimar, who died in 160\%, leit several sons, the chlest of whom, Wilhelm, hecame the fonnder of four different Irancles, all of which, howerer, were reunited umber Ernst Aumst, Jhke of Weinatr, who died in 1748. After 1815, the chehy of Weimar became the graudhachy of Siace.Wemar-Eischach, and its present ruler is of course the lincet repesentative of the Erucstinian line. The other three f:milies by which it is now alson represented are those of Neiningen, Saxe-Coburs Gotha, and Altenhurg.

Efinst 1, suruamed the Pious, Duke of SaxeGothar and Altenburg, fommer of the House of Gotha, was lom at the castle of Altemburs, 2th inecember 1601. He was the son of that Johann, Juke of Wcimar, mentioned in the previons artiele, who died

## ERNST IV.-ERRATA.

in 10ni, anl was thes connected with the main Lenertinian line. E. was the ninth of ten lorothers, the yomurest of whom was the famons bernhawd (q. $\because$ ) son Wedmar. He received an exechlent chasation from his mother, Porothea Daria von Auhalt. After the arrival of custavus Alulphns in Cermany, E. entered the Swedish sorvice, and in varims engagements exhibited great conrame and skill, completing the victory of the l'rotestants at Litzen, after the fall of Gustavis. After the battle of Nördlingen, Obth August 1634. E. withlrew from the theatre of strife, and for the rest of his life dewnted himself to restoring the prosierity of his territories, which had been frightfully devastated during the Thirty Years' War. Ite died in 1675. Uf his seren sons, the eldest. Friedrich, continucd the line of Gotha, while the third hecame the fomder of the House of Meiningen, nad the seventh, the founder of the House of saalfehl. E. is a fine type of the ohl German Trotestant prince. Zealonsly attached to the doctrines and government of the Latheran Church, be exercised a constant wath over its religions and eluentional interests. With the formalism; Lowever, that often characterises 'strietly religious' frople, he compelled his children to learn the whele Bible by heart. He was much interested in the eause of Christianity abroad, and invited to his court the Ahbot Gregorins from Abyssinia, besides sending thither on a religious embassy Joh. Mich. Wansleb of Erfurt. IIe also carried on a correspondence with the king of Ethiopia and the Patriarch of Alexandria. II is line becane extinct by the death of Friedrich IV. in 1525.

ERNST IV. (AcGu*t Karl Johannes Leopold Adexasime Eiruard), Duke of Saxe-Colnurg-Gutha, elum lowther of the late l'mince Albert (I. V.) born at folmors $\because 1$ st June 1818. Both brothers received an ulmirable literary and scientitic education. The family to whieh he bedongs is a liranch of the Ernestinim line, having heen foumded in 1680 by Abrecht, scend som of Erast the Pious (1. v.). When E. hat completed a university eurriculum at Bonu, he entered the military service of the king of saxony, hat left it on the aceasion of his marriage with the daughter of the tirand-duke of Baden. In 1844, 1. succeeded his father as Duke of Saxe-Coburg-Cotha. In his opinions and aspirations, imbued with the spirit of his age, he has introduced into his little dominions many heneficial reforms, and allayed not a few longstanting jealousies. Fet one regrets to say, that his collghtened views of his duty as a ruler have nut been generally appreciated by his suljects. Thaing the stormy period of 1848-1849, by spontaneous concessions on the one lame, and on the rither by an energetic repression of the political anarchists, he contrived to save his territomes from the prils of revolution. In the Slesvig-Holstein war, lis tonk a prominent prart, and on the 5 th $\lambda_{p r i l}$ 1849 won the battle of Edkenforde. $\mathbf{E}$. is a great alvacate for the mity of the German nation, and las taken a prominent part in most of the effurts male in that direction. II leisure hours are dovotel to musie and the fine arts. His opcras,
 :and recontly (1861) he has published a pamphlet (which is virtually an autobiography) vindicating the prineiples on whieh he governs his duchy.

## R1zos. See Cupid.

Rlionslon, the induened of a stream or river in hollowing out its chamel. Ben the smatlost streams, whon rumaing over goft strata, as elay or kand, cut mat chanmels, aud remove the erould materials. Hollows thos proluced have been olserval among the stratified rueks. One that ocenrs in the cualficld of the furest of Dean has
been earefully described. The trongh was foum to hauch, when traced in the progress of mining, over a considurable area, and to assume all the appearances of a little stream, with small tribntaries falling into it. When the hollows thas abrated are of considerable extent, 'valleys of crosion' are probuced. Many of the earlicr geologists beld that rivers had hollowed out their own valleys. The immense amount of materials brought down by rivers, and deposited at their mouths as cleltas, shews without loubt that they have eontributed materially to proluce inequalities on the earth's surface; lut the examination of the geologieal structure of valleys, plainly testifies that almost every great hydrographical basin has derived its form origimally from some other agency, althoughe its outline may have been subsequently altered by the contimed action of eurrents within it.

ELOTLC (from the Greek cros, love), signifyiag in general whatever is marked by love or prasion; but the term is chiefly appliod to poetieal pieces of which love is the predominating subject.

EROTOMAN1A, a species of mental alienation cansed by love. Sce Manla.

ElRPE'NlUS (Latinised from Thomas van Erpen), one of the earliest and most eminent of European Orientalists, was born at Gorkum, in llolland, 7th September 1584. At an early age. he was sent to Leyden, where he directed his attention first to theolory, but afterwards more particularly to the study of Oriental languages. Having completed his efucational course, he travelled throngh England, France, Italy, and Germany : and in 1613, became professor of Oriental languages at Leylen. Here he erected an Arabic 1 ress in his own house, caused new types to be ent and not only wrote but printed a great number of important works bearing on his favourite stulies. The professorship of Hlebrew not being vacant at the time of E.'s trinsla. tion to the university of Leyden, a second 1ldurew chair was fundel expressly for him in 1619. Soon after this he was appointed Oricntal interpeter to the government, in which capacity be read and wrote replies to all ollicial docoments coming from the East. Snch was the elegance and purity of his Arabic, as written at this tme, that it is sain to have exciteal the atmiration of the Emarer of Boroen. Towarts the cluse of his life, tempting otlers of Lonours and distinction came pouring in upon him from all parts of Europe; but he was never prevailed npon to leave his native country, where, in the midst of an eminent career, be died 13 th November 162t. Althong the present standiard of Oriental knowledge in Europe is much in advance of that of E.'s day, there is no donlt that it was through him prineipally that Eastern, especially Arabic studies have become what they are. With hardly any better material than a few awkwardly printed Arahic alphabets, he contrivel to writo his famons grammar (Crammatica Arabier, quinque litris methodice explicuta, Levden, 1613; recent cilition ly Michaclis, Gött. 1771), which for 200 years, till the time of Silvestre de Sacy, enjoyed an undisputed supremacy; and there are many who think his liudimenta unsurpassed, even at the present day, as a work for leginners. Among his other important works the lest known is his Prover. biorm Arabicorun Centurise Duce (Leyden, 1614).

EFRlRA'TA, the list of crors with their corrections flaced at the end of a book. From greater carefulness in correcting the shects of a work in passing throng the press, errors in sense or typoraphy are now much more rare than formerly; in miny instances, indeed, looks are now produced without a single error which needs to bo pointed

## ERRATICS-ERSCII.

out and corrected. On the suhject of crrata, some interesting particulars will be foum in Disrach's Curiositios of Literatere, of which the following may be taken as a specimen: ' Besides the ortinary crrate which hajuen in printing a work, others have been purmsely cominitted, that the crata may contain what is unt permittel to appear in the buty of the work. Wherever the Inquisition had any lower, larticularly at Rome, it was mot allowed to employ the worl jutum, or fitu, in any book. An anthor, desirous of using the latter word, adruitly invented this scheme: he had Irinted in his lung fucter, and in the evrute he put, "For fucte, read fata." "
ERRA'TICS, the mame given to the water-worn hlacks of stone that have been washed ont of the houlder clay, or are still enclosed in it, because they have generally been derived from rucks at a distance. See Boulders and foulder-clay.

E'RRHINES (Frr. on, in. amd rhim, the mase), meticines administered loeally to pronluce sueezine and discharge from the nustrils, in catard, and in warious disorlers of the heal and cyes. Commen Sutfo and rarious other pergetable irritants in juwder, have been nsed fur this parpose.

F'RROR, Proclemings in, the form by whim in Eugland the masuceessful party in ath aetion at law brings his case for consideration befre a court of revicw. The sucessful farty is entitled to issue execution inmerliately on the (signing of) final Judgment (q. v.), uuless exceution be stayed by due motice of the intention of the olpmite party to loring the juldment under retiew. Error may be in foct or in law. If the error is in fact, the case is hearl before the comrt before which the action was originally tricd; if the error is in kaw, procedines mist bo taken before the Court of Exchequer Chamber (1. w. W) Where a party objeets to the ruling of the juige, the form is by Bill of Exceptions (q. r.) muler statute of Westminster the second (13 Ed. I. c. 31). According to the former practice, it was necessary, in oveler to obtain a review on the ground of error. that an original writ, ealled a Writ of Error, should lye issued. The writ, if the crror was in fact, was styled coram nolvis, where the case was in the Qncen's Bench, the sovercign beins presumed to preside in that court; if in the other courts, the writ wis coram volis. Writ of error is abolished by the Common Law I'rocedure Act; and proceedings in error now ennsist of a simple memorandum of error, loded with the officer of the court, accombaniel, if the errur be in fact, with an allinlavit of the matter constituting the erros. The etrect of procentings in error is to stay immediate execution; fint the plaintiff in error must proceed within ia certain number of days. From juignent in error in the Exchequer Chamber, an appal lies to the Honse of Lords. Frencedings in arror from the Coort of Common Pleas of Lancaster, and from the Chut of Pleas of Durham, and generally from all inferior courts of record, are brought before the Gurt of Queen's Bench, from which appeal lies to the Exchequer Chamber, and thence to the House of Lards. The courts of the city of Lampon, of the Cimue Ports, and of the Stannaries of Cornwall, are exceptions to this rule. In criminal cases, proceedings are still by Writ of Errur (1. \%.).

ERROR, Whit of, in civil canses. See Error, Pracefdings in. In criminnl cousex, is an original writ from the common law side of the Conrt of Chancery, mhlressed to the jutires of a superior cout, by which they are anthorised to examine the record on which judgment was given in the inferior
court, and to confirm or reverse the julument. Writ of error fumerly lay for curery substantial defect appearing in the face of the record, for which the indictment might have been quashed; but by Geo. IV. c. 64 , it was provided that seperal techaical defects shombl be curel hy verdict. Jiy It and 15 Vict. e. 100 , every formal tlefect apparent on the face of the indictment mast be oljecterl to before the jury is sworn, anl mot after, and may then be amemdel. Writ of error mow, therefore, lies only for defect in strbstance apparine on the record, as where a man having bem inlieted for perjury, it appears that the false statemmen were not made umon oath. Writ of error canmot he ollatand without the gut of the attorney-gen rall, which is mot allowed as of course, lont is nisually granted on due cause shewn.
ERIRORS. In all olservations, errons must be made. The lnest instruments lave ind"rfetions; and wo man, however equalle his temperanent, can always roly on his making a poper use of his sumens. As in astronomy numrrical carrectness in the results of instrumental measurements is of the first comesquonce, it is the constant eare of the oliserver to intect aml make allowance for errors. The threo principal sumes from which thoy way arise are lot. External or incilental eanses, such as thetrations of weather, which disturl, the amomet of refraction; changes of temperature, affecting the form and position of instruments, de.: 이, Ertors of ofserration, leing such as arise from inexpertness, defective rision, slowness in scizing the exact instant of an onearrenee, atmopheric indistinctness, de: and such errors as arise from slips in clampion and momentary deracements of the instrum int; 㕵, Instrumental defecte, cwines to crrors in workman. ship, and such as arise frum the instrument not beinis properly haced-called errors of aljustment. The first two chasses of errors, so far as they cannet lo recluced to known laws, fitiate the results of ohser. vations to their foll extent: but being accidental, they necessarily sometimes diminish and sometimes increase them. Hence, by taking numerous wiscrvations under variel circumstances. and by taking the moun or arerage of the results olitained, these crrors may be made to ilestroy no anothor to a great extent, and so far may be snlmaed. With reward to the third class, it is the peculiarity of astroumical observations to be the ultinate means uf detection of all defects of workmanship, and auljustment in instruments, which liy their minnteness dude every wther mode of detection. See Sir John Herschel's Gutlines of Astronomy, 冬 las ot sill. It may he mentioneil, however, that the methon of sulximing errors of the first two clisses by the law of averaste is not applicable in all cases. In certain cases, recourse must be han to what is known as the mether of least squares. Sicesqcimes, the Leist; see also Probabilities.

ERSCH, Jonaxs sianel, the founder of German hiblingraphy, was born at Grossglogan, in Lower silesia, e3d June 17bic; and exhilited from an early perion a decided bias towards that lyanch of literature in which he afterwards obtaned su high a reputation. At Halle, where he was sent to stuly thendory in 1785, he devoted himseli to historical investigations. After several vicissitudes, he olvainet, in 1800, the office of libratian to the university of Jena. Three years later, he was ealled to Halle as professor of geograpy and statistics: and in 180s, was apmonter, in ablition, principal librarian. Ite died at Halle, 16th January Is:8. E. was long engaged in miscellaneous bibliographical work for other scholars; Lut in 1818, alony with Gruber, commenced the pmblication at Leipsic of

ERSKINE, Joms, of Camocle, amd afterwards of Canlross, an emiment scontinh jurist and l'rofessor uf seots Law in the university of Edinbureh, was the son of the Honmarahle John Erskine of Carmock, thimd son of Lord d'irdress, whost descendants lave now succecded to the carldonn of lanchan. John Erskine, the father, was a man of importance in his day, nut only on aceonnt of the family to which he lefonged, which even then had heen prolific in historieal characters, but in conserquence of his persunal qualities and the positions which he hold. Having hoen foreed to quit Seotlame from his attaehment to the L'reshyterime religion, be retired to Malland, and beeame an ofticcr in the sorvice of the l'rince of Orance. At the lievohtion, he accompanied William t" Englant, and, as a rewart for his scruces, was : and licutenant-colnole uf a reriment of foot. Jolm E., the younger, born 1605, became a member of the Facmity of Allocates in 1719, but did not suceed as a practitinner of the lars. On the eleath of Alexamer lian in 1737. Nr E. was nominated to succeed him in the chair of seots Law, an oftice the dutis of which lu performed with great r'putation for as years. For many years J1r li.
 tions of the Lore of seotlenel as his text-book; but in $175 i$ he pmblisherl his well-known Principles of the $I$.um of Scuthat, which were theneeforth nsed for that pirgose by himsclf and hy his varions suecessors down to the present time. On his retirement from the poofesorslipe in VGo. Nr S. neeupied himself in prepariner his more important work, 'The
 mblusher fill $173:$, tivo zears after his death. Mr E. was twice marien-first to Miss Melville, of the noble family of Leven and thelville, by whom he left the afterwamls celchrated elergymin, John Erskine ; ancl. secoml, Ann, second dianghter of Stirling of Keir, hy whom he had fom sons and two danghters. As a lagal writer, Als E. is inferior to none of our donttish jurists, with the sinele execption of Loril Stair, who hat the henetit of the more leamed and wour julicial training of our earlior lawrers, whon were chlucated in a continental schonl. In consequanee of the extent to which lamh chaniowl hands in seotland subsequent to the rebellions. feudal conreyancing hecame the most prominnt suhject of stury amongst the lawyers of Dr E."s day, and the principles of commercial law, of which Stair latid the fommation. amb which have hecome so important in our nwn time. were somewhat thrown into the slande. The labours of Mr Bell in these deportments have again brought the law of Scotland into councotion with the general current of Firmuan law and mereantile practice throughout the worlh. lint of all those lepartments which constitnte tho law of אcotland, as developed by the usines and forms of suricty in the country itself, there is at the present elay no elearer, sonnder, or nate trustwortly wositor than Mr Erskine.

FIISKISE, liev. Jre Juner, son of John lirskine of C'anock, the author of the Institutes

## ERSKINE

of the Law of Scollant, was bom June 2, 1721, studied at the university of Jdinhurgh, and in 174 : was licensed to preach loy the preshytery of Dunblane. In the following year, le was ordanes minister of Kirkintilloch, where he romainal until 1753, when he wha prescontel to the parish of Culross, in the presintery of Inuformine. In 1758 , he was translateal tor New Greyfriars Church, Eilinlurgh: in Thef, the university of Elinhurgh conformi on him the honowary elegree of binctor of Dnvinity; and in 1767, he was promotel to the collugiate charge of Whe Gryiriars, where he hat for his colleagne lor lindertsom. In the (hancral Assumbly of the charch of sentlam, he was for many years the leader of the popular on "yangulical party: and there the promess and interg Fity of his character secured him the contionere and aflectime of his frombs, amb the esterm amb respect of his "Inwents. lictwonn him and Trimcipal liohertson, the leader of the monlerate party, there was a courteons and homomable frimulship: and the funeral sermon which he freached on the death of his colleague, dide equal homme to d'.'s heal and heart. Ho died .Tanary 19, 180:\% Din's writings are excomlingly numerons. They consist of essays, letters, sermoms, dissertations, amd pamphets, dee, mainly of a religitus character, and exhilhit a xuperior degrea of ability. Sir Walter Scott, in his riuy Munncting, gives a graphic and aceurate deseripetion of his prowers as a preacher.
Eliskine, Timmis, Lomd limskine, was the youngestsm of Henry lavirl, tenth Earl of Lhehan; and was bom in Eidinhurgh, 10th Jantary 1750 . Although his father, at the perind of his hirth, was relued to an ineome of tollo a year, he transmitted to ham the dond of a rave whied han been prolitic in men of great alility, and hat been enmbled bufore the era of senuine history. 'The countess, who was the daughter of Sir Janaes Stewart of cometrees. in the connty of Mlithothian, was not only is endy l'resbyterian amb a skilful lumsewife, lut a gifted and accomplished woman. Arter E. had attembed for some time the 1 ligh Schom of Eilink areh, the family remored to NE Andrews, at the grammar schot of which place, imb shlsequently at the university, thongh never it would semon a matriculated student. Thomas E. rucoivel the rest of such elweation as fell to his share. Ilis iusire was to stmly for ic profussion ; but his parents, who hat sent lis cher brother, Lom Cardross, to Leyden. and were elneating his secomb brother, Jlenry, afterwards the well-known Harry liskine, for the Scottish bar, ewhld mot afforn the expense of a thirel Jearnel education, and sont him to seal ins in mindshipman. In this cipmeity he served for fobur years. unthl the death of his father, when he purelased at commission in the First Rayals, ant was for some time statimed at Nliuerca, where lie employed his leisure time in the study of loghsh literature. On his return to Lomdon, his lirth, his aequiremonts, the clumance of his manners, and rolubility of his conversation, led to his lecine warmly received in the best circles. It was then that he had the controversy with $\mathrm{D}_{0}$. Jolinsm on the respective merits of lielding and licharism which Buswell has recorded; and that he phblished a pamplet on the prevailing almses in the army, which, though auonymus, was well known to be his, aul olstamed a great circulation. L. now grew tircl of the army as a profession, in which he saw little chance of promotion : amd while in this homour, an accidental interview which he had with Lord Mansfield at an assize court, determinel him to prosecute the stuly of law. E. was admitted a stment of Lincoln's Jnn, with April 15:5, and on the 13th Jamary 1776, he entered his name on the books of Trinity

College, Cambinge, as a rentleman commoner. 1lany anectotes are tall of the privations whiel E. nimerwent when stulying for the bar-how he livel on 'cow-hed and triper,' dressed so shabibly as to be guite remarkahle, and boasted that ont of hisw oun formily he dial mut know a lond. Such stories, thoudh probally exageraterl, prove that he emlured eonsinerable pivations-considering his rank-in fitting himself for the lugal protession. Lod ('amplell says, that 'llamg Easter and Trinity tems he excited a great sensation in the diming-hall by apmaring with a stment's black gown over the scarlet recimentals of the linyals; probehn! mot haring a demen suit of bluin chothes to put on." Thongh li. was aided liy his aristucratic connection, his rise was still very womderfol. Without the arrantage of a hasiness training. or what, promaly cron in thase lays, was firr nume important, a lasiness comncetion, he rose inta practice with alowst mancechentel rapility. After his tirst specth, the attomeys actually flacked round him with their retainers, and in telling the story, he usel sometimes to bring the number which he rectival hefare quitting Westminstor hall "I to sixty-fire! 1 is two first clients were officers in the nary- (hatam Baillie, whe hed an offiee in Greenwich Ilospital, against whon a rule hate lecen ohtaines calling fon him to shew cause why a criminal information for a libel reflecting on Loml standwich's combuct as bwernor of the darity, shomal not lia filed apon lum; and Almiral kepm, who was tried ly it cunt-martial at lortsmouth for insapacity and misconsluct in an cheounter with the French fleet of lohant; and in looth cases E. derind lenelit from his uwn early condnection with the service anl the arecial information which he thas pussessed. Almiral Kerpel sent him twa tive-handret-pumbles ass a fee. From this time forth, F's crom-fortnme as an alvacate wats minterrupterl. In 1783, he was returneal to [arliament for lon'tsmonth. Four years and a half after he was called to the liar, he hial cheared £Sono tu feqoot, hesides paying his delits, har had got a silk genn, husiness of at least expon a yoar, anm a seat in parlimment, and harl made his hruthel form Alvocate. In partiment, on the other hamd, be faileal so equeginsly in his first spech as to leare scarcely any hope in the lusums of his ammirers. and what is rery singular, his failure atal horl Eldon's took place the same night. To smme extent the phenomenm was arcomoted for by sheriflan's remark when he said to him: "Erkine. yon are afrail of J'itt, and that is the flabley jart of y"ur character.' lant motwithstanding his palitical murtifications, lis professimal career went on with increasing lnilliaucy, In 17sio, he was made Attorney-general to the l'tince of Wales, ly whom he was wamly patronisel, hut towards lim annl crery one else bie exhilited that manly imperendence Which was the best part of his character. The fact of his appearing as comsel for Thmas $\mathrm{l}^{\text {aninue }}$ more to his credit, than even the lrave and honest speech which he mate in his defence; whilst his removal in conserquence from liss othice is, as Lord Complell has sail, a lasting disgrace to those from whim the measire proceded, Throughout the politieal trials which occurrel in this enontry at that trublled perionl, he enactel the same many part. When E. was proposel for the woulsack, an uftice far lseyomi his legal attainonents, the king, Gearge lli., in consenting exclaimed: 'What! what: well? well!-hat remember he is your chancellor, not mine.' Yet his decisions as "urd-chancellor, according to Lord Cimplell, are not so much bad as supergicich, though lyy some equity practitioners they are spoken of as the Apocroplut. E. was

fomerly refirred to E. are now included in other Gelura, as sisymbriun (q. v.) and dlleriel (q. v.).

ERVSI'PELAS (Gre derivation uncertain), an inflammatory amd forile disease of the skin, attembed by diffused redhess and swelling of the part affectel, and in the end either ly desqumation or hy vesication of the cuticle, of suarf-skin, in the mikur forms, tun ly sujpuration of the decper parts in the severer varieties of the disease (phleg. momous erssipedas). Drysipelas atfects, in a large proportion of instances, the face and houd; it is apt to lie attenled with severe and typhoil fever (seo Ferter), and often with wrat disorder of the neryous system, arising in some instances from inflammation of the menbranes of the brain. In other parts of the bonly, severe or phlegmonons erysipelas is apt to be suceceded ly protracted and exhansting suppurations, aml sometimes ly diseases of the bones, or inflimmations of the internal organs. Erysipelas is frequently an Epidemic (II. v.) disease; it is also very apt to reeur in a person who has been attacked once or oftener; and this is especially true of the form wheln afferts the face. It is seldom that wepletion is allowable in erysipelas, but the bowels should be well eleared out in most cases, and a binctie ( $\mathrm{g} . \mathrm{v}$ ) given, after which the treatment comsists for the most part in watching narrowly the progress of the ease, keeping up the strength as well as possible, and obviating speeial hangers as they oceur. Ju sume cases, iron is used as a specitic remedy.

N1STHE'MA (Gr. cruthain̄̈, 1 redten), a minor form of Erysipelas (g. v.), presenting the same tendency to difiusion and redhess, but not so much swelling, and little disposition towards suppuration, or even resication. Erythema is chiefly dangerous when it presents itself in a wandering shape, attended with slow consuming fever. The muriated tinctare of iron, in doses of twenty drops in water "very hour or two, has been regarded as a speefic in this disease, as well ats in erysipelas. Some forms of crythema are distinctly connected with constitutimal diseases, as qout, rhemmatism, syphilis, \&e., and depend for their cure on the removal of the canse.

ELIV'THRAJ. Sec Centatry.

## ERYTHRINA-ESAU.

## ErytilríNi. Sce Coral Flower.

ERYTHIRO'NIUM, a genus of bulbous-rooted plants of the natural orter Lilicecer, with drouping flowers and the sugments of the perianth redexed. L. dens cemis, the Dog-tooni Volet, so calleil because of the resemblance of its little white bulbs to doss' teeth, is a well-known arnament of our Hower-bordors in spring. It is a native of the central parts of Euroje and south of Siberia. Anthelmintic properties are ascribed to the halls. Those of $E$. Lmericanm are emetic.
ERYTHIOPHL E'UNI, as senus of trees of the natural order Leguminose, sub-order Minowes. $E$. Guincense, a native of Gumea, is a bery large tree, Ino feet high, remarkable for the great quantity of red juice which every part of it contains, and intercsting on account of the emplosment of this juice by the natives for an ordeal to test the innocence or guilt of a person accused of crime. The jnice is swallowed in lare draughts, and thuse who remain uningured by it are surposed to be innocent.

ERITHRONYLACE.E, a natural mele of exogenous plants, allifen to Malpiothinepers. They are trees or shmbs, with alteruate simple laves, stipules. Howers growing from amidst seale-like luracts, caly $x$ of five sepals, corulla of tive pretals, each petal having a eurious aprendage-a plated seale-at the lase, ten stamens united at the hase, a 3 -ctlled ovary with two edls enipty, and the thirel containing a single ovule, three styles, and the fruit a drupe. Numly I0: species are known, natives of warm countries, and chietly of tropical America. To this order belongs the coct (1. v.). The woot of sume of the species is bright red; that of Erythrarylon (Gr. red wood) suberosum is nacel in Brazil for lyang. and a permanent red is oltained from it. That of $L^{\text {. heppricifolium is the Bois dhutle (Oil-wood) of }}$ Mauritios.

## ERZDERG. See Einenenz.

ERZERE'M, or ERZLOEN, properly LAROM, a strongly fortifiel town in Turkish Ammena, in lat. $34^{\circ} 53^{\prime}$... long. $41^{\circ}-0^{\prime}$ E., but far from the morthern source of the Euphrates. It is situatel in a hiuh. but toleraldy well cultivated plain; its site being 5800 feet above the level of the sea. The clinate is enlll in winter, lut dry in summer. E. is the rusiknoce of an English, a liussian, and a French consul; and is believed to contaiu upwards of 100,000 inbahitants, consisting of Turks, Armenians, and Persians, who carry on a brisk trade, thed have thus attained to is degree of prosperity unusual in the Enst. The coppre and irm wares of E. have aequired a wide celebrity. Situated at the junction of the important highways leading from Trelizoml, Transcancasia, P'erxia, Kurelistan, Mespןntamia, and Anatolia, İ forms an entrepht of cmmmaree hetween Europe on the one hand, and the interior of Asia, and particulaty: lerwia, on the other. The strects, the houses of which are loilt of nuth, worm, or sum-dried bricks, are namow, crooked, anl tilthy ; and ruins of fortifications and of buildings formerly magnificent, everywhere meet the eye. The town consists of the Iortress. strictly so-callem, and four sulurbs. The firtress, which is encloserl by a hiyh wall, has, on the west, a eitadel called ljkaleh. with many curious monments, and a mosque of Christian origin. The furtress also contains 1.5 mosifues, the resitence of the chief magistrate, some caravanseras, and a few elecant honses belonging to the higher oreler of othicials and Mohammelan merchants. The suburbs boast h 4 mosques, several Armenian churches, and a number of lirge bazaars and caravanseras. E. imports shawls, silk gools, cotton, tobaceo, rice,
lorses, mules, amd wall-mats. The native manufactures here have ben in part supersedel by Lritish manmfactures, of which it is estimated 6000 bales, valued at e300,001, are anmally retailed in the bazars. E. is a very ancient town. Its Armeman name was Kione wr Cimin Kholukh (the eity of the district of Garin\}, whence the Arahian walifs called it Keli-Kalah. Anatolius, the [meral of the Emperor Theodosins 1 I., erectell here the fortress of Theodosionolis, in the Gith c., to the north-west of the syro-Armenian trading town of Arsen. When this मiace was destriyed liy the Seljuks, the inhahitants retreated to the furtress of Theorlosionolis, to which they gave the mame Arsen-cr-Rum, i. e., Arsen of the limans (or Byzantines), whenee the inodern Erzermm. After l04!) it was a thriving emprium; lout in 1801 it fell into the hands of the Seljulse, whin 100 churches were destroved, and 140,100 inhalnitants lost their lives. In $12+2$, it came into the lossession of the Mongols; and, finally, in 1517, int," that of the Turks. It still, however, continued to the the most important city in the country, and at the commencement of the 19 the $e$ had a pophlation of 100,0100 imhabitants. In the war of $15 \operatorname{sig}$, between the 'rurks and Pussians, the taking of E . lyy the litter decideal the campaim in Asia. It was restoren to the Turks at the preace of Alrianople.
E'RZ(iEBIRGE ('Ore Jountains'), the name siven to the chain of mountains, riels in metals, stretching in a south-westerly direction, on the contines of Saxomy and Bohemia, from the valley of the Elise to the Fichtelgelirge, in long. $12^{\circ}-0^{\prime} \mathbf{E}$. In the south, it rises to a height of from 2000 to 2010 feet, forming a steep wall of rock; in the west, it forns lroal, slaty plateanx, and gradually slopes down towarls the Saxm side to the fevel districts of Altenburc and Leipsic. In consequence of this formation, the streans flowing somthward are small, whide the north side of the chain, which is well wondint, presents a serifs of romantic, and ocensinnally fertile and thickly permed ralleys. watered hy the Mulde, the Pleisse, and their mumerons tributaries. The town of Gattes ralue, the site of which is the hichest in Germany, is situated towards the south of the E. range, in lomg. $12^{\circ} 5 t^{\prime}$ E, at an elevation of 3162 fect. The Keilberg, the lichest mint of the rance, is :isto fect above the level of the sea. The E. is chictly of the gueiss-granite forala. tion, in which must iof the metal strata are to be found. J'orphyry and basalt likewise appear.

E'SAU ("hairy' or 'roun'), the rhlest son of Isaae, and twin-lrother of Jacul. is E. grew up, he hecame 'a man of the fich1,' a canning honter, and his father's favourite. Me scems to have been a will, rough, hearty Bedouin, or son of the desert, thinking nothing of to-morrow, but living with joyons carelessuess from day to day. This is apparent from the manner in which he allowed Iacol, $t_{1}$, fefrand him of his hirthright, although it carrien with it, hesides many temprral advantages, the Corenemt-blessing itself. After this transaction, L., when 4' years of age, married two Canaantish women, ' which were a grief of mind unto lsaae and to Relbekah' (Gun. xxvi. 3.3). Then follows the narrative of Jacol's personation of his brother, amd his securing irrevocably the llessing to himself. $\%$ nuw swore to kill his brother, wherempon Tebekali sent Jacol to his uncle Laban in Padanarana. E. next married his consin Mahalath, the daughter of 1shmad, and appears to have established himself in his wifc's country, to the sonth of Palestine in Mount Weir. Jlere he lived probably as a predatory chief. When Jacol, was returning from Palanaram, E. encountered him with 400 of his Bedouns. The meeting was a touching one. The wild borderer at

Jeast was in camest. ' Esan ran to meet him, am? enthacel him, and fell on his nek. and kissed hims (Gem. axxini. 4). His anger hand lung ded ont. E. next afpears at the burial of his father Isaza. whom he secms to have lored with the wam and simble affection of a child of mature, and having whatined Ihis share of the property. 'went into the conntry
 lixum Li. the region of Monnt seir tomk the name of bitom ( $(1.5$.$) , and his pusterity are gemerally called$ Edumites.

ESCALIDE (Fr. from Lat. seolda, a ladher), in siege operations, is a mode uf pamime mimission within the enemy's works. It comsints in advancing over the ghacis and corert-way; diseculing, if necessary, into the dith he means of haters: and asconding to the parapet of the curtain and lastions ly the same laders differently placel. Thu ladders are either prowneal on the spot. ur are sent out with the siegormy. A conveniont form is in pieces of 12 feet length, ditting end to end by means of soclects. A firing-party is usnally twhe off, to keep down the fire of the enemy mon the escaladers, especially a hank fire lengthwise of the ditch, which might sweep then oft with terrihle rapintite: The leaders of an escalale constitute a - furlorin bine.

ESC'A'LOP-SHELLE are often used in heraltry to signify that the hearer hats made

Secaluy-shent. many lone voyares ly sea. As the Pildims (y. r.) , mblem, they were commonly siven to thase who had been to the 'rusales: they came to be regarlent as imbeating either that the hearer or his ancestor had lown a Crusular. The rsaluphell vals the cmblem of sit Jums the firent, and is gemerally mot with in chumbths idedicaten to him. 'The more ordmary

ESCDPE WAPRANT is a warant issmed ly a jurge for the apprencosion of in trans who hawe escancl from the gurans blunch an flet prians. This power is conferred 1,1 Anm, s. $\because, i \circ 6$ fulluwer by Anne. e. 9. The warrant may 1 n' issacd by any judere of the court wherein the actina was tried, or julgmont anl execution oblatinel, upan wath in writing of the escalue of the party. mate lefore limself, or lefore ond of the commis shomers tu take maths. The appreherion may le eflected on sumbay. The person appremenich is committel to the charge of the sherifi of the comety, who is made responsilde for his sate leerping.

ESC'APEMENT is the tem arplied to that part of the machinery of a watch or clock loy which the onw arl revolving motion prodnced by the moving pwwer. whether weights of spring, is lirought int." contact with the regulatine moment of the perdultan or balane-whed. Fie flomotogit.

E:C'Alil', in Furtification. is the side or slope of the ditell mext the: rampart, and of the parapet itsclif. What the diteh of a fortress is dry, the vearp is uswally fited with mason-work, to remine it hathent of ascent; and behind this facing (a, oitemont) ther are oftem prassates or cascmatus for ifence. In tempory fortifieations, the merte oment is smmetimes of worel: and in foled-works, pallasaless at the fom, or fraises on the berme or colse of the thitch, are heded sutheient. The cseary is always made at as large an angle as the nature of the soil will allow: the desion being to offer the greatest pussible ulistacle to an assallant.
biscARS are large heaps of eravel, comsistines chiedy of carboniferous limestone, that were wemmu-
lated during the lloistocene priod. They oceur in Central lreland, hat are identical with the carar of Nwerlen; and mider the name of komes, they are not maknown in sootlanl. The gravel is often heaped into narrow ridges 40 to so feet high, and from I to 00 miles lous.

## Esc'AUT. se somblot.

ESCHAL (Gir. eschum) a sloush or portion of dead or disorganised tisste. The name is commonly appled to artiticial shonghs produced by the application of Cousties (I. v.).

Ficchaliotic (in.), caming an eschar. See Cuestie.
BCHEAT (Fr. whoi, from Łat. cudero, to fall or happen!, an incident of the feudal law whereby, when is tomant in fee-simple dien, laving no heir capable of suceeding. the land reverted to his lord. by the earlier usages, this eflect tomk phace where there was no representative of the vassal in the serenth dearec, which, according to later custom, was extembed to male descendants in infinitum (Lih, Fcud. i. 1, s. 4). Aceorling to the law of England, useheats are of twokinds--pmoter el fectum senguinis, and propur detictam tementis. The former was in acearlance with the fuculal usage: so that if the owner of an estate in fee-simple diss without leaving an heir, and without having disposed of his estate hedecd or will, the land reterts to the overhord, who in the present day is almost invariably the sovereisn, exeld in equhluh ustates, which escheat to the lorin the manio. The most frequent instance of escleat is in the case of the eleath of a bastard, who, having no relations lat descemdants, the lands on his death intestate and without issue, mast revert to the erown. Eseleat mopto deletam tenotios is pectliar to the English law. It hapmened where a temant in fex-simple hat beenguilty of treason or felony, in which ease, mot muly his estite in possession, but any estate which might devolve una him ly the rules of deceernt, escheated to his lord; so that all who might sucered thrmy him were cut off from the imheritance. This rule applied to all feloness, and was productive of much hardship. liy modern lexislation, it has been proviled that attaimer for Adony shall not "perate as a bar to inheritance, except in case of treasom or morder (50 (ien. 111 . c. $14,::$ and +11 ill. IV. e. $106,1: 3$ and $1+$ Vict. c. (ia). This species of escheat is to be distinguished from forfuiture of lands to the crown for treason, which frevaled in other cometries besides England. Fee Furimiche.

Escheat in scotland is of two kinds- 1 . The total forfuiture to the crown of all property heritable and mosable belomging to a person who has heen convieted of treasom. $\because$. It signifies the forfeiture of sools ly a deltor who has falled to make payment of delit in ohelience to lexal Diligence ( 1 . v.). This species of cscheat for deht was abolished hy 20 Geo. 11. c. 50. It was of two kimels: single escheat, and liferent escheat. liy the former, all the delotor's momalles were forfeited to the cromin ; ly the Jatter, the ammal profits of the dhtor's estate were forfuiter to the superior. Ningte escheat still exists in scotland as a punishment if erime. In all capital convictions, it is ordered that the prisoner's 'whole movalhe goods and tear be eschat and inbrought tu his majesty's use: ln cases of reforcement, lismay, perjury and some others. single escheat is impusid ly statute as a portion of the penalty on conviction. Single escheat also falls upon demuneirtion for ontlawry; and if the relel continues for a year umler denmeiation, his liferent escheat falls to lins surntor.

ECHIDELLEA, Les a villate in Savoy (recently as 心rlinian, now a French state), is sitmated on the

Ghier, 12 miles south-west of Chambery. The valley luyond this villach and on the road to Chambery is loncked in by a huge limestone rock Soo feet himh, over whith travellars formenty used to climb, by means of louldurs, and honce the name given to this village. 'Though this uass of limestone the panlic rime now passes hy means of a tumel, which is 2.5 feet high, of eqpial wilth, and 1000 fect long. The tumel was projected abd commenced hy Napulen I., and finished in 1:1\% by the ling of sardinia.

E'SCHENBACII, Wolfishm vow, a eflematel poet of the midulle ases, was hom in the second half uf the lothe e, uf a mold fanily; which derived its name from the village of Esthenk hath Anshach.
 and passed his life in knightly fashion. In lewt, he came to the court of Hermann, lampraf of Thuringia, where he shone amoner the pucts of the time. at the swealled Wartburs-war (ir rivalry of the German minstrels hell at Warthure in ioni or 12010 ). Hermann's streessor, luiwig the Pions, appars to have shewn E. little favour, in conserpucte of which he withorew from the Thumaian cont thwarls tho close of his life. He died snme time lotwern 1219 and 1205 , and was hurich in lns native village fins poms are partly origind, and partly fachined aitor Frem hand l'rownal molels. His ricls fancs, "feel sentiment, and vivid l"wer of representation, as well as his elegant mastery of languace and rersitication, give somethine of an epic character to his works, the principal of which are Parciral. componse before lols. Withetin ron Orenge, ani Titurd. Lesiles these, we have several love-songs of his. E. exereisel an impertant inthence on his time, bat sulsequently was almost forgotten; and it is only recently that he has been restored to his place of honour. The first eritical edition of his works was that hy Laclmann (berl. 1583 ) ; they were tramslated into wolem (feman hy Sim-Maitre ( 2 vols., Magdeh, 1s3it-1811). The best translation of Perciuel and Tifurel was executed loy simrock ( 2 vols., stuttg. 1842).

E'schele, Joh. Meine. Aefred, a distinguished Swiss statesman. Was hun at Zurich, outh Fomary 1s1!, and stadiol at loonn anil berlin. In 1sta, he was ereated Ductor uf Law at Zarich; and spent the two following yars in Paris, devoting his attention chicily to stuling connectel with lioman law. On lis retum to Zurich, E. herame a lecturer in the 1 Iofl whal, the subject if his lectures beinis chiedy the pulitical law of the swiss comforacy. In listi, ho was clectem member of the great comncil of the cantom, and was thas drawn into the arena of practical statesmanship. Even at that carly perinel. his sentiments ware deciledly liberal. In Jammary Isth, along with six others who shared his opizions, he publishen the famous summons to the porntar asscmbly in Interstrass for the expmlsion of the Josuits. Ilis elaction into the Comeil of the Interior in 1845, and into the C'moncil of Elueation in 1540 , opened a wille field for his alministrative talents in his native canton. 'The reorganisation of the schools in the canton of Zurich, accorlines to the demands of the time, is chietly his work. In becember 1847, he became presilent of the ureat council : and in his opening speech, recommented the emmplete reform of the confederacy, and the greatest possible centralisation. $\ln$ 184s. he was sent as a deputy to the Ferleral Diet: aml, along with M. Minzinger, was charsed with the negotiations entered into lotween switzerland anci Austria, in regaril to the canton of Tessin. In December of the same jear, on the introinction of the directorial system, E. became president of the newly clected Cunneil of Regeney.

Since that time, culueation, the reorganisation of church pridicy the law estalishing the free choice of teachers aum clergy ly the congregations, have been the puints to, which his legislative and alninistrative energies have been chetly directed.

E'SCHOLTZ B.AY, a pintion of the Arctic Ocean in Kussian America, finms the innermost fart of Kutzebue somd, the first great inlet to the northeast of Belaring's Strait. It is ahont long. $16 \mathrm{I}^{\circ} \mathrm{W}^{\prime}$, being harely on the outsine of the plater circle. It is worthy of notice chietly on aceonnt of its fossil remains, which, though common on the northern coast of Silseria, are comparatively rare on that of the new continent.

ESCHLSCHOLTZLA, a genus of plants of the natural order Papacreterf, if which E. C'nlitionicas and other species, natives of Cilifornia, have mow become very common in our flower-gariens, making a showy ajpearance with their large decp yellow dhwers. The genus is remarkable for the calyx, Which semarates from the dilated apex of the fowerstalk, being thrown otl liy the expanding flower, and much resembling in its form the extiurnisher of a camile.

ESCHWEGE, a town of the dectmate of Tesse. Cassel, is situated on the left bank of the Werra, 2.5 miles east-smenth-east of Cassel. It cmasists of an wha and new town, ani a sulmarl; is surrommeal with walls piercel hy six eates; and is well built. The only hnileling of note is the castle, which was long the residence of the landerats of ITessenlantenlerg. E. has mamfactures of woolen and linen fatios, mumerons tanneries, aml several oil and other mills, also some trade in frait and victuals. Pop, 60000.

## E'SCOR'I' See Cormor.

ESCT ${ }^{\prime}$ DU DE VERAGUTA denotes at once a riwer and an island on the Atlantic side of ("entral America-the latter being at the montlo of the former. They are situatenl a little to the east of the boundary between New Granada and Costa Thica. The island is in lat. $y^{2} \mathrm{~N}$., and long. $\mathrm{S1} 1^{2}: 30^{\prime}$ II. : and the river, being only 15 miles long, derives its importance, if any, from the narrommess of the belt which hove seprates the two oceans.

EsCURIAL (the cormet titlo is El Refla sitio de Sis Loheyza el refl de Eisomini), a famonz momastery of Nuw Castile, in the province of Mainit, and situated :0miles north-west of the town of that name. This solitary pile of gramite has been called the eighth wonder of the world, and at the time of its erection surpassed every building of the kiml in size and magnificence. It owes its origin (at least, so it is said) to an inspired row made hy Philip II. during the lattle of St Quentin. On that occasion, he implarel the ail of St Lorenzo, on whose day, loth August 1857, the battle was foucht; and rowid that, should victory be granted to him, he would dedicate a monastery to the saint. The E. is lanilt in the form of a gritiron, in allusion to the instrument of sit Lorenzo's martyriom, and forms a huge rectangular parallelogram 74 feet from north to sontli, ami 580 feet from east to west, and divisled into longs courts, which indicate the interstices of the bars. Towers at each angle of this parallelnorrm represent the feet of the gridiron, which is supposed to lre lying upside down; and from the centre uf one of the sides, a range of milding abuts, fommint the royal residence, and representing the handle. The E. was begun in 1003 , and finished in 15St, and was intended to serve as a palace, mansoleum, and monastery. It has a splendil chapel with three naves. 320 feet long, and $3: 0$ in height to the top of the eupola. The Postheon,

'Tle South liok rises in the Gimmpians of the west of lorfarshire, and runs 40 miles south-east and east, erussing the valloy of Strathmore. It passes Diecclun, ami emols in the tidal hasin or lagoon of Nontrose. The busins of both consist of gneiss, miea-slate, clay-slate, and old rel sandstone.

E'SKI-DJU'MNA, a town of Eurndean Turlery, in the provine of buldratia, is situaterl 20 miles west of cihumla. Iat. $43^{\circ} 1 \overline{5}^{\prime} \mathrm{N}$., long. $26^{\circ}: 5^{\prime} \mathrm{E}$. Jop. 60100.
 the province uf lamili, is situatod at the somthern hise of the Ibalkan Mommains, 70 miles north-west of Adrianople. In the viennity are mumerons grariens amil orehards, amd also severat mineral spinse, which are in great reputa. The manfactures are carpots, coarse linens, and leather. Pop. 15,000 to 20,000 .

Pisi $A$, a river of $\mathrm{S}_{\mathrm{p}}$ ain, aml an important aftuent to thw Disuro, rises in the prosince of Paleneia, Ohl I instile. from the sonthern liase of the Asturias momatains, To miles north-west of the town of Vallelnum. Thronghout the whole of its course, it Hows sruth-wost, and joins the Douro 15 miles below the town of Zamora. It is 125 miles in length. Its waters, whiels are joined by mumerous streams, are well stocked with tish.

## ESMERELDA-ESPARTERO

ESMERELDA (signifying Pmerald in Spanish) denotes a river, a town, and a monntan-chain, all in America.-1. The river is in Eenador (q. r.), rising near the city of Quito, and entering the [acitic after a eourse of 110 miles, in lat. 1 5' N., aurl long. $79^{\circ} 40^{\circ} \mathrm{W} .-2$. The town stands 10 miles from the mouth of the river, eontaming almot 4000 inhabitants.-3. The monatain-chain stretches alront 170 miles cast and west in Ninas (ieracs, an inland province of liazil, about the mithate of the lengtly of the country.
LSNE, E'SNA, or E'SNEII, the himplyphic sen, and the Greck Latopolis or Latlompolis-the city uf the Latus dish or Lates nobilis, from the dish there worshippen - is a small and badly built town of 1 loper Gegpt, and is situated on the left lank of the Nile, in lat. $25^{\circ}$ 15' N. The central partion of E . has elitices of coloured brick. It contains about t(000 inhabitants, of whom 1500 are Copits. and has some maniactories of blue cotton, and pottery. There are famous zuins at $1 \%$, which consist of a samlstone templa, with a purtion of four rows of six collums, which apmars to have been founded by Thothmes II., whise name is seen on the jambs of a door. The temple, howerer, suems to bave been restored ar principally coustructed by Itolemy Eucractes ( $246-203$ B.C.), and the pronos was erected in the roigh of the Emperom Clantins ( $41-54$ A. r.), and completed in that of Vespuinn. The interior is of the clate of Trajin. the Antonines, and Geta, whose name, crased or replaced by that of Caracalla, is there founi. The ureat temple was dedicated to Thmmis, Satis, and har-1lek. It has a zodiac like that of Denderah, formerly thought to be of the most remote antiquity, but now known to be no ohder than the Liomans. A smaller temple with a zodiate, erected in the reiqu of Ptolemy Enerpetes, formerly stool at E'1 eyr. 21 miles north of E., but it has been destroyed. At I. is alsu a stone quay, bearing the names of M. Aurclins. This eity was the capitai of a nome, and the coins struck in it in the reign of Iladrian, $1 \because 7-1 \div 5$ a. n, , mpersent the: tish latus.-Champollion, Tot. Deser. p. $293 ;$ W Wilkinsom, Mod. Agme, ii. P. "68; Tochon J'Anmecy, Méduilles.

ESOCLDA, a family of malacopterous tishes, which is now regarded as including only the likes (I. 8. ), but in which the flyiag tishes (Exacoptus) and other fishes, now constituting the family som-
 were until recently includel.

ESOTENIC (Gir.) is a term derivel from the ancient mysterses, in which it was aphiol to those doctrines that were desimed for the initiated, in coutrulistinetion to these that were imparten to the
 used in varions relations uf in andogens kind.

ESP'S'LIER, a term lorrowel fron the French, and siguifying a miling on which font-trees are trained as on a wall. such railings are very varionsly constructel-sometimes of wool, sometimes of iron, sometimes of upright rails bell togethe" by a horizontal rail at top, sonctimes chictly of horizontal rails with upright posts for their support. Espahers may be very conseniently aml cheaply made of stroug iron wire, sustained ly mpright iron or women posts, ats in ordinary wire-fences. They vary in beight from four to about eight feet, according to situation and the siac of the garden. They lave the alvantage of securing the fruit in a meat measure from the effect of winds, which oftern shake off great part of the crop of standaril trees whilst still nuripe: and from the full exposure to sun and air, cxcellent fruit is proluced, although there is no retfected heat as from a wall, which is therefure still superior.

Lspaliers are very common in gardens in Britain, and add at once to the leauty and the productiveness of a garden, the ground not being overshadowerd as by staudard trees, althungh, of course, the ronts of the trees render it unsuitable for many crops to sone distance on both sidus of the espalier. Espaliers are iften used to separate flower-horlers from plots oceupied by culinary vegetables. Apples and pears are considered more suitalde for espaliers than any other kimals of fruit trees commonly cultivated in Britain. The treatment is sencrally similar to that of wall trees, lint the traming is nsually by herizontal branches. It is mut umsual, when trees have lecome whand their banches thik and firm, to lispense with great part of the mils necessary in their carlies traming.
ESPARTEIRO, Joaderin Pammern, ax-rement of Spain, Connt of Lnclann, Duke of Tittoria, \&e. was lan in the year 1792, at Gramatula, in Lis Minchar (Cindad lieal), where his father, Antmin Fspartorn, followed the ocoupation of a cartwristo E. was iutended for the ecelesiastical professom, aud in 1506 went to the miversity of Almagro, lat two years later, on the invasion of Spain ly the Frondh, he eatered the Saerce Battalion (Batullon sayrato, so called from leing couposeal almost entirely of stulents. After the close of the Wiar of 1 ndependence in 1814, he went tos suath America, whore fought against the insurgents: lout after the vietory samed iy Lolivar at A yacueho, December 9, 182t, had pit an end to the smaish rule on the continent of America, E. seturned to simin. In ls:o, he declared himself apmly in forome of the succession of the ciarghtar of Ferdinami VII.; and on the breaking out of the civil war after the king's death, he som rose to the rank of lim. tenant-fencral. In Angust 18.36, he succected in saring the eity of Mandril, and beeane successively genem-in-chief of the amy in the north, viceroy of Navarre, and eaptan-gonemal of the Basque prosinees. When the army of 1 on Carlos appared hafore Madrid on the Ioth september lasio, h. had again the glery of saving the eapital. Mis successiul campuin of $15: 3$, which resulted in the expulsion of Don carlos from sipan, poeneal him the title of Crambee of Smin, and Durpe de la Vittoria $y$ de Norella. In 1 sta, the prea-mother Christina was compelled to resion her othee of regent, and on the Sth of May 1841, E. was apminted hy the Cortes to sumply her flace matil the queen (İsabella) shond have reached her majority. E: guided the hem of the state with energy, firmhess, aud ability"; but in 1543, an unscrupulus and umprincibed combination of parties naturally inimical to cach other, the Repullicaus and the Motcraths, bronght about his fiall. E. sailed for Englanl, where he resided for fomr years. In 1847, he returned to Sbin, and lived quictly at Loprono till 1854, when the wrotched despotism and proHigacy with which the name of Christina is asso. ciatel, caused in insurcetion of the poople, and compelled the qucen-mother to leave the kingdom. L. was again called to the head of the government, and conducted the affairs of the mation for two years: but in July 1850, he was supplanted by General (I) Honuell. Since then, F. has taken no part in plitical agitation. E.'s career has shewn that lie is not astute enough to manage parties. An honest man, a gallant soldier, and a somul-headed constitutionahist, he has, nevertheless, not exhilnitel that tact anl foresight whieh are nucessary to all politicians, lant especially to those of Spain-the laul where the progress of hiberty and knowledge is circumvented at every step: Compare J. S. Florez, Expartero Mistoria de sa I'ida Militare y Politica (3 vols., Madrid, 1843-184).

 timally left lectwonth the lomses of a city and the glacis of its citallel. It requires to be at least 800 fraces lormen, that the comem, in case of his getting grasession of the town, maty not be able to assat the eitalel muler cover of thr nearest houses. I'or this furpuse, the eitarlel must command the esplatnube, and le abole tosend a direct fire into the strects mpening upw it. ln uld works on fortificis tion, the term is uften applital to the flacis of the canntersearn, on the slne of the parapet of the covered way townds the country.

EsPIRINGAL, or S]lildliat, in the military eneimering of the days lufore the introduction of gunpowler into Jaropean warfare, was a machine for throwing missiles. These missiles were either large darts callod motethes, of arrows winged with brass, and called rombus, from their whirliner motion when shot forth. The esprinign [robahly resembled in some dearee the machme engraved in Badsas.
jesPRIT D'IVA, an aromatic liquem made in Switzrlaml, from it plant called feviri (Achillea mirvehatit, or I'tomicer mos'hutse: see ACHILLEA). like the Simiss ter, made from the same plant, it

PSPY, TAmLS I'., whe of the most original aml able meterolucists of the present century, was the son of a farmer in Western lennsylanio, where he was loon in 1754 ar 1785 . He received a surerion eqlueation, amb, dowing the earlier part of his corcer, was one of the lest classical and mathematical instructors in l'hiladelpha. E's attention was limst strongly turned to science by the writings of loalton add Janiell on meterology. After some time, his enthusiasm lecame so great, that ho resobved to give up teaching, and to rely for thas means of $\mathrm{f}^{\text {wosenting }}$ his meteoralugieal researehes ubron his slember saringe and the success of his lectures on the subject, which, fortumately, turned out to be far more attractive than the avorage of bepular lectures. His tirst course was Jelivered hofore the Franklin lnstitnto of l'ansylvania. la's theory of stoms (with which his name is specially connurtel) drew general attention to itself, especially in the Gritud States. See Somms. A memuir on this subject gained for him, in 1836 , the Narellanic preminm of the American Ilhilosophical soriety of I'hilablelphia. In 1541 appeared his work on the Philowophy of Storms, regarding which the limport of thr Acolemie des sciences (l'aris) says, 'that the theory on which it is hased alonm accounts for the phenommat. .... In a wnrl, for physien geopraphy, arriculture, navigation, and metenrulory, it gives us new explanatimns, inlications useful for ulterior researches, and redresses many aecredited errors.' later in his life, li. liecane I'rufessor in the I'liladeldhia ITigh

Schonl, and afterwards in the Franklin Institute of that city. He travelled axtensively through the Tnited States, lecturing on his favorive theory of storms, innl studyine the laws of elimate, umtil he acyured the pombar titlo "f the "sterm-kine." Afor the oremasation of the sumblismian Institution at Wrashingthon, he was commissioncel by lor llenry, its superimenment, to pursue his researches. It was in the halls of the Guithsemian that his experiments on the bute of coulang of erases of dillerent densities when expamber wate maile. The emoling efticets of expansion on alry innd moist air alsu formed the sulynect of nice expriments. The results of these exproments lave thrown mode light on the farmation of choud and rain, and the propelime plower of winds. They atholed materials for his claborate and valualile reports on meteoroming, juresented tor the scmate of the [nited states. Fomr of these

E'SQUIDINX, 叫 EXKJMOS, is the mame of a mation inhablinur the consts uf all tlat stas, bays, inlets, and iskmhs of America surtll of the bet of N. lit. ; from the enstom conat of tirenland, in ling : Oi, to the strait of labring, in long $167^{\circ} \mathrm{W}$. Wan the Ithantic, they ire to be fumbl alumg the catine roint of Jatrambe to the strait of Bell.. iske, and duwn the cast sille of Ilulsmas liay nearly as far as James's Liay: while un the J'aceifice they reach as far as the meninsula uf Alaska. thesy are also to be met with an the Asiatic side of behriners Strat, and thond few in momber, may be regardod as the most walely spread nation in the world, oceuryins, acourding to Mr Gallatin, not less than $5+00$ niles of coast, without includinif the inlets of the sea. 'The Eskimo,' says J)r Latham, 'is the only family common to the Old and New Worldan inportant fact in itself, and one manle more imprortant still liy the fiskimo loealitics leciug the noly localities where the two continents come into 1roximity. Nobling howreve has as yet come wut of a monsidaration of this fact in the way uf tracing, with absolute cortainty, a emmection lutween the F. and any well-lefinced Asiatic race. The name itself, Lispuimizex or Eskimo, does not leclu us jn ang such attempt, being from an Aleoncuun or Nomaki worl, signifying "eaters of raw thesh." This is not the notisc name, for they eall themselves

 the scamon of the Hudsmes Bay ships desimate them as "Neymus, or "Ackemos'-alpellations, acenoling ta lioblardsum, evidently derved fron the suchletons eries of surno on Tryono with whise the pore fupply erent the arrivel of the ships.' The

 timel a strmar resumblance between them and the lied ludions of North Ameriea, whels is the view also taken ly I'richard-the last mentioned regard. iner then as a kind of link loctween the Northern Asiatic and American family of mations. Lathan, on the other hand, pronomecesthem to le Nomentian in yhysingomy, with flat nose, projecting cheekbones, eyes orten oblique, and skin more brown than red or copper colomed; thers presenting a marked contrast to the North Aucrican Indians. Their language, however, is, he acknowledges, American in resinct to its erammatieal structure, being composed of long compound words, and regular, though remarkalle, inflections. With respect to the com.

105
plexion of the E., Sir John Richarison is of a different "pinion from any of these anthors, deseribing it as nearly white, whon rehebed from the smoke and dirt with whielr it is msually inerustod. Many of the foung womon, he consilers, may even be called pretty, when this operation has lieen performed. "The voung mun," he sarys, "have lithe heard; but some of the oll ones have a tolerable show of long gray hairs on the upher ip aud chin, which the lied Indians never have, as they ewalicate all stray hairs. The Eskimo leari, howevor, is in no instance so dense as a Eumpean whe. In stature, the E . are usually represented as not being more than tive fiet in heirht: Lut the anthority just mentiomed describes them as ranging from live fect to five feet ten inches, and even more. They are hrom-shoullered, and, when seated in their lonats, luok tall and muscular, but, when stamting, aprear to lose some of their hejplit, from the shontuess of their lower cxtrenaties. The k. bive usually thronghout their long lines of const in small villages, containme about live or six families cach. The men oceupy themselves entirely in honting, while the women jerform the domestic hroderery, whith eunsists princinally in prejaring tlu ford, of which hoth sexes consmme a large quantity. This is almost entirely of an animal nature, lunt neit without variety, cmbracing the reindeer, geese and other lirits, the sual, walrus, salmon-trout, and various other kiuls of tish. They are expert lomenters and hishors, aml, aidel hy their dogs, make consider. ahe have amoner the arctic amimal tribes. Where whales are common, Aurust and Sepomler are levoted to the pursuit of these anmals, and great juy is manifested when they eapoure any of them, as from the lhnlber of these they ret their sulply of wil for lights in the long winter seasm. Of verge. talles, they scarcely taste any except in the autumm. - Carbum is sumplied to the system by the nse of nuch oil and fat in the diet, and dranghts of warm blond from a mewly killed animal are consideral as contributing rreatiy to preserve the hunter in health.' The habits of the E. are filthy and revolting in the extreme. A great part of them food is cunsumed withont any attempit at conking it, and they brink the blood of newly killed animals as the greatest delieney that coulil lue offered them. Jn the short summer, those who can afforl it live in tents : but in the winter ther all crually live in snow. huts, the stench of which, from the offal with wheh they are stored, and the filthy oil that gives them liwht, makes them insmportalle to the European. The dress of buth sexes is mearly the same, consisting of the skins of animals, leindeer, birds, and ever fish-whatever comduces most to warmth, withont mull reqard to apparance: lut in their wintur aboules they usually wes nothing except tronsers. Their roligion ionsists brincipally in superstitious observances, lut they lelieve, we are t:lll, in two greater spririts. and many lesser mes. The Moravian missim in (ireenland, commencert liy the beacrolent Hans Euede (q. v.). in Trel, has surcended in eonverting many of them to (hristianity: aud they are represented by the nissionaries to be a mibl and teachable people, easily led ly kindness to distinguish letween what is morally risht and woong. Where the missionaries, howrer, lave not jemetrated, our arctic voyagers generally surak of them as honest among themselves, hut incorrigilly dishonest, and prone to lying and exageserativi, in their intercolurse with strangers.

ESQUIMATA DOG, a kind of dog extensively spread over the most northem regions of North America and of Eastern Asia; large, powerful, with long rather corling hair, tail much eurved over the back and very bushy, short and pointed ears, and 123

Takewin-i-wekaii (Thble of Ewents), the official journal of the empire, was placed in his hands. In ls35, he was emploged by the late Sultan Minmone on an embassy to Molimmol, the som and successor of the kine of Perwia. E. had also the titles of Grand Jutge of Liommalia, Tuspetor-reneral of Shools, and nember of the 'onucil of lublic lantraction.

The works of L. comprise, ammenthers, the U.ss iTrefor (the Establishment of Victory), at work which has leen translated into French, am gmblished by 11. Cimsin de J'erecrah, with the following titlo: Jinturic summenty of the Destruttion of the JemiEarics by the sheltrin Muhmoul in Jsod (l'ar. 1833).
F:SSEN, a town in libenish l'masia, situateld betwern the Phur and the Embelur, 20 mites umeth-rast of Disseblurf, stands in the midut of a rich conal ant iron district. The town is surromaded by the high elimmers of the stema-minges used in working the mines. As it has risen only very recently to its present importaure, its architectural beaties are not errat; it has, however, an imposing cathedeal, contaning many enrous religuaries, crosses, \&e. E. whes its prosperity to the incelanstible conl-mines in its vicinity. Owing th this, there are in the nombombnod extencive works for all sorts of mamactures in iron. The enmmons works of 1 err Krmp, the discoperer of the ructhod of castime sted in very large masses, who employs about $10,000 \mathrm{men}$, are it E . It them are mannfactured many artiches nsed for preaceful purpases, lut the girantic steel guns which the (iomams tasel with such terrible effect at the recent sience of Pinis have mathe the name Krmpe worhe
 dustrial activity of E. is only of reent growth, the town itself is very okl, and can trace its orquin to the famous lenedictine manery of the sane name, fonmded as far back as 57.3 A.1.

LSSHNOE DE PRTIT ditaIN is motainal by distillation from shall umipe mensers, about the size of a cherry, and is nsed as a perfume in tho same mamer as Grontlothour Iftors.

D'sscinces are solutinus of the essmatiol oils in alcoloi, and may be propared (1) by alliny rectified spirit to the almiterons parts of plants, or to the essential wils, and thistilling; or (2) simply ly arkling the essential oil to the rectified spirit, and acitating till a miform mixture is obtainel. 'Thus the essence of lomons is merely a solution of the volatile oil of lemons in rectiticel spirit.
ERSENES (B"seruni, Lswaid), a small religious fraternity amons the dews, whose nane and origin, as well as character and history, are alike imwhed in obscurity. Nill, in the wide lich of the history of the smitic religions, there are not many sulpects of impury of greater importance, or calculated to inspire a deeper interest. The Fiscmes bom ane of the must momentons farts in the develomment of Julaism. ('hristianity stands in so cluse connection with tham, that John the baptist and Christ himself hav: leen pronomed to lave origmally issued from their rams. Nore surprisires than all, out of Essenism, in the stare of Subaism, has spruns Islam itself, and in this last development of its tencts and maretices are still preserved some of its priveipal rites. it is but natural that from the days of the Fathers to our own, an intinite number of writers, more or less qualified for the task, should have endearoured to thirnw light on this mysterions brotherhood, hat with suceess far from satisfactory. The reason of this is ohrious enough. Josephus, Philo, Pliny, Solinus, Eusebius, aud the Fathers generally, were consinlered the sources, and the only sources, from which the genuine history of this fraternity could be
deduced. Of these, Illiny intieed has a geographical notion, whink cannot be tracel to either lhilo ur Josquas; but the rest have so evidmatly derivel their shallow and contranictory ineomets iminectly, ant through emrmitol chanmes, from those twin writers, that they lose all clam to considmation. Of the two lamks of l'hilo in which information regarding the Jissenes is coutainel, one (De lithe 'ontemplativet) is peren to lave luca writhen almat three centuries after lhin's dath ly a Chistian momk as a pancggrie ou ascetio manachism. 'Th"o wher (ouout (ommin) is, to say the lanst, of dmultent reumeness, and is, moremor, at maman with Joseqhens. As to Jasephas himself, it is now paty grnerally allowed that his lissenes stame in macis tho same relation to the historical Bssen's as tho incal inhabitants of the Comancu of 'Tacitus stam? to the real Gemans of his time. Struge that for so many centuries the ral and grnuine smacesthe Talmmlical writimss-shonh never lave been thought af. These, tomether with Josephas ampl I'hilo, I'liny, and the Arabians Macrisi imd Alatfarag, will perhaps hetter chable us to form and ind not only of the real state of this communty, but. what is of no less monent, to trace the process ly which they gratually arived at their peculand mode of life and worship. We becol not remind the reader that we must strictly contine onrselves lato to an chitume of facts and conclusions.
We have to premise, that exception must at the outset he taken to the openins statement of Tusephas, that there were three different sects' among the bews: the lharisces, the sulducees, and the Essones-a statment which has been copheal amb accepted from that day to the present. 'Lhe Suhtucers were a political party, mothing mum or less, ami, as a matter of course, held religims views antagonistic to, of ratleer they did mat accept the traditions of, their allyersaries, the Jharisees, who, again, forming as they did, the bulk of the nation. camot rightly be called a sect. Least of all wre the Essenes such. They ware lharisens of vironger couvictions, and carried ont the lharisaic riews with a consistency which male them rikirulus even in the eyes of their own mother-party ( Sota, "b, a.) ; neither were they karwn ly the names of Essenes, this being a very late ilesignation, derived either from it Chaddee word batha, aud meaning bathers, or baptists; or from Ascr, meanins Healers. The Mishon, beraitha, and Talmme spak of these adranced Iharisecs in general as Chasidim (Assiduioi, Pious Men), Nazirim (Ahstinnts), Toble Shacharith (ITemerobaptists), Banai (builders), and Chaberim (Friends). The Arabic liook of Maccabees calls the Essenes simply Assidatio, and Macrisi speaks of 'N゙azirs, Fissches, anl liaptiste' as alh being 'A samim,' or Lissenes.
The Nazirhood, a kinh of voluntary priesthood, cajoining abstinence from wine, Hesh, and other sensual enjoyments, hat, in the troublous times of anti-Syrian aritation, aud the gencral uphearing of society, foum munerous adherents (Tosifhe Xasir, r. 4; Tatm. Babli Berach. 48, a. 1; Mace ii. 49; Jos. Antiq. xviii. J); and gralually there sprang up (eontrary to the Dible, which restricts this asceticism to a certain period) a host of men calling themselyes 'Nazirs for 'ver'-Nazire olam (Nazir, 4, a.). Ilharisees of a spiritual and contemplative bias, with no natural taste for the conflicts and activity of politieal or pulbic life, or wearied, perhaps, with the vanity of human aims, took this yow of Nazirship for life, and constituted themselves into a sort of religious club. Levitical purity in its strictest and highest sense made them draw closer and closer the innumeralle 'Ifnces' which the traditional law had erected round the biblical law.

## ESSENTIAL OILS-ESSEQUIBO.

Any unc, friome or foe, could, at any mument, by havint tonchat something impure, disturb thas purity for the time, and necessitate new and molless purifieations. Thus it hecame necessary, on at least experent, that those among them who could break all ties of friendship and family, shohe retire inta a solitude not easily approachable lua stramer to thesir commonity. Fond, asain. corbl not he prepared saw by those of the brethren who knew and strictly obeyed the hyper-tralitional injunctions. 'Their dress, every implement of daily use, hat to he made under similarly strinetit laws oi purity. A mathal consequence if this their exalted motion of ontwarel Iriesthon, was the ditlerent phases of woman's life taken into consideration-theiremeral celibacs: (The explanation given ly Jusephens-the fear of the corrajtion of buth towns and wamen - is entirely ratuitous, and utterly in disemmance with the Jewish notions of the time.) In this state "f voluntary isolation, traling was out of the ques. thon; they thlled the sromat, and lived on the fruits of the carth. Takind their meals, and these of the "Marsest and plamest deseription, in common, they idealised the table into an altar, and, prayer having leen said, they remained stadine silently roma it during the repast. That they land an intivinual pronerty. follows of conse, and then communistic mothe, which the Misha (Aloth) has prescred to us...' Xline is thine, and thine is mine'-explitims itsedf. We need not enlame further on their small recentrivitios - on the white limen sarment, the apron (kenopham), the scompor shasel; they are che and all, signs and symbels of Leritical purity, the scerep reminding us of a cortain Dasaic orlinance during the wanderines in the desert, the apron beominis necessary from the frepucat alihution of their hands. Exery morning, they hathed, like the priests who ministered in the temple, in pure sping water. They aldomed thonl as a sonre of impurity, and for this reasin, 1 robably, some of then absataned also from goine up to the temphe, where sacritices were daily offerel: others we dind persent at a festival in the temple (Suceah, 51, 53). Their ofiorings wore sent alive umber the care of messenters. Hut these were hat contwan sigus of purity; steppingstones to inner piety, to commmion with lionl, which was unly to he acquired, aecordime to their notion, by solitude anl an ascotic life. The belief in the ettieacy of the most rigid simplicity and willing self-sacrifice, they helit in common with tha Pharisces: their harror of oaths, their frequent prayers, their oconpation with mystical doctrine, were their own. Untronllech lix the mise of war or the strafe of purties, leading a life divileal hetwem the bath, ablutions, contemplation, and prayer despising the lonly and lodily wants; what more natural than that by demrees they shouk be led into a kind of mystical chthusiasm and fanaticism. They allerorised, they symbolised; and their ctiorts culminated in secins the unsecti. Ahsorbed in the attempt to fathom the mysteries of tho nathere of (enc), one of their principal wecapations was the stuly of the mane of (atol; of that umpremomaceable name which omly the fligh-priest ditred uthe woe a year in the EIoly of Holies during the must awinl and sulemn service on the bay of Atonenont. The knowlalye of that nome in foms, in twalve, and in twenty-fome letters, womld mive them the pwace of prophecy ant of receiving the lloly (i) inst."
 minent feature of their creal. In ewarse of than, they were looked mon liy the vulsur as saints ami warkers of mirteles. A womberinl book uf eures (ropher hefnoth), which Talmutic, Amalic, and Byzantine anthorities alike aseribe to Solomon, was
in their hands, and with this, by the aid of certain ronts and stones.' by the imposition of hamels, and certain whisperings a practice strongly comberuned by the Iharisees (Nomhequ. 90, a.) they east out demons, and healed the siek. Phitosephy tlay reparded in su far only as it treated of the existence of dol. Jehowah is the oricimal light; from Him procred a mumber of sinits (the l'latonic Ideas), and at their head stamls the Wisdom, or Lofos, into which, after death, the som is again absorbed. Their coule of Lithies was therefold - the love of Conl, of virtue, and of mam; their scale of perfectilility reaching its acme in the communion with the Holy (Ghost (huach Makol, wh). (Mishn. Sota, 99). In tine, mixiny $u$, in the strangest mamer, the most exaltend and the most prerile motions, they beame the forerumers of the christian finosties and of the Jewish Calhalists, amb, it may be, of many secret, still existing arders, who may have derived from this surce their ceremonies and the eralations of initiation.

They seem never to have mumberel more than 4000. including "won those Nazirs or Vessenes who remainel in their own familios. Their eotony apmars to have been established chietly near the beal Sa, and it is undoultody this colony wheh has somed Josephus as a hasis to his romantic lissene repulile. lint, however distant from each other they might lo, a constont intercommuniea. tion was kipt up through a lonly of delegates, or angels (Malichimi). As they lat sprong from the Pharisees, so they nasin mersed into them-part of them, we should rather say; the remainine part becme Therapenta, on Chrirtians, Nee Thenareves and Jewtif sicts. The Talmud gives a listinet accomet of therir ceavine tor cxist as a semarate commanity (bechorot, $\quad \therefore$ ), and so soon after their extinction diel they fall into oldivion, that in the thind century we tind a Jowish suge asking who

Much has leen written amd said of a certain literature which they forsessed; on this we are umable to decide, deprival as we are of all trustWorthy authority, once framacnt only remains; it is youted in the Talmud (Jerusch. Ferachoth. Eni) in the followine worts: 'It is writton in the bowk of the Chasidim, If than leavest it (the divine law) for one day, it will leave thee for two.

## ESSENTLIL OILS, Sie Ons.

EAsbolitho, the most westerly of the great rivers of British Giuana, enters the Atlantie near the thritory of Venezuda, in lat. $7^{\circ}$ N., and long. 51 $40^{\prime} 11$. It furms, at its month, an estuary of twenty miles in width; anel it is favourably distingushed from the thmeram and the Borbiee by the athsuce of a birr. It appears to exed the other streans of the conntry as well in length and volume as in its navigabo ficeilities, and to to practicalde fon large shins wion linst falls-a distance of 60 miles from the seat. The greater part of its course of 6 (i) miles is through forests of the most gisantie regetation. Its lasin, spealing generally, corresponts with the coment of the same name. This subtivision of the colony is inferior, unless
in purely natural resources, to either of the two nthwrs in value and importance-Demerara and Berlice repectively containine the principal settlements, Gearyu Tuwn and New Amsturlan.
FSSSEX, $n$ maritime connty of the sonth-cast of Fincland, havine the North sea on the E.; the Thames estury, diviling it from Kent. on the s. Mildesex and Mertford on the $\mathbb{V}$.; and C'amlmate and sutiolk on the nortla. Its ereatest length from north-east to south-west is 6.3 miles. and the greatest hrearith from east to west is it miles. It has $1,0.5,161$ statute acres, nine-tenthe b ing arable or in grass, and a twentieth in wool. The const-line is 5.5 miles luns. Some clifis at the Naze are 35 feet high. The centre and north uf the comoty are heartifully diversified and richly wombed, the highest point beiny Langion 1lill, foob fuet above the sea. Wesides the Thames, the other chief rivers are the Stome, 50 miles lonan, Blacksater, $4 ;$ miles: Lea, Rodiag, Crouch, and Chelmer. The east of the comuty is mostly on Loniom clay, with limestone bels near Harwich. In the north-west, chalk appears. In the midde and north, there is mach dilnviun, with chaik fragments. Crag neours near Harwich, and stones of phosiblate of lime are fount here and there. IS has fer manufactures, exeppt in the neighbourhond of Lombon, where are chemical works, tar, ant uther works of a kind that conld not le carried on in a large scale within the metropolitan boumaries. The Thanes lron-work and Ship-buillins Company, near the mew Ticturia Docks, are another mandacturines feature wit the county. At colchecter, there is a reat silk-mill, as there are also at Bocking. linaintree, ind Halstead. Tambour lace is made at Cougeshall and a fow other places; there is straw-flatine in some we the smaller towns, lut the comoty has, motwithstandin:, comparatively few distinctive manufactures. The chief erops are wheat, barley, wata, heans, potatoes safiron, caraway, and hris. Great mambers of calves are fattened for the Lomdon market, and there are large sheep-Hocks. F. has valualde wsterfisheries. Fopp, in 1sis1, 4ll, (14: in 1871 , $16 \%, 136$. The connty is almost entioly in the dinese of Roehester. F. returns six meculbers to larliament. E. Was oner forest-land, mat the seat of a l"werful trile, the Trinchantes, whose famous chiefs, Caractacus and boadicea, were overthrown by the Romans. L. constituted part of the loman fluevie Ceverionsis. It has allondel many Foman remains, and a liman road once phessel through Colchester, which was au important lioman station. The raxon kinglum of Visses inclumded London and parts of Mihllestex, IIertfind, licedord, aml Essex.
 Walter Duverenx, first carl of B. was burn at Netherwond in 1 Ierefordshirs, loth November 1507: enterel Trinity College, ('ambrulge, at the age of ten, where he remaineld for fonr years. Lord Burleigh, to whose guardianship, he had been intrusted, introduced the hamesome and gifted youth at court in 1584. Here, by his arrecable manners, his appearance, and talents, he established himself amone troops of friends, and gained the special farour of Elizaleth. In 1585 , he accompanied the Earl of Leicester to Ilolland, where he distinguished himself
at the battle of Zutphen, and on his rcturn to Engat the battle of Zutphen, and on his rcturn to Ensland was made Master of the Morse and Knight of
the Garter. After the death of Leicester, E. contimued to rise in the favour of Elizabeth, who loaded him with honours. In 1591, he commanded the forces sent to the assistance of Henry I Y. of France against the Spaniards, but achiered no success. The next few years were spent in cndeavouring to get the better of Burleigh - the wisest, the most prudent,
and the most plitic of all Elizabetb's advisers. In 1, 96 he was alr"minted joint-commander with Loril Howand in the rxp lition aqainst Spain, to which Burleigh was strmaly ollosed; and though E. displayed all his wontel crmaser amp rontributed to the capture of (iulin, which consed immense loss to the spaniarls, yet thet exputition resulted in nothing. and E. had to defem hmosf acrinst varions aumsations on his return. In IG! ${ }^{2}$, In was mate Earl Marshal of Englam?, and, wn the death of Lonl lorleigh, Chancellor of 'ambride. In 1505 wecurved the first fatal mistake in E.'s carver. Tresmming upon Elizabeth's admiration and fominine fontm"as for his person, be differel from her almut sume trithis matter, and angrily amd rudtely turned his bukl upw her in the presence of some of the conncil, and her majesty, whose language was harmy man delicate than her fathers, gave him a vigurous bux on the cars, telling him to "on and le lrangel.' is vident quarrel ensuch, which, though alparently suon thed up, was never really so. E. was afterwarts, in I.594, sent to Ireland-part if which at that tinne was in a state of robellion as lord-hentenant of that country; but here his government was ill-advisal and inctivetual, and after a fow mimportant mulertakinges, be comelnderl a truce with the rchels, which was ruaried at court as high treasom. In order to confront his cmemies, he hastened back to Lompon, contrary th the quecn's expuss commands. and furced his way into lifizaleth's hembhanher. Instly offended, the queen thenived him uf lis dignities, and commanded that he should be calles to acenome for his lndavinur. E., advancing from me legree of fortharihool to another, trit to excite an insurrection in London. Ite was imbrisoned. tried, and formet guilty: Elizalueth lomer delayed signing the warrant fin his executim, in the hope that he woulh inaphate levp parim. He was beheaded on the e-ath Fehrary IGol, aiter defeatiner hinselic with Imide and dicaity. E. was rash, hold, anel presmoptunus; bont have, generons, and affectionate, and the friemi and jatron of literary men.

## ES-SIOITT. Sue sivtt.

ESSLINGEN, a mamfacturing town of Burmanys in the kingdom of Wiurtemberg is sitnatel near the right bank of the Necker, in the centro it a lleacing and fertile district, seven miles east-smenthcast of stuttrart. It consists of the town 1 wower, and tive sulhurls, and is surromdel hey strong walls, and fortined by towers. The chof buildings are the Fromenkiorho-a spondil mbitice in the jurest (Bathic style. lanilt in 1111). ame surmomateit ly a shire 830 feet high-the whl :mil new town-hanses, ant the old castle. It has the greatest machinemaking trade of the lingtum, has manufactures of a wive callad Esilingen champarne of woollens, and enttom and woollen yams. lateked imm, silverplate and tin wares, and paper, with a gond trade in wine and arricultural where Pop. (15:1) 17,041.
L. Was funded in the sth c. and received in 1000 the rights uf a free city of the German empire. The lone and hooly quarrel which existerl hetween it and the House of Wiurteminry was hrought to an enl at the 1 reace of Lnnéville ( 1802 ), when E., With its territory, was assigned to the duchy of Wiirtemberg.
Essolisi or ESWAN. See Assotax.
ESTADLISHED CHURCH, a church established and maintainel ly a state for the teaching of Christianity in a particular form within its homadaries. Subsequent to the lieformation, many of the opinions which had given sanctity to the Church of Rome still kept prossession of men's minels; amongst these was the notion, that the civil government of each state was bound to maintain a
particular form of Christianity. The same fallacinis reasminer which in more recent times has lad to the someh for one absolutely last form of civil goverabands was at woik then with reference to the church. Thu: Roman Catholic Chureh was mot the hest furm
that the lrotestant stater hal beeme con-Sherel-hat all forms were not themere indificent; arn if one was better than another, and another in-ter than that, there must le an alisolutely leest, which the state was lumal to disouver, anit when - lisenvered, to sulstitute for that which had luen athlishem. The ilea that the gemb on lad qualities of finms af govermment, whether civil or eeclesiastical, so long as they dial not violate the furdamantal doctrines uf 'hristianity or morality, were relative and not absolute, and that whilot one might be the best for men in und stage of durelopment or if one particular temprament, anther might he the lust for those who dilficul from them in these ruspects, "im mot lulone th that age. Each Protestant state consequently wahlished a chureh, conformity to the tenets of which it raforced not only urum thuse who as ministers were henceforth to enjor the property whi h in Roman "atholip times had lowen dersted to the sipiritual interests of the community, lint very oftom on its own ciril servants anl alwisers. The benetit of the arrangement was, that, to a greater or loss extent, the mans which the onmmunty hat sot apart for its own spiritnal inpmoment wore potected from the spoliation of private indiviluals: and this henefit was secured hare effectually the more cumpletely the new whreh took the place of the All-in Dongland, for oxanide, hetter than in sontland; hut as cach of the Protestant states hal sulatitutini one form of churchfowernment for anther, and as the same form hal not been adopted hy them all, the idea of therw buing one form which was alismbtely preferable to the rithers, thench not aholished, was mulely shaken. In Englanh, ©ncen Elizalreth liad stated in hor celomatmil declaration, that she, as head of the chureh, ' womld not emblure any varyins or departing in the laat derrex from the doctrines of the Episcopal - lumely of Englaml as set forth in the Thirty-nime Articles : amb yot Dreshyterianism was established in Englan in 1649, lin Sootam, where Presher torianism lam at first taken ront, Episeopalianisu ban more than mee lecome the law if the land. The effiect of such recurrences was to countract the helief in any wne form as the form for all Christomlon, and to facilitate lissent and the formation If seats. The pastors of these sects wore not at first reconised lyy the law as entitlal to any of the privileres of Christian ministurs. Whatever they might lie to their onn llack, to the state they were laynen, ant thair charches wore mere secular lecture-rooms, or, at mest, places of mecting for ] mivate devotion. Su Noxominnmity, Dissexters, Girmen, \&c. Gradually this view became modified, aml the civil consequences attaching to sacreal rites, when priomed by a elerryman of the establishmont, were extensed to them when preformed ly shins-nturs. See Maramas. But though many of the privileges, and atl the liberties belonging to the wtablished church, have now been atented to disenting bodies, ineluting limman Catholies (see
 Ifw), the (stahbined (flume of England and Rentdaml are suported by the state, and guardel from spuliation ley the Coronation (athe (r. v.). The grant tw the liman ('atholic collecs of Maynortls, anit the
 in Irelant, whe eap italised by the aet (1869) which disestahlished the Mish Church. 'There is no endowmont to other religions rlenomimations, as in France; and the emoluments of the established church in

England, thonch modified in their distribution ley the labours of the Lecelesiastical Commission (f. w.) have not yet been appropriated to any other than religinus uses in eonnection with that chmed.

The cumse of cstablished churches is very genemally mantained on the eromed of the allemed inty of the state to provile for the relighos instruction of the whole hanty of tho peophe, as most essential to their moral welfare, and su to the general prosperity of the commmity. It is further armed, in support of the same canse, that civil rubers, of the people as assomated in a free state, are moler at moral olligation of the highest kind, to acknowletge God, bis law, and his ordinaness. Concermine which, and other arguments, for and aganst establishod churehes, as far as it lelongs to the scheme of this work to nutice them, the reander is referesel to the article Volcathix (hicholis. It may here, lowever, he ohserved, that the arguments fust mentioned do not necescarily infer, pren when almited to the utmost, that the state is homm to sumprt in any exclusive way a particular sect or denmination, unless, on th.". further assumption that religious truth and worth belong to that denomination alone. Nor does the endowment of a church ly the state necessarily follow from the fullest alopition of the principles thus conteaded for. Auck, on the other haml, it is a point which may very reasonably be disputed, how far the common arguments agaiust state endowinents are aphlicable to those endnoments which were not ariginally bestow by the state, lut which the state las, from a very early periol, recognised as trelonging to the church ; a description which will be foumi to comprebend great part of the existing endorments of estahished churches. The exclusive pussession of them by a particular denmination, and their rightful apprariation to religions uses, are, however, distinct questions.

ESTA'TE. In the law of England, an estate in lands, tenements, or hereditaments, signifies such interest as the tenant hath thewin; sis that if a man grants all his estate in Dale to A. and his heirs. everything that he can possilly grant sla la pass thereliy.-Blackstone, Comm. ii. 10 . . The first division of estates is into legal and equitable. By the former is signified the istate which a man has hy the common law: ly the latter, the interest which las been ereated by the operation of a eourt of equity. Sce Eqitabie listatra. Uses, Tevers. legal estates are considered in England with refercuce to the quantity of the estate, the time of enjoyment, and the number of persons who may mite in the enjoyment. IThler the first hemh, estates are cither frechold or Joss than frechold. Freehold estates, again, are divided into frewholls of inherit. ance, or Fees ( $q$. $v$. ); and frechohls not of inheritance, or for life. An estate for life may be for the life of the gerson to Whom it is granted, or for that of another person, or for more than one life. A person lolding an estate for the life of another is ealled tenant par autre rie. An estate pur uutre vie licing a freeholit, deseends, in case of the deatly of the tenant during the term. to his beir, and not to his executor. An estate lyy the Courtesy of England (q. v.), aml an estate in lower (g.v.), are estates for life. A converance to A. H, without mention of heirs, makes the grantee tenant for life. An estate tu a woman during her widowhool, or to a man until the occurrence of a specified event, as till ho recive a benetice, will be construed to be an estate for life. Tenants for life are entitled to take Estovers (q. v.), hut they must not commit Waste ( $\mathfrak{q}, \mathrm{v}$.$) . The representatives of a tenant for life are$ also usually entitled to take the Emblements (q. v.) on the expiry of the torm. Estates less than freehold are called also chattels real. This species of
estate, on the lenth of the temant, passes, like other ( Battels (q. $\mathrm{V}_{\mathrm{o}}$ ) to the executor, ind nut to the luir. Phey are divided into estates for years, estates at will, and estates on sufferance. See IJusts. Listates, with reference to the time of their enjoyment, may be either in possession or in expectancy. In estate in possession campuhends not unly an estate in the actual ocenpation of the tenant, but one from whiel Ife has been wrongfully ousted. In this latter case, the law rocrards the rightinl tonant ag lawing the acotial costate, to which is attaclued the Right of Fintry (r. F.). In estate in expectancy maty le cither in lieversios or liemsinuer (q.v.). Jistates of Whis chorneter form a large portion of the rights to land in linglimel, and are the sulyect of sume of the nost sulthe leamine of the Emglish law: With refrence to the number of persons entitled to the enjoyment, estates may he in sevoralty, in joint-tenancy, in co-farenury, ow in commom. An cstate in severalty is where the sole rient to the estate is in a single person. see Jomp-TExivir, Coposcemary, Tenincs in Common.

## EnTATN TATL. See Entaif.,

ESTATE: ON THE IN:ildy. The three estates of the reslm are not linue. Larls. and ('ommons, as is pomblaty beliuted, lint the Lovis Spiritual, the Iovis Temporal, aml the ('ommons. The ancient pratianment of sontland consisted of the king and the three estates of the realu, by which latter was meant-1st, the archbishops, bishops, abbots, and mitred priors; Al, the harons, malioc which hual were comprehended not only the nohility, hat the commissioners of shires and stewartries: and BL, the commissioners from the royal hurylis. All these assembled in one house, and formed one meeting, by a majority of the votes of which all matters, whetlier legislative or jurlicial, were determined.-Ersk. b. i. tit. 3, s. 2. Bell's Dictionary. Sie Statis.

P'STE (ancient Atestc), a tuma of Venice, is lieantifully sitnated on the sonthern slope of the Euganean Hills, 17 miles south-south-west of l'adua. It is an old town, and hiss a elecidedly Lombard aptearance, many of the houses being supuorted by arehes. It has seceral interesting hombings, amony which the chief ate the hocce, or castle of Este, with a grim-lonking donjon tower, overhanging the town, and the chumeh of Sim Martino, in the Fomanesque style, sumounted by a campranie, which slopes as much as the Leaning Tower of Iris. Doth churel and tower have been sadly distigured lyy an attenpt to morlernise them. E. manuiactures silk goorls, saltpetre, hats, and earthonware and has numurous silk-mills and whetstone fuarries in the vicinity. I'opr. more than lo, mou.

D'STE, one of the ollest and most illustrious families of Italy, which, aceording to the historian Juratori, owed its origin to those petty princes who governed Tuscany in the times of the Curlosingians, and who were in all Irobability of the race of the Longobards. The inrst whose timure is more than a mere shatow is Adalbert, who died about $917 \mathrm{~A} . \mathrm{D}$. The grandson or grand-nephew of $A$ dalbert, named Oberto, was one of the Italian nobles who ottered the cromn of Italy to Otho of Saxony. He is afterwards styled Comes sacri palutii, and appears to bave been one of the rreatest persouages in tho realm; he married a daughter of Utho's, and diel about 97: A. 1. In later times, the family of F . received from the emperors several districts and eounties, to be held as fiefs of the empire. The family diviled, at an early periou, in to two branches, the German and Italian. The former was founded by Welf or Gaelfo IV., who received the inres. titure of the duchy of Bavaria from the limperor

Hemy IV. in 1070. The Honses of Prunswick and Ifanover, and consequently the sovereigns of Great Britain, alsn callud Este-tinclis, are descended from this person. In the 12th, 1jith, ancl 14 th centurics. the history of the E. family, as leals of the Guelf rarty, is interworen with the destinies of the other ruling familiss and small republics of Northern Italy. Muring this perime, they frist gained ponsession of Ferrara and the marel of Ancona ( 1 nons A. D.) and afterwarls of Molena and Leegrio (1258 - [2S9), and were widely celelrated as the patrons of art and literature. One of the most illustrions was Azzo THI, who encumagel I'rownegal troublidours to settle at his court at Ferrara, and also fommed schools in that city. Alfonso 1. (died 1534) was equally distinguishel as a suldier and a statesman, and was celehrated ly all the poets of his time, barticulanly hy Ariosto. His second wifn was the unturims Turneia korgia. His quarel with the lopes Julins II., Lew X., amil Clment Vil., was unfortunate, as an interdict was haid upon him for his adherence to the league of Cambray, and his papal licfs lectared to be forfeitel. After the siepe of liome, in 1:27, the duke was restored to liis former pussessions hy Charles V. Itis suecessor, Brocle or Hercules II., who marrial lienatr, daughter of Lonis XTI. of France aml Ame of lirittany, attached himsclf to charles V . He and his hather, a dignitary of the Cathodie Clurch, were also likeral patrons of art and scicmee: the latter erecterl the marnificent Villa d'Este at Tivoli. Tho
 noways inferion to the precting but fur his immoderate love of splendour, his incrimate ambition, and the cruelty he displayel towards the joet Tasso, whise eccentricities, however, it must he confessen, were enongh to try the patience of any reasonalle mortal. Alfonso IV., who flourished in the latter half of the 17 the c ., was very fund of the fine arts, and fonnded the Liste gallery of paintings. Rinctido (died 1737), by his marriage with the daughter of the Duke of Brunswick-Luwenburg, mited the German and Italian Houses, separatel since 1050. The male line of the House of E. became extinet on the aleath of Ereole III. in 1503, his possessions having been previonsly seizel by the French invalers, and ammexed to the Cisalline Iiepullic. Itis ouly diaughter married the Arcladuke Ferdiunnd, third son of Franeis, emperor of Austria. Their ehlest son, Francis IV., ly the treaty of 1814 181.5, was restored to the territories which had lelongell to his maternal ancestors, comprising the duchy of Mowna: and, on his mother's death, obtained the duchies of Massa and Carrara. He was succeeled ly his son, Fraacis V., 21st Jannary 1846. The comection which the family of le, like others of the small Italian ]rineipalities, hanl forned with Anstria, gave it, of conurse, pro-Austrian symnathies, the result of which has been fatal to its lmpularity and dynastie existence. In 1860, the sentiment of ltalian uuity and independence, which for the trevious 1.5 ur 20 years had heen stendily fostered ly the pulicy of Sarlinia, triumphed in a universal explosion of national feeling, which mited the peninsula (with the exception of lione amb Tenice) muder the authority of Victer Emaanuel. Venice was adilel to the kindiom of Italy in 1stic, and Fome beeame the capital in 1570.
Esterlda, an ancient city of Spain. in the province of Navarre, is pleasintly situated on the left liank of the Ega, about 27 miles south-west of Pamplona. It is a well-built, clean town, with several squares, and has, in the environs, a variety of agreeable promenades and ${ }^{1}$ deasure-grounds. It has two interesting churches, loth old, and one of them, San Juan, a fine building with a very lofty t,wer.

The manufactures are wothen and linen fatmies, branty, ami earthenware A tolerable wine is matho in the vicinity: E, has some traule in fruits, womb, hambare ami grain. Phs, alwat emb. Heru [ban - arlus was prochamed king in Sowember 1s.3.:; and here in Finmary 153:9, six of his wheden wom tranchemsly betrayed and excented withnut ewn a form of trial.

ESTE'PA, a town of spars, in the pravine of Seville, and 60 miles cast-sontlectast of tha town of that mane. It is, on the whele, well homits has four splares, and numerns religions whitions among wheh are the churdies of samta Maria and sin Solnastian; the former, on mhe specimus of cothic, having three naves, and al debly ornamented interims. It has mandiactures of coarse choth, haze and ail, with a trade in grain. fruits, oil. bramdy, woul, and cattle. In the vieinity are marlle and buhlingstme quarries. Jon. T3.0.

EsTEPONA, a maritime town of spain, in the province of Malaya, and :2 miles north-murth-east of Gibraltar. It is well and regularly bilt ; its strects while clean, and well raved. It supplics Gibraltar with fruits anl wegetables; and hits chief inlustrial features are its hishing, linen-weaving, and manmaetures of leather. Jop. 9400.

EsTERLIAZY, an ancient Hwigarian family, afterwards raisel to the rank of princes of the empire, the representative of which is at present the richest lamed proprietor in Anstria. The family divited into three main limanches-the Eseszaek, Altsoh! or Zolyom, and Furchtenstein lines. A clescombant of the last family, Nicholas de Esterhazy, hom in 176.5, travellel wer a great part of burone, and resiled for a considerable time in JEngand, France, and Italy. He fommed the splembiel collmetion of pictures at Viema. He also made a clonice collection of drawings and engravings. When Xapoleom, in lsum, entertained the motion of weakening Anstria by the separation of Hungary, le made "vertures to l'rince Esterhazs respecting the crown of Immary, which, however, were deelinet. 'The great Ilaydil composed most of his works at the court of I'rince Nicholas. His son, l'rince I'aud Anton l'Estarkazy, lome in IFbe, entred at an early age on a diphomatie carecr. After the peace of Jienna, he went as ambassulur to the conet of Westphalia. From 1.315 to 1518 , be represented the Austrian moverment at Jombon. He filled the same othee inctween 1530 and $18: 35$. and distinguished himself by his diphmatic tovet aml ability. In 1812 , he returned heme, and comtimued to exert himself in the cause of powitical and literary progress. In Mareh 1s49, he becme Minister of formign Athars, in the cabinet presided wer ly Patthyan ; but when the strughe betwen Anstrial aud IMmary lowe ont, hu exhiniterl more prouner than herosm ly reting from public atlairs altagether. Hedied in 1566 . The herchitary prince. Nicholes Paul 'harles Visterhazy, born onth Jume 1si7, married Lady Sarah Villices, danghter of the Earl of Jersey.

B'STHER (the worl signilies the phat Vemns") is the lersian name of Itwhassah, danghter af Ahhath, the son of shime i, the som of Kish, it lenjamite. Nine is represented in Suriptore as an ophan, and at havin! been lrought up, by her cousin Alordecai, an olliwe in the homsehold of the lersian monarel Ahashras. Wher history, as recoredeal in the bank of Sthr $x$ is woll known and extremely intoresting. Whan the miseominet of fashti hal cost hor her 'rusal istate', all 'the fair somg virgins' of the kinglan were gathered tugether, that Ahasumens
 who received the nane of $L$, on aceount of her
lowelines. The erwat went of her life was the siving of her lewish combtrymen from the harems of that misersal maseacer phamed hy the malion of Ilaman, and ammatell tor bey thenghtless crucley of an "hin nital despot. The details of this went are $t$ on fomiliar to require namation. It is sutlicicut to say that W". s succens was signal: and the fount wheh shat and her comsin Moritemi arpuinten in menmy if their deliverame - vis, the feast of lurim (i. e., if 1 ats), is, in consemumere, celeHated with ereat chthuwian. E , is not hontimenel in prome history, whene it has larn inforret ly somut that she was nut ex.utly the wife of Alasuemes (Nersest) hat rathir the faworite of his harem, to which sha moduabtedly helomind; for, as we real (ii. S), E. was comsigued 'the the ensterly of Hegai, kecper of the mancu.' This hymothesis is rendered prohable ly the fiact, that the lation kings ald mot chouse wives from their harem, lat irnm the princigal fersian families, or else from the damehters of fureigen jotentates.

ESTIAELR, Hank of, of of the very latest of the eamenieal works of the old lestament, and commonly, lat withont a shather of evilence, sup. pused to be written ly Momkenai or Ezra. This is the view of theneria, Clonent of Alexamirit, Augnstime, Gerbard, and ithers. The 'Tahmil assipus the authorship to the members of the Great Synarmue, a semi-mythical hody, who are mado use of hy lewish rathis and Chistimotivines as a sart of $\dot{D}$ ens ,., manhina to salve every diticulty: Accorling to the opiminns of the most learned and unprejudiced erities, the date of its compasition must be flaced after the downfall of the Persian monarchy. The lanange is moch later than that of Jizara ane Nehemiah, ant the faet of mensional explanation of l'arsian contoms tits the prime of the selequita hetter tham an earlier one. The Inchrew text is that which has been followed in the English version: hat the septuagint is full of late interplations and aditions lig Alexandrian Jows. The book is held in the highest raverenve ly the Juw : so much so, that Mamondes declared that, in the days of the Mrsiah, every Themsla seripturn would he firgatten excelit the burk of bither and the lentatench. The brok is mot written in at thencratio spirit, like the rest of Jewish literatume Nothing is directly attributed to dion ; in fact, his name is nut once mentioncl. Neither is then: the remotust trace of religions feeling of any kinh. Luther, in his usual foll-hamd hasty way, expressed his contempt for the book, in spite of the almiration which the Jews lestowed on it, censuring it for it: 'Ibathenish extravagnce.' and declaring that, in his julement, it was more wortlyy than all of lomin excluted from the canon." The alsence of all recomition of (in), ferplexel some of the ancient Jewish crmmentators, who therefore invented the hypothesis, that the book was micinally a bart of the P'ersian chamicles, frobohly exented ly Mordecai ; and that, heing intmedelfor the heathen, the siberel name was wisely left ont!
ESTIlO'NTA, called by the inhalitants them. schess Wriona (i. e., the Jonder-land), a liussian
 extemils immeliately sonth of the Gulf of Fimland; lase on area of 7ayt symare miles, and a popmation ( 1567 ) of :320,668. It was compurin (1182-1241) hy thu. Danes, who suhl it to the Teatonic knights in 1:346. It came inter the possussion of the Sweales in 1.ai, lut was takn from them ley l'eter the (ireat in 1\%10; :mil ly the treaty of Nystarlt was linally secured to linssin in $1-\frac{B}{-1}$. One-third of the entire surfaee, which is in ermeral that, is under cultivation, and prodnces great quantities of rye
and barley；the remaining two－thirds are chiefly composed of s：mbly tracts and marshos，strewn in many places with lare lilocks of manity：there are also extonuive forests of birch and pime．The government of 14 is hividel into fon cireles ；its prinespal tow is Reval or Revel（if．r．）．

Tandry, as aplided to any inferior kind of friperys. is betheved to be a corrupt inse of the term st Aldicy

E'THEF (ntherwise callell Finylic Emimer, Vinio Ether, and sclpuchic Enimat is prepared from alcohel ly the aetion of sulphate acid at an eleanted temperature. On the small scale, the apmaratus which may be employed for the parpose is the retort and recciver, into which a mixture of equal

weights of spirits of wine, or reetified spirit and oil of sitriol, or, hy whme, 2 of aleohol and $]$ of sulpheric acid. are placed, and heat being cantionsly appled, a liquid distils wer, which consists of cther and water. In a short time, the contents of the retort begin to blacken, and the operation must be stopped, or the distillate will become contaminated with sulphurms ach. On the largo scalc. a modification of the process is carricd on, which remders it theoretically a 'continnous process,' thomgh. practically, there is a limit to the amount of ether distilled ower.
The enversian of alcohol ( $\mathrm{C}_{4} \mathrm{H}_{5} \mathrm{O}, \mathrm{HO}$ ) into ether $\left(\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{O}\right)$ and water ( HO ) by oil of vitriol ( $\mathrm{IJOSO}_{3}$ ), was at one time considered to lee duo simply to the strong affinity of the nil of vitriol for water, which enabled it to take possession of the one atom
of water, the elcments of which form the only diflerence in the ultimate composition of alcohol amb ither. This simple mode of explaining the process of otherification, however, dues not acknowledge that the atom of water is not retained by the wil of vitrind, hat is given off side ly side with the ether in mechanical solution therewith. The theny of the process mow generally acented is too complex fur introndertion here.
Lither is a colouless, transparmt, whatite liquid "f grat mobility and high refrative power, and mossessing a frogrant oumb, ami a hary, passing to a conling taste. When pure, it has the specitic
 commereial specimens we never from water and alenhul, and have the density 7.11 . It buils at 94'5 ${ }^{2}$ $\mathrm{I}^{\prime}$. (the enmmercial at $36^{\circ}$ ) amb yidhs a very dense vapour, the specific gravity of which is exsif, as compared with air 1000 . When reduced to a temuerature of - $24^{\circ}$ F., ether frezes. It volatilises spontaneously when placed in an uncontined position. as in the palm of the hand, and waprises so quickly as to prombee intense eold. Indeod, when water is covered with ether, and the latter assisted in its evaporation by hemis hlown umb, it escapes so realily as tor relice the tomprature of the water to : $:=$. when it freezes. It is very inflammahin. haming with a yellow-white flame: and mixed with air or oxyen, it gives rise to a dangerons explosive misture, and hence great care reguires (o) he taken in its distillation to keep all lights and fires ont of the rome where the rapours are condensing. When ether is addod to its own bulle of water, hriskly agritated, and allowed to sottle, the two liquids appear to separato arain; lut it is fomm that the (ether has taken up) nne-eighth of its whome of the water, whilst the Iatter has dissolvel the same quantity of ether. It is ruadily miscible with alcohol in all proportions. Fther is one of the lest solvents for the rils and fate, aml hence is employed in amalysis for the solution and sepration of the oils from other orqanic matters, as in the aunlysis of oil-cakes, \&e. lt is rlso a gool solvent of iodine, sulphur, phos$]^{\text {honens, and of strychine, and other alkakids, as }}$ well as of corrosive sublimate, and other salts.

Ether is usciul in the preparation of freezing mixtures, and the mixture of ether and solid carbonic acid gives rise to the lowest temperature which has as yet been attained. When inladed hy man and thio lower animals, ether first produces stimulating and intoxieating effects. hat afterwards it gives rise to clrow iness, acompaniod her completo insensilibity, which entitles ether to the regarded as an important anasthetic agent; and, indeed, for somo thme it was the only arent usel for jrowlucing Anes. thesia (f. v.) in oprations, hat has been entirely sumerseded hy the employment of chloroform.

Lither coters iuto conlination with many adals, forming compound ethers, possessing great framancy, the more important of which are given in the fol. lowing tahle:

> Acctic Fther.
> Butyric Ether,
> Caproie Ether,
> Butic Ether.
> Polarganac tother,
> Enanthic Fither,
$\mathrm{C}_{4}^{4150} \mathrm{C}_{20}^{12} \mathrm{H}_{13} \mathrm{H}_{3}$ )
$\mathrm{C}_{4} \mathrm{IL}_{5} \mathrm{O}_{1} \mathrm{C}_{18} \mathrm{H}_{1} \mathrm{H}_{3} \mathrm{O}_{3}$
Tine-apple Oil.
Th $\mathrm{C}_{4} \mathrm{HSO}, \mathrm{C}_{14} \mathrm{H}_{12} \mathrm{O}_{2}$, Wine Oil

There are other ethers, in which ordinary ether is mot one of the menbers, as

ETIIER, sometimes FTIIER, the name given to the medium which is assumed in astronomy and physics as filling all space. It was shewn by

Newton, that if light consisted of material particles projected irom luminous luries. these must move ficster in solinds ant liquids than in air, in order that the laws of refraction might lio satisfied in their motions. Huyshens, on the other hand, shewed, that to accomit fin the sume laws on the sulposition that light consistod in the malulamy motions of an clastic merihm, it must muse mave stonty in solids amd fluids than in gases. Fiacim and Foucault have lately, ly different mothonls, measured these velocities relatively, and have fomm llyynens's proliction to be comect. Lighto them, conists in the vibratory motion of a medim, which mist, of course, till all space. This is called Ether. As yot, we have no idua as to its ultimato mature; sime of onr greatest philusphers, eron. hase sirlpuad that it may lue of the clase of umbary anses, and that our atmesphere, for instance, is not tinite in extent. lut pervales, with preatly redned donsity, all interplanetary and interstellar space. Many ubjections, howerer, may casily be raised arainst this supposition. Mcanwhife, we may remark that the mathematical theory of light, in the hypothesis of undulations, requires that the vibrating merlium should pressess fralebties mare marly allied to those of an elastic solud than thuse uf a lifuid or a gas. The ether leing required for the explanation of the existence and the propagation of light, it lecomes a matter of importance to incuire how many more of the plysical foress may be referrel to the same canse or melinm. Tadiant heat most certainly may, and, in all prolalility, pravitation, molecular actions, magnetic, electric, and clectrodynamic attractions and repulsions, are also to be thas explained. As to sensible amd latent heat, electricity and magnetism themselves, the nccessity is not so clear ; lint even thes. have been of late almont satisfactorily explaina? by the hylothesis of the all-pervarting ether. Son Fores. In the article just referred ti, a good deal more will he found with reference to this sulject, and especially with reference to the impossibility of the ether's consisting of air or other rases, which are made up of distimet and separated particles.

ETHICS, a wom of Greek micin, meaning nearly the same thing as the more familiar tern Marals. The science, treating of the nature amd grommes of Moral Obligation, and expmonding our various duties, is called sometimes ly the one term, and sometimes by the other. This is a sulject wherein opinions so dillerent from each other have been, and are still held, that a writer's task must lie first in explaining what are the chief points in dispute, and next in giving an account of the positions taken mi by the opposing schools.

Thre are two distinct questions connected with the Theory uf Norals. The tirst is the properly ethical question, and is, what is the criterion of it moral act? otherwise expressed as the moral stan. dord-the circumstance determining an action to lis right, and not won\%, nor simply indifferent as regarts riyht and wrong. What determines us to single out some conduct as the subject of moral apmolation, and other conduct as the subject of moral disar, mobation? We consider murder, theft, breach of promises or contracts, resistance to authority, cruelty, ingratitude, slander, holding of slayes, polygamy, to be wrong. or immoral : and the scicnce of ethics is called upon to assign the reason, or reasons, why these various actions are so accounted.
The other question is properly psychological ; in other words, relates to the constitution of the human mind. It is, ly what faculty of our nature do we recognise this difference in actions? Is it by onc of our ordinary intellectual faculties, such as Reason? or by some of our emotional susceptibilities, as Loro

## FTIIICS

and Hatrel? wr by mixal faculty like l'munew?
 this cone whenet and no other, as the eye is fumend fir remenisims eotome, and tho bar for smand? This guestim has teen often improperly mixell ap with the wher, althump there are ertain thembing wherin the answer to the first d.jumbs the the answer to the serond.

As regrats the Nembard of Maralo, it shomht he promisul that Punisment fin norget is what shew
 embluct: hat if we do int comsher it dasumer of punishment, it is not immoral in wir wes. bomples imprudences. whemes they hast thomstres alome, are disipproved of ; lint there is sehmm any dispusition to step in ly way of penalty in arder ta prevent sum comluct ; the disapmonation, therefore is not of the moral kimb. The panishment intlicted by socisty is partly lank on threng the civil wasernmont, and partly low pulic minme, which, by attarhing a stigma to certain combluct, is able to insine mo loss theal than the civil autherity. "Ihe pminhment, ley society acting in this way, is some-
 from the legal sanction. Pishomour is another name fur the same thins: Many kinds of conduct tolerated by law, an stall maished ly the loss of pmilie estem ant the infliction of disures. Cowardice, eccentricits, hetemloxy heyond certain linits, expose the individual to puhlic censure Many kinus of inhumanity, as maltreatime depeudents, hate no other check than expressel disaprobation.

There have ben various theories to acement for the sineline out of some actions to be authoritatively furbiden by law ant socioty that is, forbmen by the sanction of pmisment. Some have said that the will of the Deity, or divine revelation, has imbicated what we are nut to dh, and that there is
 preseribel: others, as (omborth, maintain. on the eontrary, that what the lhaty commands must be such as our own consciener apmoves, rtherwise we comb not give 1 im the chatacter of being inderems. ently gomi amt just. It has luecn sail that light leason shews us the difference between right and wrone; this was 'ulworth's nwn view. Samuel Clurke concervel that there was an eternal ant intrinsic gitnew in the thin*s considere a a riwht, and an untithess in the wrong 'with a reand to whin the will of Ceml always choses, anil which ourdit likewise to determine the wills of all sulwordinate ratiomal heines.' Both these writers aimel at replying to Hobles, who had maintaned that the (ivil Magistrate is sumeme in Morality as well as in lohties: memins, however, in all prohatility, that the magistrate limself ousht to frame his dietates in che, ass in the rither, with a view to the palife gnont, which womld be a Ctilitarian view. The phrase, 'the Moral sense,' which now reporents perhaps the most prevalent monal thenry, necurs dirst in Loml shaitestury's Inguiry Commoning Firfur, from whom it was aloptad ly IIntcheson. and has simos passed into general currency. Sumetimes it has luwn maintaned that a recoril to silf. int.rest is the only ultimate rule of right, which hass a wry diffornt in aming, accorling is we look at
 The mont andarged homewhence, in me view, is lat :an aipect of self. Adam sumith, in his Theory of Momen sentiments, lidid lown as the criteriom of riyht, the "symmathetic feelings of the impartial and wellinfinmel suctator.' Fat although this therry acknowhores our hias in the catacity of agents, it presmacs us to be imfalhble when actime as judges or critus, a pasition hy no means self-cvident. The spectator has his own failings as woll as the actor,
unkss specially qualified by mature and chncation to play the part of a moral judge. Bint to pass ins. A.rmix Benthan is known as the nost clistinguishad frombider of the primeiple of 1 tility as the basis of manals, a principhe exphancel by him as in contrast. tirst to Asectichm, and noxt to 'sympathy and Sntipathy', by whel he meant todeseribe all these systems, such as the Moral semes theory, that are ermaled in internal feelines instraul of at reatad
 Aserticism, he intended to imply that there was mo merit attanhint to selfedenial is surh, ame that the intliction of pain, or the surrember of plasure, combld only be justithel ly lneing the moans of provering a sriater amomet of hapiness than was lost. l'iley also repudiated the duetrine of a Mamal sense, and hed that virthe is "the doiner somel to mankimet, in obedience to the will of fiakl, and for thip sake of everlastiog harpmess.' The utilitarian theory of Jjentham, with various molifications, has heen defembel amb expuntel ly dames Mill, in his Andlysis of the Human Minel, and in his anonymous Frotiment on Muckintov: by John Austin, in his Prominte of Jurispudence Determinal: and by Mr . Tohn Stuart Mill in his Jisaertations and Disettasiom., and in Prasers 14ugzine (Oet. to 1)ee. 1861).

The great eontroversy may he said to lie leetween the allherents of the lloral sense in some form or nther, and thase that deny looth the existence of at separate faculty in the mind for pereciving moral ristinctions, ame the valitity of the determinitions of the imtivitual emseience; mantaining that morality ought to be fomded on a regard tor the wellowine of mankind, and that exelusively; am that rules of morality gronnded on any othe? motives are indeimsible. In short, the yuextion is, Is murality an intution of the mind, of is it like the genermmat of the state, a pasitive institution, (101 which different societies may ditfer, and which may lee set up or lee almpateif at the pleasure of the suciety?

The theory of Intuitive Morality was vismonsly assailed hy Locke in his Essa!y on the l'mbrastundin!t (book i. (hap. 3); ami we may renture to say that his abjections to what he called 'Innate l'ractical Irinciples have never heen anawred. These onjece tions have them given in a combensed form by latey
 in point of fact, there are no pinciphes minersally receiven amons men; that moral rules require a rasmen to tre given for them, whieh ought not to be necessary, if they are imate; that rirtue is senemally approved of, not hecanse imate, but beause protitalde ; that innmmerathe ennmities have been practised in various comontries without eren cansing remorse; that the moral rules of some uations are Hatly emitradictel by nthers; that no one has cever been alle to tell what the imate rules are; that we do not dind children possessed of any moral rules, \& fomber on the ercat variety and opposition of moral rules in ditherent places and times, ly saying that although the sulstance of the moral codes differmo bart of the worll heing monogamons and chaste, White other nations allow promiscuons intercourse of the sexes-all arree in enjoining some moral rules: mowhere is there an absence of social and momal abligations. But this is to dejuart from the orimal question, which was to assign the standard of morals, the criterion for determining which of two "Iposite courses-monngany or phlyamy-is the correct or moral course. The intuitive moralists say that human nature is endowed with an instinet which at onee alproves the right and disapproves of the wrong, and that we need go no further than our own conscience to settle the point. Nuw, when the

## ETIICS.

existence of enntrulictory consciences is pointed out, it is not to the purpore to say that these are still consciences, and imblicate something as miligatory; this all cumit: what we ilesire is, to determine which we are to follow.
D. Whewell. in his blements of Vhomlity, has propersed a way ont of this serivis ditliculty ly sotting up a sumpme or Etamdan Conscience, by which the: inlivilual conscience may lo supared and corracted: lont he has not toll us who are the men whase consenence is the standand; it being mbioms that the loman race, ats a whole, do neit recomise :my such, althanch each stparate community minht consent to take some of it most estimalle citizens, or the interpeters of its religions conde, as models to confum to.
The following is one viow of the nature and orivin of onr manal principles which would seem free from the trave abjections athere ahbuld to. If we sut aside for the present the guestinn as to the propur standar of momals, the riterim that we shonh comsider the right eriterime, if we had tor ract a corde of momals for the tirst time, ami if we lenk at the momal prineiphes that have provilod in liflerent nations and thas, we thall find that they have lecem dietated from two distinct limels of motives. The one is Utiliter in the sense of the common safety of men living in sochety. The prohihitions astinst manslayimen thent, breach of harazin, relodlion, are necessary, Wherever men have formed themselves into connmonities: and it is the aurement in such matters as these-although subject still to very graat varicties-that makes ul the amount of mifiormity actually anserver in the moral condes of aations. If the suchety hin mot arree to protect life and property, liy punishing the murderer ame the thief, nothing wimh be gained hay coming water the sway of Covemment, ame hman leings would mot he gat to assuciate themselves in tribes or nations. The common rme gives a common character to the means, without snpposing a speciat instinet to sugecest that stealings is wrons. But, in the speond place, thre have been, in the mural conles wif all cuntries, prhibitions not connected with any puldic ntility, hat jrompted ly strone sentimental likings or aversions, which have acquirel the force of law, and are make the fommation of empualsory enactments. Of this kim is the antipathy of the Wew and the Mohammedian to the jis the Ilinda repugnance to animal fond cenerally, and the usages of a merely ceremonial kind prevaling among many nations, which are ats strimently enfored by haw and publie union as the sacredness of life amd property. For a wiman, among the Dussumans, to axpuse ber face in puldic, is as great an otfence ass grimp naked would he with us; while, among savage tribes, in warm climates, where clothing is little required, it is nu shame to expose the whele persm. For these practices, mo reason can lee given: the pablic sentiment has determined some thinss to loe richt and others wrong, without reference to any publie or private utility; and it is in these enactments, founded on liking or disliking, that nations have differed most willely, the diflerme often amoming to contraniety. The anciont dreeks held it as a sacenl obligation to drink wine in honom of Diony:ns (Bacehus); the Nazarenes among the Jews and the Nohammedans entertained an opposite view. A lerishator for the North American ludians might prokibit aleuholie liquors on the ground of public utility, the natives not being ahle to contron themselves unter stimulants; lut the prohibition of wine in those other instances is probably a species of asceticism, or an aversion to human pleasures as such, which belongs
to the domain of sentiment, and not to the consideration of utility.

Looking at the many earicions injunctions that owe the in orimin to fancies such ats these, it may be doulted whether the hmman race can ever gain anything ly departing from the principle of utility as the sole criterion of gool morality; and there is an increasing tondency to recomise the supremacy of this brinciple hoth in Marals and in Legislation. Justice, truth, jurity, although smactimes viewed sentimentally, or as heing ends themselves, are in mon's practice looked unum mone and more as of the nature of means, the promotion of human happidess being therat.

A great number of the existiner moral rules can he traced to a distinct historical micin, powime still mone decisively that they are mot the suggestions of a miversal instinct of the human minit. The Dhanmedan corle of marals came from Stohammest; Comfucins was the moral legislator of ome larye section of the "hinese. The making of the marriage tic irrevocalde in christendom was an exereise of panal anthurity in the listh c., and has since been repalal in some I'rotestant contries, although retainal in Catholic states. Nee bivones, Marmane. The sentiment which forlouls the lowling of human beings as slaves is chicily the growth of the last two ar three centmies.

Athrough the donetrine of intuitive morality is, in this view, demmel, it is still admitter that there is such a power in the min! as Conscience, which warns us whon we are doing wrons, and is to a curtain extent a fore to make ns do right. But it camat be shown that we ant hom with any such principle, combininis loth enlifhtemment and motive power. Conscionce is is ifooth. There are in our constitution certain primitive impulses that sofar coincigle with what is our duty, and therefore contritute th the formation of the conscicnce: these are principally Solf-preservation, or a regayd to omselves, and inympathy, or a regard to others. There are many duties that we are prompted to for our own interest, such as telling the trath, in rider that jeople may confule in ns; obeyins the laws, to awod junishment. \&c. lhat We cannot perform all our social duties if we look merely to ourselves. We must, in aldition to jerndence, have a source of disinterestod action, inducing us hoth to aved mjuring om fellow-beings in the promotion of our own selfishness, and occasionally to sacritice ourselves for the sake of others. Such a principle exists in onr mental nature, although not of cunal strencth in all minds. Being provided with these two primitive springs of action, we are susceptible of hemer ehucated to the sense of moral whigation. The child is tirst taught obedience by $p$-nalties, aml is made to associate pain with forbidden actions. 'this is the gern of conseience. Habits of arominer what is mohibited under penalties are gradually forment, and the sense of Anthority and law is the eley acruired. When the powers of olscration and reason come to maturity, the indivilual sees why the restrictions of duty have been imposed, and is then ready of his own accord, ant apirt from the fear of punishment, to behare rightly. The Conscience, grounded un lear, then becomes the Conscience grounded on spontaneous approval.

Consciance thus follows, and does not precede, the experience of human anthority. Authority, sanctioned lyy punishment, is the type and the starting-point, even when the conscience takes an independent llight, and adopts rules for itself different from those that entered into its education. The grat mass of human leings have nothing more than the slayish conscience, or the habits imparted ly the excreise of the parental and public authority,

## ETHICSETHIOPI.

which shews what is the mest matural foumation of morat sentiment. The persons that julge of right
 natima pernliar to the semety where they innw up, are so few as to the the exeption everywher their comsidence does not prove what is the usual coldownent of human mature in this resteret.

Itnguries of the nature of those above sketeherd, froceed mon the assmmption that momal distinctims have their ground in the constitation of the woth and of man's nature, amel may he discovered by the exercise of human reason, as the other laws of the universe are. Tiut fractically, the rulus of morality have, in almost all commonitas, been mone or less dependent upon a befice in divine laws supurnatually revealed. 'lhe relation of these to semen titic ethies will he consilered under linvelutios.

ETHIO'PIA, the bimical Kust. Origimally, all the nations inhaliting the smbthern purt of the globe, as known to the ancients ; or rather, all men of dark-brown or black colom, were callal Ethio1hans (ir. ailho-ips, sumburned). Later, this name was given more particularly to the inhalitants of the enmatries sonth of Libya anl Egypt, on the Upper Nile, extending from $10^{\circ}-25^{\circ} \mathrm{N}$. lat., $45^{\circ}$ $-55^{\circ}$ E. lows--the present Nubia, Senaar, Kordofn, Ahyssinia. The accounts which the ancients have left us with respect to this porple are, cren where they are not of an entirely fatulons anture, extremely santy and untrustworthy, as both Grecks and fomans never got beyond Napata, $19^{\circ}$ N. lat. We will just mention that from the Homeric age duwn to Ptolemy-who is somewhat better informel-these regions were peoplen ly Jymins, Troglolytes (awellers in caverns), Blenmyes (hidcous medi), Aacrobii (lung-Ived men), \&e. besides being diviled into the lands of rimatmon, myrrh, of elephant-caters, fish-eaters, tortoisc-eaters, serpentecaters, \&c. The only purtion of ancient records which does contain something akin to historical accounts, is that which refers to Meroe, an island formed ly the rivers Astaphus and Astaloras, tributaries of the Nile. There stoon, from times immemorial, an oracle of Jupiter Ammon. This, and the central portion of the island, together with the extraominary fertility of its soil, the almmo ance of animals, metals, \&e, male it mot wily the chief place of resort for all the inhabitants of the ailjacent parts, especially the numerons nomad tribes, but also the emporimn for lndia, Arabia, Ethionia, Erypt, Libya, and Carthage. Thas it grew so rapudy, that about 1000 子. C . it connted imong the most porerful states of the ancient world; and about 700, having ever since Sesostris been tributary to Eeypt, it succecded, mater Sabacus, in shaking of the buyptian yoke, and continoed, in its turn, to hold Esypt for abont sixty years. During the reign of i sammetichus, 240,000 legyptians settled in Mcros, which, the greater jart of the immigrants being artisans, tmars, \&e., rose still higher. Many new eities were hailt, and the state was in the most flourishing condition, when it was conquered by Cambyses, abnent 530 lic. He fortified the capital town, and callent it Neroe. After the destraction of Theles by Camlsyses, most of the inlabitants of that city tork refuge there, and made the country still more Exyptian. Enganmes trasformed its theonacy into a military monarely, in the $3 l$ century. Inder Angnstus, llerue was conquered, and a Queen Candite is mentoned as his vassal. Under Noro, nothing bat runs marked the place of this once powerfal and highly civilised state. Up to this day, remnants of mighty laidings, covered with soulptures-representations of priestly ceremonies, battles, de.-and halfelefacel iuscrigituns hewn in
rocks. hesiles rows of hoken sphinxes amb colosesi, are frequently mot with in those parts.

Their religion, art, form of govermment, and civilisation, demerally lacing - in their chite features at hast-so impotical with the Eyyptian as to have given rise to the question, which of the two mations imparal their knowlealse to the othro we will refer the reater for thase points to the article Lastr : and will pmed mow tor say a lew words on the history of the desemmants of the ancient Sithonians-the inhathitants of the present Itabesch, or Alyssinia-as we dorive it from the wery poor ame seanty native chromicles.

Accorling to thase the son of sulomon and the (Pucen of shelam (Makemat as ther, balkis as the Arahian historian* eall her, namal Acnilehek, was the first king of the Rethiopians. Few kinge' names oceur ap to the time of christ. when Bizen ocenpied the throne. Tha missionary Fromentios (3:30) fomm two lrathers (Christians) remong-Abrela and Azhela. Wuring the time of the cireek emperon Justin (522), King Elennals destroyel the state of the Homerites in Asia, in wher to revenge their persceutions of Cliristians: amd was camonised. From 960 to IB00, another dynasty, the Zagoean, held the chicf fower, all the members of the Solomonic lynasty, stwe one, having been murdered hy Esal, who made luer son king. In 1300, 1honAmlak, a descentant of this ane scion of the honse of David, who hat thed to shela, regained possession of the conntry, and made Shela, insteal of Axum, the seat of rovernment. To this day, his family rules the conntry. Propuent revolations within, more especially lrought abont ly the refigions squabldes imported ly the lortumese towards the end of the lith 8 , and a host of enemies all aromb-the most formidable of whom were will nomad tribes of the desert-foreed the lings more than once to aptly for forcign help; amongst others, that of the Tinks in 150s; and the affars of the modern state lave at all times loen anything lat prosperons. Special mention is made of king Zara-Jakub (Constantine), 1434l46s, who sent an mbiasy to the church-council at Florence; of Aznaf-Sitell (Claulins), 15401.550 , during whose reim Christaph de (Gana from lortugal lived in Ethiopia, and made common cause with him agrainst his enemies. This king alsn wrote a confession of faith, in which he defended his church both aqainst Jesuits and the charge of leaning towards Judaism. Socinios ( $1605-1632$ ) openly professed Roman views; but his son Facilides soon expelled the Jesuits and their friends from the conntry, and put an enl to the foman intluence. Among these frimhls was also Abla Gregorius, later the friend of the great Fthiopolo. gist Ludolf, who, having mule lis acquaintance at Rome, induced him to migrate to Gutha, where he also remamed until his death. Unier Joas $(1753-1769)$, the Gallas, a nomad tribe, bitherto the mightiest and most dangerons encmies of the Ethiopians, not only gained aumission to all the oflices in the state, but acquired almost absolute power. One of them (Sissn) Michael), holling the place of Lash, or mime-minister and chief-commander of the tronp, proved a very great friend to Bruce, to whom he also intrustel the government of a province. Since Salt's risit, the country remains convulsed with internal revolutions, seditions, $\dot{\text { ge }}$, there leing several pretenders in the fich. The taxes of the country are mostly paid in kime-raw material, metal, horses, \&e. The king resides lut rarely in the city, and for the most part remains with lis soldiers in the eamp. Iis oflicial name is Negas, or, in full. Negras Nacass Za-itjopja, King of the Kings of Ethiopia-allating to the
ehiefs of the towns and provinces. The soldiers
receive no pay, but rely on plunder; and are said to le vary valurous.
bimisants, as were beyond doult the earliest setters in Ethinia, from the wher side of the Arahian isthmus, it is hut natural that the structure of their lamsuare, as well as that of their own balies, shmal bear traces of their Shumitic origin. The reason of this emigration is contamel in the very hame of this langmato, whieh is called cietzfrow, allinding a most striking parallel to the desig. nation Fran--Frend. Free places of habitation were what they dame in seareh of. The name Fithiminim, ur, is they call it, Ithmpinam, they ahopted irom the Grocks at a very late prom. This
 $1, y^{2}$ a royal decrece of Ikom-Amlak, an the 1 thlic., amol the Ambarie adopted as the court language. liver since, it has, with exception of the province of Tigré, where it is still spoken (with slicht iumatic changes), remained the Seshenet Mashat, the langrave of lanks and of the church. It is exclusively used in writing. won of ordinary letters, and the edueated alone momentand it. Its general structure comes as close to that of the Arabic as a dialect ean aml must. A ereat many of its worls are still classical Arabic; others insemble more the Henwo ancl its two Chalke dialects, the Aramaic anl Sybiac; others, arain, belong to Afrian dialects; and many, ald the numes of the months, are Greek. It lans eb letters, e2 of which bear the ancient shemitic stituly, and exhibit the greatest likeness to the Dhenician, the common origimal alphabet; and seven vowels, incluting is very shante, which somuls precisely like the Helrew schěwa. These vowels are represented ly little hooks aul remain inseparably attached to their respective letters; and as the Geez, mhlike all its sister-languages, is never written without vorels, the alpinatne becomes a syllabary with 182 characters. Another difference pxists in its leing written from left to right-a circumstance from which some have conelniled that the Greeks introluced writing in Ethinpin: forgetting, in the first place, that Greek itself was frequently written from right to left, and that Zenl, certain cunciforms, hieroglyphs, \&c., are likewise written from left to dight. We cannot enter lere into the grammatical mimutiae of the language ; we will only mentin that out of the ten conjugations, eight are Arabic; that there is a double intinitive, lut no participle aud no dual: that the formation of the so-called plural, and of declension generally, puint to that very remote period when the Helnew and Arabic made use of the same grammatical processes. There are no diacritical marks enployed in writing ; the letters are not combined, and the worls are separatel by two ints.

Athongh there can be no donbt of the existence of a rich literature in a dourishing comatry like Ethiopia anterior to Cllist, stili, owing both to frequent intemal convolsions, and the missuiderl zeal of the early Christian missionaries, who bere and elsewhere considered it their first duty to destroy all the ancient records of which they could get buld, nothing but a few half-erasel inscriptions have survived. The earliest existing document of post-Christian literature is a complete translation of the Bible, probably by Frumentius. See Frumentios. The Old Testament, probably a translation from the Alexandrine version of the ENX., consists of four parts: 1, the Law or Octateuchos (five books of Moses, Joshua, Judges, Ruth) ; 2 , Kings; 3, Solomon ; 4. Prophets, and two books of the Maecabees. The New T'estament eonsists of - $\mathbf{1}$, Gospels; 2 , Acts; 3, Paulus; 4, Apostolus. A very peculiar book, Henocb, belongs also to the literature of the

Old Testament. See Exocir. The Now Testament eomprises likewise another book, Senodas, containind the jseudo-nlementine or apostolical constintious. The lithonians lave a liturgy (Kumen Ficlaso-foly Kanon) and a symbodicodogmatiend work (Haintenota Abau-belief of the Pathers), comtaiming portions if homines of the Greck lathers, Athanasins, liasil the (ireat, Chrysontum, (yzil, Gregory of Nyser and Nazianea. liesiles these, they have martyondies, callen symaxir. They amploy in this then sacred litrature a peculiar kuid of rhythm without a distinct metre. Any nomber of rhyming lines furns is stanza, without reference to the number of worls comstitutines the verse, or of verses constitutius the stama. Thas also use certain phrases as a refrain-mot malike the manner of the medieval Jo lurew lizmm, New Tewrif Litergy. As to general literature, they have neither a written hook of laws, mo a drammar of their own lambage nur, in fint, ampthing worth mentionithrs excent a fleronicle of - Leum and Thronicles of - Ibsssinid. Thuy we wry fonl, however, of rimles, wise saws, anit the likn. so fascinatiny to the Eastern minh. They have a bictionary, lut most of its explanations and translations are utterly wrong. No whuler the learned in Darope shouh have been som ly puzzlent loy such a languate, ame that they shomh, after loms consideration, hase mononced it to be either 'Chahlee' or 'Indian,' while Bruce lehl it to ho the language of Alam and lise, l'ntgen, a Cologne charch-prowost, happeniny to be at liome at the leginming of the $16 t^{6}$ c., there made the acquaint. ance of native Ethiopiams, amil Incame the first to enlighten the worll on the mature of this orembt language After him came the Camelite Jacm Marianus Victorius from licate, who wrote Instilntiones Lingue Chuldree S. Ethiop. (lame, 151人, an entirely worthless book; then Wemmers, who in 1683 phblished an Ethinpian grammar and dictionary. The principal iurestigator, Low wer, is Hi, Ludolf fromgotha, who, ailed ly the dba firegrius before mentioncd, and supported by his uwn extraordinary lingustie talents and indumitable oncrgy aequired sueh a power over this lamgungt, that notwithstanding the number of eminent irientalists, such as Platt. Lawrence, Dorn, Huphell, 1Iofmann, lioediger, Ewahd, Isenberg, Bhamenlmuch, de, who have since his time bestuwed much attention upun it, his books still boll the first place. It is hardly neeessary to adil, that the Ethioppian is on. of the most important and indisjensable languages to the Shemitic scholar, contaming as it dues a great many words and forms of a date auterion to the separation of the different Shemitie dialects. Among the most important Lthiopian hooks printed in burope are the l'salms, edited with a Latin translation ly Ladolf (Fraukfort, 1701) : the New "Lestament, in two volumes (Foner, 1548); the book of Menoch (Lond. 18t0): iscensio Isaive I'atis, with a Latin translation by Lawrence (Oxford, 1S19) ; Didescalia, or apostolical constitution of the Abyssinian Clurch, with an Énglish translation ly 1'latt (Lond. 18:3, \&c.).- Ludolf's works are-Grammutica A:thiopia (Lemd. 1661); Lexicon E Ethiopimm (Frankfort, 1699) ; Historia Ethiopica (Fraulifort, 1681). See also Heeren, Mistoriad Researchos: Caillian, Ioyage it Meroü; salt, Emee, Rupucll, \&e., Travels.

E'THIOLS, or E'THIOIS (C.r. aithé, I burn, and ops, countenance; being of a hlack or burned comntenance), is a term ariplied by the ancient elomists to certain oxiles and sulphides of the metals which possessed a dull, dingy, or black appearance. Thas, Ethiops Martialis was the mixture of protoxide and peroxide of iron, known as the black oxide; Ethiops

 a movet, is on of the eidhet lemes which collectivedy furn the cavity of the cranum. It is of a smo What cundal furm, amd is situated letwern the two mhats of the eye, at the ront of the mose. Its mphr
 (W) Whe its name throng which the filaneats of the alfactory meve fors downwarts from the interiwe of the skull to tho seat of the sense of smodl, in the upper part of the mose. It consists of a perpemdienlar cuntral phate or lanella, which artienlates with the wance and with the central fibrocarthlace, ame thas assisto in forming the scgotum or partition between the two nostrila. The lateral natsecs present a very complicated arrangement, and are so plamed as to dive in a small spave a very bate amone of smfac\%, wh which the dilaments of the difutery new are sural. In comparative amatony we timd a diret ratio between the developmont of thene masses and the aentemess of the semse of smell. Suesmeli, Whadis hin linysiolugy of.
DPHNOLOCV (Hirs ethons, mation or race, and freme. disomome is the stionee that treats of the saricties in the human race; their most marked physical, montal, and moral characteristies, when comparel we with the wher ; their present sengraphical distribation on the glome: their history tracel hackwards. with the aid of writen documents and natural or monmental remains, $t$ o the carliest attamalle point; and finally the languates of the sarions nations and tribes of mankind, whether still spoken ow extinct, classitied and compred, with the fiew, by their means, of determining the chief points of resmblance on dissimilarity among the nations of the earth. Aecordins to this definition, framed after the latest and host authoritios, it is a science that involves in its stoly that of comparative physiology, ako of gegraphy, history and archewhery and eomparave phalongy. It is therefore a mixied or componsite science, emilacing a variety of whijects formerly not thourht to belong to it, hut m, lecmed necessary fur its successful cultivation. It has leen witen confoumded with dhnopraphy, is which is implied a simple description of the natims of the earth ; but thoolom takes a wider range. aml while it comprements the former, embraces momeh besides; indmed, in its widest sense, it is now umberstond as imolving in disenssion of the importaut questions: "What is sprecies?' and 'What is vanety"? also, of the doctrine of hybridity, and of the difticult frollem concerning the origin of mankimi; that is tusay, a sifting of the widence for or aramst the alsohte unity of the hman race.
lithondery, however, is a science still comparatively in its infacy ; and althong it has made considurable progress since the resarches of Camper and Bhomonach, equecially in this country, whing to the indefatimble exertions of Jr l'richard, it is to low hend that, as in the ease of other selunes-s-uldey, for instance and comparative philologyahno of rumhern whath, when it comes to be luoter maldratool, and more widely enltivated, apart from projulae of whaterer kiml, its limits will he more accarately defind, and the staty of it narrowed to at mom reasmahde area than it at present vecuphes.

As it is, there is malternative hint to treat of the subjact aceorting to the defnition given above, which aur dace oblices us to do as briefly as pussible.

No one ean lowk at an Englishman, a Jimd Imbian, and a Negro, withont at ance noticing the ditleren"es Jotween the three, not only as regards the colone of thacie skin, bint the shape uf the skulh, the twature of the hair, and the eharactor of the several features, as eyes, lips, mose, and cheek-lones. What strakes the ordinary onserver chitlly is, of course, the differnce of complexinn: but the anatomist is fully as much interested in the shage of the skull. The first thoronghy schontific writer who endeavoured to lay down a method of distinguishin: loctwen the different races of mankind by a emo parison of the shape and size of the skull was l'eter Camper, a distimenshall butch amatmaist of last eentury. Jle lail down io techmieal rule for ascertainug the forial line and determining the amonnt of the ficinl angle, which he has thas hescrited: "The basis m which the distinction of mations is fommen may be displayed by two straight lines, wo of which is to lee crawn throush the mentus qudituriks to the lase of the nose, and the wher tonching the prominent centre of the foreheal. and falling: thence on the amst adrancing part of the upper jaw-bone, the head being vewed in profile. In the angle produced by these two lines may le said to consist not only the distinctions between the skulls of the several species of animals, lont also those which are found to exist between diflerent mations: and it might be eoncludel that nature has availed herself, at the same time, of this ancle to mark out the diversitics of the anmal kingdom. and to establish as sort of scale from the inferior tribes up to the most leautifnl forms which are frime in the haman species. Thas, it will be fonud that the heads of himels display the smallest angle, and that it always becomes of greater extent in propurtion as the amimal approaches more nearly to the human figure. 'Thus, there is me species of the aje tribe in which the heard has a facial angle of to degrees ; in another animal of the same family, which is one of those simiar most appoximating in tigure to mankime, the facial augle contains exactly 50 degrees. Next to this is the head of the African Negro, which, as well as that of the kalmuk, forms an angle of 70 decrees; while the angle discovered in the hoads of Europans contains so deyrees. On this difference of 10 degrees in the facial angle the superior beauty of the European depends: white that high character of sublime beauty which is so striking in some works of ancient stathary, as in the head of Aprillo, and in the Medusa of Sisocles, is given by an angle which amounts to 100 degrees.'

Camper's methol, bowever, although ingeninas, was foum pratically to le of little use, ind was suon alambuned for the vertical method, or norma articalis, of vewing the human sknll, invented by Iblumblach. The object somelt in comparias and arranging skulls being to collect in one survey the greatest mumber eharacteristic peouliarities-"The lest way,' says I!mmenbuch, 'of oltamine this end is to place a series of skulls with the cheek-bones on the same horizontal line resting on the lower jaws; aml then viewing them from behind, and tixing the cye on the vertex of cach, to mark all the varieties in the shape of parts that contribute most to the national eharacter, whether they consist in the direction of the maxillary and malar hones, in the lrayith or narowness of the oral tinure presented liy the vertex, or in the plattened or valted form , the frontal hone.' Founding uron this mode of almeasurement applied to a large collection of skulls of different nations, accumblated ly himself, fhmenhach classifice the human family into the following tive varicties-viz, the Cancasian, Monmolian, Ethopian, Malay, and American. In the first of these-which he made to include the Caucasians

## ETHNOLOCY.

or Cibcassians Proper, the Celts, the Toutous, the Shemites, the Libyan family, the Nilutie fanily, and the Himdustanic family-the skull is larese and ural, the forehnal expmond, the nasal bomes arehod, the chin full, and the tocth vertical. In the secombwhichentraters the chinese and lownechinese, the natibes of the fular restins, the Almen Tartars, aul the Thalks-the skull is whons. but flattomed at the siles, the formead low and recemme, the nose broul and short, and the check-hones home and that, with salimentermatic arches. In the thind - embrateing the Negroes, Kiafirs, Huttentuts, Anstralians,
 narrow, the forebeal lust, the nowe loped and that, the cheek-hones prominent, the jaws projectims like a muzale, the lijs thick, aum the chin matl. In the fourth-embracinr the Malays and Pelymesians fomeally - the skull is hinh and sumare, the forchead law. the nose shont and hroad, and the jaws pur jecting. In the fifth chabracine tha - imerican family and the Toltien fumily --the skull is small. with the apex high, aml the lack part Hat, the forchand recenting the cheek-lomes hing, the nose arpuiline, the mouth latere aml the lips tumb.

This classification of the hman family. with the admed characteristies under eachelass, of complexion, har, and eyes, is, amen the whole, the most pmplar, Blomenkeh haviur taken considerable fains to elaborate it, ame prescht it to the world in a fom acceptalise to scientitic inpuirers. Later rescarches, howerar, have paral it tu be not pate temalhe. Chas, l'uvier reducen the tive classes of Bhancmbach to three-viz, the Canarisian, Monmatam, and Ethimpan, treating the Dalay and Amorican as subdivisions of the donadian. Jaceumot does the same. Hr Prichard, who hrought to the stwly of cthnology mot maly a large acquantance with physiolorg, but a consindable knowledge of langnares, almits a areater momber of varieties than Bhmenbach, omt iliviles his Chacasian lass into two imberendent grons, which he ealls the syruAralian im Somitie, ant the Aryan in Indofietmanic. Horeover, be objects to the term Coucavion, as representing the notion that mankind hat their wrigin on mountain heights. Fur himstlf, J'rielarel hohls with the biew that it was rather on the hanks of larse rivers and their estuaries that the primitive nations developer themselves. "The cradles or musseries of the tirst wations, of thase at hast who became fumbons, aml have laft a name collonatal in later times, alpuar to have loen extensive pains on vallas, traversed by navisable chameds, and irrigaterl ly premial anil fertilisine streans. 'Thren suth regions were the swenes of the earliost civilisation of the hmona race of $1 l_{\text {a }}$ tirst fundation of cities, of the earlinst funitioal institutions, and of ther invention of the arts which ambellish humatu hio. In one of $1_{1}$ wise, the somitic ur Sym-Arathian nations
 bets for the sphatur and luxury of Ninevel
 or Japetic furople luondit to I"rfeetion the most Wharate of haman dialecte, destimet to lrecome in aiter-times, and moder diflerent modifications, the mother-tongur of the nations of Furme. In a thim, the land of Ham, watered by the Xhle, were invented hierogbphical literature, and the arts in which leapyt far surprassed all the rest of the word in the earlior ages of histors' Ir l'richard, in his wall-knonzt Jofural hiviony of Ifen, commonces with a description of these three divisoms of the laman race, not as diseriminated une from the wher by the form of the skull, hat ats comprising nearly all the cirilised commmities, anl indeed most of the tribes of people known to antiquity.
"They were neither momates nar savages, nor do they display in their crania either of the forms pribeipally holonging tu races in thase diflerent states of existence. They haul all heals of an wal or alliptichomerical form, wheh aro observed to preval chictly amme nations who have their fitenltios developeal hy civilisation.' As they cannut, however, ly any means be mato to comprehom all the types of man, after the Eyptians, he deseribes the great hudy of the mations of Africa, maluacing trilues sunk in the lowest state of degradation; and after the Aryans, of lndu-Enropreans, the porple of ligh Asia, chathy momber, inhaliting rast steples, and never rising in the seale of civilisation beyom the emdition of wandering shepherds, though in this eapacity pussessimer sme wealth, and acyuainted with the use of clothing: tunts, and wayms. These classes of nations, he: observes, fiave diflerent physical characters. Amones the African savages we timl the prognthons fom of the ho:ai amb all its accompaments; and these traits dixplay themselves in froprom to the monal and physical degradation of the race. In Nonthern Asia, most of the inhahitants have the invamidal amb' hroal-faced skulls.' lieferring our realers to the articles Aisias Piace, Enipt, and Semite lises respectively, fur more detailed information on the subject if these three grand divishons of namkim, we shall here only motice $\mathrm{l}_{\mathrm{L}}$ l'richarlis stadivisions of one of them, namely, the Aryan race.

The great Aryan on lubr-burnpean race, which axtends itself from the month of the (ranges to the british Islands and the morthern extromities of Scandinavia, diviles itsolf, aceoding to l'richare, into two mancles- riz, the parent stock in Asia, and the colonies that it successively sent forth into Eurne. The daian branch comprises: 1. Hindus; O. lersians; 3. Afshans; 4. Baluchi and Brahni; .). Kmols: 6. Armenians ; and 7. Ussetines. The collective lody of the Eurnpean mations are now gencrally regarded as a series of colmies from Asia. The provif turns manly on a comprison of lampages; the ancient sinserit beiner regarded ly the most competent jutges as the parent mot only of the (rretk and Latin languages, but of the 'leutonie, with its several ranifications of the slayonic, Lettish, Lithanam, and eren Celtic. In l'richard himself was the tirst to joint out the aflinity of the Celtic with the Sanserit, (ireek, Latin, aml Tutunic, in a memoir puldished by him in 1S31, on the Eastern Oritin of the Celtic Siutions. Later philologers have contirmed the vew taken hy him, and he is perhaps correct als, in the conelusion, that they were the first great immigation of the Ayans into Europe, whe were afterwarls conquerel, and their numbers cansideraldy reducel ly fresh anlvancing colonies from the same parent hive. But there are other natimus ur tribes of Europe which no efforts of the philulugists have succeeled in tracing to the Aryan stock: such are the Lapps, Finns, Tschmes, aul I Lrians of the North, and the Euskaldumes, now mincipally represented ly the Baspues in the West. Tin these, Dr l'richard has given the appellation of Alluphylian (rir. allow, another, amb phate, tribe), therely simifying their independence of the Aryan stock. The jrogenitors of these tribes were prohably the inhahitants of Eurnre, pror to the first Aryan immigration.

After these several races, Dr Prielard treats of the nation tribes of the austral seas and the great Suthern Ocean, and finally, of the mative inhalitauts of Ammica. In every case, he carefnily descrilnes the $p^{\text {divesical aldearance or structure, the }}$ geographical hedhift, history, and migrations (if any). the language, ant the moral and jsychical attributes

## ETIINOLOGY.

of the nation or tribe immeniately hrought mater mobe. llas information has gencrally herin aldanal from the best someces and hence his works may he reathal as a stomhouse of kinowledite mand the salijuect of ethmoluy:
bate both before and since lihmonkwh and Prichard, the hase bern several chasitiotions of the haman race propesel, the simphest of which is perhaps that of Dr Latham, into 1. Moncohate:
 remaled as the chief living ixpment of the sיinnce of ethondoy in this comatry. Fallowins i: 1 the track of Pricharl, ame phesussims, like him, a considerabla acepuaintance with physiology and history, he tistances him altugether in the department of comparative phalolows. His contributions to the selence of ethabley burwed from this particular hanch of sturly are consequently of the highest value. but there is one important question, with respect to which the sutrizeres of the last philohaters are rather with lrichard than with Lathan-viz, the orgin of the Aryan or IntoEuopean race. Prichard, as we have sem, refers it to Asia, whule Latham clames it for Europe.

Other classifieations might he mentioncl; hut these we shall leave, especially as the best anthorities, even those of rival schools, ilo mot at present much insist un classitication; $p^{\text {motahly }}$ from a comvietion of the hopelessness of laying down any detinite scheme in which all condi be lorought to agree, in the cxisting state of the saience. That a classification will at last come, wheo more fiacts shall have heen recumulated, there is crery reason to helieve; hat this will scarcely happen before one great quastion at least shall have been set at rest, which buw divides the cultivators of ethonchery inter two hostile camps.

This question is the all important one: "What is species?' Man misy go on "lassifins, hat what In they dasify: 1 "it species, or is it varicties? Prohnil and lathan in this comentry, with a lare bund of followers, maintain that the num rous tribes of mon mon the eath constitnte essentially but one sprecies; that they have all sprung from a simele Inir; and that the differem ohervathe among them, even in the extreme cases of the European and the Necro. may all he accoment for ly the influences of climate, fool, and other circumstames sperating throunh a long series of arges, and which thus produce the peculiar characteristics that mo no can fanl to notice in a comparison of one with the other. It is a well-ascertained fact in respect of the animal and veretable kinglons generally, that although by the mon of two species hybris ammals and hybrid plants may le prenlued, Whecially in the lomestic state still thre is no liwer of reproduction amons the hyluids themfelves; in males, for instance, and the offspring of the elog and the wolf, also in varions tribes of birds; anture allearing to have set her ban upon any fermanent invasion of her law with respect to the distinetness of species. With the races of man. hownor, this is not the ease. The European and tha: Nerwintermarry, likewise the spaniard and the Intim of Sonth Anerica; leth have oflipuine, and that offapring is quite as canable of reproduction as iuthivibals of the same prarent mation. Whence it is arenel, that all nations and tribers of men are arimally of the same species. The diversities amons then, say Prichand and his schon, are not greatey than we contimally see among the different breeds of dus, huses, sheep, and oxen, which are nevertholoce miversaly ruarded as nothing more than varnems hated. within the historial periond, and sa hate "wan as sime the dismovery of America in the listh c., :H h markel clanges have taken jhace
in the amimals transurntel to that conthent from Cimpe. that thery would searcely seme to hawe dusomblod irm the same stock. Anet if this has lnon the tase amons the lower animals within such a limited perient as that mentioned, is nothins to be allowed for the intinence of climate anil nther agencies in monlifying the aspect of man, abil problacing these varioties observable in him ater a long lape of ames! Han, athough a cosnemplite, ami subulumes all thiugs to himselt, - capable of living umar every elime, from the shores of the thy whase the frozen soil never softens under his foet, to the laming sames of cematorial plains, where acon reptites frish from hat amd drought, is nevertluders himself to a certain extent the creature of the dirmmatances ly which he is suromuled. He momithes the agencies of the clements umon himself ; lint do not these arances also modify him? Have they not renderet him in his very organisation different in ditherent resions, and uniler variuns mondes of exnstime imposed by physical and moral comlitions? How ditferent a being is the Esplumaux, who, in his hurrow amill northern iows, whes himself with the hhliber of whales, firm the Lean and hungy Numidan, who pursues the lion under a vertical sin! And how diflerent, whether comparad with the skin-elad :mbl oily fisher of the icelurgs. or with the makel hunter of the Sahara, are the luxurions inmates of eastera harems, or the energetic and intellectual inhabitants of the eities of Europe!' Notwithstandiur all these differences, however, masmuch as no impediment whatever exists to the perpetuation of mankiud when the most dissimhar rarioties are hendend together, 'we hence derive a conclusive pronf, unless there be in the instance of human races an exception to the miversally mevalont law of orgmisel mature, that all the tribes of uen are of one family.' 'This conclusion of lrichard, lased mon jhysinlogical srounds, is strongly supperted ly Dr Latham with arguments drawn from philolugy. Dr Latham, taking it as a matter of fice that all the landages of mankind have hat a common origin, argues from it in favour of an oricial maty of race. This common uricin of lanenages, however, is a thing by no means proved; for althouch Klaproth, liurst, and behtzseh have taken great pains to establish an athinty between the sanserit and the lehrew, M. Rewan and other excellent authorities recard the attempt as unsuccessinl, and, wen were it otherwise, 'the Chinese,' says i late writer (Farrar, Essat? on the Origin of Langmage), 'must always remain it stumbling-block in the way of all theorics respecting a primitive limguage. Radical as is the dissimilaity hetween Arian amd Semitic languages, and wide as is the abyss between their rammatical systems, yet they almost apear like sisters when compared with the Chinese, which has mothing like the organic frinciple of rammar at all. Indeen, so wide is the difference hetween Chinese and sanscrit, that the richness of human intelligence in the formation of language receives no more striking illustration than the fact, that these lansuages have absolutely nothing in common except the end at which they am. This end is in both cases the expression of thought, and it is attained as well in Chinese as in the grammatical languages, although the means are wholly diflerent.'
llaving thus made the reader in some degree acguainted with the views of ])rs Prichard and lathinn on the suliject of ethnology, we now prorecel to inform him of the totally hillerent views and conelusions of the American sehond of ethanlogy. This schend was founder by the late Dr Morton of Philatefphia, an crulite and active man of science, who laboured for many years in forming

## ETHNOLOGY.

a collection of human camia of all uatious, and of ancient as well ats modern ases, with the desion of still further carryint out lihmenbach's researches into the varieties of mankind ly a comparison of crania, atecording fo the methot he had proposed.
 the time uf Dorton's leath in 1551 , amonted to the larse number of 918 human crama, to which were afterwarls inhed 50 : and it, besides, inchuded 278 crania of mammals, 271 of hirds, and 58 of reptilesin all, $160 \%$ skulls, beine the larest eallection of the kinn ever formed, and which, fortumately for the ]urpuses of seicnce, is now deposited in the Bluseum of the Acatemy of Xitural Scicnees at Phiadelhia. Simultaneously with this aceumulation of cramia, 1h. Nortnn carrich on his researches in ethmonge, not, however, in the restricted sense in which he began, following Blumenbach's classification, lut availing himself of the latest discoveries of Prichard. and the other English and cmonental writers. One of the results of his labours was the fuldication. in 1530, of a bandsome work, entitled r'remier in cana, which was follown in 1841 ly the Cromat Lomptiace, in the collectinn of whel he had been mach aided by Mr (i. 1i. (ilidion. 'In this work,' says his hingrapluer. Dr l'atterson. 'Morton found limsulf compolted ta differ in "pimun fron the majority of schohars, in reard to errtain points of primary importance. The reat question of the unity or diversity of mankind in their midin was one that endy forcel itseli upon his attention, aud the conchision at which he arrivel. after much ratient investimation, was in favour of the latter riew. ILe vas stow to pulbish any opimion on the sulyect, lrobally reserving it fir a work upon which he was chisaged, to he ontitlen the Efements of Eldnotorg. His minion, howerer, was well known to his friemes. In a mote to a paper in stllimen's doumal for 15t7, he saty: I may luse olserve that whenever I have vonturad an arminn on this fucstion. it lins been in favour of the doctrine of primeval diversities amone men: an original alaptation of the sureral races to thosp varied circumstances of climate and locality which, while eoncenial to the fone, are instructive to the other ; and subsernent investigations have confirmed me in these views.' In a lettor to lir Nott, dated Tanuary Is. 0 , he lays down the following propositiun: "That our species had its oricin, not in one, lut in sceroul or momy creations, and that these diverging from their primition centres, met and annamated in the [rogress of time, and have thus given rise to those interneriate links of organisation which now combect the extemes together. Ihere is the truth divestal of mystiry ; a system that explains the othorwe unincullatile pheaomena so remarkally stammal on the races of men.' lis latest uttrance nan the subject is contained in a lettor written to Mr (土. Ji. Glidion, in April 1s5l, only a forthight hefore the writer's decense, which concludes as follows: "The doctrine of the original diversity of mankind unfolds itself to me more and mur: with the distinctncss of revelation.' His views upon this and other puints of dispute among ethntugists have been sinee ombodied in a remarkalle work, entitled Types of Mentind: ni, Lehnologival hiswarches lased upon the Ancipt Monuments, Paintints, sentphtes, and Crania of laces, and upon their Vateral, Ficographical, Phitological, and Libliaul Hatory: illustratel by Selections from the inedited Papers of si. G. Morton. M.D., end thy additional Contributions jrom Professor L. Agassiz, IH. U'sher, M.D., and Profusor M. S'. Putterson. Hy J. C. Nutt, M.D., and (G. R. Ghimen (Philadelphia, 185t). In this compusite work, perhaprs the most remarkable feature is the laper contributed liy the celebrated naturalist,

Professor Agnssiz, in support of Dr Morton's theory as to the original diversity of the human races.
The paper by Aqussiz is entitled, Shetch of the Nafiral Prorinccs of the Animal World, and their Relution to the Difirent Tignes of Man. It was drawn up loy writer from a conviction that much might lee gained in the stanly of ethnography by observing the natural relations letween the different races of man and the pliats and animals inhabiting the same regions. The sketch given ly him is inteudea to shew, that the houndarics within which the different natural combinations of animals are known to be circumseribel upon the surface of our earth coincide with the natural hande of distinct types of man. SHCh natural combinations of anmals circumseribel within definite boundaries are called Finmo, whaterer be their home-land. sra, or water.' 'There are eisht regions of the (arth, according to Agassiz, each containing its own fauna, and its own peeuliar type of man; aml his man cunclusion from a consideration of these suceral faune is as fullows: "That the diversity among animals is a fact determined ly the will of the 'reator, and their geomraphical distribution part uf the general plan which unites all organised hrings into one grat arganic conception; whence it follows that what are called haman races, dosn to their specialisation as nations, are distinct primordial forms of the type of man.' Messrs Nutt and Glidion, in their work quotel, appeal triumphantly to this themry of Agassiz in surport of their view as to the primitive diversity of the races of mankimi; and in a subsequent work, Indizenous Races of the Earth (bhilallelphia, 1557), have insertel a further commumication from the writer, in which, whine he reiterates his formerly expressed opinion, that the races of man, so far as concerns them geographical distrilsution, are sulbject to the same circumscription as the other members of the animal kinglom, he ubserves: Eren if this fact stood isolited, it woull shew how intimately the ran of the animal creation is linked with that of mankind. But this is not all. There are other features, occurring among animals, which require the most carcinl consideration, inasmneh as they bear precisely aron the question at issue, whether mankind originated from one stock or from several stoeks, or by mations. These features, well known tu every zorlogist. have led to as condicting views respecting the anity or plurality of certain types of animals as are prevailing respecting the unity or plurality of the origin of the lmman races. The controversy which has lecen carried on among zoologists umon this point, shews that the difficultics respecting the races of men are not peculiar to the question of man, but involve the inves. tication of the whole animal kingdom-though, strance as it may alpear, they have always been considered without the least reference to one another.'

This theory of Agassiz, it must lee stated, has been much controverted, as likewise the opmions generally of Dr Morton and the American school of ethondigy, partly nn litilical, and partly on seientific groumds. Inheel, from the conflict of opinions as to the origin of the human race, if the solution of this question were the sole object of ethnology, the science might be said to be in a very unsatis: factory state. But this is not the case. The question at issue is one that may well be left in abeyance for the present. Without it, the feld of inquiry is sufficiently wide, and is well cultivated by skilled labourers, who continually bring the product of their researches in physiologr, geography, arehaulory and comparative philungy to enrich and fructify the newly turned-up soil.

irregnlaritios when viewel at a distance as suborJinate point: of so imposine and colussl a monatain. Seen from the summit. they present a heantifnl aspect: some baw and harren, others covered with the dark an! sombre finn, on with the gayer amd more varien follage of the oak, the luecth. and the hawthurn, and all arransed in picturesque groups of varims hejphts and sizes. Sut the most remarlallu feature in L. is the Val hel liose, an inmense dully excavatiar the eastern flank of the memotain, tive miles across, and surromden by nearly vertical precipiens from 1000 to somo fect ligh, on which are shewn sections of inmumerahle liva-strems and heds of sembee, traversed hy hivhly inclimed dikes. It has a singularly dreary and blastal appearance.
'lho smmat of E. rises consilerally alowe the line of vecatation, and comserpently presents, excepe where empered with show, a dreary waste of Dack lava, sencio, amd ashes, in the centre of which, in as desolate phan, risus the crater-hearing cone. This is called the lesert regin. It is followed hy six or seven miles of the Womly regon, in which luxuriant forests of pirne, oak, weech, poplar, and hawthorn abonnd, tongether with rich pasturage fir herds and flocks. A varyine brealth of from two to eleven miles of cultivated recion surromits the base of Etna. Its great products are cora, oil, wine, fruit, and aromatic herls.

The first recorded eruption of E. thok place 4 Ti n.e. The most remarkable that have oceuremb since are the following: 1169 A.D., when Catamil and 15,000 of its inhabitants were ilestroyed ; 1.27, ia which two villarges and mang luman beings perished; the eruption whel continued at intervals from 1664 to 1673 , and destroyed many villages with their inhabitants. Nunerous chasms were formed at this time; from one several miles lan: ani four or five feet wide were emitted a bricht light and strong sulphurous vapour: from another, black smoke and quantities of stones were given out; and from others, streans of lava. In 1673, an immense volume of salt (?) water rushed down the mountain: liy some, it is sitpunsed to have been ejected from the erater, hut it is more probable that it arose from the sudden melting of the snows which coverel the summit of the momentain. The last great eruption took place in 153. . lmmense clouds of ash-gray dust were ejected, eovering the whole of the surrounding country. From two new mouths on the eastern flank there issued vast torrents of lava, one taking the direction of Zaffarana, the other flowine towards (iiara. The one stream was two miles broal, and at one time as much as 170 feet deep. It moved at the rate of about 600 feat in the hour; lat when it descended abrupt eliffs on the monntain side, it was precipitated like a torrent in fiery eascades.

The minerals peculiar to rolcanic rocks occur at E., such as ehrysohte, zeolite, selenite, alum, nitre, vitriol, copper, mercury, and spicular iron.

## ETOLIA. See Etolat

E'TON, a town in the sonth of Buckinghamshire, on the left bank of the Thames, 42 miles south-south-east of Buckingham, and 22 miles west-southwest of London, near the Slough station of the Great Western Railmay. It lies oprosite to Windsor, in Berkshire, with whieh it is connected by a bridge over the Thames. Though in separate eonnties, these two towns really form one. E. ehietly consists of one long well-paved strect, and is manly dependent on the eollege. Iop. ( $\mathbf{1 S 6 t}$ ) 312 Q , exchusive of the Eton boys.

ETON COLLEGE is one among the most famous educational establishments in England. It was fommed in 1440 by Heary Vl., under the title of "The College of the Blessed Mary of Eton beside Windsor.' The original foundation consisted of a provost, 10 priests, 4 clerks, 6 choristers, 25 poor grammar-seholars, a master, and 25 poor infirm men. The king provided for the establishment ont of his own demesne lands and the estates of certain alien priories. A supplementary charter was sranted in 1441, in which year also the College buddines were eommeneel. Henry was very solieitous that the work should le of a durable kind. Some of the lualdings were fimished in $1!\frac{1}{4} 9$, and were handed wer by the royal commissioners to the provost, dark, and scholirs. Politieal troubles of various kinds retardes the completion of the buillinus fill 152s. Bishop Waynfeete was the first lome master, and afterwards a munifieent supporter of the Colle re. The institution passed through much peril in the regor of Elwaril IV., and again in the time of the Commonmealth; liut it sumomet the danerrs, and the increasing value of its entates lament in a large income.

The present foundation consists of a proverst, 7 frllows (on of whom is rice-provost), 3 enducts, 7 cherks, 10 lay-cherks, 70 scholars, and 10 choristers. lusides ofliecrs amb servants. Most of the selonars are, at the age of 17 , ellecton to valuable scholarchips at king's Collewe, Cimbridere; several smaller sholarships at wher colleges, both at Oxford ame

Cambinge, turether with sumbry exhibitions and grizes, are also open to them. Amony these is a mize for the prench language, given hy the late Irince Consurt. The seholins are lodged withio the Cullege walls.

The main $\mathrm{l}^{\text {ortion }}$ of the establishment, however, mumbering mearly 900 , concists of the oppedens, stulants who live nat of the college, and whose frimats pay liberally for their education. The tuition is the same for them as for the colleqers or scholars. There are an uper and a lower school, managed hy a heat-master and lower master, with a large staf of assistants Consideralle discussion has taken place within the last few years eoncerning the kind of edncation received at viton, the cost at Which it is obtained, and the enormous ineomes derived hy some of the oficials. The course of education has not undwene mueh ehange, exeept that the stuly of mathematics has been reeently (15.4S) mate a necessary part of the sehool lusiness; it is still of the medieval character, which regaris Greck and Latin as the hasis of all gool elucation ; and does not bestow much attention on motem science. There is, however, crat prestige comnected with the Collese; and the Etomians, in their aftercareer, generally look back with affection uron it.
The chief buildings of the College consist of the chapel, the hall, the library, the schools, the provost's and master's apartments, and the lodro. ings of the fellows, surrounding two quadrangles; together with the boys library and sleeping apartments, in a cluster ealled the New Buidings, attiched to the northern side of the older cromp. The ehapel is mostly of stone, the other huildings of brick; and the effect of the whole is very picturesque, as seen from the terrace of Windsor Castle, on the other side of the 'llames. The chaped is an especially beantiful chject. The houses of the masters are generally fitted up for the reception of oplidans as boarders.
ETRU'RIA, TYRLIIE'NIA, TU'SCIA, desionated, at a period anterior to the foundation of Rome, marly the whole of laly, together with some of its most important western islands. Its northern part, from the $\mathrm{Al}_{\mathrm{l}} \mathrm{s}$ to the Apennines, was known under the name of Etruria Cirenmpadiana: its southem, from the 'Tiber down to the Gulf of Pistum, or, aceorling to some, to the Sieilian Sea, under that of Etruria ('mpmanana; while the central prortion, hounded on the $N$. hy the Apemnines and the river Macra, S. and I. liy the Tiber, and W. by the Tyrrhenian Siea, was called Etruria Propria. The two first, however, did not long remain Etruscan territory, but were either reconquered by the surrounding tribes to whom they had originally belonged, or fell into the hands of new immigrants. No bistorical records of that brief periond of any monent havines yet enmo to light, they do not elaim our attention; while Etmaria Proper, scanty though our information about it still le, drserves on interest in the highest degree. Fen its physical features, we refer the realer to 'luscany, Lucea, and the Transtiberine portion of the present Papal Dominions; and have only to remark, that vast expanses of that country, which now are cither coverel with deep forest, or are shmmed on accomet of the malaria, were in thase times fruitful, densely proped regions. For folitical, or rather administrative purpuses, Etruria lerper was divided into twelve sovercign eitiea, or rather cantons, anong which the most important were Targuinii (corneto), the cratle of the rogal family of the Targuins, who at one time widded the seaptre of Rone; Cere (Acylla, Cerverit), which, durny the war of Rome with the (ianls, offerel a refuce to the Roman Fhamen Qurinalis and Vestal Virgins; Veii, the

## ETRURIA.

greatest and most powerful city of Etruria, with 100,000 inlablitants, which earried on seven wars with Cone: Clusium (Kamars, Clinsi), the ehief of which, l'orscna, as principal commander of the Etruscan trous, dictated a lumiliating peace to Fome aftor she had expelled the Tarquins; Pernsia (l'engia), destruyed in the Jernsin civil war ( 40 ) ; Arretion (Arezzo), binthplace of Dlacenas. Of other not sovereign places may be montioned Laca (Lacea), Pisa (Pisa), on the Arnus, with the Portus Pisanus, now Leghorn, and Florentia (Firenze, Florence), on the Amus.

Towhat nation the inhabitants - called Etruseans (= Exteri, strancers) or Tuscans in the Ioman, Tyrrheni or Tyrseni (Turrénoi, Tursénoi) in the Greck, and Rasena (Tesme Rasue) in theiw own lan-guage-originally belonged, and what comentry they cane from, is a question which was debated many Huntred years before Christ, and is not settled yet. All the most ancient writers, save one of the most trustworthy, Dionysims of Ilaliearnassus, impheitly frllow Herodotus, who-confoumting them, ]erhaps, as is his wont, with the Eydian Turemoi, or inhabitants of the eity of 'Tyrrha-pronomeces them to lue Lydians, althong there is not the slichitest similarity between these two nations, and althongh Xanthus, the Lydian historian, linows nothiug whatever alout a fabled famine of cightcen years' duration in Ledia, followed by an emigration to Italy under a Prinee Tyrhenus. Dionysius himscle ofters no uninion; he calls then an intivenous racewhinh neans nothing; and it is surprising that some modern inrestigators should, despairing of a rational solution of the oll riddle, hare fallen back upon this evasive theory of "autochthons.' Thucydicles, in first mixing up the Torrhebian pirates with the l'elasgian lillibusters, gave rise to the most hopeless confusion about their very name. As to the innmerable theories and hymotheses that have heen put forward since his day, we will only mention that while Ciampi and Collar hold then to be of Slavonic origin, Fréret ealls them Celts; Nical, Alhanese ; Lani, Pfitzmaier, and Stickel, Semitios; aud others rariously make then Goths, Suandinowians, Basques, Assytiuns, Phreuicians, Eryptians, nad Armenians. The most rational and generally accepted opinion is that of Nithular-modified more or luss lyy Ottfricd Mialler, Lamzi, Lepsins, Steubof their being, when they tirst appear in listory, as mixture of an esstern tribe, which had settled for if while in the linetian Aps (the Tyrol of to-day), arul I'elasgians, whom they han found in their new Italian seats; these latter haring, in their tum, since their immignation, mixed with the Cmbrians, the chlest historical inllabitants of those parts. But, as we said before, this is only the most rational opimion that rose ont of an mecan of widd speculation: so far from any authentic moofs haviar been brousht forward in its suphort, the question stonds twe (iay preciscly where it stond when lionysins wrote:"The kitruseans da not resemble any people in lancuage and manners.'
lumense as was their influence on Jioman, and, in fact, on European vivilisation, very little is known with respect to their pulitical listory. Chicely cultivatiner the arts of peate, they still seem, long after thew heroie perionl, to have ben powerfal enough to scare awity any invaler, and this probably is the reason why historians have so little to record of thens; but their doche may he said to stand in an inverted ratio to the rise of liome. The Thand earlier half of the 6 th e. ra. c. lowl been the most powerfud and dumerishing epoch of the Etruscan state in its widest sense-which then probably harl been in existence for four or tive linudred years. Whether they had put their 'Iarquinii as governors
over conquered Iome, or whether, on the contrary, the reign of this Etruscan family would denote the subjugation of Southern Etruria by liome herself, is mot quite clear ; but the expulsion of the last Roman ling. Tarquinius (Tarchon), called S゙uperius, was followed, abont iot i.c., by a war between the Etruscans, noder I'orsena of C'lusinm, and the Romans, whieh, althouch endime in a most ignominious peace, dictated withu the walls of liome, did not brinc about the restoration of the Tarquinian dynasty. From the wars letween Veii add Fome, which began in 4-6, and ended-interrnptel only by an cecasional armistice- 395 b . c., with the destruction of Veii, dates the gradual but sure extinetion of Etruria as an inderendent state. The Gauls adrameing from the north, the Etriscans were forced to conclude a forty years' truce with their adversaries at any price; but these over, and the Fomans being engaged with the Sammites, the Etruscans recommenced the hostilities more diereely than ercr. In the course of this last War, tho liomaus suceeeded, 309 r.c., under Q. Fabius Maximus, in twice defeating them, ant Fabius crossed the Ciminian forest-the frontier sacred from time immemorial; and when, 283 B.c., $P$. Cornelins Dolalella had beaten both them and their Gallic auxiliaries in a deeisive and sancinary battle at the Viadimoniau Lake, Etruria became a Roman frovince; and abont two hundred years later, the Lex Julia conferred upon her inhabitants, as a reward for their tidelity, the right of citizenship. Up tu that time. they had succerded in keep. ing np their own singularly distinet creed, customs, tralitions, language-their nationality, in fact; when sulla, $8 \sim$ B. C., infuriated by the part they Ind taken against him, liberally bestowed great portions of their land upon his reterans ; and sone fifty years later, ( Ictarianus planted his military colonies there. 'This wronght and eompleted the transformation of that mysterious conglomeration of heterogeneous races and tribes, hitherto called Etrurians, into Fomans. Once more, well-migh 2000 years after its extinction, the lingdom of Etruria (Hetruria) rose bofore the eyes of the world. The peace of Luneville re-created it, and conferred it on the herenitary prince. Louis of Parma; after whose death, his wilow, the Infanta Lonisa of spain, alministered the government for their son, Chayles Lonis, up to 1807, when it becane a French province. Fromi 1809, it again bore tho name of the frand Duchy of Tuscany; and to Tuscavr-which in our dias fomes a province of the Italian kinglom, as it dill of gore-and to Itaty, we refir for its modern history:

We hare spoken above of twelre cities as forming the confederacy of Etrimia Prober. Sinnilar confeleracies of twolve cities were established, independently of each other, in the two other Etmorias. The eities themselves, however, cannot be fixed now in all cases. From the fact of more than twelve autonomons ones being recorded in Etruria l'oper, it wouk appear that sume among these twelve confenturates, or pognuli, possessed more than one capital city, each popmlus, however, being limited to none representative vote in the general eouncil. The members of the confenteracy were boumd to apmear regularly at an annual religious assombly moar the temple of Foltumna, a locality which we are as yct unable to point out. Ilere great fairs were held for the pople; common operations of war leiner diseussed by the principes, and a general-in-chicf for the ensuing year elected from their number. Eacla city on canton, in the earlier times at least, had a ling (Lucumo, Lauchme $=$ Inspired), chosen for life, who at the same time acted as high-priest ; and a lereditary nobility, which alone

## ETRClid.

 of chents of batmen, probably the thecembants of *alojected uricimal inhalatants. On the whale, thu" foderal internapabace butwon the cince was far

always stemed irate, hat whose angry derreos comld easily he foreseen amin awrent, they set to work in develoning the immer pesturece of the anntry, and in making the best nas of their interemme with foreigh comentris. They thas heomb emiment in acriculture, navication, military tartics, medicine, astrmony, and the like; and in all these, as well as in some of the very minutiou of their ifess and furnithre, the homans lecane their remy disciples and imitatoms. The division of the year into twelse months, if the montha int" kalimes that nons and idns, the desigatand of the manerals,
 the toph puetexte as well as the pomp of trimuphs. the lieturs and appuritors, dinw th the isury enmate chairs. The thwns of the Etraseans were clean and healthy, owing to their perfect system of drainage and sewerage : they tumphed and wat rated, they embanken :und irrigaten, they turned swanks into citios, changel the course of streans. and excillent in all himes of nepend publice ant private works. Thurir ideal was mot the leantiful or the spiritual, hut a comfortalde. amb, if porsilhe. lnxurious existence. is a special prof of thir love for their own hearth, a puality probably imported from the nuth, we night allince ther invention of the atrium, the rommon sittingrom of the family, where the master of the louse sat surrommend hes his penates and the figmers of his ancesturs, while the wife and hor handmailens plied the latwurs of the lom un the uistaff. As in the (rermanie nations, woman stonl in liuh estimation. She was the compmina, not the slave of the lansloned, and thes had certainly mot a litthe share in the softening of their primitive wilhess, an $l$ in combteractiug the sombreness of thoir creed. That we fime them even in their tomb, painting nacagent in comvivial carnemus, dancing. ruecs, athletie gamos, and that they liked thin wery worship acempaniod lye the sonad of flutes, liorns, and trumpets, only fhews that that donimis sky ni theirs, their intercourse with the artions, their wealth and culture, hauk uradually cansen their antigue ami glomy ansterity tu war ofle exen as it wore wi with the Romanis and other feendes; fur to assum. with sume that the lomistrmus scems to, which we altude were canseal mure or liss liy the despair arising from the lass af their ind pendence, wond he gring somewhat tow far. Licentinushess is the sme forcrumer of the fall of a nation, but a whale perple doses not take refnge in enjerment when there all is lust. Wir know littlo of Etrusem haterature; it seems to have consiston mostly of rithals, religions hymns, and some historical worls. Whether the Fescemines, certain mocking-smas, smp in alteruate verses, with musical accompanment, at muptials, oriwinatel with them or mot, is not decided.

Wi. have allumed to the hight proticinncy of this people in arehitecture; they were, in inet, s. renowneal in this eraft thrmungots the antipue
 salem to build his temple, on the finmans sought in Fetruria the framers of their grandest masmic structures, such th the Clarika Haxima, the Temph of Jopiter on the Capitul, \&e. The peculiarly fantastic, and, withal, powerful mim which spenks in all their institutims, mpally weraics their architectural profuctions: lout, at the same time, everything they built, they built either for practical or finms purnises, We canut here enter into a discussion of their maner as it appears in raminus eprochs, but it never reathed any thing like a distinct mational completeness, their eaberness to protit by foreign rxamples nut allowing them to develop it to the full malloyed, Oi their walls and gates, temples and porticues, theatres and amplitheatres,
lridges and sewers, ginamic, and, in the earliest times, evelupeau-"viluatly erected, in Lastern fashinh, ley hosts of slaw-wery little is extant in su cemplete a form ats to give us an "xact insight inta their mole of constrmonn : and were it not for
 limitel. These form ane if the must peculiar features in Etruscan antin nities, Hewn in moks, cither below the ground or in the face of is clitf, they were aulornel ontside with is sumewhat Expetian facale of a temple or a laves, which the insulus themselvers most exactly reprodure, with atl thuir internal decoratims, furniture, and utensils. Gi the paintings which run round the walls, amb whinch are our satest and must complote guills to the inner hife of this matim, we will siyy more fresently. W. must not, in conclusion, mant to auration thait their temples bere in primitive times, amb always retaineh, in some measure, si far as we can judice the untinishal character of the wool-builhings of murthern momatain trihes-a sif nare, hali-honse. halfefretidication, overluaded with (quaint urnamentation.
In their llastic and fictorial arts, Winckemann has establishell three histinct stylys-to wheh Demis has adted it fourth-viz, the Deyptiau, with Bahymian anahgies, the Etrusam in Tyrrhene proner, the liellenic, and that of the livalomes. Characteristic of the first style are the prevalence of straipht knes, rught anches, faces of an obloms. contracteil wal, wath a pointed chin, eyes mostly drawn mpards, the arms hanging chase to the site. the bes eluse twe ther, the drapery lone, in stramet parallel lines, the hair difyonsed in tiers of enters. In this styke, the attitude is curstrained, the action stiff and cramper. The prowess shewn ly the siecend style is the greater attention lestowind in the deliseation of the muscles, which swell wat in disproportimate prominemes in the now alnonst entirely mule brily. The two remaining styles explaii thenselves, Their statuary, as it aplyars chietly on sarcophayi and cincrary mons, suguests lakewish an Eryptian urizin. 'ilhe figures are thas of thoir own mysticell and :wful hiales, instend of the Lacelic processinns of toreve ank lame. The wruphen follows rather a pheturind than a phatic principle : the motion is hasty anl forcerl; hat the features of the decersed, hemin on the lul, have all the rude acenracy of in stiritless [mortait. Statms of duities in winl amb stme have inleed lieen frame, hat very ravely. If high renown were their umaments and uthrisls in laken cliy (turra cota), in the manutacture of which oljogets the Vejentes were especially famme Rome at a very early puriok, possessed of this material a runalriga anil the statue of Cummans, male lay Etruscias. Of the art if working in lenorec, thic Etruseans werc suppusel to be the inventurs: that they lorought it to a rery high ibyree of perfection, is evilents from the examples which remain to us. statues and utensils were mandacturel and warten in immense equatities, whe only to Rome, but to every fart of the known with. Of figures on a lary seale still extant, we may montion the renumbed she-wilf of the C'apitol, the Chimara in the Ausemm of Finwme, the Warrion of Toli in the Etruscin Musem of the Vatican; in prortrait-statue of an Gratm, wath the inseription Ante Ifeteli, in Florence; and the hoy with the (awose at heydur. The tarions wijects of urmanent and use. fouml in great numbers in tombe, such as candelahra, cups, tripols, chadrams, cullhes, hises; artielns
 ment; fills, cists or casketw, are most of than models uf exquisite finish and artistice skill. Their gems are as numerons as thuse of Esyyt, and, like

ETYNOLOGY (Gr.) is that part of crammar that treats of the derivation of words. It embates the consideration of the elements of worls, or lettirs and syllables. the different kinds of words. their forms, and the notions they conver ; and lastly, the modes of their formation ly durivation aml com. position. letymongical inguiries have fomen a faronite pursuit from the earliest times. In tha buok of Cronesis. numerous indications are given of the ferivation of proper names. Homer alsuattempts etymologirs of the names of gols and men, which, howerer, can only lo lowal amon as more or lass ingenmos fancies. The erammarians ni Alexamiria and Varro amons the Lomans tricel tu has their etymologes on somethins like principle; but the wildest conjuctures comtinned to be indulpal in. and the results were hittle hetter than guess-work down to a very reent periol. Ax philolay extenden its sphere, and became acguanterl with the lanquases ami grammarians of the List, who far excelled thone of the Weest in this particular, ctyonolory took on a new form. It no longer sought the relations of the words of a single languape exclusivedy within itself, lont extendeal its view to a whole gromp, e. of, the Telutomie, or wider still. to a whole family, as the Indo-Enropan, or Aryan ( $q$. $\%$ ), and becane a new science under the name of (omparative irammar. Se P'innoncos.
Eitmnolayicum Magntm is the name of a Grek lexicon, the ollest of tho kiod. profersine to give the ronts of the words. It appears tolnhog to the loth e.; the author's namu is mknown. The etmologies are mere guesses, sometinus right. oiten willy absural ; but the low is valuable, as containing many traditions and notices of the moanise of ohl amb homsual wods. Thero is an edition bis

 often been confoundel with the mathematician of the same name. He was one of the carliest disciphes of Nucrates. Although Mosara hay at a considerable distance from thens, ant all Hecarians were forliblen to buter the Atheman territories moder pain of duath, F. cans into the city in the evening in fomble disguise, to enjoy the instruction of Socrates. After the death of his master, le estahlished a school of his own, whith received the name of the Megarie schonl. His dazth took place alont lot i, d. The lasis of has aystem was the Eleatic dogma of a one, unly, miversal, substane or existence. llendin: with this the suratic idna of the predominance of the moral clement, E. held this one real existence tu be the good, though it receives various names under its speciad manifestations.

IUCDIO'METER (Gr. , udion, good, and metron, measurer) is an instrument oriqinally introduced as a measurer of the goodness of air in auy locality, but which is now employed generally in the analysis of gases for the determination of the nature and proJortions of the constituents of any eascons mixtare. The instrment is now male of ghas in the form of a tuln, which is hermetically sealed at one emb, and open at the other. The tube may be straight, or hent m the shape of the letter U. In cither case the tule is graduated or marked off in equalsizel divisions from the clused end onwards, so as to admit of the volume of piss paced within being accumately measured; and two platinum wires are inserteal throngh the glass mar the shat end of the tube, and closely apprach, hat do not tonch, each other. These wires are intended for the conveyane of electrie sparks throush any mixture of gases, so as to cause the combustion of certain of them. Fer the moles of manipuating with the endiometer, see Gis, Avilusts me.

EUDOClA, the name of sermal Byzantine princessen, of whom the must important is the wife of the Dimperor 'Theodosins [I. She was the dinghter of the smhist Leontius or Leon, and was edneated by her father, who instructed her in the literature of Greece and lome, in rhetoric, geometry, arithmetic. and astronomy: Her accomphishments anl her singular beaty were reckoned ly Leontins a sumieient fortune, for at his death he left all his property to her two hrothers. E. appealed to the rimpor at Constantinople. Pulcheria, the sister uf Thembusins, was interested in the maiden, amel thonght she would make a suitable wife for the -myeror. Jint as E. (or, more properly, A thenais, for this was her name until her baptism) had been lrought up a paqan, it was necessary finst to convout her. This was easily aceomplished. E. was married to the emperor in 421 A.1. For many years, however, Puleheria ruled in the imperial louseholl and councils, F., accorling to Nicephorns. 'submitting to her as mother and Augusta;' but in $\therefore$ it. a quarrel liroke wat leetween them in regard to the Jutychin heresy, of which E. had become asmp. purter. At first, No was trimphant, and Pulcheria was hani-hod: hat in a short tune the emperor was wembeikel to his sistcr, aml treated f. so slarply That she retirel to Jernsalem, where she died 460ani A. 1 . Her latter days were speat in works of
picty and charity. She enriched chmehes, whilt the walls of the Holy City, and foumled many monasteries and hospitals. Thromod the inthace of the fimons symeon stilites, she was inducel to renome Eutychianism, aml become an orthonx Catholic Christian. E. was a peetess of considcrahle merit. She wrote a poem in heruic verse on the vietury obtamed by the troops of Thembenins own the lero sians, $4: 1$ in 422 A.In; a paraphase of eight books of Seripture, a paraphrase of Danicl and Zachariah, and a $\mathrm{p}^{n \times m}$ in threc looks on the history and martyrdom of Cyprian and Justina. The aut liorship of Ifomeru-Comtones has also (hant withat sullichent reason) been attribnted to her. This is a work romposed of verses taken from $1 l_{\text {fomer, and su atrangend }}$ as to appear a history of the fall of man amb if his redemption ly Clurist. It has heen ofen pulalis hem.

EUDO'XUS', of Cuiths, callet he "iemothe frince of astrommers, ilnwiwhed about Bibib.e. He studied umber Plato for some time, and atterwatls went tu Egynt, where he resided fur thirteen years, mul hal much intercourse with the Eaphion f riesthoml, from whom he is supposed to havederivel his sure. rior knowledge. His last years are saill to have been spent on the summit of a high hill, that he might have the stary heavens evor bofore his eycs. There is little reasen for indieving that E. deserves any great almiration for lis athamments in astroman: Ile probably introducal the splere into Greece, and may have eorrected the length of the year, upan Exyptian information, hat he appears to have heen but an inditierent observer of heavenly phenomena, aml Delambre consilers that he was remorant of geometry. E.'s works are entirdy lost, and our only reliable sonces of information resarline him are the joom of Aratus and the comimentary of Hipparchus.

EUGFNe, Fraveons de Prince Frapois-Eugene de Savoie-tarignan), better known as l'mace Earene, equally distinguished as a meneral and as a statorsmau, was born at Paris, 1 sth Octoher 1663. He was the son of Eugene Maurice, Connt of Soissons, and of Olympia Mancini, a viece of Combimal Mazarin. Ile was intended for the chareh: hat the banishment of his mother to the Low ('mantries, by the orders of Louis XIV., was so deeply resenteil by him, that he indignantly renouncel his country, and entered the service of the Emperar Leopold as a volunteer aminst the Turks. Sulsequatlo, the French gowrnment made lim the most flattering offers, but he newr returnel the the serien of his native country. He displayed extram dinary military talent in the Turkish war, especially at the famons siege of Vienna in 168:3, aml som rase to a high position in the army. In the cinalition Wiar against Lonis XIIV. in Itally, he tomk an ative part; ame in 1691 , be was raised to the emmand of the imperial amy in Piedmont. On his return to Vienma, he was phaed at the houl of the amy of Hungary, ami defeated the Timks, with immuse slanghter, in the famons battle of Zent:1, September 11. Wi97. The booty ohtained was almost incredinh, abourting to several milions sterling. In 1701 broke ont the Spanish Wiar of Sucucssion. E. for two years commanded the army uf italy, but his forces were too small for him to accomplish anything of importance. In the year 1703, being appointerd presilant of the council of war, he beame thenceforth the prime mover of every undertaking. He tirst took the command of the inumerial amy in Gemony, and along with Marlborough gained a hrilliant victury at the lattle of Blenheim, 13th Angust 170., when the two commanders ilefeaterl the Froueh and liavarian army. E. afterwards saved Turin, and expelled the French from Italy in the
year 1ang. Me shared, too, with Marhoronch the Elory of the fichle of Ondenarde (in I70S) ani Mal-
 by the retiremont of IFAlame and Foghand from the contest, he was mahn th withstand the enemy on the Hhine, amb his defoat by Villars at Deman, -2th July 1712, was followed liy other disasters, matil the peace of lastath pat an end to the war: In 1716, nh the recommencement of the war against the Turks, E. defeatel an arme of 180,000 nen at letomardein, took Temeswar, and in the sear 1:17, alter a hlowly lattle, ganced possession of Belerate. Ater the peare of Passamwice, which was emcluted in tho fullowing year, he returned covered with glory to Vicona, where, huriner the surcecding bars of peace, he laboned with noweatied enerey in the cabinct. When the question of the succers siom to the throne of Polam lirnght on a now war with France, F. appeared again on the lhine; lnet luing now alvancel in years, and destitute of sutheient resomrees, be was mable to accomplish ansthing of importance. Aifer the parce, he whenmal to Vienna, where he died, 2Ist April 170 . l., was amall in stature, with thin face, and long nowic: he was simple in druss and manner, and intulsel profuscly in smulf. An enthasiast in his professum, and a strict disciplinarian. he was also kimelhearted and sympathetic. and abways carefully attended to the wants of his men. He introtheed no new tacties in the art of war, and was deficient in the guidance aud command of masses; but by his rapidity of perception and decision, and faculty for making the lust of existing eircumstances, which was his fonte, he raised the prestige of the Austrian arms to an eminence unctuatlen before or since his time. He successively serverl under three emperans, of whom he was wont to say, that in Leopold I he land af father, in doseph 1. a brother, awd in Charles YI. a master: E.'s political writines, pmblished ly Sartoni, are inpurtant for the light they throw unon the histury and manuers of the time. ECELER, lswsinn, whe uf the greatest of mathomatime, was lum at liased, Aprel 15, 1707, and rewived his thrst instruetions in the science, twe which he afterwards hit so mand, from his fath $r$, whes wats paten of the mejgbowing villago
of Riechen. At the miversity of Basel, he studient under John Bermailli, and was the friend of Daniel and Nicholas Lurnomilli. At the age of lat he was second in the contust for a prize offered by the Acalemy of l'aris for the best treatise om the masting of ships. His friends, the Iermouillis, hav bene called to st Petershurg ly 'atharine l, when she fommed the Acadeny, and they now induced 13. tu settle in that capntal, in 1730 , as Professen of Physics. There years later, law exchansent his profussorship for a place in the Aculemy. lirme that time, he continnel to lalrour in the firles of mathematies with an arlour redly astomishines. Shore than half the mathematical treatises in the tio guarter volumes palisinel by the it letershare Acalemy from 1729 to 1283 are ly lin, and at his death he left more than wor treatises in MS. which were afterwarts phdished loy the Acalemy: The l'aris Acalemy of sichee awarlal him the prize m ten several occasions, one of which was his treatise on Tides, 1 dut 1 a $17 \pm 1$, he accopted the imvitation of Frederick the Great to Serlin. He afterwarls, 166is, retmone to st letersburg, where he was made director of the mathematical department of the feadeny, and died september 7,17 s.3. The lant years of his life were secnt in total blimeness.
E. was of an amiable and religious charaeter, always chereful amt grow hmonarel; in society, he was distinguished for his agrealne wit. It was doulthess his resilence in st letershurer that loil him to the apmication of math matics to the buidiner and management of ships, as emboricol in his Throrie de la f'unsterntion el do le Jamonere des J"aiswana (Letersh, 17:3). Thee great probloms left by Newton to his snccessons were the ohjocts of his noceasing research. On physical subjects, 1. often alopted extremely matoratile hylothesis. lle occupied hiniself also with philosophy in the froper sense of the worl. He mutertonk to prove the immatcriality of the soul, and to defend revelation against frecthinkers. In his Lettres a

 now el., Par. 1819; and wheh have also leen translated into English), he attacked Leibnitz's system of monads ame of a preestablished harmony: lint this was not the field in which he was hest calculated to shine; his proper domain was the ahstruser parts of pure inathematics. IIis most ingortant works of this class are his Theor? of Plunctury Dlution, Introduction to the Analysis of Insinites, hinstitutions of the Liefferential cent of the Fiblegral Cedculne, ant Diontrios, which are all, as well ats his Upustuleb Anelytice, in Latin. His Introtuction to thelowe is wall kwawn.

EUMEXVLDES (literally, the well-mimed or benign goddesses) was the eaphemistic name of eertain fearful beings, whose true name of Erinnyes (from crimo, I hunt u], or erinuo, I am angry) it was considerd umlawful to utter. Their Latin name was Furie or Direc. We find the mentioned by the carliest poets, anl they play a prominent part in the writings of the tratcilians, where their spluere of action is much extemied. In the carliest tmons, Homer and hesiol represent them as arengiog and punishine perjury and muder, as alsn the violation of tilial duty and of the rite of hospitality; they were also regarded as goldesses of loate (iike the Pareac), and had a share in the grim Provilence which led the domed ones into the way of ealamity. A part of their function was also tio hinder man from aequiring too much knowledge of the fature. In these poets, their number is sometimes nmbefinel; sonetimes they appear as one. The limitation to the number three, as well as their names Alecto, Degera, and Tisiphone, is of a later period, a whole 167
chorus of Erimyes appearing in the writings of Eschylus. According to Homer, they dwelt in Frthis, anl with this the lluration after death of the punishments which they inflict is eonnceterl. Lesion calls them the danghters of Ge and Uranus. Aschylns describes them as laving the features of porgons and harpies, their honlies covered with hlack, serpents twined in their hais, ame bood Mriping from their eyes. The later penets and sculpturs representel them in the more pleasing form of winged virgins, attireal in the garb of huntresses, hearing torches in their hands, and with a wreath of sopents romm their heads. Ciralually, they came to lu consideren gendesses of the infermal regions, who pmishen crines after ileath, lout seldom appearel on earth. In Athens, their worship, Which, like that of the other infernal deities, was comlucted in silence, was hehl in great honour. The sacritices offired to them were black sleed and libations of nephalia-i. e., honey mixerl with water. The turtle-dove and the nareissus were sacred to them. They had a sanctuary in the vicinity of the Areopagns, and one at Culonus.

FUMO'LIPTS' (the 'sweet singer') was, in the later mythungy of 1 recece, the som of Poseilon and Thinne. He was loought no in Ethopia, whence he went to Thrace, and atterwards passed into Attica, at the head of a boly of Thracians, to assist the Elensinians in their war against Erechthens, king of thens. E. and his sons are said to lave been slain in battle. We is spoken of as the fommer of the Elensinian mysteries. A dis. tinction is malle ly some of the ancient writers between this E. and a son of Duswus bearing the same name. The latter is represented as a scholar of Orphens, and the instructur of Hercules: but E.'s listory, like all mythological stories, is involved in great iliscurity and confusion. 'The name of L . is one of the suries of those ohl priestly singers whas ly the institution of religions cermonies, spreal culture and morality among the rude inhabitants of Hellas. An illustrious Athenian family, the Eumolpider, derived their descent from E., and ledd the office of priests of Demeter in Eleusis.

EUNO'AlUS, the founder of the Arian sect of Eunmians, was horn in the village of Dacora, in Capmoneia, and was tirst a lawyer, then a soldier, and ultimately took louly orders. In 360, he was apminted Bishop of Cyzieum. In the ureat controwergy regardine the nature of the Trinity which raged during the the e. E. was conspicnons by his alvocacy of the view that the Father aloue was eternal and supreme; that the Son was generated of Hin ; and the lloly spirit, again, uf the Som. His ductrine of the Trinity is sometimes called the Anomoian ("dissimilar'), to distinguish it, on the nne hand, from the IIomuiousian ('similar'). held hy the semi-Arians, and, on the other, from the Ifomnousion. (*identical'), held by the Athanasian or Trinitarian party. It was thus the extreme of Arianism. In defence of his peculiar views, E. is sail to have shown superior alility, although his opponents also accuse hinn of leing verbose and inflated in his style. His life was much chequered. IIe was banished from no place to another, until at length he obtained fermission to retire to bis native villare, whre he died in 394. His writings have entirely lerishen, with the exception of a fragment lacre and there preserved in the writings of his alverearies.

FU'NU(CH. The miginal signification of this word ( ir . rumuchos, one who has claarge of a bel) puints th the oflice that this elass of persons fulfilled, aml still fultil in the East-that, namely, of taking charge of the wonen's apartments or harems.

In the byantine cmpare, un the contrary, castration and kemper of mandse wore very provalent. This dass playal a prominent part in the court of the Lastern Enifires and the word anucl cance to be the title of an office similar to that of chamberdain. In monern times, the pratice is mostly contined to Dhammedan comatries, and the eumebs are chiedy brumht as slaves from the interion of Airica.

ETO MPHALVA, a large gemus of fossil gasteropoloms shells. characteriscd ly its depressed and discondal sholl, wath angled or coronated whorls, fivesided month, ant bery large monbilicus. The operculum was shelly, roumi, and multi-spiral. The genus seems reluted to Trochus. It appears among

Linomphalus Discore.
the uathest twants of the qlobe, and keeps its place till the Triassic period. No less than eighty species have heren described. Our figure represents one from the Wembel limestone.

## duONyMUS. See Sprinde Teee.

EIPATO'RIA (furmerly Koslum, a thriving maritime town of liussia, in the government of Tiamilia, is situated on a hay in the west cuast of the Crimea, 15 miles north-west of Old Fort, and :3 miles north-west of Simferoph. The town stands on the lurder of a monotonons pastomal sthme, and is surrounded by low hills. Seen from the sea, it presents, with its wecasional minarets and its honses roufed with real tiles, a somewhat picturesque apparance. The principal builing is tho" Tartar mosque, built ly Devlet-Ghiri Khan in 150, and reckoned the fibest in the Crimen. E: experts come wool, and salt. Its harlour is shallow, and is sheltered only from the nurth and north. east winds. l'ol. 13,340, mostly Crim-Tartars ams Aows, whare engaged chictly as famers and shep. herds, and possess in immense number of oxen and slacep, and a large area of lady eultivated lam.

On the 14th Soptember 1sil, a protion of the Anflo-Freneh invading army danded here, and oech$1^{\text {nind }}$ and fortifed the town. It was also the seme of a lattle between the linssians and Turks, 17 th Phanary 1sis, in whele the batter were victorions.
 natural "ritw ('ompersite", sul-ordur conymbifiotr,

a hairy lampar. The sucies are mumerons, ant muntly American. One culy is lritish, the common
 Iremmial flant, growing mostly in abarshy fatees and on the bakk of streams. The root was formorly employed as a purgative, and the plant was

Hemp Agrimony (Eupatorium cannahinton).
", a fourt.
also ased as a dinretic and as a vulnerary,-Thorotgh-wone (E. perfoliatum), a species having the opposite leaves juind at the base, is very common in low grounds in Nurth America, and is a jopular medicine, much estecmed and used in that country, It is ofteu administered in intermittent fesers. It acts powerfully as a sudorific, and is often very beneficial in eatarrh and influenza. It is also emetic and purgative, and, in small doses, tonic. The whole phant is very hitter.-Other North American species possess similar properties, and the root of one, known as Giavel-roor ( $E$. purpureum), is employed as a dinretie for relief of the disease from which it derives its name- The Ayaraxa ( $E$. Alyarana), a half-shrubly species, native of the north of Brazil, has a high reputation in that country as a cure for smake-bites, and lias heen introluced into the East ladies. It is a very rowerful sulorific, and is also dinretic.- The famons I'eruvian vilncrary, Antico, has been referred, but uncertainly, to a shrubiby species of this genus, $L$.' aluthosum. - Guaco or lloaso, mneh valned in l'erna as a cure for snake-bites, is supposed to belong to the allied genus Mikania.

EUPEN, a flourisling mamufacturing town of Rhenish l'russia, is sitnated in a leentiful valley om the Weare, within '2 mles of the Belgian frontier, and 9 miles smuth-sonth-west of Aix-laChapelle. It is well huilt and open, includiner within its limits several gardens and meadows. IS. has the most flowrishing weoblen manufactures of any town in l'russia-contaning mon less than 14 woillen mills, working nearly llow looms, and givins employment to between 3000 and 4000 1ersuns. I. has also dye-works, machine-maling,
and other manufactures. It owes the prosperity of its manufactures eliefly to a number of French refugues, who settlerl here after the peace of Limé. ville Pop. 12,759.

EU'PMEMISM (Gr, ou, well, and phemi, I speak) is a tigure of rhetoric by which an unpleasant or offensive matter is designated in indirect and milder terms. Thus, instead of directly calling upan umpleasant image lyy the worl clicd, we say, 'The was gathered to his fathers.' The ancients used a mudtitude of enphemisms, to avoid worls that were thonetht to be ommous of evil, or oflensive to the unseen phwers. They spoke, for example, of the Euncnides, or 'benign godlesses,' insteal of the Furies: just as the elves and fairies of modern superstition are spoken of as 'goud neighbours.'

EU'PHON, or EUTHONON, a musical instrament invented by Chlamin in 1790 . It is similar in tone to the harmonica, am, like it, the tone is produced from the sounding body by the tinger direct, without wechanism, and is rendiated in quality and effect by the taste and feelings of the performer, who ean produce tones from the most delicate pian. issimo to fortissina. In 1820, Chladni exhibited an improved euphon, of whieh a detailed ilescription is given by himself in the Leipsic Musik-zcitung of that year, page 805.
EUPHO'TiBLA, OLL of, or OIL OF CAPER SPURGE, in extremely acrid fixed oil, obtained by expression, or by the aid of alcohol or ether, from tha seeds of the Caper Spurge (Euphorbia Lathyris),

Caper s'purge (E'uphorbiat Luthentio).
a plant common in many parts of Furope, and maturatisod in some places nh liritain. See Sputer Od of enphorlia hais much resemblance to croton wil in its proproties, although less powerful, and is smactimes used as a substitute for it, in doses of from three to ten drops. It is good for use only when recently extracted.
EUPHOIRDIA'CFAD, a very extensise natural order of exorenous phants, containing upwaris of 2500 known species-trees, shrubs, and herbaceus plants. 'They aboum chietly in warm countries, and most of all in tropsical America. The few species found in the colder jarts of the world are all herbaceous. The common bux reaches a mare northern limit than any otlier shruhby speeies. 'Jlee wther IBritish species are different kinds of Surue (Euphorlia) anil Dog's Mercury (Afereutialis). The Li usublly aboumb in an acrid and poisumons milky juice, although there are species of which the juice is bland or becomes
hand through the application of heat, so that theni leaves may be used as fool. The leaves in this order exhibit great diversities. The inflorescence is also varions. Awonest those most remarkable for the acridity of their juice are the Manchanemp (q. v.) aml Exceccuriu uychloche, an Last Indian tree -formerly sumped to yidd one of the kinds of aloes-wool-the smoke frem the burning of which is extremely dangerous to the eyes. The juice of many of the spmrges is also very acrich. Dany of the E. are valued for their medicinal properties, different parts of the plant being in smme instances employed, and in sone the resios and oils which they yield. Thus the juice of sume of the spurges, the roots or bark of the roots of others, the hark of different species of Croton (Cascarilla Bark, Conalche Bark), \&e., are used in mediciue; and to plants of this order we are indebted for cuplorbium, oil of euphorbia, castor oil, croton oil, \&c. A few of the F. yiuld balsamic products of exquisite fragance (see (botor); a few, although their juice is misnnous, yield a wholesome starch in considerable almudance (see Masioc) ; a few are cultivated and used as pot-herbs, ${ }^{\text {marticularly species of Plukenelio }}$ in the East Itulies; a fow yidd wholesome and atreeable sub-acil iruits, as Cicca disticha and (: rucemose in the East Indies; the seeds of some are catable, as those of the Candle-nut (q. v.), of Omphulur diandra, a Jamaica tree, and of Concereiba Guiconensis, the latter being esteemed particularly clelicious; the oil of the seeds is also in some cases used for food, like other bland oils (see CavoleNUT) ; lut more frequently it is used for burning, as castor eil, cinde-nut oil, the oil of Elaoconcie verrucosa in Japan and Manitius, and the concrete oid of stilliugiue sebifera, which is used in China for making candles, and in medieal preparations as a substitute for lard.-The dye-stuff called Turasole (4. v) is oltained from a plant of this order ; and a lright sed is imparted to silk by the roots of Motthera tinctoric, in native of Circassia, and by a red powder with which its seed-vessels are covered. The timber of some of the E . is valuable. African Teak (q. v.) lelongs to this order. The red-coloured wood of Stglodiseles trifoliutus is used in Java for making masts. Some of the E. are often cultirated in girdens and hothouses, more frequently for their curious apmearance than for their leanty; but the large deep crimson bracts of Poinsettia pulcherrima, a native of Madagascar, make it a very attractive plant.

EUPHO'RBIUM, an extremely acrid gum resin, oldained from several species of Euphorbia or Sporce (q. w), as E. offinarum and E. antiquorum, in the north of Africa, Arabia, and the East Indies, and L. Canariensis in the Canary lslands. It is olstamed lyy incisious in the branches, whenco issues a corrosive milky juice, which dries in the sun, and becomes a ycllowish-gray waxy gum resin. The persuns who collect it are obliged to defeml their months and nostrils ly a eloth, as its farticles produce incessant sneczing, vinlent inflammation of the nostrils, anf a very painful buming sensation in the mouth. On account of its excessive acridity, it is now less nsed in melicine than formerly; although it is still oceasionally mixed with Bur. ghady pitch or other sulustances to make rubifacient plasterr for chronie affections of the joints; its alcobolic tincture is used as a canstic in carious ulcers, aml its powler, mixed with much starch or flour, as an crohine in clironic affections of the eyes, ears, or brain. It was formerly administered as an emetic aml drastic purgative, but is dangerously viment in its action.

 Andemer. The cipistal is Everix ( $1-\mathrm{V}$ ).

EVILE, oriver of the north-west of France, amb a tributary of the reme, rises in the department of Drate, fows first south-east into the centre of the department of limeoct-Loir, then north aml worthWest throngh the departments of Eure-et-Loir ind Fiure, and foins the seme on the left alove l'ontrde. l'Arelen, after a comrs of abont 100 miles. Only that portinn of the F . which is in the dhenrtment uf Eure is navigalile.

EFRE-1:T-LOIR, a deprartment of France, formed chictly from the province of Orleannais, extemis between lat. $45^{-5}-45^{2} 5^{\prime \prime}$. and lons. of $47-2$ Fis Area, 2245 simure mbes. Pog. 201, (174. It is watered manly by the liure in the math, and the lour in the sonth, the two rivers from which it takes its mames. This rlemartment lies on the water-shed hetween the liay of Biscay ind the limelish Channel. It is in reneral level, the east amd sonth being necupied by high and extemsive tlats: while in the west, the scenery is tintely variond ly hill and valley. The soil is firtile, aml, especially toward the east imd south, is aimirably alapter for wheat. Jops grow spontanemsiy in some quarters. In the forests, the bak amel bireh are the prevailing trees. The rivers, num of which are navimable in this deprotment, fumasin valuable water-pwer for the mumerons mills of various kinels that are situated on their banks.

## EURIPIDÉS-EUROPE.

Iron is the ouly mineral fonm and worked to any great extent; lut the chicf articles of trade are corn, flour, and woml. The department is divided into the four arromdissements of Chartres, ChateanDun, Jreux, and Nowent-le-Rutron, with the town of Chantres for eapital.

EURI PLDES , the latest of the thre great Creek tracelians. was born at salamis. 480 bec, on the very day ( $2: 3$ d sentember), it is said, of the glorinus victory gained by the Grecks over the Fersians near that island. The Arumlel Narlile, however, gives as the date of his lirth 485 b. C., whale Dhiller, following Eratosthenes, makes it finur years later. His education was very goml. At tirst, he was trained to gymastic exercises (in conserquence of the preliction of an oracle that he should be crowned with 'sacred garlands'); he mext turned his attention to painting; then studied philosophy umber Anaxagoras, and rhetoric under Prodicns, and formed a lasting friemiship with Socrates. The first play of E.'s which was performed was the Peliules (4⿹\zh26ti e. C.). In 41 b . c. he gained the lirst prize for tragedy. and contimed to write for the Athenian stage unt 408 b. c., when he accepited an invitation to the court of Archelans, kine of Macedonia. Scandal has invented other reasons for E.'s leaving Athens, but they are unwortliy of notice. He is said to have been killed ( 416 E в. C.) liv dogs, which were set upwn him ly two brother pects who envied him his reputation. In E.'s time, Greek tragedy lad leen brought to its highest perfection by Suphocles, who was fifteen years older than Euripides. The latter, however, was the second favourite anthor of his time; nay, on more than one occasion, his tragodies were preferred to those of Sophereles; but his liverad and even neologistio tendencies in regarl to rdigion, excited the hostility of that witty but scurrinus champion of Greek orthoduxy Aristophanes, who frequently ridiculed E. in cutting parodies. There can be no doult that E. was syst matically almsed by the Atheuian Tory party, of whom Aristmhanes was the literary chief, and to whose noserupulus opposition it was oning that he gamed the prize only five times out of 7.5 competitions. But against the censure of Aristophanes, may be set the praise of two nuch greater men-Aristotle and Jun Milton. E.'s phays are reckoned by some to have amonated to $7 \overline{3}$, by others to 92 . Only 18 have cume down to us. These are-Alerstis ( $4: 3 \mathrm{~S}$ в. c .),

 B. c.?), Ion (thate not ascertainable), Hereults Furens (date not ascertainable), Anlromache (fio) -417 в. c.), Troudes ( $415 \mathrm{~B}, \mathrm{c}$ ), Electra ( $415-$ 413 в. с.), Belona ( 41 - в. с.), Iphigeneia in Tauris (date uncertain), Orestes ( 40 S e.c.), I'henieste (probably same year), Bucche (probally written in Macedonia). Iphigeneia in Aulis (prosthmously represented in Athens) ; and finally. ('yclops (uncertain). Ihesus, attribnted to F , is probably not gemuine. Concerning E., and his tragedies, A. W. Sehlegel remarks: 'Of few anthors tan so much grod and evil be predieated with equal truth. He was a man of infinite talent, skilled in the most varied intellectnal arts; but although abonnding in brilliant and amialle qualities, he wanted the sublime earnestness and artistic skill which we admire in Eschylus and sophocles. He aspires only to please, no matter ly what means. For this reason, he is so frequently unefual to himself; producing at times passages of exquisite beanty; and frequently sinking into positive vulgarity.' The main object of E was to excite emotion, and his works laid open a tutally new world (in literature), that of the heart, which, beyond dispute, contributed much to their pepularity. On the other
hand, his inartistic and cardess plots compelling him to a constant use of the lous ex machima solution of difficulties, and occasionally even the subjects of his art themselves, leave ample room for criticism. Archclans refused to allow his bones to be removed to Athens, and evected a splendid nonument to him in l'ella, with the inscription: ' Never, O Eampiles, will thy memory le forgritten!' still more honnurable was the inscripation on the conotaph erected to him by the Athenians on the way to the lirelus: 'All Grece is the momment of Euripines; Macedmian earth covers lout his bones.' Sophoeles, who survivel him, pudicly lamented his loss: and the orator Lyenrgus afterwards erected a statue to hin in the theatre at Athens. The altio minceps of $E$. anmearal, it is thought, at Florence, toward the enm of the listh centary. The best modern editions are those of Beck (Leip). 1775-1785). Matthiae (Leip, 181:3-1829), and the Chasgow edition of 182? An English traustation in verse, by Potter, alpeared at Uxfird in 1S14.

FU'JOPE, the smallest, but also the most highly civilised and most proplons of the three great divisions of the old contment. It is separated frmo Anerica on the west and north-west lyy the At thatic; from Africa on the somth by the Mceliteranean; and from Asia by the Archipelaro, Sea of Marmora, Black Sea, Caueasian ridee Caspian Sea, Utal hiver and Mountains, and the Fara liver. It is in the form of a huse penimsula, projecting from the north-west of Asia. Its extent from Cape St Vincent in the south-west to the mouth of the Kara Liver on the north-east is 3400 miles; and from Cape Nordkun, the most nurtherly P mint of the scandinavian mainland, to Caje Matapan, the sonthmost print of Greece, 2400 miles. The continent of E , irrespective of islands, lies within lat. $36^{\prime} 1^{\prime}-71^{\circ} 6^{\prime}$ N., and long. $9^{\circ}: 0^{\prime}$ W.-65 $30^{\circ} \mathrm{E}$. Its area is estimated at rather more than $3,200,900$ square miles; and its coast-liue, more extensive in promortion $t 0$ its size than that of any other geat natural division of the chabe, is costimaterd at 19.540 miles; giving a proportion of 1 linear mile of const for every I!m sinare miles of surface. It has a population of $299.010,000$, which gives an average of about 80 for every symare mike.

The boily of the European continent diviles itself naturally into two great purtiens-the great plain in the north-east, and the Highlands in the sonth-west, the montanous peninsula of Scanlimavia, lying, as it were, apart from either, being to some extent excrlitional. The plain occupies absut two-thinds ( $2.500,000$ ) square miles) of tho entire extent of the continent. It reaches from the eastern bomdary of E , nonth to the shores of the Arctic Ocean, suath to Nlome Cimeasus and the Black Sea, and westwand over the whole extent of the continent; gradually, however, lecoming narrower in its progress west. In shape, this phain rescmbles a triangle; its base rests on the eastern homulary, and it may le said to reach its apex on the shores of Holland. It separates the two monntain systems of E.-the Scanlimavian system (see borenise, scambivaris) on the morth, and on the south the system of Southern Europe See Alps. Arempines, Falkin, Carpathlin Muuntahs, Chevences. Pyrenefs, \&c.

Jutting out in numerous peninsulas, and indented by extensive lays and gnlis, E. hats no town at a nueh greater distance from the sea than 400 miles, save those in the centre of the castern plain; but even here, by means of mmberdess rivers and the canals, which, from the nature of the country, are easily construeted and maintained, a splendid system of emmmonication ly water nuw exists. See Voldi, Düxa. Diteper, Mienfan, \&e.; also liessia.

cmaid riol moler the dimeront countrios See alsn Abrs．IM

Suturnl／I iotury．The nathal history of E．very mach whe with that of the morespuring latitures of A－i，As the mometain systoms and the platios af the one cominn ent exteml into the other，so also foothoir thoras and taunts．Tho natural history of the louronan comutrima nh Moditerman Sea is wry smilar to that ufyriamb of Asia Minor．The natiral hetury if the nupe morthern requans of E． rosimhen that if the enent phains of Central Asia and shomit．The mot，northern regions have the stribly aretio flom and fana common in a great mensime to all tho aretio：and subarctic regions， Eurw history of the rast suthom comatries assumes a

 olonformas loathen than the Cancasus ame aljoin－ ing regions，whilo the riormophlemen are more alombatt．Whe extrome abumbance of＇ivtore may be montional as at pernliar feathere of the thera of suain ant lortugat．The Primuluce are parti－
cularly plentiful in all the Alpine regions of the smath of E．，Int this claracteristic is in sume measure slareal ly the llimalaya．A great alundance of umbelliferous and couciferous $\mathrm{p}^{\text {lants }}$ is a character． istic of all Europe．In no wher part of the world do they form so large a proportion of the tlora．
The temperature of the western and noribern parts of E．being raised by the dulf－strom and the winds from the great mass of dry and desert land in Africa above what is essewhere found in similar latitules，the thora and fauna exhibit a corrospunding chameter，affecton，however，hy the great amont of moisture derived from the Atlontic Geean：and also to a still greater degree ly the comparative unifornity of temprature which the froximity of the acean produces．The effect of the last－mentiond causes is sn yroat，that the northern
 of the Atlantic than in the more central parts of R，where the winters are much colfer，and the awrave temperature of the year is lower．Of this the vine is a motable example，and maze may lee mentional as another．l＇lants which reguire a mild

winter will not grow in the north-and searcely even in the contre of li.-but they advance along the western coast under the influcnce of the maritine chmate. Thus the myrtle-althongh not indi-genous-grows even in the south of Englant.

Amongst plants, the date palim, and amongst aninats a species of ape, are foumel in the sonth of E. (the ape only on the Fiock of Gibraltar) ; whilst some strictly African birds are frequent visitants, and many birts-as the cuckno, swallow, \&c.-are common to L. and Africa, imhabitants in summer even of very northern regious, and returning in winter to the warm south.

Of the plants now most commonly assnciated in our thonghts with the southern conntries of F , , many have probably been introtuced from Africa, or from the East. This has prolably been the case even with the myrtle, and certainly has been the case with the vine, the olive, the orange, lemon, \&e., the if, the peach, the almond, the aprient, de. Some of the most extensively cultivated froits are ecrtainly iudigenous to E , as the apple, par, phan, and eberry, although even of these the first improved varicties may have been introdnced from the earlier seats of civilisation in the Last. Anmong the wild animals of $E$. at the present day, the anrochs or bison is still reckoned; and the ox existed at no very remote perion in a truly wild state. The reindeer inlabints the extreme north of L. ; the elle, the star, the fallow-deer, aud the roelnok, are fonm in more sonthern regions; the ibex or houquetin exists on the high central mountains; two species of anteloue-the chamois of the $N 1 p$, and the saiga of the Russian plains-commect the European fanma with the Asiatic and African. Of carmivorons animals, the most worthy of notsee are the bear, the wolf, the fox, and the lyn.

The abmulasee of lakes and streams in the northern parts of E , is aceompanicd with 2 evoresponding abundance of water-fowl (Arutheter) and of fish. Of the latter, the Sulmonide are the most Faluable, and the Cmprinite next to then. The European seas afford valuable fisheries, particularly of herring and of cot in the north, and of timny, anchovy, \&e., in the Mediterranean.

The common live bee and the ligurian bee may probably be reararded as natives of Enrope. Ilie sill-worm was introluced from the last. Anotlier valuable insect, the cochincal insect, was introduced from America; but the ('untharis, or Blistering Fly, is truly inkigenous tos the south of Europes.

EUPIVALE, a genus of plants of the natural orter $A$ ymphatacer, or Water-lilies, elonsely ailied to Vicronis ( $1 . v$. , although of very different ajpearance. $L$. ferox is a water-lily with small red or violet-colvired dowers, leares almit a foot in diameter, the leaf-stalks aud calyees eovered with stiff prickles; a mative of India and Chini. 'The fruit is round, soft, $\mathrm{p}^{\mathrm{m}} \mathrm{p}$ y, and of the size of is small orange, connmsed of a mumber of earpels, and containing round black sceds as large is leas, which are full of a metritions anceeable farina, and are eaten roasted. The rout-stock also contains starch, which may be separated and used for food ; and the root itself is caten. 'l'he plant is said to have been in cultivation in China for urwards of 3000 years.

EUSE'BIUS, of Casarea, the father of ecclesiastical history, was borw in Palestinc ahout $264 \mathrm{~A} . \mathrm{D}$. Te took the surname of Pamphili from his friend I'amphilus, Bishop of Cesarea, whom he faithfully attended for the two years $(307-309)$ in which he suffered imprisonment during the perscention of Diocletian. He then went to Tyre, and afterwards to Egylst, where he himself was thrown into prison
on account of his religinn. In 315 , he sucecederl Agilius as bishop of Casarea, took a prominent pratt at the Council of Nice in 327, and died about 310 .- E . was the head of the semi-Arian or moderate party in the Commeil of Nice. That party were averse to discussing the nature of the 'lrinity, and would have preferred the simplicity of Seripture languade in speaking about the Goulead to the metaphysical distinctions of cither side. 'Hhey ragrelel 'Trinitarianism, on the one hand, as logically indefensible, lut, on the other, they recognised the fact, that Seripture sometimes spoke of the Son in terms not compatible with the views of Arius, and therefore they wished cach man to enjoy the nimost freedom in his interpretation of Seripture on this point. E. thonght that the great thing was to lay to heart the truth, that Ciod so loved the world that he gave his only begotten Son, that whosocver believeth on him should not perish, but have everlasting life." The promise is to him that beliereth on him, not, he armuos, to him that knozes how he is genarated from the Futher. He was very reluctant to accelit the term homoousion (of the same sulostance), devised by Athanasius to deseribe the equality of the Som with the Pather, and retained the kindliest feelings towards drius after the views of the latter were comlemned. Blis moderation and other excellent quallitios procured lim the favour of Constantine, who declired that he was fit to lie the bishop of almost the whole world. E. has the reputation of hein! the most leamed Father of the church after Origen. Ilis chief works are-1. The Chroniom, a history of the world down to the celelration of Constantine's J'iconueliut at Nicomeduia and lione, $\therefore 27$ and 329 A. I. It is valuable as containing extracts from such writers as Berosus, Sanchomiathon, I'olyhistor, Cephalion, and Nanetho, It was tirst publislexd in a complete state hy Mai aml Zolarab, at Jilan, in 1 S 18 , from an Armenian Ns. version diseovered at Constantimgle. 2. The Prepuratio Erauplica, in 15 bosks, a collection of such statements in old leathen anthors as were fitted to make the mind resarl the evilunces of Christianity in a farourible light. It was translated into Latin, and appared at Treviso in 1480. The Greek text was first phlished at l'aris in 1514. 3. Drmonatratio EPamerlwa, in "0 hooks, a work intinded to cunvince the lews of the truth of Christianity from the evidence of their own simputures. A fatinversion of this was printed as early a. 1498 ; the (rreek original titl not apmear till 1541 , when it was published along with the Propraratio at Paris, by la. Stephens. 4. The Eeclewiasticel Mistor!, in ten books. This relates the principal oconreaces which took place in the Christian C'lureln till the year zot, and contains the resilts of his stmbies in nomerous libraries, and even in the impurial arehives, the Emperor Constantine having ordered, at li's request, an examination of all documents relative to the history of martyrs. One Arawbind of the work is, that la, on prineiple, withholds all account of the wiekedress amd dissensions of C'luristians, inasmuch as lie did not consider such stories for the edification of the church. A Latin translation of the work ly Rutinus was published at lome in 145 ; the Greck text at l'aris in 1549 , and at Geneva in 1610 . Among the more recent editions are those of ITemichen (Lein. 18:7) and Burton (Oxford, 1838). The Ecclesiastical Jistory has been translated into English, German, French, \&c. Besides the foregoing works, may be mentioned the De Martyrilues Pelestina, a book against Hierocles; another against Marcellus; and a Life of Conspontine. The first edition of all E.'s works :uycared at liasel in 154:.

EUSTA"THATS, the eelehrated Creck emmmentator on Homur and the emmrapher bionysims, was horn at Constantiunle. He was at first a monk, then a deacon and teacher of rbetorie in his native city, and, in the year 1155 , was appointed Arch. hishop of Thessahnica, where he died in 1198. I: was 1 rofoumlly versed in the ancient classic authors. amb a man of prodigions aemirements, as is prowed hy his commentarice. The number of authors whom lie quotes is ahnost incrodible, and the value of his quotations is luathened by the consideration, that monst of the works from which he extracts are na longer extaut. Wis most important work is his Commentery on the Hiad ant ohlysury of Homer
 the last at Leip. 16:5-153!. The work is "nan to aljection on the seore of mothod, am is difluse and digressive, lut it is nevertlehess a sast mine of knowderge for stabints of lomer. Of a similar chavater is F.ns Commentory on Diomysitu, first printed by Stephens (laris, 1.575), and lastly in Bernhardy"s ellition of Dimusius (Lecip. 1s:s). Of his commentary on the lymis of Pindar, only the Promimum has com" down to as. It was first pulnlishen loy laful in 150 , alnary with E.'s theolagigal treatises and letters.

EUSTATIUS, Str, one of the Dutch West Imian Islimbs, lies near the month-east lemi of the great arch of the Intilles, about twelve miles to then moth-west of st ('hristopher. Lat. $17^{\circ} 31^{\prime}$ N., and lons. 6:0 5 W. Area, 190 syure miles. St E . is a pyamidal rock of voleanic formation, shewing two cextinct craters. and being still sulbject to "arthquakes. Ilurrieanes also of intense severity ocenr, more particulay in Augnst and September. Along its entire circuit of momiles, st E, has only one linding place, which, besides being difficult if access, is strmy fortitied. The whole mountain is fortile, prolucing in ahmonee not merely commereial erops, such as sugar, cottom, and tolaceo. lut alsa provisions of various kinels. sueli as maize, huss, grats, and ponltry. P'on alhout Doou.

EUVETIPE (i.e. she who (lelights), one of the nime Muses, was the dinushter of Zans anul Anemosyne. She was the muse of lyric purtry, and is represented in ancient works of int with it flute in her hamd. sue dresss.

## EUTROPIUS－EVANGELICAL．

sheathing far down the stem，and so forming a thick column of several feet in lengtl at its summit． To this genus the cabbage palm of the West ladies， and the Assai baln of the banks of the Amazon，are often referred．See Areds amel Assin．

EUTRO＇PIUS，a Latin historian，concerning whon we only know that he tilled the othee of secretary to the Emperor Constantinn，finglat afrainst the Persians unler dulian，and was still alive in the reign of Vakens．The perind of his death is unknown．I Iis Rreatarum Historke Rommer，givinct a shont narmave of Foman listory from the fomm datiun of the eity to the time of the Empreror Valens，is written in an extremely simple and pure style，ambl appars to have been originally intumber for the use of sohools．It hecmue bery popular as the taste for ariginal investigation doclined，in that dank period between the eath of the ohl world aml the birtl of the new ；and is either conderl（11 followed by the early monkish amalists．An edition with enlargements，however，was published hy I＇anl， son of Warnefrid mul＂theotolinlts，gentrally knuwn as Panlus Diacomes．（1thers eminnued it fown $t_{1}$ the year S13．The Ilistory existed in three distinet forms at the ruvival of letters：there was tirst the gennine work of E ，in ten books：secont， the expanded editions of laul ；and third，a very complete，but alco laredy intermatel coly con－ tained in the Mistorice Mixetlle．The clitios pirinems， printed at Romu in Ji7l，was from the inpure text of I＇aul．The best editions in modern times are those of Taschucke（Leip）1796，impured Isut）， and of Crosse（Ilalle，1813；Leip，1505）．

EU＇TYCHES．a Byzantine peclesiastic of the Sthe．，and a zealous but mokilful represcatative uf the clogmatic opinions of Cyril of Alexandria． In opposing the doctrines of Nestorias，he tell into the＂lowsite extreme aml tamght that after the union of the two matures in Jesus christ，the lomman mature wias absubbel in the divine：an opinion which spread extensively throumh the Alex－ andrian Charch．E．was in consequence summond lufore a synmi at Constantinople in the vear 415 ， arel deposed by Flavianus，batriareh of that eity； lut his canse was warmly espoused by the emmeh ＂hrysidhins，chief minister of the Emperor Then－ －losias 11．，ami Dioscurus，Bishop of Alexambria， who were both＂prosed to Flavianus．Chrysaphins induces the emperor to eall a formeral conncil at Eibhesus in the following year．nodur the presideney ui Diosenrus．Neasures were tiken beforehamd to secure a trimmph orer the anti－Entyehians．Soliliers were atmitted to the deliherations of the comeil． to oreraw the party of Flarianus：while a crowd of lierce Lirylitim momks，ferotedy attached to whatever was pmplax in Alexandria，or hal been countenamed by their ohi bupil Cyril，drowned hy their fanaticial outcries the voices of $\mathrm{tl}_{\mathrm{lu}}$ os who ventured to speak acgainst Eutyches．The result was that the jubliment of the previous council was reversel ：liarianus amb his adlerents were deposed，and the doetrine of E．athirmed tu be orthodox，and in aceordance with the Nicene ereed．His trimmp，howerr，lasted only two years；in 451 ，Entychinnism was prommaned heresy it the C＇unncil of Chalecdon，attencled Ly Cäl hishops；amb in opposition to his views，it was declared that in Clirist the two matures were united without confusion or conversion of snbstance． Nothing forther is known conceming E：，except that Leo wrote to the Emperor Mareian to lamish him from the capital．The sect of Eutychians， lowever，under the name of Nonophysites，com－ tinued to exist quietly for a centory after his death， in the Armenian，Ethopin，and Coptic churehes，

When it awoke to new life maler the ansprees of Jacoh，Joradans，who died lishop of Ehessa，Sis A．I．His followers wore called ．lacobites，umi have perpetuated the Xlomplysite toctrine in the Armenian and Coptic churches to the present day．太心e Neauler，Kirdenyeschichte，vol．iii．1．1079，de．

EU＇XINE（Cre，Eruxinos，hospitallly）is the name appliad by the ancionts to the black soa（ $\mathrm{r} . \mathrm{v}$ ） ． Before receiving thin name it was called Arfons Pontos，the inhospitable sea，locause of the liack and turbulent weather so frempently aseribed tos it by the aneient $\mathrm{l}_{\text {bete，}}$ amb the reported cami． halism of the scythian tribes who linnol its northern slores．It seums to have leen eallisl the E゙axime of hospitalble sea，after the establislment of Greets colonies on its borelers，aml when its waters werp thrown＂pren to Greek commerce．

FVANDER，a somi－mythical firecian hero of antipuity，was，aconding to Ioman travitions，the sun of Jhomes，ly（＇armenta or＇＇Jiburtis．About b0 years hefore the＇l＇rojan war，he is sail to have led it l＇elasgian colony from F＇allantinm，in Areatia， to ltaly，aml to have lamien on the hanks of the Tiler，and near the foot of the lalatime Hill．Here he lmalt a town，namins it lallantimm，after the one in Arealia．At a later perionl，it was incorporated with lome，and is affirmed to lave criginated the names Palatinus anl I＇alatium．Tradition
 the labits of sucial life among his neighbours： he prescriber for thom milder laws，and tausht them，ammg other arts，those of masic and writine． To Inm is also ascribed the intruduction of the Worship of the Lyean I＇an，with that of Demeter， Posedom，amb other deities．Virgil repesents him is beiner still alive when Eneas arrivel in Latimm after the sack of Troy：E．was worshiplued both at ＇rallantiom，in Arealla，and at lomot．

EVAN（WHJIC＇AL is an aljective derivel from the Gir．cumbpluon，＂sood news，or＇the Cinspel，＇ and is applied in gencral to anything which is marked loy the spirit of the qusul of Jesus Christ． ＇Thus，we sprak of an evampelical sermon，of evan－ gelical piety，eranizelical views，\＆e，though it is Tut right $t$＇，mention that the tern＇evangelical＇ in such a compection is used liy a prortion of the religious community to deaote，bot so much a spirit or suntiment resembling that of the Siviom，but certain peculiar theological upinions，which are held to constitute the only true and complete expression of Cluristian belief．In Lirfland and Sicothand，dis－ senters have generally laid claim to be considered more＇evamelical＇than the national churehes－i．e．， they conceive that thay have lorne，and still bear， more decided testimony than their lnethrem of the Establishment to the trath of such doctrines as the total clepravity of human nature，the imputation of dilam＇s sin to his posterity，the expiatory character of Christ＂s sutferings，justitication hy faith in the atoning efficacy of these suflerings，\＆e．In the Anglien Chmeh，howerer，the rise of the Puseyite or lractarian party has brought into prominchee an antanonistic firty，resembling ulissenters very much in their theological tenets．This party calls itself，pure expll nue，＇Lvangelical．＇－In Prussia，the term Evancelical has been entrlayed hy the gevern． ment since $1 \mathrm{sl}_{7}$ to desirnate the national Irotestant （hurch，formed hy the maion of the lieformed or Calvinistic anl the Lutheran Churebes，a umion umhappily too much enforced ly severe and even comerise measures，and which，partly on that aceonnt， and partly from the invincalile repugnance of the more extreme or Jligh C＇hurch Lutherans，has not been so prefectly aceomplished as the government wished．See l＇ressin．

FVANGFLICAL ALLIANCE, an Raswation of 'evangedeal Christians lehonsing t" wamen
 - iate and concontrate the strongth of an endelitemed Iroustantion arainst the encomelments of lomery and lus.yism, and to promote the interest it at Ecriptural Christianity.' Its origin is to be ascribed to a derp sense of the evil of the divisums existime amone l'rotestants, who newertheless asee in hold inf the essential principes of the Lhemonation. - number of circumstianes conchered to direct the attention of Christians luth in linghad aml scotlami rery stromply th this subject; and a repuisition, signed leg ministers and others ledonging to varinis denommations in scotlam, was aldressed to the evanceleal charches of England, Walcs, and Ireland, comvening it mocting to be
 sition a cordial respone was siven; the mecting was mumerosly attembed by forsous of great influence, both in the estalilisheil and dissentimg Churches; great larmony prevaled; and the A. A. was then organisel. It bew has hranches in the mant impurtant cities and towns of Britain, and of many wher piorts of the wom; it has eontributed to the promotion of Christian mion, fellowship, and hrotherly co-operation, and at least as evidently on the continent of Eurone as in Jritain; affording at the same time much encumarement to those who in varius countries of the contiment were strugeling in the feeblemess of isolation arganst all the fomens of uminn most adverse to the primelites of the hofimation, lut to whose support the strength of British footestantism has been in some measure hronght. The E. A. secks, by various means, to promote the canse of • Erangelical l'rotestantism,' and to opmose 'Intidelity, Popery, and other forms of superstition, crror, and jrofanchess, especially the profanation of the Lord's Day.' It has also ventured to remonstrate against the persecution still practise"l in some lrotestant countries of the norih of Eurupe both against l'rotestant dissenters and Roman Catholies, and thus has sought to extend the intlucnee of the principles of tolcration. The meetings which have heen held umber its anspices in continental cities have also led to much temprate and fricully disenssion on varions important gumans. Great meetiurs of the E. A. were lichat Paris in 1855, at Derlin in 185\%, and at Cimeva in 1861.

The E. A. alopted as its lasis a brief statement of the points of doctrine on which its members mnst hadd 'what are usmally understom to be evangelical "viaws.' This gave rise to ohjections against it on the part of some who would alidy have joimed it, lut Lim an aprchamsion of compromising principles to Which they dirk not think diwe place was given. Th, High Churk party in the Church of Euglame, and in the churches of Oumany, Nweden, \&e. have In m cmasistent "phments of the Lyamelimal Alliance. It is of comrse equally uppuscal, an other grounds, by mationalist.

Ite busis "xelunts those wha, althongh otherwise landins evangelical doctrines, deny 'the divine institution of the Christian ministry, and the anthorty and prpetuity of the modinances of boptina :und the Lorl's Supper. Few Amerieans :We comected with the E. A., owing to diflicultics aixinf wit of the guestim of slivery.

LVANGHAMCAL ASEOCLATION, a meligions
 in the Toutel sitates of North America, and has considerally extemdel itself both in that comentry and in Famala, heins no longer chicely contined, as it was at first, for forman immigrants and their hasemants nsing the German lagnage Its $1: 10$
dontrines are a monlitied Calvinism; its church :rinernmerat an moditied episeopacy:
 liy a rolinions lundy constituted in Scothand in 1813 hive flew James Dorisen of Kilmarnock and other ministers whose dectrinal views had been combumacd in the luited Secession Church, to which they previonsly beloneted, and the congresations adherines to them. They were soon afterWards joined ly a mumber of ministers and comserations of similar views, perionsly connected With the Congresational Linion or Independents of Sontand, and have since extended thenselves considerahly in Scotland ant the north of England. Their dictrimal views are thase which, from the name of Mr Morison, have now lecome known in Scothand as Murbsemim. See Murisominism. Their chmreh-govermment is ludependent, but in some of the congreations originally Presbyterian, the othee of the eldership is retained. A notable practice of this denomination is the very frequeat advertising of sermons and their subjects.

WVA'NCELIST, literally, : bringer of good tidings. It designates, in the New Testament, a person appointed ly an afostle to itinerate anong the heathen, and so prepare the way for resident instructor's. The evangelist, therefore, had no particular flock assigned to him, and is to be distinguished hoth from hishops and ordinary pastors. Later in the history of the carly church, the evanaclist figures, accoring to Euselins, as 'a deliverer of the written gospels to those who were jignomant ui the faith.' "This may possibly imply that he acted as a colportenr, by distributing copics of the arspels, or that he ruad them to the heathen, and so made them familiar with their coutents.- The word evangelist is also used to denote the fonr writers of the life and somel of Jems Christ, these being crangelists ('hringers of good tidings') mer vactlence.

E'VANS, Liectenantgenehal Nif De Lacy, C.C.B., born at Moig, in lreland, 17s7: antered the army as ensign in 1807 ; in 1812 , joined the id light Dratoons, with whom he saw much Peminsular service. In 1814, he was present as brevet lientenant-colomel of an infintry regiment at the capture of Washington, the attack on Baltimore, aurl the oprations before New Orleans. He was next at Watemno. In 18:30-1831, he sat for liye, and in 1833 was clected on the Liberal intercst for Westminster, which he represented matil 1841. The emase of the young queen of Sbain was believed by the linglish ministry to be identified with that if frewhom and constitutional govermment, and an order in council was issued in 1835, authorising the raising of 10,000 men for service in Spain, and expressing the linges desire that his subjects shoull tike part with the queen of span, his ally, hy entering the new eorps. The command of the britioh anxiliary legion was offered to 1.., and he was allowed by his constitnents to accept, it withont racating his seat for Westminster. E's principal military exploits at the head of the lritish Leng were the storm and capiture of the Carlist lin's of Ayctta, near St Selnastian, in 1836 ; the storm and captire of Irmo and the capture of Oyaram and Fontarabia. For these services, he received the grand crosses of St Ferdinand and Charles 11I. At the eneral election for 184, k, was defeated for Westminstor, but was re-elected in 1S46, and contimued to hohd his seat, ly malisputed tenume, till hais. He was promoteli to the rank of majorgenerad of the British army in 18ti, and oltatined the coloneley of the elst foont in 1853. On the Aeclaration of war against linssia, he was appointed
to command the second division of the army sent out to the Crimea, with the rauk of lientenantgeneral. JIis division was lotly engared in the Fattle of the Alma, and E. received a suvere contusion of the shoulder. On the 2lith Oetolier, during the siege of selastojol, his division was attacked by a force of 6000 Pinssians. L. met the enenty with great gallantry, and drove them back into the town. fu February 1855, E. atterded in his place, and receised the public thanks of the House of Commons, throngh the spuaker, for his services in the Crimea. He was rewarided by the crown with the Grand Cross of the Bath, aut by the Emapurur of the Fremeh with the Grand Corion of the Lequan of Jomour. He also received the degree of D.C.L. from the miversity of Uxiord. Je tork a freerrent fart in debates on matters of army administration. In polities, he always belonged to the party of 'adranced Liberals.' He died January 9, ISTU.

E'VANSVILLE, a flomrishing city of Jndiana, in the United States, stauts on the right bank of the Ohio, about 150 miles sunth-west of Indiana. polis. It is very alvantaceously situated for triude. From E. downwards, the navigation is seldom intermpted either by drought or ly ice; and there terminates the Wabsh and Erie Canal, the longest work of the kind in the Ameriean repllibe. Thus, the place connects the lower Ohio at once with the inland lalies and with the Gnlf of Nexico. Coal and iron ore ahomul in the vicinity. I'up. in 15:0, 21.330.

EVAPORATION, the eonversion of a fluld or solid into vapour. Steam, vapours of alcoliol, camPhor, jodine, \&e., are fimiliar instances. All fluils are surrounded by vapour at common temperatures; but for every sulostince there is a limiting tem. perature, below which no evaporation talits place. The pressure, or tension, of a vapour depends mamly upon the nature of the substance evaporated, and the temperature to which it is raised. The full amount of vapour, however, is not prontuced instantaneonsly, and therefore, in ceneral, time is an element in the question as well as temperature. See Diffusinx.

The Boding point (q. v.) is the temperature at which vapour is freely given off-i. e., at which the tension of the vapour of a sulistance is equal to the atumapheric pressure. Dalton gave an empirical law, whicl, however, is only at all alpoximate for temperatures near the boiling-point: "The tension of the vapour of a smbstance rises in grometric, as the temperature risus in arilhmetic, promression.' It is sulficient for onr present purpose to notice, that the tension increases very rapitlly with the temperature. Some carions čonserpucnes result from this. Thus, water hoils at $212^{\circ} \mathrm{F}$., under a pressure of 30 inches, or at that temperature the tension of its vapour is one atuosphere. At $102^{\circ} \mathrm{F}$., or $50^{\circ}$ beloss its boiling-romt, its raprour has a tension of 10 inches of mercury, and it will therefore boil, if placed in the receiver of an air-pump, as soon as two-thirds of the air have been extracted.

If a little water he hoiled in an open llask till the steam has disjlaced a great part of the cuntined air, and the flask be then tightly eorked, the water will gradmally cool. If the hask he now diped in cold water, bibing recommences, the cold water having condensed some of the rapour, and so dimmished the pressure on the contained liquitl. Dip the tlask in hot water, and the boiling eeases. These appearances may be obtained several times in suecession.

A thin cannot lie beated above its biling-point, at the ordinary pressure of the atmonphere; but if it be beateat in a closed vessel, the tension of the raponr produced is tu be taken in addition to the
former Iressure, and the boiding-point rises with it. Thus, when the pressure is equivalent to 2 atmorspheres, the boiling-point of water is raised $40^{\circ} \mathrm{F}$. At such temperatures, its solvent powers are greatly increased. Jans minerals which are foumd in tine erystals are sumbsul to have been deposited from Water which had dissolved them in larre quan. tities, under the combined jnthences of messure and temperature. I'apm's Digestur ( 1. v.) dejends uron this principle.

The amome of evaporation from a fluid depends upon many circunstances. As, excupt in the ease of actual boiling, it takes place moly at the surface, the amount of surface expused is an impurtant consileration where rapid and copious evaporation is requirel, as in steam-hoilers, salt-1rans, \&e. When, on the enntrary, it is desirable to prexent evaporation as much as possible, a layer of oil, preventing direct contict with the air, is of great wise. The rate of evapuration depends alsu on the pressure, and varies, according to Daniell, nearly inversely as the latter. His experiments, which appear trustworthy, were made in an exlansted receirer, and the vapour was remored as it was forment.

In the conversion of a fluid into rapour, a cuantity of heat disaplears ; i. C.. is lechuided to Iroluce and maintan the gaseus state. Thus, the temperature of storm at $\mathbf{s o l}$ imehes is the same (to the thermoncter) as that of the loiling water from which it comes otf ; but the heat necessary to convert a pmand of water at $22^{\circ}$ into steam at $\because 1 \square^{\circ}$, would raise nearly Ioon pounds of Water from $60^{\circ}$ to $61^{\circ}$. siee Jleit, Latesif. When, thurutore, a fluid craporates, the viburur carries off heat irnm the flud, and thas erapuration prodnces euld. This, of course, is matter of dally ohservation. I'orons earthenware jars are employed to coul water in summer in this elimate; ans in ladia, ice is proenred by exposing water in shallow pans, laid on straw, to the combined effects of evaporation and raliation at night.

On the same prineiple depends Sir Tohn leske's method of freezing water. The water is placed in a that porous dish, over a large surface of strong sulphuric acid, and the whole covered with the receiver of an air-punp. When a good racum bas been moducel, there is, of eomse, as we have already scen, a rapid evaporation, and the acil eagerly alsorhing the vapour as it is formed, the process croes on without further working of the pimp, till the residnal water has become a solid cake of ice. A most extraonlinary example of this production of cold is afforied by the freezing of water on a white hot rlate-by no means a diftionlt experiment. A platinnm capsule is heated nearly to whiteness by a lamy placed underneath: a little water, mixed with snlphurous acil, which is an extremely volatile licuil (indeed it is gaseous at ordinary temperatures and pressures), is poured upon the plate. The acid instantly evaporates, and the coll pronlucel freezes the water, which can be dropped from the hot plate on the hand as a lump of ice.

Another remarkable instance of this oceurs in the formation of solid carbonic acid. The liquid acid is forcted by the pressure of its own rapour in a fine stream into the air from a nozzle in the strong iron vessel in which it is contaned. It evaporates so rapilly in air that a portion of the stream is frozen, and the delicate snowlike mass can be collected by proper apparatus.

Having thas briefly examined some of the circumstances connectril with evalwation, we may proceed to mention some of its imprtant bearinys on meteorology. In this respect, it is one of the most effective of all the gigantic processes that are continually roing on around us. Watery rapour is continually rising imisible in the air; meeting with

## EVE EVENISK Sellools.

EVENDN: sc'HoOls may be divided into two dasers: 1. Those which, either in the form of lectures or lessoms, earry further the elueation recriwn at schowl: Those which exist to supllemont the defoets of warly trainiag or, it may le, to Live the simplest rulinumts of dementary instruction to alults who are muler the disalvantage of boing pupils for the first time in thair lives. The former are fomul chadly in connection with mechames' institutes" (which are mow very numerous in (ireat liritain, and form one of the most important charatiomal agmenes we have), existing day schools, and congregational organistions; the latter more fretpuently fall under the hemb of parochial missionary work, cir are eomected with factories. These latter emstitute the class of eroming schools which engage the largest slave of interest in the prosent condition of England, and which present the greatest dithiculties in working.

The total number of evening schools of this humbler class at present in operation in Englame and Wales is $20.3 \%$; of these, 1547 are comlucted hy the ('hurch of Englant, 125 are Congregational, lis British, 06 Roman (atholic, 73 Bajtist, 37 Cnitarian, 21 Wesleyan, 6 Jewish, 9 Non-sectarian, aml it Ragged. The total number of scholars in attendance is 80,966 , of whon $54,5 \mathrm{~J}$ are male. In scotlanl, primary evening schools are not so usual as in England ; and this is no doult to be greatly attributed to the more general difusion of education among rhildren of the porer classes.
"onsilering the large proprtion of the fresent adult population unalile to read or write, the number of evening sclouls is miscrably inaderpate. lout the neecssity fur their institntion has not jet luen sufficiently felt by the comitry, to lead to their taking a much more important place in the elucational machinery of the nation than they have hitherto done. Her Hajesty's isspecturs, the linyal Commissimers (1861), and the clery of all denominations, strongly recommend their greater extension. 'If the education of the country were in a groud state,' say the commissimers, 'evening schouls would be nearly universal, and wonld serve to compensate the scantiness of the instruction given in day schools, by giving mare adranced instruetion to an older class of scholars.'

State Aid, rend Volontary and Petil Teachers.Many wheationists have come to the conclusion, that the hope of retaining chuldren in school matil they have obtained as much instruction as is requisite for their guidance in life, is a vain one, and consequently louk to evening schools as an intispensable part of a national system of elucation, and consider them entitled to look to the state for encouragement and support to an equal cxtent with day schouls. Bishop lhimels was the first publicly to suggest that eveming schools fairly come within the sphere of state action, in a hetter to Mr sonor, printed in $15: 30$. The recent inquiries have lorought out that the majority of thuse who frequent existing evening schools have never received any elementary instruction, or have forgotten what they once knew, and that a large promortion are either adults or alolescent young men and women. They attend for the purpose of learning to read, write, and eiphor. Though in many instinces, especially where no fie is charged, the irregalatity and unpunctuality of the attendance are great, yet in the majority of cases there is an earnest desire on the part of the pmpils to bemefit by the instruetion they receive. It is a question of some mational importance how far schools of this
*The Wurking-Man's College in London, and the selioul of Arts in Ldinburgh, buth belong to this class.

## EVENING SCHOOLS-EVELETT.

supplementary class shonlth lie left to the action of private philanthropi. It is also a chestion, to some extent implital in the other, whether the prenliarly delicate work required in eveniner schools is not more efliciently diseharged ly voluntary than by $1^{1 a i d}$ labourers.

1. As to the first yucstion, it may lo safely said, that all would desire to see those wholesome chamels of benevolenee which comnect the por and the rich free from fovernment interforence ; lut if, in our derotion to a thenry we nuglect the work, it lecomes the luty of the state to see to it, to the extent of enomrasmont at least, if unt if direction. Since Bishop Himds' letter, to whith we lave referrel alowe the colucation committce of the privy comeil have recognised this duty, and loase given aill to a small extent to all evenin... schools complying with certain conlutions, and in connection with day schools. Iry the resised enle recently issued liy the privy council, evening schools of this class are allowed to clam
 ance of a pmpabove twathe attondances. The schools must lie tanelt by certificated masters, and lay persons are alone recognised. To all thuse schools frequentel for the purpose of cumiming or extending frevious knowledre, this nuw conle will be of ereat assistance, as there is a tendency to engace tramed tavhers for such schoms; to those which are chicfly frequentel hy alults whally ignorant of the simplest clements, and chiefly conilucter loy vohntary twachers, it will aflord little or no advantage, becanse the comductors will a the alle to claim so large a sm as would sullice to pay the salaries of certificated masters. Nor, $\mathrm{I}^{\mathrm{m} \cdot \mathrm{rhan} \mathrm{s}, \text { is it }}$ desirable to interf.re with this particular class of evening schools; it is of more impurtance. so far as state aid is concmerned, that the enlucation of the primary schon! should the contirmod ly the establishment of evening schools for boys anidgirls. There is active bencrolence enough ahrond to wertake the ignorance of the culult population, if proverly stimulated ly the varims religimes berlies.

The propused new arramements as to payment may also leal to the encater separation of such schools into schools for thys and girls above 1 ? and under 18 , and schools for arlults. It is fomm that boys and men, girls and women, do wot work well together.
-. As to the secoml question: in those arening schonls which are anly a ematinuation of the diy school, the same methoul will generally be fomil to suit as in the primary schorls; and therefore it seems advisable that they should be conducted by paid certificatel teachers, acting under managers (as in the case of ordinary day schools), and claming grants from the privy conncil. Thase schools, again, which are freguentell by alults, who eome to receive the elements of remling, writing, and arithmetic for the first time, reguire more ileticate landling, and a greater consideration of individual character and wants than are repuisite in a schow attended by boys and girls. In such cases, whuntary effort under the influence of religinus or merely $\mathrm{f}^{\text {hilian- }}$ thropic motives appears to be the luest arency. 'The ignorance of methol displayed by such trachers, and the irregular manner in which many of them lang to their work, are no donld serious difliculties: but they may be overenme ly the institution of dineesan or nther nnions, in imitation of the East Lancashire Union of evening schools under the presideney of Sir J. I'. K. Shuttleworth, with each of which might be connected an organising master. who slould itincrate among the schools, giving the benefit of his superior knowledge of method.

Suljocts and Method.-As to subjects to be taught,
we have little to say to that class of evening sehools which continue the work of the day school. It is to lee presmaned that practical instruction (and what else should he aimed at in such schools?) will cmbrace the clements of thme seiences which bear most directly on life. We refer to social economy and the laws of health. Jimming schonds of the lambler and more ureent sont will necessarily confine themselves to reading, writing, aml arithmetic, inventing such methols of tearhing those suljects as will most directly touch the intelligence and (acage the interest. The short perion of attemanee reyimes that much be done rather than many things. Through a well-enstructed course of reading-bocks (unfortunately, there is no reading series for adults worthy of mention, all the general culture and specitic information attainable will best be given. If such roading-books do not furnish alcoquate information on social ceonomy in its dromestic :ard its wider social relations, amd on the laws of hralth, they sally misumberstand their position in cuncational literature. Instruction in writing and arathmetic should le given in such a way as wall naturally eomnect itself with the lives and daily necessities of the leamers. lut this is not the place to treat of the suliject of mothool.

Misfory. - Althongh w have directed attention to, the fact, that bishop. Hinds was the first in this country to adwate state rocomition for evening schoods, he was ly mons the first to feel the necessity that cxisted for them. The first schowd establishod excheively fru adults was at Bala, in Merionethshire, in loli, ly the Iev. T. Charles. In 1s1\%. a similar schom was set on foot in Bristobly Willian smith ami Stephen Pront, a schowl which led to the estahbishment of the "liristol Institution for instructing alults to read the Hody Seriptures. In 1513 , writing was included in the schnol fongramme; and in J816, a socicty of the same kincl Was foumdel in Lomton. In the course of a few years, thirty towns possessed similar seloouls. The first teming school proper for instructing loys and girls who hat to work all day for a livelihmor, was frumed in 18nt at Bristol, by the 'lienemont Evening schools' rociety:' The present statistres of erenine schods have heon alreaty given.

In other comatries of Enrope, wening schomls, where they exist, have manly in wiew the continuance of the education alrealy received in pimary schonls. In France, barever, the wants of untanght adults lave heen provided for log the establishment ly law of evening schools suitell to them. In all the states of cremany, prenision is made more or less in the country districts, amb always in the large towns, for contiming the instruction given in the primary schenls. Whools for those who wish to learn radmer and writing for the first time scm searcely tu exist, 1 rotahly lecause they are nut nomed. The schools which do exist have a quater aflinity to our Dlechanics' Institutes than tu any other kind of institution in this country. The instruction is given on sundays and holidays, and in many places also on one or two evenin es in the weck. But sunday instruction seems alme to have heen originally contemplated. The suljects taught are the ondinary branches, with seography, free hand and gcometrical drawing, geonetry, anil in some cases the chuchts of natural science and the laws of health. These institutions are sulported ly the funds of the commune or district; in some cases supplemented by the state.

E'VERETT, Alexinder Itill, an American diplomatist and author, was born at Boston, in Mlassachusetts, 19 th $_{3}$ Mareh 1792 and entered Inarward College in 1802 . In 1506 , although the youngest of the alumni, he graduated with the

These are on a vast variety of subjects, and are probably the most interesting probuctions of his pen. E. also published a rolume of forems in 15t.5.

SVERETT, Enwant, a youner brother of the preceding. was bom in 179t at Dorchester, near Thstom, Dlassachasetts, evtered Harvand College in 1sw\%. and tork his degree in 1511. He was for sume time a Cnitarian elergyam in the town of Cambridge, and in this capacity had the reputation of luing une of the most eloguent and pathetic preachers in the (nited states. In 1515, he was Chected professor of the Greck Language and litemature in llarvard College; and to qualify himself more thorongly for his work, he visited Europ. where he resided for four years, and had a distingushed circle of acquantance, inchulins Scott, Byon, deffey, Romilly, Diwy, \&e. D. Consin, the French philospher aml translator of Plato, promomed him 'one of the best brecians he ever knew.' In 1s\%0, J: became editor of The Forth Aneriern lieview; and in 18.t. a momber of the rnited States Congress, sitting in the II mase of Lepresentatives fir ten years. In 10.35. he was apmute ${ }^{\text {ghernor of Massachusetts ; and in 1841, }}$ manster plemipotentiary to the court of St James's. Whic in England, he received from the universities of Oxforl, Combritge, and Duhlin the tegree of D.C.L. On his rethm to Ameriea in 1845 , he was electel president of Harrard College; on the decease if Waniel Welster, he lecame sucretary of state; ant in 1853 , the legislature of Nassachnsetts chose ham as is member of the semate of the United seutes. Ho dien Jinn. 156is.

L's principal works are: 1 Defene of Christianity
 form 150.5 to 15:3; (1836) ; and Wrations ond Syethes on Varioms Grasions from 1825 to 1850 . This imblales all the previons arations. These Orations. as they are calleal, are urn ill smbects, amb, like the writines of his louther, indiate a varied, vizornis, ami hexible genius.
l:VIBGIELENS are thmen trees and shates of whech the leaves alo ant fall ofl in antamas. lint retan thair freaness and verlure throughot the winter, a:n promen their functions during mete than - whe mand. Evereron leaves are gemerally of thaterer and fimer textme than the leaves of deeddhen: trees and hathes. They have also fower pows 17
ur stmate (q. v.), amb these contimed to their umber surface. Evergren leaves are sumetimes very small. at m firs and heaths; sonctimes pretty laree, as in rlademumlrons, laurels, magnolias, de. F., both trons and shrubs, have always been much souglat after loy the landscape gatemer, and for parposes of whament and sleler. Some orlers of plants consist axcluaively, or nearly so, of E. whilst in others they exist only as exeprtional speedes. Dlost of the Conifere are be and the sombre groen of pines, hirs. cypresses, de., is a prevalent characteristie of mosthern scenery both in summer and winter; whilst the molimimishol thickues of the fobliage ahfords winter shelter to amimals which could not so well exist in forests connmesel merely of teciduous trees. Holly and iry are amongst the finest Sritish L.; the hox, mivet, aml hlfterent kinds of hay and tamel, rholodendron, jhyllirea, mythe, \&c., are also familar to every one. As instances of gunera in which some species are evergrem and others decidnons, may be mentioned barlemy amb cytisus. Dany tine new ornamental l.: have reently been introducet. As suitable for imparting a hrely apmanance, houghs of b. are largety emplojed in Cireat Britain to decorate the walls of $1^{\text {mhlice }} 1^{\text {laces }}$ of assemhlage, triumphal arehes, \&c., on frstive occasions.

EVEJiLASTJNG FLOWER, the phular mame of certain plants, the howers of which suffer little change of apparance in drying, and may be kept fur years withont mach diminution of beanity. Thry are plants of the onder ''omposiler, having their flowers (heals of howers) surroumbed with an involuere ; the seales of which resemble the petals of a combla, lut are ricid. membrannes, and contan littlo masture. Some shacies of (indweed (ipor.) (linuzhetitm) are often called E. F', and the other fhants which bear the name belong to nearty allied senera, lat particnlaly to the genus Melichergum, which contains a great number of siweies, mostly natives of Arica. $/ 1$. arenarium is frequent in dry sandy soils in many parts of limone and the central hatitudes of Asia. It is covered with a gray felted down, and has yellow illowers, which, when rublent, emit is faint aromatic ofour. It is often worn on the continent of Europe as an oruament in the lat, partieularly ly wagoners. M. angustifolizu and $/ 1$. Strechas-shrubly species, natives of the south of Earope-have larger yellow lowers. Some of the spectes have a powerfil and pleasint aromatic otonr. No species of Helichry/sum is as native of Britain. Several kinds of E. F. are frequently to be seen in our sardens, others in greenhonses. The French call them Immorthles, and in France they are often woven intu circular wreatlos. and phacel beside recent graves, as emblems of immortality.

E'VERSLEFY, Viscount, ex. Speaker of the lloneo of Commons. Chables Sihaw defevien born in 1704, is descemied maternally from the Leferres, who came to England from linuen on the revocation of the Elict of Nantes. He was educatel at Winchester and Trinity College, Cambritge, called to the har at lincoln's lin in 1819, entered parlitment in 1830 as member for Fownton, ami represented Jlants from 1831 to 1857. In 1839 the was chosen Sleaker of the Dlonse of Commons: and realected in the parlianonts of 1541, 1847, ams 15.5. In retiren from the oflice in 1857, with a 1"qrate and a jension of $£ 4000$ a year. During the righteen yeas of his Speakership, he suggested and carriol sht many impowements in the forms and prenedure if the Lower Jonse, tending to the dispateh of business. Tall, abid dignified in person, athabe and accessible to the younger members, to
whom he was ever ready to impart the results of his knowledge and experience, profoundly versed in the laws of delate and practice of the IIonse, le was anmirally qualified, by nature and training, to enjoy the distinction of "first commoner of lenglamb.' and to preside aver the greatest deliberative assembly in the world. His impartiality was never guestioned, and his retirement from the Lower House was universally regretted. He was appointerl governor and captain of the lsle of Wiunt, and governor of Carisbrooke Castle in October 1s5\%.

E'VESHAM, originally Eoyeshmy, a monicipal and parliamentary burough in the sonthecant of Worcestershire, on the right hank of the navimable Avon, 15 miles south-east of Wroester. It lies in a beantiful and fertile vale, in which are many market-gardens and orehards. It has some manufactures of agricultural implements. Pop. (1.561) 46S0. It sends two members to parliament. An albey was fomded here about 700; and there still exists a bell-tower, os feet square at the lase, and 110 feet high, erectel hy Eishop Lielrtield immediately before the Tieformation. Here Prince Elward, afterwards Edwarl I., defeated Simon Nontfurt, Larl of Leicester, in 1265.

EVICTION, in the law of Scotland, is the dispossessing one of property, whether in land or movables, in virtue of a preferable title in the person of him by whom the eviction is male. The same expression is used in England as to property in land; but where the tenant is merely deprived of posession, it is called Ouster.
E'vidence, Legal. Evidence is either parole or written, the former consisting of the statements of witnesses appearing personally in cout, and which statements mnst be attested lyy an oath or solema declaration; the latter consisting of records, deeds, anel other writiags.
The tendency, both in Englanil amb Scotland, of late years, has been to abolishall restrictions on the admissilility of witnesses, and to loning the rule practically to what [3ackstone stated it to be in theory, viz., 'all witnesses that have the use of their reason are to be received and examined.' The ground on which witnesses were formerly exclnded was untrustworthiness, arising either from the character of the witnesses or their interest in the suit. Under the former head fell those who were lexally lnfamous ( $\mathrm{m} . \mathrm{v}$ ) ; whilst the latter ind luded, first, the party to the suit himself, and then all who were comnected with him ly the ties of family, or cren of business, in any apreeiable degree. Gradually, however, it cane to be seen that, though witnesses sulject to these objections were less valuable than wthers to the party adducing them, it by no means followerl that their testimony was of no value at all, and thit the safer comse in all eases was to examine them, and then to allow their teatimony to be invaludated ly proof of their interest in the cause direct or indirect, of of their having lemen convicted of such erimes as to render it nulikely that they should speak the trath. The objections have thus become oljoctions not to the almissibility or competency, but to the eredinility of witnesses. The tirst of the rery improntant statutes by which these changes were effected was 9 Geo. IV. c. ©id, which permitted Quakers and Moravians to substitute a solemn atfirmation for an oath; admitted the party whose name had been forged as a witness in prosecutions for forgery; and provided that no misdemeanour (except perjury) shall render a party an incompetent withess after he has undergone the punishment. lhon came the Scotch Act 3 and 4 Vict. c. 59 , afterwards referred to, and the Engtish Act C and 7 Vict. c. 55 , which
provided that no person offered as a witness shall hereafter be excluded, by reason of incapacity from crime or interest, from giving evidence cither in person or by deposition on any issue or infuiry civd or criminal, but shall be almitted notwithstanding he may have an interest in the matter in question, or in the event of the trial or proceeding, and notwithstanding that he may lave been previonsly convicted of any crime or offence. The same principle was extended ly 14 and 15 Vict. c. 99 to the parties to a cause, who are not mily competent, bot compelable to give vidence on lehalf of either on any of the marties-subject only to exception where the question tends to crimimate the lerson examined, or where it is put in insy action for breach of promise of marriage, or any artion or proceeding instituted in consequence of athultery. By 16 and 17 Vict. c. S3, the formor stat. 14 and 15 Vict. c. 99 , was amended to the cflect, that the hasbaml or wife of the parts shall be in the same position with the party lim-suli-sulject only to these exeeptions, first, that the Lushand or wife cannot give evidence for or against cacb other in eriminal proceedings, ow procecrliors in consequence of adultery, and that they cannot be compelled to diselose matters which they have learned ly communications from each other daring the marrige. The statutes by which the eorresponding changes were effected in Sientland were 3 and 4 lict, e. 59,15 and 10 Vict. e. 97 , and 16 and 17 Tict. c. ${ }^{2} 0$.

The Oath ( 1.6 .. ) to 'speak the trath, the whole truth, and nothing lut the truth,' is anministered to witnesses in England on the New Testament, in Scotland, hohing up the right band. Quakers and members of other denominations who object to the rise of an oati, as formerly olserved, emit a solemn Affirmation (q. v.); and persons who are not Christians are sworn, or otherwise bound over to speak the truth by snch forms as are conceived to be alpropriate to their respective evects. The test of the amount of religions belief which will suflice to render a witness admissilde, has been gencrally consilered to be a lellief in future rewarls and mmishments: but there is no decision which tixes the point, and in Fingland, lekef in a foul whose rewards and punishnents extend only to this life is considered sufficient (Starkie, 4th etl. p. 116; Dickson, 1. 849). There seems reason to think, however, that this restriction is remosed by 1 and 2 Vict. e. 105, which provides that all persons shall he bound ly the oath administered in the form and with such cercmomes as such persons shall declare to lre linding.
It is a general rule of the law of evidence, that a witness is not bond to criminate himsulf, and he may conseruently decline to answer any question that tends to expose him to punishnent as a criminal, or to jemal liability, or to forferture of any kind. If the effect of the guestion be merely to estaldish that he owes a delat, or is otherwise subject to a civil suit, the exception will not bohl, and he will be bound to answer it (H6 Geo. Inl. e. 37). The rule in England is, that a counsel, attorney, or solicitor is not bound, or even entitled, to clivulge the secrets of the cause with which he has Leen intrusted; and the recent Scottish Act 15 and 16 Viet. c. 27 , s. 1, preserves the same exception with reference to agents who shall at the time when so adheced be acting in that capacity. Neither can ufficial persons be called nopon to disclose matters of state, the publication of which might be prejndicial to the community. All other professional persons, howerer-lawyers not engaged in the cause, , hysicians, surgeons, and divines, must divulge all secrets relevant to the issue with which they have becomo
a momainted. © won in the strictest phonssional con-

It was mo loss clarly it pustulate of the endivatorl reason than a dictate of divine revela. tion, that the world pocereded from one absolately bivine (rieator, holy aml goon, of whom, anil through whom, and to whom are all thimes. It was meressuy, thequene to reconcile the aplearance of evil with this fumlamental almissinn.

The doctrine of the Fall, especially in the later form of dovednment wholl camects it with the uxintence of a devil or evil spirit, tempting man in the shape if the strpent, was stupersed to explain the appearame of evil in human histors. buing tempted w the devil, man sinned, amd so fell from his aledience to the divine law. "I'his is the ductrine of urthodox ('hristian theology, and the answer which it sives to the inquiry, how sin eane fntu the worli: Anol may mumels never thank of caryine the moniry further. ft is clear, lonever that this explanation of the historical uricia of evil leaves the question of its real and aboblute "rion matetiden. 'The devil being assmmed as the canse of man's sin, the further question arines, whence the alevil? Is he an alisolnte forsonality: in whidh corse we are landed in the wh theory of dualism; or is he a acordiner to the traditimary 'hristam conception, a fallen angel? in which tase the fuestion just rotarns, whence the spring of evil in lim: There is no real explanation Grinetel lys this removal of the question: it is still the same ditheulty-whence the orinin of evil in the weatinn of an allperfect heing, almighty as well as all wise and goni?
specnation may please itself with ingenions answers to this ubustion, lout in trutl it admits of mo satisfactory solution. sione, for example; haw armed that evil, like darkness or eold, is an imdismasable element of alternation or contrast in laman life. All intlivitual revily is oniy the product of opposite forees workings town her. Clarater could only arise from the interation of opposing ethical intluences of groul and evil. ln nature, we lave attration and repulsion, rest and motion, positive and nogative clectricity: why should it be different in the spluere of morals? Ihere, too, there must be polarity. Good can only exist in contradistinetion to evil; the one no less than the other is necessary to constitute the ilrama of human life and history. Others, again. have argued, that covil is the result of what is called metaphysical inarerfection. (ind alone can le perfectly gont. "lhe creature, in its very nature, is linited, defective; anel evil is nothing else than the cerilenee of this lmatition in man. It is mot somethimg real or positur, but only a privation. It is in morals what. comband alarliness ace in physios, a pure negation. Thus have argned such profonmel thinkers as Angustine amb leibnita. lint it requires but little penctration to see that such armments, however ingraions, and so far well foumbed, do mot meet the assential ilitlienlty of the problems. I i evil be, according to such views, a necessary clement of human life,

## EVIT-EVOLUTE AND INVOLUTE.

in the one ease, in order to develop its activity, in the other case, as clinging tor its ereaturely limitations, then phanly it is not, in the orthodox sense of the wrml, cril. It is not, and canot he a enntradiction of the true idea of human life, and at the same time a necessary element of it. Whatever neeessarily belones to life. must help its true development, ant mot injure and destroy it; must le food, in short, and not ceil. Such theories, therefore, only solve the problem by eliminating the fact. The origin of evil must remain for ever inserutathe ; nor is it wonterful that it should. It is only in its mitimate sense coneefralle as a quality of monal freedom, and moral freedom in man or any createl being is a jrofomel mystery. It is something which 'we apprehenil, but which we can neither compreheml nor eommumicate.'

## EVIL, Kisc"s. Sue King's Evil.

EVIL EYE. Both in ancient aud modern times, the belief that some persons have the power of injuring others ly louking mpon them, has been widely diffused. The Greeks frequently speak of the Ophthatmos Daskanos (or evil eye), which they conceiverl to he specially lamgerons to chilitren : and the Romans used the verb foscinure to express the same faet. Pliny speaks-not on his own anthority, however-of those among the Triballians and Illyrians, who with their very eyesight can witch (offascinent), yea, and kill those whom they look wistly upon any long time;' and Plutarch states, on the authority of I'hilaretus, that 'the Thybiens who inhabited Pontus were deadly, not only to bales, but to men grown, and that whomsoever their "ye, speech, or breath would reach, were sure to fall sick, and pine away.' Menaleas, in Virgil (Ecl. iii. 102), also complains that some evil eye has fascinated his young lambs-

Nescio quis tencros oculus mihi fascinat agnos.
The principal amulet used by the aneients was the phallus or fitucimm, as the homans called it, which was hung roum the neek of children. Of course, this superstition, like all others, tlourished in Lurope during the middle ages. See Reginalal Sut's Discovery of Witcherait ; the Opusculum de Fuscino of John Lazarus Gutierrez, a Smanish physician, publishet in 16.33; and the Tractutus de Fascinatione of Iohn Christian Frommam, a physician of Staxe. Cobure, pulolished in 1675 . In the British Isles, also, the belief in the pewer of the evil eye is of ohi date, and is by no means dead, at least in Irdand and the Highlamis of Scotlami. In these countries (as elsewhere), it was once a very emmmon sururstition that eattle were subjeet to injury in this way. Witches hal the power to a malignant degree; and various charms, such as twining montain-asla among the hair of the cow's tail, were usel to avert or destroy their moxions influence. In the East it was anil is no Jess prevalent. The Persimes have varions methods of cliseovering the specina kimt of fascination by whieh a persom is aflicted; and Dallaway, in his Accome of C'unstuntinople (Lont. 1797), affirms that ' nothins ean exceel the superstition of the Turks respecting the evil eye of an enemy or intidel. Passages from the koran are painted on the outside of the houses, glolees of flitus are suspended from the eeiling, and a part of the superHuons caparison of their horses is designed to attraet attention, and divert a sinister inllnence.' IIobhouse, in his Travels, bears equally conclusive testimony to the prevalcuee of this superstition in the Turkish cmpire, not among Mohammedias only, but also among Christians ; while Lane, in his Modern Eogptians (1836), gives an aceolnt of the preantions taken by the Egyptians to avoil the influenee of evil eye. The American Indians partake of the
same belief; and it is not improbable that if the matter were still more profonndly investigated, it would be found that every nation that exists or has existed, with anything like a developel system of superstition, believes or has heliced in the reality of fasemation in some form or other.

The universality of this superstition goes far to prove that it has what may be called a matural origin : and, inlecd, when we eonsiler that the eye is the most expressive organ of the soul or mind of man, that through it are shot forth, as it were, into the visible world of the senses, the hidden passinns, emotions, and ilesires of our nature, we will not wonder that in the 'times of ignorance,' when men could give no rational or seientific aceount of almost any physiological phenomena, if conneeted with psychology, the eye should have leen superstitionsly imagined to be a eentre of malignant iolnence. The eye is, in point of fact, as potent as superstition dreams: the crror lay not in the reeognition of its fower, but in explaining the mode of its operation. The person who felt himself nnder the spell of a powerfud gaze, was too anitated to ealmly consiler the cause of his terrors, amd attributed to another resnlts for which he himself was manly responsihle. It was really he that gave to the eye of his fellow-creature its baleful inflnence; and he quailed less before the foree of character which it indieated, than before the fearful fancies with which his own timility had invested it. For this disease, wherever it has existed, or does yet exist, there is no eure but that solit culture of the understanding from which comes a true strength of will and brain. See Fasclvation in Serpents.
m'Volute and I'N Yolute. Sce Curviture and Osulative Cibcle. The evolute of any eurve is the locus of the centre of its oseulating eircle, and relative to its evolate, the curve is ealled the involute. This is the smplest detinition that can be given of an evolute and involute, which are relative terms. There is another, however, which may represent the relation of the curves more elearly to those who are not mathematicians. If on any eurve a string be closely wrapped, and if the string be fastenel at one of its ems, ant free at the other; and then if we mowind the string from the ourve, keeping it constantly stretehed, the curve which would be traced out by a pencil tixed to the free end of the string, is eallet the imwonte of that from which the string is unwond, and relative to it, the latter is called the evolute. It is clear that the involute might otherwise he described by fastening a string at one extromity of the evolute, and wraphy it theremon, keening it alwas stretchen. From either definition, it is clear that a normal to the involute at any point is a tangent to the evolute, and that the difference in length hetween any two ralii of enrature to the involute is equal to the lengtl of the are of the evolute intercepited between them. The nature of evolutes was first considered liy Huychens, who shewei that the evolute to a common evelond is another equal cyelnit, a property of that curve which he employed in making a rentulum vibrate in a cycloid. To describe the invulute of a circle, procect as fotlows: Let $a$ be the contre of the circle, and $b$ the extremity of the string to he unwomd from its circumference. Divile the cirele, or part of the cirele, according to the length of curve recpuired, into any number of equal prits, as $c, d, e, \& e$; through these, from $a$, thaw ratlial lines; from the points where these tonel the circle, draw, at right angles to the lines $a c$, ad, \&e, other lines, as in the diagram. With the distanee $c b$ as radius, from the point $c$. describe an are $b 1$, eutting the line cl in 1 . From the point $d$, with $d$, describe an are $1 \cong$, entting the

## FVOLUTION ANIM INVOUTION゙-EVVEEX.

 entting the line ef in 3. With rulins for, from $f$,

descrike an are $: 1$, cutting $f 4$ in the point 4 . Prococel in this way, descrihint ares whelh pass throngh the points $5,6,7,8$, and ?. The involute will thus be formed.

EVOLU'TIONAND INYOLU'TION, algemaical ternss. the former signifying the retraction af roots, and the latter the ruisiny to powers. When any number is multiplien lyy itself, the promuct is called its square, or sicond power. If we multiply the symare ly the number again. we get the culce or thind poiser: and so on. This process is callent involntion. Evolution is the inverse process, by which a number heing presented, we may ascertain a particular root of it, say the fourth; or that mmber which, beine moltiplied into unity a particular number of times, say four times, the product will be the number $1^{\text {resentel. Both subjects will be }}$ fommil treated in all algelraical text-hooks. Evoln. tion is more partienlarly considered under the heal Exthaction of liooty.
EVOLU TIONS, in military matters, are the movements of troops in order to change position. The olject may be to maintain or sustain a post, to oceupy a nerr post, to improve an attack, or to improve a defence. All such movements as marcli. ing, connter-marching, ronte-marching, changing front, forming line, facing, wheeling, making column or line, making échelon or square, defiling, deploping, \&c., come under the general hearling of evolutions. Hore minute descrintions of these and other motions will be given under Tactics, Mllitaiy and Naval. Other things being equal, the best evolutions are those which occupy least time and least spree. The worl evolution equally applies to the movement of shipsin a fleet.

EVORA (ancient ELora), a city of Portugal, capital of the province of Alemtejo, and, after (ibimbra, aud perhaps Thomar, the most interesting city in the conntry, is heantifully situated on a fortile and elevated plain, 48 mile's west-southWent of Balajoz, and about 80 miles east of Lisbon. It was nace a place of considerable strength; lout its r:mparts, and the towers which flanked them, its citarlel, its furts. and its wateh-towers, are now in a lupelessly ruinoms comdition. The town itsele is mot well hinite, its strects are narrow and winding, and its houses ohe and hadly planned. It has a cathedral, a large fathie edalice, fommled in 11S6, the chair of which, rehailt in $\mathbf{1 7 2 1}$, is in the ltalian styh, and is richly almond with marbles of varions cahmors. B. has leen the see of an archhishop sine jatl : has an archepiscopal library, embaming mowat of 50,010 solmes ; ind several pietures of grat numit, attributed to Gram Vasen. It las manufacture of irmware and lather, and a wellattombel ammal fair. P'ol? abont 12,000 .
ITs
li, is a very ancient city. Quintus serterins took it in sil bec. It was also contured by the Moors in 712. Wut recoverel from then in 1166 . The limman antiguities of lis atre umivallal in the leminsula. Anome these, the temple of liama, used as a slaughterhonse for sone time previnns to the year 1834 , (xhihits in its tine Corinthitur columns admirable frountion and delieacy of senpture. There is also an arpeduct, 1200 paces in lenath, erected ly Quintus Sertorius; hut the most beatiful Loman relie, and me of the most perfect pieces of ancient arehitectme in existence, is the tower which rises in the city at the extremity of the agurluet. It is 12 feet 6 inches in diameter: anl is surounted by eight columns of the lonic orter. Ionic filasters decorato the secomd story, and the top is crowned with a hemispherical lome. It is wholly constructed of brick, and coverch with cement of such a dnrable nature, that, although this iclicate structure has existed since 70 bic, fow parts of it seem to have been impaired ly time.

Evremond, Gharles Margotelef de: St Denis, Seigseur fie str, an anthor and wit of the 17.the., was born at sit Denis-le-Guast, in Normandy, April I, 1613. He entered the army about the age of 15 , became an ensign in less than a year, ant in 1635 hat the command of a company of foot. Abont this time, le gained the farour and friendship of Turenne, Gramont, the I'rince of Condé, and others of high rank, all of whom were delighted with the wit and cheerfulness of his conversation. Havine talkel himself into the esteem of these men, it was not long, howwer, until, by the same means, he lrought himself under their displeasure. In 1661 his mblrifled indulgence in raillery compelled him to take remge in England. Many attempts were malle at the French court to induce Louis XIN' to recall st E., whose accomplishments, gaicty, and wit rendered him the delight of all who had not smarted from his sareasm, lont Louns remained immovable, until 1659, when le granted the exile permissin to return. It was now, however, too late. St E. had by this time smronnded himself with an admiring eircle of the wits and beanties of the linglish court, and resolved to remain where he was. IIe died in his 91 st year, in September 1703.

S't E.'s works, comprising comedies, classical essays, \&e, were first correctly pullished by lles Maizeanx, with a life of the author (Lond. 1705). The works are also translated into Euglish by the same editor.

EVREUX (anciently Mediotanum, and more recently Eburorices), an epriscopal city of France, in the department of Enre, of which it is the capital, is pleasantly situated in a valley on the lton, a feeder of the Eure, 60 miles west-north-west of Paris. It is well built, its streets regular, and the environs prettily laid ont in promenades, gardens, and vineyards. The priweipal bailding of F . is the eathedral, which dates from the lith century. The other buildings of note are the abley church of st Thaurin, originally loilt over the tomb of St Thaurin, the tirst bishopi of E, and having a shrine extonted in the 13th c , which once contained his relies; the Bishop's l'alace, bnilt in 14S4; and the Tour de lHorloge of the same century. E. has extensive maunfactures of bed-ticking, woollen stutls, cotton-yarn, leather, vinegar, and a trade in its mamfactures, and in gram, sceds, timber, and liguenrs. lope 12,577.
l: is remarkable for the numerous sicges which it has sustained. It was taken by Clovis from the Romans; was sacked and phodered in 892 by the Northmen, under liollo; was burned by Henry 1. of

## EVREUX-EWALD.

England in 1119; and in 1194 and 1109 it was twice captured by l'hilippe Auguste, king of France, into whose hands, after a short time, it permanently came. It was frequently taken and recovered in the wars Letween France and England during the reigns of Ifenry V. and Menry Vl. of the latter country.

Vieil Erreux (old l'ereur), a village near 1., and the supposed site of the ancient Nediolamum, has some meient remains of a theatre, an arferluct, and fortifications.

EwALD, Georg Heintici August vun, one of the greatest living Orientalists, was born 16th Norember 1S03, at Göttingen, and exhilited a predilection for Oriental literature even in his schooldays. Ile stndied at the miversity of his native place, and while still a stulent, wrote a work on the Composition of Genesis (Dip Composition der Gencsis, Lirannschw. 1823). In 1823, he became a teacher at the Wolfenhiittel gymnasium; in 1827 , extraordinary; and in 1831, ordinary, professor of philosophy at Göttingen; and in 183n, was appointed nominal professor of the Oriental languages. Travels in search of Oriental MSS. leal him, in 1820, 1899, amd 1S36, to Berlin, l'aris, and ltaly. After the death of Eichhorn, the critieal exegesis of the Ohl Testament was included in bis duties as professor of the Oriental toncues. The tirst, and perhaps the most important fruit of his new labours, was his Critical Grammar of the Hebrew Language ( Kritische Grammatik der Mebr. Smache, Leip. 1827), an abridgment of which was mblished at Leipsio in 1535, nader the title of Grammar of the Hebrew Language (Grummatik der Hebr. spache; 5th edit. 1544); and a still simpler epitome in 1842, entitled Ifcbrew Grammar for Beginners (Ifelr. Sprachlehre fïr Aufänger). Before this, however, E. had acquired a high repatation by his work on Cantieles (IIohe Lied Sulomo's, Gutt. 1SO6): his Commentary on the A pocalypse (Commentarius in Apocalypsin, Leip. 182S) ; his Poetical Books of the Oll 'Testament, in 4 vols. (Die Poctischen Bücher des Alten Bundes, Gütt. 1835-1837); and his l'rophets of the Ohl Testaraent, in 2 vols. (Die Propheten des Alten Bundes, a Bde. Stutt. 18.10). Between the years 1843-1550, E. published at Güttingen an important work in 4 vols, on the History of the leople of Israel until the Time of Christ' (Geschichte des Volkes Israel bis auf Christus), and a subsidiary volnme on the Antiquities of the l'eople of Israel (Die Alterthümer des l'olkes Israel). The Geschichte des Folkes Israfl, together with its two continuations, The History of Christ and his Time (Geschiche Christus und semer Zoip, 1857), and The Ihistory of the Apostolic Age, \&e. (Geschichte des Apostolischon Zcitatters bis anr Zerstörung Jerusalems, 155s), is regarilen as E.'s greatest work. Bnt Jewish history and literature did not limit the sphere of E.'s wonderful activity. His lectures at Gouttingen embraced the literature of the Arabse, Persian, Aramaic, and Snnscrit tongues, and gave hirth to such works as that on the Metres of the Arabian Songs (De Metris Citrminum Arabicorum, Leip. 1825); on Some of the Older Sanscrit Netres (Ueber cinige ältere sanscrit-Metra, Gött. 1827), an epitome of the Arahic author Wakidi's work on Mesopotamia (De Mesopotamioe expugnatce Historin, Gött. 1827), and a frammar of Arabic, entitled Grammatica Critica Linguce Arabica cum brevi Metrorum Doctrina, I Bde. (Leip. 1831-1833). In 1832, E. published at Göttingen several very important Dissertations on Oriental and Biblical Literature (Abhandlungen aur orient. und biblischen literatur), and plannel the well-known periodical, Journal for the Knowledge of the East (Zeitschrift fiut die Kunde des Morgenlands). E., however, is not only a scholar and philologist, but a man of
strong political convietions. Haring, along with six of bis colleagues (the others were the lrothers Grimm, Dahlmann, Gervinus, Weber, and Albreeht), protested against the abolition of constitutional law and liberty in llanover lyy the new sowereign, Ernest Augustus (previously Duke of Comberland), he was dismissed from his situation, 12th December 1537, and went to England to investigate its public libraries, whence he was called to Tubingen in 18:3S, as professor of theology. Hero he remained for ten years, and, partly on aceount of the catholicity of his views, and the imperiousness of his temper, was involvel in many strifes. In 1841, he was ennobled by the king of Wiirtemburg. In 1848, E. returned to rabtingen, where he established a Year-book of Biblical Science (Johruach der biblischen Wissenschaft), in which, as well as in his work on the Synoptic Gospels (Die drei erster Evengelien, Gütt. 1850), and works on the Epistles of 1'aul (Die sendschreiten des Apostels Paulus übersetat und erklüt, Gütt. 1857), he has striven to give a firmer lasis to New Testament criticism and exegesis. liecently, also, E. has paid great attention to Ethiopic literature, a result of which is his valuable Dissertation on the Book of Enoch (Uber des Ethiopischen Buches Henoch Entstehung, \&c., Gütt. 1856). The distinguishing peculiarity of 1. as a theologian and critic, is his love for the conerete forms in which divine truths are revealed in history, and his dislike of the abstractions into which they are retined away by over-speculative theologians. He regards it as the especial glory of the Jewish people, that they never lost sight of the conerete, as the l'ersians and Hindus, for example, did, with whom the realities of religion ranished into the most intangible dreams, bnt kept it ever before them until, in the fulness of times, thero was born in their midst Jesus of Nazareth, tho Perfect and Only One, in whom humanity reached its spiritual consmmmation. E.'s fosition in the variegated field of German theology is mot easy to define. He refuses to class himself or to be classed with any party. Hle is equally opposed to the extreme left represented in Tiilingen. and to the extreme right represented in the modern Lutheran movement headed by Hengstenberg. It cannot be expected that E. coukl form a party, when he at times denounces, with an eloquence nnequalled in any theological chair in Germany, the 'heathenism" of Lutherans, Romanists, and liationalists.
EWALD, Jobannes, one of the best lyric poets of D'nmark, was born at Copenhagen on the 18 th November 1743, and dien in the same city in 1781, after a life of checkered adventare, trouble, and privation. At the age of 11 , on the death of his fathor, E. was almitted into the Slesvig College. In his 16 th year, when his friends were abont to send him to the university of Copenhagen, the restless impatience of restraint which had always characterised him, led him to make his escane to Germany, where be entered as a irivate suldier in the army of Frederick the Great of Irnssia, from which be soon deserted to the Austrians. His bravery having attracterl the antice of his superiors, he was offered a commission, but this be refused to accept, as it would have obliged him to become a Catholic; and having induced bis friends to purchase his discharge, he returned to Copenhagen in 1760, after having taken part in the great campaigns of 1759 -1760. He now began the stndy of theology, but a disappointment in love drove him to abandon it, and give bis attention solely to poetry. The first prodnction of $\mathbf{E}$. which attracted general notice, was the funeral orle which he wrote on the death of Frederick V. of lenmark in 1767 , and which exhibited so much original genius, that it at once
raised thu robine part to the rank of one of the best witers of his comutry. 'Ihis smomessful attempt

 of as careful stmpy "f shaksuare amb the line-

 spirit of the ancient hate of the math, and exhibhts the specially matimal tembery of lise prmas, is

 to ramk equally hient, when consumed ais a more lyrival pronduction. Ins hathits of doseipation, and the decibled eprinims whid he "xpressed in rofer-

 irrwalanites of conduct, "stanes the allectom of his mearest relatibes, and in the latter years of his malaply life he was oftem imblited to the charity of straneres for the moun of sulnsistence. Some of his nantical stones hate ben raisol to the dignity of mational inkes, and many of his necessomal gheces riank amung the swoutsit jums of his comentry. He was chenged at the than of his death in crompling an autulingraphy, and in bringing ont the complete edition of his writinge, whith finally appeared in Fite. His works haw also been cilited 1 y F . L .

EXAMINATION OF A B.ANKRURT. SEE

EXAMINATION WR A Plisoner, in Sentlame Som lemandarma.

ENAMINATHON OH A WITAESS Se Evinexp:

ENADJNATHONS FOHE THE PUHEIC SERTICL. ['p tu the year Istin, all the jamior npmintments in the soveral latanches of the "ivil sirvice vere male mon a system whin was pratisally ome of simple and undincked mominations. Wamimations bumanly "xiated in a few of the Wrpartmonts, lant they hal demeneratel intu an monaming form. 'The depretmental examiners, Who were takn from other ilutios for this temporary phryense, and wore chacely comectol with the particular department, ware tor murh afrath of the chame of indimalals to lo very stringent in their reguirements, and kerp up the standard of examina-
 halloen rejoetch for twelow years. Thechuse pance Wias, that fursons wern uiton appointed wha were ohigetimalle on aremant of agre, broken state of herth, and lod eharoctor, as well as from want of prowr intellectual qualitiontions.

Chames in the 'isil sirvice lawe hen mate somutimes by the lexishature, sometimes by the "xentur", lant clicitly, is in the prosent instaner, by the latter. Shme years a;n, ar commission was apminted to consiatir phans for its antire rocomaninstion. This rommission, which incluted the mans of Sid' 'harles Theolyan and Sir Staford Noptheoto, mad" tes reprert in 1 sins, and strongly remmmondel comperiture pxaminations, as the monlo in making the appointments in the dirst instaner. ha the following yerar. a plan for improy1me the systom was promisel in the ? Sucen's sperth, bit wothing further was done. In May
 preant rivil sirvice 'ommissionert, and deliaing then dithes. 'Whis arder is still in foree, and directs the commissioners to examine into and certify the

Inalifications of youme mon mominated to junior
 oretlicato, they are to aseretain the form followimg thats: the age, health, chanacter, and the knowhellen ame ability of the emolibaters. All the detrils
 and the subjerts of crammation arosettled at tho diseretime of the heads of the several departments; while the decisinn, on imbinhal eases, rests solely wath the commissimers.
As the mature of the replumements exprected from
 departmente, consideralde varinty ming he expectel in the different hathehes of tha service. As the system las not yot reaclach at wethed state, the exact dintails of the examiation for the varions ollices mast be sught from time to time in tha latest of the ammal reports of the Cival sirvice Commissioners; Lut tla following semeral acount of its pesent state may lue given here. Leaving out accomet labourers and artisans, the premons cmployed in the publie servier may lo divided into t wogreat classes: the dirst incluline all thase who may be called by the enompal nance of clerks, and whose oeengation is mainly of a sedmatary, amd more or less of an intellectuat dharacter: the other cmbracing all the inferion appmintments - such as excise othicers, tide. waiters, athl letteresuriers, whise employments repuire in a special degree jhysical strength and activity. Far the latter chass, the exmmation is of in jurely mementary wharator, amb is for the must part contined to realing, writing, spelling, nad withmetic. The principo of complotive examinations has nat hern applient, and is not intended to le. applind, to this class of phblic scruants, mit thoir health amb momal qualifications are strictly investigatem.

As to the first class, the system is still in a state of transition. It will $l_{n}$ whiserverl that the order of 185.5 directs the eommissioners to examine young men who have bern numinated. Under this order, there varieties of examination are nuw in operation. Whe first is a simple test examination. When a yacancy nerurs, a single person is momated hy the head of the dejartment or other proper anthority, and this presm is afterwats sulunitta to axamina. tion. The second is a syst om of lomitol competition. When a vacaney oeniss, sewpal fersons are nomimoted, and being salmitted to examination, the apmintment is ohtainel by the luest of this limitel mumber. The third is the system of open competition, which has heen emphyoul in the cases where the rifht of nomination has lieen wholly surremdered. A simple test examination seoms to have been all that was contemplated in the orilor of 18.55 . hut since that time there has been a stady advance towards competitive examinations. Iexshations hava bussed the Hanse of Commons recognising the alyantages of empuetition, aula parlianuatary committer, apponted in 185, has reported in favom of fraceeding further in that direction. At present, the principle of apen eompetition prevals in the Imdian C'ivil Nervice, in the Medienl Service and l'ublie Works Department in India, and in the secientitic hranches of the Militury sorviee. The prineijle of hmited enmpetition prevals in about threc-fourths of the higher departments, white in the remainder of these, and in all the lower gralus of the service, from tide-waiters downwards, there is a simple test -xamination.

The mumber of nominations to which the order in moncil has been applial from 185\% to the end of
 me only, to whom, therefore, as explamen above, a simple test examination was applicol. The commis. sioners rejected 2259 . (lat of these 2259 , all but

## ENAMHNATIONS FOR THE PUBLIC SEIVYOF

Q20 failed cither in arithactic or spelling; some, of conrse, in other suljeects also. lt may therefore be said that mone than 2000 persuns delicient in the ordinary rmdiments of a giol education lave been nominated to the ('ivil sorvice in six years, amt "xclutel by the examination. Buring the same feriol, alnnt 600 of these nominated were incligible on account of age, health, of chatacter. In compliping the number of certificates granter with the mamber of rejections in eachs year, it apparara that the proportion of the latter has dimimished in the latter years.

Up to 1859 , the far greator proportion of all appointments made mator the new system has luen mate by nomination of a single person followed hy a test examination. lint the exferience hat in the working of the system has convincal the commis. sioners and the parlimentary commithe of the wisdom of adranemg in the direction of empntition. The minimun standard is diflicult to mantan. It causes Ilclay and incomvenience by the rejection of cadidates, and the necessity of providing others. The rejections throw umpeasint iliscrelit on the patron, and if frement, it is ascribed mot to the mulitness of the candidates, but to the stamland becing fixed too high. The camblate is agerrievel at the loss of an appontment which he had horked on ats his own, and the patron is likely to share the feeling. In the conpetitive system, these evils mon exist. The number of competiters will itsclf keep up the standard; the candidate is not rejected as mat. bat only gives way to che fitter : and the standari commot be said to be fixal tom high, for the fact of canlilates coming forward shews that the prize is worth the tromble of attamment. On these groumls, the commissioners recommem the gralnal introluction of open competitive examinatoons inta all the departments of the service, but in the meantime think it a safer comrse to continue and oxtem the system of limited comprition. Experience, however, las shewn that the latter is often a system of competition more in mame than in reality, and that some conditions are requisite to make it effective. In 1859, 1107 persons were nominated to compete for 258 situations: of thesc, muly 307 wore competent, the remaning 710 being whelly matit fom any appointment. The real competition tuok place hetween 307 persms. The expernence of 1860 comfirms this view. la a competition for de clorkship at the Almiralty, of 66 camblidates, only 24 were competent, loeing less than the number of situations; so that competition in that ease would have given worse results than a simple test examination. With the view of reobering it move eflective, the parliamentary committec of 15.5 have recomatended some monlitications in the system, which the commissioners intend to carry ont. In future, mo candilate will be almittel to enter into the competition w!on has not previously passed the test of titness: and the competition for tach vanary will take place amony at least five of subh pualified persons. The test examination will le nainly conlinet t" writing. spelling, arithmetic, and making an pricis of a given set of phers. It is at the same time farther recommended that the experiment of "pen competition, as tried in the Imlian ('ivil service, be from thme to time repeated in other departments.
The mote of makins the apponintments to the Civil service has of late years bean mbeh diseasseal, and the permanent nature of the apmointments makes the quastion one of much importince. The menbers of this surviee remaining in wher throngh all political changes, and aiding cach minister in turn by their knowledge of hasiness and of othecial details, form, in fact, a class of profrossomed public servants, entering their profession as others do while
young, in the hope of rinine grablually to its higher grades. It is almitem on all hands that theso persons shomhd not be labhe to le: turnel mat an! thus deprived if tha benclit of their previons service, exeept for $1^{n}$ witive mistombet: and since there is no way of getting rill of them execpet loy making them jensinurs in the phblic furso, it is clearly of the weatest impnatace that the ampintments shonhl he well made in the lisst instane:

It is sain on the one basm, that, aport from an examination, there is monamah, flan that ean (enable the heal of at anartment, wherwion its he often is, to acyuire an intimate honwlenge of the (rharacter, habits, and abilities of sumeessive fonerations of young men; that even with this kow lodine and much more in its alsence, there is much to D, feamed from partality and private or political interest. The minister annst depend on the recommendations of others, and will le obligen to comply with the importunities of friems amp political supporters. 'These will natumally desime to seme their frimis rather than thu palific, and their friends are lest serwed ly the ablancoment of their least competent chihlrin. Hence, thare is romb reasm fur supposing that the chane would be somewhat worse than if male blindende from at mallat-hox.

Thanyly the mew system has mity yet loen kong enongh in operation to give suldicint grounds from
 commissioners dow hothentate $t$, dechare in than latest requrt that competitios: exammations, comhimed with proper conditions as to age, bealth, and character, am! with the eheck of a parion of probation, and with fromotion her merit from class to class, is the luest move of proviling for the puldie somice.
The oljoctions which have heen arged on the other hand are manly reducihle to the two whin h follow. It is sail, in the tirst plase, that in cont petitive exaninations tow mads eredit is given to scholastic reguirements which are not reguired fon the service: To this it is rophend, that persmos heine appointed in early life, not as having learnesl, hut in orler to learn, their puefessun, the amy thime by whicb the best candidates can bue discrimimatel is their proticiency in the or linary hramo of a himeal elucation: further, that due weight is always given to acequirements that are strictly practical -writhg, arithnetic, spelling, English composition, and the: pwor of framing a precis of a given set of papers, so that whature he the seholastic requirements of the successml candidate, there is conoth of the practical to qualify him for his office ; and lathy, that (xaminations in lanenase, literature, and seidee are extremely usefal in ascertaining the relative ability, iminstry, and coltiration of the candihates, amb that it is as affordiner ervilence of these that they are principally remated.

It is contemed, in the secom? ]aces that there are very important moral yualities which are mot taken into acoont in a compertitio exmmation. This must be at once admitiol, for although such qualities as purswerance and enorgy may to some extent le indicated by superionty of acquirements, there are others, such as jubment, discretion, fidelity, strength of will, regarding which now certain conclusions can le drawn. It haz, lamewr, been justly ulsserved, that this class of gualitio's can loe shewn only hy conduct. anl that the carly ase at which the apmintments are made will have rarely afforden? sulficiont "pportunitios for giving proof of them; to which it may le arded, that the previons conduct and dispusition of candinates is rarely known the the bal of the department or other anthority who makes thw

## EXANTHEMATA-EXCHANGE

mpontment. If these qualities are not tested loy compertive examinations, neither were they tested muler the system provionsly in existence; and the wjoction, therefore, apparently amounts to this, that having the means of testing the intellectual qualities and acquirements of the candidat:, we dught to abondon it because it does not imende all the mond qualities, while at the same time there is no satisfactory mode of testing the latter.
It is obvious that whenerer several prions aplly for the same thing, there mast be competition in ane way or other: it will he either in the way of inlluence-in which case a person is selected not because he is the fitter man, lint to gratify some one else-or hy testimonials, which is not altogether satisfactory. The remaining plan is competition ly examiuation. It is worthy of remark, that besides its other adrantages, the latter gives an impetus to colucation through the whole comotry, stimulates exertion, and enenuages habits of industry-hahits which, once acquired, remain, and lecome aphlicahle to the publie service.

EXANTHEALATA (from a Greek verl, to alloresce, or come ont in a rash), a class of fclorile diseases (see Fever) attended liy distinctive cruptions on the skin, appearing at a detinite period, and running a recognisable coursc. To this class belong small-102, chicken-pox, measles, scarlet fever, and, aceording to some authorities, plague, typhus, erysipelas, \&c.

E'XARCII was the title first conferred by Justimian on his commander-in-chief and vicegerent in Italy. The conquest of Italy ly the Goths in the early part of the 6th c. was a severe how to the Byzantine pride; and Justinian determined to wipe out the disgrace, and recover the imperial territories. The execution of this project was intrusted at first to Belisarius ( $\mathrm{q} \cdot \mathrm{v}$ ), and aiterwards to Narses ( $\mathrm{q} . \mathrm{v}$. ), ly whom the reconquest of italy was effeeted. The latter was the first who bore the title of exareh; and the district over which be ruled was called the: Exarchate. The seat of the exarehs was Ravema, the different towns and territories belongine to them being governed ly subordinate inlers, styled Duces or Dukes. The extent of the exarchate, however, was gradually diminished, until it embraced only the country about liavenna, the present Romagna, and the coasts of Himini as far as Ancona. This was lrought about partly hy the conquests of the Longobaris, partly by the dukes of Venice and Naphes making themselves independent. In the year 7as, even this small portion fell, for a short time, into the hands of the Longobarils. In 752, Astulf. or Astolphus, king of the Longobarils, Iut an end to the liyzantine rule at Ravenna; but in 75.5, he was compelled to resign the exarchate to l'cin the Less, king of the Franks, who gave it wer to the lishop of lome, Stephanas 1I. - In the Christian Church, exarch was origimally a titlo of the lishops, afterwards of a bisliop who presided over several others-a prinate. It was lorne by the lishops of Alcandria, Antioch, E'phesus, Cosarea, and Constantinople, till it was timally exebanged for the title of Patriarch. A superior over several momasteries was also called in ancient times an "xarch. The same title is also borne, in the molern Greek Church, ly the person who 'visits' nflicially, as a sort of legate of the patriareh, the clergy and churches in a proviuce.
EXCAMBION, in Scotland, is the legal name for an exchange of lands. Heirs possessing unter dapds of entail are empowered by the so-callent Montgomery Aet ( 10 (ico. III. c. 51) to exchanre or excamb eortain portions of the entailed lands. The I Fortions exchanged mast not include the
prineipal inansion-house or ollices, or the garden, park, home-farm, or policy, or more than one-fourth in value of the estate. As to the conditions under which, and the proceedings ly which, excambions of entailed lanis are effected, see Bell's Law Dictionar!.
hacellence, or ExCEldEACY, a title now given to ambassadors, as representing not the allairs alone, but the persons of sovereign princes, to whem it was formerly applied. The privilege of being addressed as 'Four Excellence,' and of demanding a private interview with the prince to Whom he is acerdited, are the elief distinctions hetween the privileges of an ambassador, and an envoy or minister plenipotentiary. Sce Ambassamor, Lamissy.

EXCHANGE, a term applied to buiddings or places of resort for merchants. The name Bourse ( P urse) is applied in lirance and Bulgium to a resort of this kimd; and in Hamhurg, and some other German cities, there is the equivalent word Börse. Fxchanges have usually comprebended an open quadrangle, smrounded by an arcade, free to all persons: but in some cases large reading-rooms now constitute resorts of this lind, and these are nqueu only to a body of subscribers, and visitors whom they introduce. Of this description are the Exchanges of Nanchester and Glasgow.
Exchanges originaterl in the eommercial cities of Italy, (Bcrmany, and the Netherlands, from which last-named conintry they were copied by England. The merit of introdueing them is due to Sir Thomas Gresham, who, having resided as Britisk agent at Antwerp in 1550, chose the Bourse of that city as a morlel fir the Ihoyal Exchange of London. Their institution in England is therefore coincident with the rise of commercial prosperity at the middle of the loth century: The first stome of Greshan's Burse, for so it was originally ealled, was laid June 6, 15 tb , a site being found for it ly romoring cighty honses in Cornhill, and it was dinished in November 1507. It consisted of a quadmande with an areade ; above was a corridor with stalls, for the sale of wares. This corridor was called the fron-believed to be a corruption of buth- (fer. for path or walk. Outside were shops. On Jamary $23,1570-1501$, the liarse was ceremoniously njened by Queen Dlizalneth immediately after dining at the honse of Sir Thomas Gresham in Bishopsgate Strect. Daving viewed the whole Burse, the gneen, hy herald and trumpet, cansed it to be prochaimed "The Royal Exchange! This first Exchange of London was almost entirely destroyed by the great fire of 1666 . A new Exchange was forthwith erected on the spot, and opened Scitember 2s, 1669. This second hoyal Exchange had the same fate; it was destroyed by fire, Jaunary 10, 18:3. The fomndation-stonc of the third Exchange was laid by Prince Albert, Jamary 17, 18.2. Completed in three yoars, at a cost of $£ 150,000$, from the designs of W. Vite, it was opened danary 1, 1855, ly Quen Victoria, who declared it 'to be her royal will and pleasure that this buihling loe hercafter called the fioyal Exchange.'

The term Exchange scems to have been naturally adopted from the circumstance that loying and exchanging of merchandise, and also cxchanging and paying away of money, formed the chicf objicet of concourse. In the present day, carly intelligence in matters affecting commorce and public finance forms a principal attraction of this kind of resort. Athengla open daily, there are usually certain days and hours of meeting when the throng is considerable. The mecting is familiarly ealled 'Change;' as, for example, 'Change commences at 1 o'clock,

## EXCHANGE.

and it is worth while seeine the crowd that comes througing at that hour.'-Nurray's Hendbook, article 'Hamburg.' The two great days of meeting at the Royal Exchange, London, are Tuestays and Fridays, and the bisiest time is from 3 to 4 o'clock. At this time are seen the greatest preople on Change; some of whom, such as the Ioothschilds, occupy a well-known spot.

Tn London, there are several other Exchanges, but for special purposes; among these are the Corn Exchange in Mark Lane, and the Coal Exchange in Lower Thames Street. Exeter Change, which was a sort of bazaar, with a menagerie of wild beasts, stood in the Stranul, upon or near the site of the house of the Farl of Exeter: the building, as an interruption to the thoronghfara, was removed in 1529. The Bourse at Paris amd at Marseille, also the Merchants' Exchange in Wall Street, New York, may he mentioned as luildings of great extent aul elegance. Lately, some hand. some and commodious Corn Exchanges, as resorts for grain-dealers, have been erected in rarious towns in Great Britain.

ExCHANGE, in Political Eenomy, is sometimes applied to the contersion of the money of one country into its equivalent in the money of another -as by stating the relation which French napoleons and franes bear to British pounds. The technical meaning of the word has now, however, come to be the difference between the actual valne of meney, taken ly the standard of bullion, in any tro places with relation to each other. 1f, in Lonlon, it costs more than $£ 100$ to pay $£ 100$ in St Petersburg, the rate of exchange is against the former town, and in favour of the latter; an inhabitant of which will be able to pay a deht of $£ 100$ in London with less than $£ 100$ werth of bullion in St I'etershurg. The process will be best explained ly analysing it through means of simple examples. If Thomson $\&$ Co. of Lendon buy £lon worth of wine from De la Rue of Paris, and De la liue, on the other hand, buy $£ 100$ worth of cotton geols frem Themson \& Co. of Lendon, the two debts, were there no others betuceen the merchants of the same fowns, would extinguish each other, and there would be no necessity either for transmitting money or drawing bills of exchange. Suppuse, however, that it is not De la line, but his neighbour Bonchamp who has lought the $£ 100$ worth of catton gonds from Thomson \& Co., then the debts of all will le settled by Bonchamp paying $f 100$ to De la lue on Thomson \& Co.'s account. Surpose, next, the case of De la Rue being due nothing to Thomson \& Co., and Fouchamp lieing due them only £50, a like sum has to be otherwise fonmi. Van lrait of Amsterdam is due precisely this sum to Thomson $\&$ Co., while either De la Liue or bonchamp is due the same amount to Yan Pradt for a purchase of Goula cheeses; then it is clear that the several debts can be adjusted amone them withont the transmission of bullien. It will cost some trouble to adjust the payments, however, and this trouble will have to be pail for. As in praying Thomson \& Co. their dubt of $\pm 100$, De la liue will have to pay for this trouble, the rate of exchange will be agaimst him. If the debt, or any part of it, cannot be met by such an aljustment out of cross mobts and credits, it will le necessary for the delptor to send bullion to his creditor; and this being an expensive process, it throws the rate of exchange against the debtor who so lays. For instance, if the sum due by the Frenchmen to Van Iradt was only \&'25 instead of £50, then De la line would have had to be at the expense of sending $£ 25$ to Loudon in bullion. No such actual transactions take place in the existing mercantile world, because the accounts in debtor
and creditor connectel with the three towns above referred to are to lre counted in thousands, and ramify into other towns; but the abure examples may be held to represent the groups of dehtors and crediters, as algebraic signs represent quantitics. The individual merchants in one tralime town havo no idea how the surplus of delit or credit may lis between them, far less can they tell how it may be adjusted lyy delits and credits in other towns; lut through the ageney of luakers, bill-discumaters, and other persons who deal in money, the relations of all trading places towards each other are in a constant state of shifting and adjustment ; and any one who has to pay a delt in any trading pace can find out how much he has to give to get that dolst mad, and can pay it accorlingly. When, through the uncration of these complicated transactions, you require to give more than $£ 100$ in London to set that amonnt pail in Parjs, then the rate of cachange is against London, and is in favour of Paris, whero less than $£ 100$ in eash will pay a delit of $£ 100$ in London. The difference will generally depend on the difficulty of adjusting questions of delt am credit throughout the fieh of Eurofean commeree, in such a manner as to get the debt paid. If it cannot be paid by adjustment, then budion must be sent; and thus it is generally said, that the rato of exchange against any place is limited by the charge of transmitting bulliom to it. The rate of exchange is liable to be brought to a level also by commercial exportation and importation, since, whenerer it is expensive to get money sent tu a country, there is a temptation to send goods to that country, to compensate the delt. In the general circle of transactions of this lind, the state or town which has the largest amount of transactions will have the largest mumber of debtors and of creditors, and will thus afford the chief facility for each compensating the ether. It is thus that London is the centre of the money-market, where all the debts and credits in the word may he said to meet and extinguish each other. While the cull notions about the Dalance of Trade (! 1 . v.) existed, it was supposed that the nation which the exchange was against was going to ruin : whle that which it was in favour of was Irospering through the other's loss. At present, it is inconvenient and expensive to a comatry to have the exchange against it. An adverse exchange generally indicates a surt of break in the eircle of trade, which it would le adrantaceous to fill up and mony lue caused by the commerce of a comtry decreasing; on the other hand, however, the imports for which a country laye in cash or in expensive bills, may be the same as a highly advantageous tratic. Gohd-producing comentries tind bullion their most advantapeous export, and the same is the case with countries into which gold luas tlowed in excess.

EXCHANGE, l YeEt or, in English law, a common law assurance, wherely persons severally seised of lands, mutually grant them in exchange, each his own land for that of the other. In order to a valid exchange, five things are necessary: 1. The two subjects must be of the same nature, as lands for lands, chattels for chattels, but not real fur personal estate. 2. The parties must take an equal cstate; thus, an estate in fee cannot be exchanged for an estate tail. 3. The werd 'exchange' must be used. 4. There must be entry, and if cither party die hefore entry, his heir may aroid the exchange. 5. Since tho statute of Frauds ( 29 Car. 1 I. c. 3), if the interest ho larger than a term for three years, the exchange roust le in writing. A mutual warranty and right of cutry was formerly implied in an exchange. This eflict of the deed has been taken away ly S amd 9 Vict. c. 106, s. 4. By the S and 9 Vict. c. 118 ,

EACHEQVER, Chatebloi of the. The office of Chancellor of the Exchopur, in malem times, will he acenately described when we say that he is the first fmance minister of the Cromes. strictly speaking, he is the muler-treasmor, the athe of Loml Ityh Jreasurer heing now vesteal in the lomeds Commissiners of the Treasury when the l'rime Dinister is at mombre of the Damse of 'ommonso he sometimes holuls the oflice of than ellom of the Exchenner. The judicial functions of the 'han cellur of the lexchetuer may now $l_{n}$ comvilered matter of history. See Exhodeder, Cublit of. When the chief ham and the barons are equally livited in opinion, he may be comuired to reherr the cause with the barons, and to give his ophion. Shat the last instance in which this was dme was in $17{ }^{-1} 5$; and thongh the lecision whel sir lobert Walple gave is said to have given great satisfactim, the custom is mut haly to be revertal to.

EACIIEQUER, 'OCLET OF , one of the sumeme courts of common law in Singland. The Court of Exchequer was originally the comrt wherein all matters relating to the royal revembes were adjadicatol uron. It is said (Sadox, Mist of Er i. 177) that as emly as the reisn of Willam the Compucror a Court of Exchegner was in existence: Thas was probaly mothing mome than a hranch of the fule hergen, of grat conacil ol the mation; but oll the subdivisinn of that rourt in the reign of Lilward 1 , the (ourt of Excherger achuired it separate amb inderembat position. The special duty then assigned to the court was to moder the Formos of the crown, and to recover the liones dehts and dutics. 'The court was then demminated the Srememrium, a word derived, it is said, from venerms or scacrum, a chess-bobitl ; and it was su callew heranses a cheederend dotly was anciently wout to be laid upen tha" talike of the comer (Nadex, Mist of Sar), a practice wholl, matil the late act, prevailal in the Court of lixelomaer in scotham. The court formerly comsinted of two divisions, an equity, and a comman law on pha sille. Latal coke (hat. iv. 115) apmears to doubt where the "untable jurisdietion of the court can lec traced back further than
the statute $3: 3$ llumy Vill. c. 30. This erpuitahle juriwhetion of tho Exelnequer was aloblished by
 (b) the dirst institation of the court, the business was chin-dly contimed to matters conmected with thow
 thin kinfs debturs and farmers, and all acemutants of the Fxelnergare, tos san and impload all manner of prranto. This mivilege was exerosed by means of a writ of gno minus (now alwlishad bye Will. IV. ( 3 39), wherem to was set forth that the phantill lume : ilebton of the king, was, by reason of the wrong dome to him by the defontiant, deprised of the me:no of diseharging his shet to the crown (que) minnes swtheirus wivtif). '1'lue benefit of this writ was ley degrees extombal to all the lieges, on the fiction that thay were crown deldors. By this means the Cont of tixelngher atopioce as concurrent jurisdiction with the wher courts of common law. Tha jughes of the Exehequer eonsisted originally of tha lom trasurer, the chancellon of the Exchequer, ami three juisne juldes; these last were called harong of the Ex ehequer. The title of Jaron is said ly Mr
 the judqes in the Exelecquer becanse they were anciontly mate of such as were barons of the kingdom. The chancellor of the Exchequer sat only on the equity side of the court. The last oceasion on which he was calleal upon to exereise bis judicial functions was in the case of Naish $r$, the East India Company, when the juiges were equally clividud in opinion. 'this case occurred in Sichaclmas term 17 at, when sir liobert Walpole was chancellor of the Jexcherpuer, am! his judment is said to have given seneral satisfaction. The comrt now consists of tiwe jubges riz, the chief laron, and fom barons of Excheqner. From this court an appeal lies in

The Court of Escheque? (hamber was orymallo a comt of all the judges in Enesman assumbel fur decision of matters of Iaw (Coki, /nst. お. 110, 119). lard Camplsell states, that the low chancellor was in the labit of infourning eases of extraordinary importane into the Exchepurs, that he might have the aquinn of the twelve julges (Limes of the Chanrollors, i. 10). But the winary juristiction of the Comet of Exchemper ("hanber is as a court of error. in which capreity it reviews the judgments of the thee courts of commom law. This court was establishey hy :3 Jilw. 1. c. 10 , for the purpose of reviewind the decisions of the common law side of the Court of Exchequer, and was composed of the juderes of the other two conrts-viz, the Queen's Bench and the Commom Jleas. ly 47 Eliz, c. 8 , it was enacted that the judges of the Common Ilvas anl Exchequer shouli firm a second Court of Wxcherner (hamber, for review of certain cases in
 I Will. IV. c. 70 , the Court of Exelequer Chamber is constituted the conrt of review for all 1 rocectines in Errar ( f . v.) from the courts of comanon law, the juleges of two of the conts always forming the court of appeal for the proccedings of the third. 'The Court of Exchermer Chamher is als., by 1 Will. IV. c. 70 , constitutel the court of review for criminal cases on writ of error from the Quedrs Bench.

In Keotland, Infore the V nion, the Exelhequer was the king's revemue conrt. It consistel of the treasures, the treasurer-d pute, aml as many of the lords of Exchequer as the king was pleased to apmont (Ersk. i. :3, :3). The Scottish Comrt of Exelnequer was contimuel by the loth article of the treaty of I nim, matil in new court shoubl be establishect, which was eflected by 6 Anne. c. 06 . A privative junsdiction was comfarped on the court as to questions reluting to revemucs and customs of excise, auk
as to all honours and estates real and personal, and forfeitures and penalties arising to the erown within Sentlaml. But 'ruestions of tithe to lands, honomrs, \&e, were reservel to the Court of session. The judges of the comit were, the hiche treasurer of Great jiritain, the chief baron, amt four other barons, and Enclish barristers as well as Scotch advoates were allowed to practise in the court. In eases of elifticulty, and where there was at collision of jurisdictions, it was formerly not musual to holl coufer encers with the harons; am the form of desiring the conference was to send the lord adrocate, and, in his absence, the solicitor-meneral, to ruphest a mueting, though it has heen doulsted whether they were lound to earry the messare (shanl's Praction, 27). By 2 Will. IV. c. 54 , it was proviled that suecessurs should not be apliointed to such of the buroms as should retire or die, and that the dutics of the eonart should be discharged hy a judue of the Comort of Session. And now, by $1!9$ and 20 Vict. c. if, the Court of Excheriuer is indishen, and the jurisiliction transferred entirely to the Court of Session.
The Court of Brchequer Chamhor in Ircland was established by 40 (reo. IIT. e. 39. It eonsists of the chief justices, chicf baron, and the rest of the justices and barons, or any nine of them.

EXCHEQUER BILLS, hills issnel at the Exehequer under the anthority of acts of parliament, as security for moncy adranced tor the govermment. They contain an cugagement on the fart of the govermaent for the jayment of the principal sums advaneed with interest. These bills form the chicf part of the unfunded debt uf the country. They were first issued in the reign of William III., in the year logi, and were drawn for various amounts from स'l00 to $£ 5$. At that time they bore interest at the rate of threepence per day on a lundred pounels Macanlay, IIistory of England, iv. 700). The interest was reduced to $9 d$. during the reign of Anne. Huring the war 17931814, the rate of interest was usually $3!d$. At present, it is cenerally from $1!d$ to owt. per . $£ 100$ per diem. Holders of these hills are exempt from all risk, except that arising from the amount of premium or diseount they may have given for them. The bills pass from hand to hand as money, aml are payable at the Treasury at par. They may also le baid to government in discharge for taxes. When it is intended ty hay off outstanding Exchequer lills, pmbic notice is given by alvertisement. The advances of money to the gevermment by the Bank of Logland are made m Exehequer bills. These bills are a convenient means whereby the government ean mect a subden deuand for umnsual expenditure. Thus (as will be scen helow) during the pressure of the Indian mutiny (1856185s), the amount due on Exchecuce liils greatly exceeded that of the years which immediatply pre ceded and followed. Amount of Exchequer bills unprovided for 1555 to $1569: 185.5,17,151,400$;
 £20,911,500; 1559, £ $13.2 .27,400 ; 1560,213,228,300$.
EXCIPIENT (Lat. axcipio, I reecive), an inert or slightly active substance, introduecd into a medical prescription as a vehicle, or medium of administration for the strictly medicinal ingredients. Thus, conserve of red roses, or hread-crumb, is used to make up pills; sulphate of potass, or white sugar, in medicimal powders; water, mucilage, white of egg, and many other substances in thiti mixtures.

ENCI'SE, the name of a tax on commodities, from the Latin eccisus, cut ofl, as beins a portion of the value of the commodity cut off and set apart for the revenue before the commodity is sold. This is not its actual nature, howerer, for the manufac-
turer who looks to a profit on his outliny dous nut give part of the value to the reveare; he merely counts the tax as pant of his expenditure, which he iutends to get loack with a protit, so that it constitutes an andition to the ultimate price which the furehaser or cunsumer has to lay. I tax on commodities sold and bousht is a very obvious one, adopted in almost every country whore taxes have been raised otherwise than on the land or by the head; but it has wemerally appeared in the simple shape of a tull on goods hronght to market, and the emphieated arragements for otlicially watching the process of a mamfacture through ail its stages, for the furpose of secing that wow of the anes of the revonue are craded, is of connaratively modern origin. It had been for some time successfully praetised in Holland, when the Lome l'allament, who were looking about for a frutinl soure of revenue, observing how productive it had been there, estalulished an excise on liquors in Finglam in l643. It was contimen at the liestoration by the same statute which alolished aids, escuages, and the other fendal exactions, along with the Court of Warels established for enforeing them, and the royal frerogatives of purveyance and precmpition. The exeise may thas be consideral the price maid for the abolition of the burdens of the feudal system. Thongh always mpondar, the cxcise in some form or wher has ever since continued to be a material element in the taxation and reveme of Sritain. ln the earlier bart of last century, sir labort Walpole entertamed the motion of enlarying its froductiveness while mitigating its proportinnal pressure, by the lomding system, which suspends the exaction of the duty until the goods are sohl, and thus leaves the mannfacturer all his capital to be devated te production. See Warenuosing Sistem. But the rumone of an enlarrement of the umpupular exeise duty created a general excitment, and the momorable ery of 'Liberty, Property, anel no Excise' compelled Walpole to abmilon his 1 roject.
An excise. when compared with outher taxes, has its good and its hal features: it is a methon of extracting money for mational purposes from pursonal expenditure on luxuries, and is especially servicable when fell from those luxuries the use of which in excess becomes a vice. On the other land, it renders necessary a system of incuisitorial inspection not only very offensive to all free people, but very ourn to alnse and frand; while at the same time excessively ligh duties, and duties on commodities strictly of domestic manufacture, lead to somughing and all its demoralisiny consequenees. The cills of an excise were formerly agerarated by the $1^{\text {nactice }}$ of farming the inties-that is, by lettiner then to the highest bidder, whose interest it becane, like any other contractor, to make the greatest possible protit ly his specniation, and consequently to exact the duties in the most rigorous manmer. In every well-regulated revenue system, it is of conrse only fair to all parties that the duty as the law lays it on should be fully exacted; but in the age of farming, the arrangements were all slovenly, and there was much latitude of power in the hands of the farmers. The farming system became very opressive in France, especially in the qubelle or excise on that necessary of life, salt. It is a emious fact, however, that when the farming of the exeise was alolished in Seotland by the Union, the people grumbled, saying they were easier under the farmers, their own neighbours, who acted on the principle of 'live and let live,' than under the officers sent down from Eugland, who rigidly collected the impost.

An excise works most easily when it is laid on

## ENCITANTS-FKCOMMUNMCATION.

some commolity banished from domestic pronhetion and ereated hy manuacturers on a large some. In a great listillery, the excise oflicer is almust a furtion of the catablislment, whon han eve on ewory stop of the process, with the view of suring that the commodity does not get into the maket withwht government ohtaining its proper slare-smantimes far the grater part-of the market price. The social intlunce of such an arrangmont is bery Rifferent from that of the old cande and salt duties, which made it the frmetion of the exciseman to pounce on a farmer's family melting the smphus tallow of the last killol sheep, or of a fishoman boiling sea-water to procure salt for his putatues. 'l'he manfacturer. however, thomh he has the benefit of the bonding sestem, feds the exeise regulations to be a perretual drag and himderance in his "perations, since there are multitudes of minnte operations which he camot perform without sending special notice to the excise department, or having an officer actually 1 wesent. This remiers it neces. sary, too, that all the steps of the gucess should not mercly be delined as between the manufacturer and the oflicer, but should be set furth in an act of parliament; and hence deviations for the purpose of eeonomy, nr ly way of experiment, become difficult. and sometimes impracticable. As aifficulties with which the prolucer has to contend, these things require him to lay on the selling price of the commodity a larger adition, liy reason of the exeise, than the actual anoment of the inty.

No method of taxation requires a nicer adjustment to the social condition of a country than an excise. Thus, in Enylaml, in the year 1746, a daty of 208 a gallun was latel on spirits, with the view of suppressing the vice of drunkenness, which, on the ether hand, it greatly increased, for the law became a lead letter, and the smuggler filly sumpled the market, althongh within the two years in which the law was in force, no fewer than 1 , 0 , 0 persmas were, accordiug to Tinlal's listory, convicted of ulences against the act. In Scotlani, the duty. wheh was 5s. $6 d$ a a gallon, houl to be reduced in 1523 to 2 .s., in account of the prevalence of smuggling-half the consumption of the country, in fact, paying no iuty. The duty has since then been gradually raised, until it now imounts to $10:$ a gallon, forming a vast sumpe of revenue. The whole excise revenue of the Unitel Kingdom for 1560 amounted to $\mathbb{E n}^{2} 0,361,0100$, of which nearly four-fifths were supplied from the cunsumption of liqnor-viz, $£ 10,900,191$ from spirits. and $t 6,55^{\circ}, 458$ from malt ; and there were besides the hop-duty, producing $\& 46,281$, and the licenceduties for selling liquirs. The proluctiveness of this great source of revenue, and the expense and annoyance comnected with the levyiner of a duty on other miscellaneous commodities, has led to the gralual removal of many excise duties, as, for instance, on salt, canilles, leather, class, soy, and lavtly, on praer, which was relievel on the list of Octuper sisi.
There was formerly a separate department with a Wry complex machinery for the administration of the: crise. It is now superintended ly the commissioners of inland ruvaue; and for the purposes of lucal collection and inspection, the conntry is divideal into districts, in each of which there is fenprally a collector and a certain number of sujurvisurs.
Certain taxes which are not properly of the mature of excise, hat rathor of bicence duties for follewing particular $j^{\text {ursuits }}$, are enllected in the excise ilpartm-rnt, as, for instance, the dinties bryahn ly auctineres, ly letters of horses and carriage tobarco-rleal res, and sonp-makirs. 'The only artiele properly excisable besides liduors is
chicory, which was excised for the purpose of mbiating the adulteration of coffee.

EXCITANTS or STIMULANTS, are those $p^{\text {ha }}$ maceutical preparations which, acting through the urrous system, tend to increase the action of the heart am wher organs. They all possess more or less uf a pumgent and acrid taste, and give rise to a sensation of warmtlu when placed on a tender part of the skin. The class is a very numerons ine, and the application of excitants or stimulants to the human suloject should always be under tho supervision of a pualified medieal practitioner.

EXCLU'SION HILL, a proposed measure for excluding the Duke of Cork, afterwards James II., from the succession to the throne, on account of his avowed Catholicism. A linl to this effect passed the Commons in 1679, but was thrown out by the ${ }^{\text {Upper House. As the new parliament summoned }}$ in 1681 seemel letermined to revert to this measure, it was dissolved, amd Charles ruled henceforth withont control. See Chinles IL., James II.

EXCOMMUNICATION is exclusion from the frllowship of the Christian Church. The ancient liomans lat something analogrous in the exclusion of persons from the temples and from participation of the sacritices, which persons were also given over with awful cermonies to the Furies. The Mosaic Law decreed excommonication in case of certain offences; and the intimate connection of things eivil and ecclesiastical under the Jewish poity, rendered it terrible even as a temporal pmishment. The Tews, in practice, had three degrees of exeommunication. The tirst, Niddui, was an cxclusion from the synagnae fur thinty clays, that the offender might be ashamed. The second, Cherem, was also for thirty days, lut heside exclusion from tho synagogue, carried with it a prohibition to all other Jews of any intercourse with the individual, and was often proclaimel with sound of trumpert. The third, Shemmatha or Inatheme Maranathe (see 1 (or. xvi. -2), was exclusion from the synagocne ant privileges of the Jewish Chureh for life, mith loss of eivil rights, anl was acemmanied with terrible curses, in which the oflender was given over to the judgment of Gol. In the Christian Church, exeommunication has in all ages been practised, as indeed every society must necessarily have the power of excluding unworthy members and those who refuse to comply with its rules, and the New Testament phainly recognises and establishes this right in the charch. Sut two different degrecs of excommunication were soon clistinguished-the first or lasser, a mere exclusion from the Lorl's Tiahle and from other privileg es of members of the ehurch; the seconi or greater, jronnmed upon obstinate oflemers and persons who departeri from ortholox doctrine, more solemn and awful, and not so easily capathe of heing revoket. Penances and public Irofessions of repentance were reguired; and in Afriea and $S_{p a i n}$, the absolution of lapsed persons (i. e.. those who in time of persecntion had yielded to the force of temptation, and fallen away from their Christian profession by the crime of actual sarrifice to idmels) was forbiden, except at the hour of death, or in cases where martyrs interceded for them. liut for a long time, no civil consequences wro connecteal with cxcommonication. Afterwards, the greater excommunication was accompanied with loss of 1 whitical rights, and exclusion from publie atheces. The power of excmmmaication also, which land been at first in the cluurch as a body, gradually passed into the hamels of the lishops, and more "Sucially of the poles, who did not scruple to rxercise it against intire communities at once. The copitularies of I'epin the Less, in the Sth c.,

## EXCRETION-EXE.

ordained that the greater exeommunieation should be followed by hanishment from the country. The Roman Catholie Chureh pronounces the sentence of excommunication with many cireumstanees of terrible solemnity, and it contains a prohihition to all Christian persons of all intereourse with the person exeommmicated, and of extending to him even the most urdinary social offices. The latest 'examples' made by the pope were Napoleon 1. in 1809, and Victor Emmanuel, king of Italy, in 1860 ; neither of whom, however, was excommunicated by name, the pope having emminet limself to a solemn and reiterated publication of the penalties decred by his predecessors against those who unjustly invaded the territories of the Holy Sec, asmped or vidated its rights, or violently impeded their free exercise. l'ope Innoeent III, in the Lateran Conncil ( 1215 ), declared that excommmication put an end to all civil rights and dignities, and to the possession of any property. The excommunieation of a sovereisn was regarded as freeing subjects from their allegianee, and in the year 1102 , this sentence was pronounced against the Emperor Henry IV., an example which subsequent pones likewise ventured to follow. But the fearfal weapons with which the popes armed themselves in this power of excommmination, were rendered much less effective through their ineautious employment, the evident worldly motives by which it was sumetimes governed, and the excommunications which rival popes hurled against each other during the time of the great papal schism. The Greck Church also makes use of excommunication, and every year at Constantinople, on a certain Sunday, the greater ban is prononneed against the Ioman Catholie Church.-The Reformers retained only that power of excommunieation whieh appeared to them to le inherent in the constitution of the Christian society, and to be sanetioned by the $W$ ord of God; nor have any eivil consequences been generally conneeted with it in Protestant countries. To connect such consequences with excommunieation in any measnre whatever, is certainly inconsistent with the principles of the Reformation. Nevertheless, in England, until the 531 of Geo. 11I. c. $12 \%$, and in Treland, until the 5tth, e. 6S, persons excommumicated were debarred from loringing or maintaining actions, from serving as jurymen, from appearing is witnesses in any canse, and from practising as attorncys in any of the courts of the reahn. All thase disabilities were removed ly the statutes above named; and the excommunieated were deelared no longer liable to any penalty, except 'such imprisonment, not execeliur six months, as the court pronouncing in declaring such berson excommunicate shall direct.'

In the Roman Catholie Chureh, the power of excommunicating is held to reside, not in the congregation, but in the bishop; and this is believer to be in exact accordance with the remarkable proceeding commemorated in the First Epistle of St Paul to the Corinthians ( 1 Cor. v. :3), and with all the earliest recorded examples of its exercise. Like all the other powers of the episcopate, it is held to belong, in an especial antl eminent degree, to the Roman bishop, as primate of the chureh; lut it is by no means believed to belong to him exelusively, nor has such exclusive right ever been elaimed by the bishons of Rome. On the contrary, bishops within their sees, archbishol's while exercising visitatorial jurisdietion, heads of religions orders within their own communities, all possess the jower to issne excommunication, not only by the ancient law of the chureh, but also by the most modern discipline. As to the prohibition of intercourse with the excom-
mmicater, a wide distinction is made between those who are eallod 'tolerated' and those who are 'not tolerated.' Only in the case of the latter (a case extremely rare, and confined to heresiarehs, and other signal offenters against the faith or publie order of the chureh) is the ancient and seriptural probibition of intereourse enforecd. With the 'tolerated,' since the celebrated deeree of Pope Martin V. in the Council of Constance, the faithful are permitted to maintain the ordinary interconrse. It is a mistake, likewise, to ascribe to Catholics the doctrine, "that excommmication may be pronounced against the dead.' The contrary is expressly laid down by all eanonists (Liguori, Theoloyia Moralis, lih, vii. n. 13, 1). In the eases in whieh this is said to have heen tone, the supposed 'excommunication of the dead' was merely a deelaration that the deceased individual had, while lizing, heen guilty of some crime to which arcommunication is attached by the church luxs. Catholie writers, moreover, explain that the civil effects of exeommunication in the medieval privd-such as incapacity to exercise political rights, and even forfeiture of the allegiance of subjects-were amexed theremito ly the civil law itself, or at least hy a eommon international undrrstandine in that ase. Examples are alleged in the law of spain, as laid down in the Sixth Comeil of Toledo-a mixed civil and ecelesiastical congress- $(608)$; in the law of France, as admitted ly Charles le chave ( 559 ) ; in the Saxon and in the Swabian conles; and esen in the English laws of Elward the Confessor: all which, and many similar laws, proced on the great general principle of these medieval monarelies, viz., that orthondoxy and communion with the floly sce were a necessary condition of the tenure of supreme civil power; just as by the I Will. and Mary, s. 2, c. 2 , profession of Protestantism is made the condition of succession to the throne of England. Hence, it is arguel, the medieval jopes, in exconmunicating sovercigns, and deelaring their subjects released from allegiance, dial but declare what was, by the pullic law of the period, the civil effect of the exercise of what in them was a spiritual authority.

By the discipline of the Ierman Catholic Clureb, kings or queens, and their children, are not incluted in any general sentence of excummunication, unless they be specially named.

## EXCRETION. Se Secretios.

FXCULPATION, Letrefs of, in the law of Scotlaml, are the warrants granted to the aceused party, or panel as he is called, in a eriminal prose. cution, to caalle him to cite and compel the attentance of such witnesses as he may julge neeessary for his defence. These letters are issued as a matter of conrse, on applieation at the Justiciary Oflice, if the prosecution le in the High Court, or to the sheriff clerk in cases of Shoriff Court libels. If there be any special defence, such as alobi, a written statement of its nature along with the articles to be founded on, and a list of the witnesses to he called, must he lotged with the clerk of court the day before the trial.

EXE, a river of the south-west of England, rises in Exmoor, in the west of Somersetshire, and flows 19 miles south-east to the borders of Deronshire. and then $3 \overline{5}$ miles sonth through the east part of that county into the English Channel at Exmouth. The lower tive miles form a tileway a mile broad at high water, with wooled and pieturesque shores, and navigathe for large vessels. The chief tributaries are the Tarle, 24 miles lons, Batham, Loman, Culn, Dart, Creedy, and Clist. The E. passes Dulverton, Brompton, Exeter, and Topsham. It has a clear and merry current through wooded and romantic vales.

## ENECUTION-FXECUTION OF CRIMHN゙ALS.

ENECT THON. in the law oi scothat, signtions the attestation hea Messmerr-at-ams(for ) , or ather athere of the hiw, that he has given a citation, or earried thmugh a luligence ( 1, v.), in terms of the warment of the jutge. It correspmuls than andilawit of arpere of writ or summons in the commmen law conats, amd of a hill or clam in Chamery. Exect that mast be subscribed by the messume on other excentor, and ly one or two withessis: and where the execution comsists of noure phene than one cerch pase, or at least eath leati, must he an attested. The whensses are witnesses to the fact of service, not mercly to the sulbstiptim of the messenger: and the exention chaght sirictiy to bar that they are watnesses to the premisce. 'Tlll the passing of recent
 witnesses were neerssary to all exemations, but one is mew sufficient. exerpt in ases of $]$ mimling, where two are stall repuirel. (Bell's Lete' Didionery, and authorities cited.)
 mexr.

EXECLTION, Mhithiv aND NAvil, umally takes phace loy langing in shoothe, arcordine to the rank of the offember and the nature of the offence. In stme rare instances. blowing from the mouth of a gun has leen resorted to. For particulars of the acts for which death is awarded, see 1rensunevis, Mheithiy and Nifal, and Murivy Аст.

## EXECLTION OF CRIMINALS. Kec Capital

 pasnmpar. Executions take pace pablicly in the Conited Kinciom, and, as far as known, all other countries, with the exception of the Unitel States, Bavaria, anl the colny of Vietoria, where they taki pace within the precincts of the 1 risun, in the sight of certain officials aml others who are invitel to be present. As one of the main oljects of capital punishments is to strike terror ly example, this methen of private exentims, as it way be called, nevessarily fails in an essential feature; lout this defect is held to be more than compensatel liy the fresention of what is in reality a hratalising pubhe spectacle. In Lombun, executions took place for the most lart at Tylnuru until 17 s 3 , when a seaffoh erected in frent of Nuwgite prison berame the common place of exceution. - The gallows was built with three cross-heams for as many rows of snfferers; aml letwew February and lecmber 1-5i, ninety six persons sule for the cart. Abmat i-sti, here was the last execution followed ly buraing the buly: when a woman Wats hang on a low giblent, and bife bemg extinct, fasents were piled arnund her and over her heal, fire was set to the pile, and the corpse humed to ashes. On one ocasion the ohl monle of exention was renewed: a trimendar gallows was set up in the roul npposite (ireen-Arbour C'ourt, anl the eart was Ifrawn from muler the "riminat's fect.' Timbers C'urineitios af Lombun. 'Torember executions more inpressive, they wore in some cases ordered to take flaee near the seme of guilt; hut this is now sehlom praetisel. As in Limbon, the orlinary place of execution in must towns in (freat Britain ann) Irmind is ontsile the prison. At Eilinburgh, cxemtions tonk plate chiclly in the Grassmarket, until Jobt, whan they were transferreal to a phatform at the west $\cdot \mathrm{mi}$ ' of the 'Tollow,th or ancient prisun, a buibline removel in $1 \mathrm{~S} 1 \overline{\mathrm{~T}}$. Executions now take phace on at seathan wrected in the open strect, near the site of the old prison. The interval between sonteme and "vention is now in most paces about three werks, the mature of the erime nut making any difference in this respect. In all parts of the lentisld Eansire, the convict ander sentenee of deathis alluwed to make chaice of the spiritual alviser who shall attemb on him: and geverally, everything that humanity ean suggest is done to assume the haterness of his fate. It whe time, the boifies of mamerers after exechtion wre, in terms of their whtence delivered tu professors of anatomy for dissection; ane! it wonlu apear that in some instanees the mangled corpse was made a kiad of publice show. Such terd phace on the execution of barl Fervers, forio. 'Ihe lndy liaving been conveyed from Tyman in his lordships landan-and-six to surgeon's 1 Ianl, was, after leing disemboweded and laid ofen in the neck and breast, exposed to puthe view in a tirst-flom rum. A print of the time depricts this ondions exlibition. The ordering of the bolies to lue dissertol, having led to great abuse, was abolinhed in 1 site ; since this periof, the londies of exeented murdmers are horied within the preeincts of the prison, and the bodies of other malefactors are given to their frimads. Fice Avatomy (in Law). It was also at me time customary to hang the landies of certan malefactors in chams after exech-tim-as, for example, the lomlies of pirates were so hung on the banks of the Thanes-hat this usage, revolting to puthic feelines is likewise abandoned. From the improved state of the criminal law, deathsuntences are now of comparatively rare ocenrence, and still more rarely are such sentences executed, for, except in cases of deliberate ame aggravated morder, the extrome scatence of the law is now anally commuten ly the crown into penal servitude for life. The sicretary of state, however, to whon mactieally belons the attribute of mercy, exercises his pwor in this respect with obvionsly much care and diseretion. (liy an act passed in 1S6s, all execntions now talie place within the misen precincts.)
In the prowess of manners, a deat change has taken place in the public attenlance at executions. Formerly, persoms beluging to the higher and midhe ranles were habitually pesent at these dismal exhibitous: many hiring winduws at a emasileralde sum fur the weasion. Litcrature furnishes us with varions instances of persons of cultivated mimi attembing regulanly from a morbid love of the spectacle. Ceorge Shwn was fond of seeing exceutions. His friend Gilly Willians, writing to him of the conimmation of Joha Wesket (Jawnary ! 1 170.5) fur robhing the house of his master, the Larl of llarrington. says: "Harrington's porter was condemed yosterlay. "adogin and I have alrealy hespace phaces at the Brazier's. I presume we shall have your homor's compay, if your stomach is not too squeamish for a single swim.' - Lelwyn's rorrespondence, vol. i. p. 3:3. The Larl of C'arlisle, writios to selwon, speaks of having attenled the exechtion of Hackman, a murderet, April 19, 1:7a.-Ibir. yol. iv. B. 35. Jumes boswell, the hiographer of Jolmson, had a passion for seeing exccutions, and even for acempanying criminals to the Lallows. 110 was imbluged with a seat in the mumming conch to TYlum, along with the above. named Jackman, the ordinary of Sewgate, and sheriff's oflicer. Visiting Johnson on the wid of June 1784, he mentions that he has just eome from the shocking sight of fifteen men hangel at Newgate. Buswell's Johnsm, vol. viii. 1.: : 13 , (roker's edition, It executions, there are still considerable crowds, hat they consist chicfly of the lowest and most dopraved of the population. During the excesses of the Fremel lievolution, the executions in l'aris were enjoyed as a spectacte by cruwds of female Jacobins. From the rincumst mee of these furies employing themselves with knitting neoltes while attending daily at the seallind, they become familiarly known as the Cricoteleses (knitters). Sume further information

## EXECUTION OF LEED-ENECUTIONER.

concerning executions will be foum in the articles Drownimi, (iblows, Gullotine, Hasemg is Phins, Mahen, Newqite, Phifiche, Phate, Pressivis to Deitil, and Trbebiv.
EXECUTION OF DEED, the perfommance of the ceremonies reguired hy law in ordor to make a deed hinding and dfectual. These cermonies in England cunsist in siming, sealine and delivering. According to the ameient common law of England, simature was not necessary to a dec.l. Iy 29 Car. IL. c. :3 (statute of Frands), signing was remineel for almost all deeds. Int it is still a o question which has not been positively deciled whether, when a seal is usel, it is necessary that the parties should sign. When a party, from any cause, is mathe to write, it is usual for him to place his mark in the place of siguature. But a mark is unnecessary, amd sigmature hy another, at request of the party, is enough. Seating is the most ancient furn of anthentication of deeds. In England, deds are technically known as deeds nuder seal. A seal is absulutely essential to the ralidity of an English deed, but my species of seal is sufficient, ami in practice a commom wafer is usually apended. Welivery is the thirel requisite to authenticate a deel. Delivery may lee made either to the grantec or to another ierson for him. In the former case, the deed heeomes absolute; in the latter, it is called an Ewerom, and dues not acquire its full effect till the combitions are fulfilled. Witnesses are not ahsolutely required to a deed in Euglaml, lut in lraetice it is usual that oue or more witnesses shond sign. As a rule, a deed must be real, if required, lyy a marty to it : and if not read, it is woid as to the party requesting. Where a person is ordered in Chancery to execute a ded or nther instrmment, and is in prison for failure to comply with the order, the comit may make an order that the instrument le executen by the officer of the court; and the execution having becn sn made, the instrument is erpally valid as if signed by the party: The execution of wills in England is resulated by 7 Will. 1 V . and I Viet. c. 26 . By this statute it is recpuired that every will shall be signcl at the font or end hy the testator in presence of two witnesses. See Will.
In Seotland, sealincs was formerly an essential requisite for cxecntion; but that practice was by lost c. 4 dispensed with in resard to registered ileerls, and has long fallen into dimse. The solemuitios uf execution are now regulated by the okd acts 1.040 c. $11 \%$, and 16 s. c. By the former of these acts, the signature of the maker of the deed is required, and ly the latter, the jresence of two witnesses is male essential. In ordir to a valid exceution of a deed or will in Sertlaml, it is necessary that the maker sheuli sign in the presence of two witnesses, or should in their presence acknowledge his signature, and that the witnesses should then sign their wwn names, writing after them the wroll 'witness.' In ease the maker of the deed canmut write, the reed is signed in his presence hy two notaries, in presence of four wituesses. lout in case of a will, one notary and two witnesses are sufficient. A deet thus witnessed is receivel as conclusive proof of the facts which it sets forth. Subscription by initials has been permitted in Scotlant. Fut this mode of execution is irregular, aud where it has been adonited, proof has lucen reguired that de fucto the simnature was so made. There is one execption to the rule that witnesses must attest the signature-viz., that of a deed or other instrament the whole or the essential parts of which are holocraph of the tes. tator. This instrument is valid without witnesses. Bills and promissory-notes, receipts and mercantile accounts, do not require to be bolograph or attested.

EXECUTION ON ('IVIL PROCTES is the method wherelay a conurt of justice enforces its julgment on the ferson or estate of those against whom judgment has beengiven. The common law of Encgland allows four ditferent writs to issue against refractory lebtors - vizo, a hieri fitcius (called
 su.), levari facias, and elegit. These writs issue from the court where the record is on whirh the proceedings are grounded, and are ablressed to the sheriff of the connty. By a fi. fir. the grods and chattels of a debtor may le attached. This writ lies against mivileged persons, beers, \&c. A writ of ca. so. is directed against the person of a delitro. It does not lie against privileged ${ }^{\text {nersms. }}$ Inder this writ, the shuriff may imprison a delitor, and detain him natil the deht has been satisfied. if writ so stringent in its eflect is regarded by the law as the last remedy; hence, when a ca. sa, has heen issuer, no other writ ean proced against the delotor. But if a fi. fru. has leen first issued for a part of the delit. a cor sfo will still lie for the remainder: By 7 and 8 Vict. e. 96 , s. is, a ras. sa. camot be issucd fur a deht under exe moness it appear that the debt has heen frandulently inemrech. I loreri facias is now seldom used. It is directed acainst a man's goods and the grofits of his lands. The writ of elenit is of very ancient date. It is directel against the lands themsclves. See Elegit.

In Chancery, rocution aqainst the estate is effected ly writ oi fieri ficions, ur writ of demit. Execution ayainst the persin is ly whit of attachment. Sbould this latter writ le returned non est inventus, the party prosecuting has it in his option to take out a writ of sefuestration, which issues of course, or to coltain an order for the serjeant-at-arms. An attach. ment does not lie against a peer or other privileged person, but an order calleal a sequestration nisi is issuch. In cases of contempt, the Court of Chancery has also power to ordor personal commitment. Previons to 1 and 2 Vict. c. 110, and the orders of court consequent therem, the performance of a decree in chancery could only be euforced hy process against the person.

Estcution for leht in sirotlant, or, as it is teeh. nically expressed, diligence in execution, is either real or personal: by the furmer, the delotor's lamels may Je attached; ly the latter, his person and his movalles. In order to entitle a creditor to use dilignee against the persm or estate of lis dubtor, the debt on which the diligence proceeds must be duly constituted by a liciud document, or by a decre, or lyy an action in which deeree is sought. In this latter case, the law in peculiar circumstances allows diligence on the dependance, in order that a barty may not he deprived of his remedy during the curreney of the action, but such diligence depends for its effect upon the julgment in the cause. In the case of bonds and othor instruments registered for excention (see Registiatios), the law allows summary diligence to proced : that is to say. exceution may proeed without the need of further appli. eation to the court. Dilizence against heritage inchutes liminition, Abjedication, Ranking ANy Ahle, Hhils aso beties, Poindivg of the Grown. Personal dilisence is by Honving And Caption, Arrestmest, Forthcoming. and Persmall Ponving. See these several heads.

EXECU'TIONER, the efficial who inflicts capital punishment. In England, it is the proxince of the sheriff to perform this as well as every other minis. terial duty enjoined by the criminal courts, but praetically he aets by his servants or officers, and he only attents to see the law properly carricd out. In royal burghs in Sicotland, this duty is impesed on the civic magistracy, one of whom attends for the purpose. In

## RNETGTIONEL.

times hapuly lyygone, so numerous were the Inthic "xecutmus, that almust every county and tuwn had its executioner, as an acknowledred ofther of justict. with a salary for his sulsistence. Det, we learn that on certain occasions, so odions and son merous was the duty to he performed, that a special cercutioner was emuloyel. such was the case at the wevention in' Clarles l. The task of putting this uniontunate monareh to death is well known to hatwo luen jurformeal by two men, who, from a ilrewl prumbly of the venseance of the lioyalists, hand conderaled the ir faces under visors. In consemperne of the mystery thus assumed, puhlic curiosity was mum exeitet, and suveral persons foll moder the suspicion of hawing been coneerned in the hoody decel; rumbur even went so far as to decile who was the wielder of the axe, and who hed ap the lueal. It cannot he suid, bowever, that any cortanty was "ver arrived at on the sulject. See 'haintres's E'linburyht Jomernal, first series, rol. iv. I. 317.
Like many other uffices, that of executioner scems to have been at one time hereditary in England. Shaksprare, in C'uriulums (act ii. secue 1), makes Menenins. Dhe of the characters in the play, speak of "hereditary Thnumen.' In several fermin states, the office if lleadsman (q. r.) is said to have been also hereditary; certann families leing thus, as it were, condemned to perpetual infamy. The last headsman of the rower of London died' in 1561. The oftice was latterly a mere sinecure, and has not been tilled unp. In some fiarts of England, the office was amexed to other $1^{\text {nusts }}$; for instance, the porter of the city of C'anterbury was cxecutioner for the county of F゙ent in the time of LIenry 1I. and Henry 1II., for which he had an allowance of ous. per annum from the sheriff, who was reimbursed by the Exchoquer. 'The sum of thirteenpence-halfumuy was loner popmarly spoken of as 'hangman's wages;' such sum, equal to a merk Seots, being the fee at one time ${ }^{\text {aid }}$ to the execntioner when Ire officiated. In the 17th c., this sum, small as it now aplears, was consid rably abore the wages of a skilled mechanic.

From Gregory lirandum, the london execntioner in the reign of James ]., the mame (iregory was chaployed as a faniliar designation for exemtioners for a considerable promb. Hemen lam the address to provure a cont-armorial from the Cullege of Heralds, and hecane an esquire by virtue of his whice. One of his successers was maned Thun, or 'Synire Dun,' as he was ealled. Dun is referred to in Linther's Ghost, published in 1652:

## J'or you yourself to act 'Squire Dun,' Such ignominy neer saw the sum.

Te was succeerleal about the above year by . Toln of Wack ketch, commemmated ly lryden (Epilome to the Duke of (ruise), and his name has since bern symomons with hangman.-C'unuingham's Jundbuok of London, article Tylurn.

Executioners lave, in some instances, come to trouble. John Irice, the London exeentioner, was execnted 3lst May 1718 for morler. In the account of him, it is stated that one day, on returnins from Tyburu, he was arrested for a debt, which he distharged by a small sum in his pocket, along with the proceds of the clothes of threc folons he hand just executed.-OHL Bailey Chronicle, i. 1. 147. If this work can be credited, the executioner was abont the sanue time arrestent while accompanyine Wha Meff, a criminal, to Tyburn. This arrest, whieh is amsingly depictel in an engraving, stayed the execution of Meff; being contucted back to Newgate, his scntence was conmuted to transportation for seven gears, lat having returned to Englami hefore the periml expirel, ho was taken and executenl. On the 24th May 1736, the executioner, on
retuming from Tyburn, after exeenting five felons, picked the pucket of a woman of 3 c . 6 . (Hone's Livom-Jay book. ii. ]. 695), lut what was his pmishmont is not related. $1_{n} 1682$, Alexander Gwekhurn, hangman of Edinhurgh, was executed for the murder of a lietesman, or privileged mendicint. larly in the listh e., the executioner of Elinburgh was John Dalgliesh, who acted at the axeention of Wilson the smuwerer in 1736, and is alluded to in the Meart of Midelothian. It was he who also officiated at the execution of the eclehrated Maogie Dickson, a woman condemned in 173S for infanticite, but who came to life again after mhluring the sentence of the law, and lived momotested for vears afterwards, as a hawker of salt in the strects if Edinhurgh. It is said of Dalyliesb, that, in whiping a criminal, he mado a point of laving on the lash according to his eonscience,' which shewel him to have been a most considerate exceutioncr. John High, or Heich, accepted the oftice of Etinlurch exechationer in 1781, in order to escape punishment for stealing poultry be died in 1817. See Traditions of Fodinhurgh, by I: Chambers. The emoluments of the Edinhurgh execntioner at one time compreheded a recompense in kind in the markets of the city-viz, a lock or handful, and a goupen or double handfud, of meal fronz each sack: hence he receipal the desis. nation of Lorkman. These emoluments were latterly commuted into a regular salary of l2s. per weck, besiles a free house, and a sjecial fee of $£ 1,11 s$. Gd . at exch execution; from the Excheqner the executioner also receivel a small annual allowance as bemoster (q.v.). The last of the Elinburgh execntioners was John Scott, whom it was customary to confine in jail for eight tays previous to an execution, in oriler to insure his atteadance; the expenses incurred by him during one of these periods of seelusion being, as we tind, £1, 2.s. $6 d$, which sum was discharged by the city. Scott was killed by a malicions assantt in 1847 . Sinee this period, Elinturgh has had no regular hagman, hut, like all other places in Great lritain, depends on the services of the London execntioner, who is hired for the occasion. This personage is the well-known William Caleraft. For an exeeution at Elinhurgh in 1854, Caleraft's fee and expenses amounted to $\pm 33.14 s$; his assistant received ${ }^{5} 5,5 \mathrm{~s}$ : and for taking charge of loth, the city criminal officers were pail $\mathfrak{t i}$, ls: total expenses for the execution, £40, iadependently of the cost of erecting the seaffold. In 1815, the maristrates of Glasgow entered into an arragenent ly stamped indenture with Thmas loung, who engaged to act as executioner at a recompense of $£ 1$ per week, a free house, with coal and candles, a pair of shoes and stockings once a year, and a fee of a gninea at each execution. At loung's death in 1837, his successor, John Murdoch, was recompensed diflerently. Ile was pail $£ 1$ per month, by way of retainer, and the sum of $£ 10$ for an execution. Sunce his death, Caleraft las officiated. Fiesides the usual emoluments or fees derived by exceutioners, they have from early times claimed the clothes of those who suller at their hands as a perquisite of oftice. Sce l'erquiste.

The most noted executioner of P'aris was the late M. Smson, who officiated at the mournful drath-scene of Louis XV', and is said to have possessed acquirements and feelings not to le expected from one of his degrading profession. He was latterly assisted hy his son, M. Menri Sanson. The larisith executioner is familiarly styled " Monsieur de l'aris.'

No professional executioner is employed at capital miniments in the Cniterl States, There the sentence is executed by the sheriff, with the assistance

## EXECUTIVE-EXEGESIS.

of an under-jailer; this last official performing the fatal toilet of the criminal, while the sherill, by a movement affecting the drop, phts him to death in virtue of the sentence and the law of the state. This seems an alvance on the practice in England, where, however, it could not be introduced, for the simple reason, that no one tit for the ramk of sherifi or magistrate would accept of ollice with an ohligation to perfom the dity of exentioner in persun. The military executioner attached to an anny is styled I'rovost-marshal (q. v.).

## ExECUTIVE. Sce Goverymext.

EXECUTOR, is Engllid, the person to whom the execution of a last will and testament of personal estate is by testamentary appointment confided (Williams on Exccutors, 19-). The mere nomination of an execntor, without giving any lesacy or appointing anything to be done by him, is suthicient to make a will. The appointment of an exceutor ean ouly be by a will, the person who takes charge of the estate of an intestate being called an Ammistrator (4. v.). The appointment may le either express or constrnetive, i. e., gathered from the general terms of the will. The first duty of an excentor is to take Probate ( $\mathrm{q} . \mathrm{v}$ ) ) of the will. He derives his title solely from the will: the estate vests in him from the death of the testator, at which time his responsibility begins, and from which time he may enter upon all the duties of managing the estate. But lus position will not be reengised as stritor in any court until he bas taken probate. The whole personal estate vests in the executor: and if the testator has made no disposition of the residne. it devolves, by common law and equity, upon the executor. But equity will endeavour so far to carry out the intentions of the testator as not to give the beneticial interest to the exccutor, where there appears from the will a necessary implication that he shoull not receive it. Ey 21 Henry VIII. c. 5 , an exeentor is bound to prepare an inventory of the personal estate. In practice, this is not usually done unless requirel; but if requiret, it must be produced. An execntor may raise actions in respect to the estate in his charce; and gencrally it may be said that his powers, duties, and liabilities are commensurate with those of the deceased. He may enter the house of the heir in order to remove the personal property. The first claims to be discharged are those of the funeral and the expenses of probate. He must then jray the delts; and he is responsible for baying them in tue order, so that those having a legal preference shall first be discharged. An executor is not hound to accept the otlice; but if he administer, he cannot then renounce the executorship without cause. On the death of au executor the office dues not pass to his executur.
An excentor to a will in scotlaul is called a testamentary executor, to distinguish him from the next of kin, who are styled exeentors. The torm executor is given to all who manage the estate of a deceased, whether appointed by will or hy authority of the court. The former are called executors nominare; the latter, executors dative. All executors must, before entering upon their duties, oltain Confirmation (q. v.) from the Commissary Court. This is equivalent to probate in England. Lut in Scotland, no right vests in the excentor until after confirmation, excent a title to sue, being exactly the reverse of the English rule. An executor acting without confimation is called a l'itious Intromitter (q. v.). Executors must, on entering upon their ofince, exhibit a full inventory of the whole movable estate of the deceased. An executor is only liable to the extent of the inventory. He is not bound to pay miterest on the funds in his hands unless they
bore interest lefore confirmation, or umless he is guilty of undue delay in administering the estate. He is not bound to gray the delts fur six months after. the death of the deceased. Eut, as in England, the expenses of the funeral and contirmation are entitled to immediate payment. Servants' wages and a year's honse-rent have also a preferable claim. An executor is entitled to elaim one-third of the Dead's Part (q. v.), after delucting delts. Dat should he receive a legacy, he is louni to impute that towards payment of his claim.

ENE'CUTORS, in Scotland, the heirs in mobilitus of a person deceascd. They are the whole next of kin in the nearest degree in bloor ; but where the heir to the heritage is one of the nearest of kin (e. $g$, the ollest son), he is not entitied to share in the movables without collation (q. r.). The order of succession among executors is first descendants: then collaterals, or brothers and sisters, and their children; and lastly, ascendants, $i$. e., the father and those claiming through him. But the mother and her family, till recently. were not allowed to succeed to her own child ab intestato. This harsh rule was so strietly carried out, that where there were no relations by the father, the erown succeeded as ultimus heres, to the exclusion of the mother.

By 18 Vict. c. 23, the law of succession to movables has been in some degree altered. On the death of an intestate leaving no issuc, his father, if he survive. is entitled to take one-half of the movalle estate, in proference to brothers and sisters. If the father le dead, the mother takes a third. No further provision, however, is made for the mother in case she is the only surviving relative. It is to be presumed, therefore, that the other two thirds would still go to the erown. See Succession, Movable.

ENE'CUTORY DEJISE, in English Law, is such a limitation of a future estate or interest in lands or chattels (though, in the case of chattels, it is more properly a bequest) as the law ahmits in the case of a will, though contrary to the rules of limitation in conveyances at common law (Llackstone, Comm. ii. 334). Dy eommon law, a frechold cannot be limited on a freehold, as an cetate to A and his heirs ; lut if he lie before he attain the age of 2$]$, then to 15 and his heirs. Nor can an estate he given to cummence at a time uncertain, as to A when he returns from Rome. But thongh these limitations would he wod in a deed, common law will sustain them as executory devises. This form of limitation is restrained by the law against Perpetuities (q.v.), which requires that the estate must take effect withim a life or lives in being and twenty-one years after. The law will not interpret a limitation as an executory devise, if it ean he otherwise sustained. Whenever, therefore, ia futare interest in land is so devised as to fall within the rules laid down for the limitation of contingent remainders, such devise will be construed as a contingent remainder. and not as an executory derise (Crnise, Digest, ri. 369). An excentory devise, unlike a remainder, cannut be defeated by any aet of the tirst taker or devisee; when, therefore, an ahsolute pawer of disposition is in the first taker, the limitation over is not an excentory devise. Within the period allowal for these estates, an exccutory derise constitutes a species of estate tail; and for this purpose, it is frequently used in Americi.

EXEGE'SIS (from Gr. elss, ont of, and égeamai, 1 lead) properly signifies the exposition or interpretation of any writing, but is almost exclusively emplopel in connection with the interpretation of Sacred Scripture, to which, therefore, the subjoined
remarks sucially aphs: The expmeter or interpreter is called an ecoge To interper a wrotime. mons to aseortam thomghly and fumbandataly what are the comegtimen and thonghte whe the

## EXERCISE-EXHIBITION.

Grand Chancellor of the Legion of Monour, and on March 11, 1851. raised him to the dignity of Mrerchal de france. On the olst July 1502, E. hat a hand fall from his horse, from the effects of which he expired on the following night.
E'NERCISE, a very important clement of medical regimen, both in the jreservation of health and in the cure of disease. 'To preserve all the functions of the body in healthy action, it is necessary to secure their lhe and regular action or exercise; to allow of complete inaction of any pant or function, is to initiate disease, ami porably even stmoctural change, or atrophy. Hence the develnment of the muscular system, of the secretions, and eren of the mind and its organ, the lrain, require the more or less reatular use uf exercise, cither in the form of proluctive anl useful work, or by means of artidicially devisel methods caleulated to serve a like pupose in regarel to the conomy. Thus, selmastic elucation is exereise for the minl; Gymuastics (f. r.). for the body. Both these means enter largely int, enlightenerl medical practive, thoush ther are often too mueh neglectert. Exereise, to be leneficial, monst be attemiled with rest, to alhw the tissues whieh are worn away during vital action to be restorel ; Lat rest of one part or orean is oftem lent seemed by bringing others into activity: so that, exeelt duinir sleel, there is rarely a necessity for a complete anil simultaneous disuse of all the faculties, or even of those most immestiately unlor nur eontrol. The lest regulated life is that which secures due and proportionate exercise at intervals for all the fuctions, mental as well as bonlily:

E'NETER (the Corr-Isc of the Iritons, the Isere Dumnonionuin of the Liomana, Erunctostr of the Saxons), a eity episcupal see, scparate countr, parliamentary and mulicind borngh, and river port. in the south-east of bormshire, and the capital of that connty. It lies on an acclivity on the left bank of the Exe. 10 miles north-west of its mouth, 170 miles west-sonth-west of Lomion, and is miles south-west of bristol. It is on the whinle well himilt and elean, and has two main lines of street meeting near the centre. There are some fine squares and terraces. The Guildhall has a singular portico, added in $15 \% 3$, and projecting into the strect. Exeter cathedral, a erneiform strueture, magnificent in its ornamentation, was erectell112-14\%. It measures 405 by 140 feet, and has a nave 1.5 feet long, with two aisles, a transept ending in twe Norman towers 145 fect high, a choir, f:3 elhapels, and a consistory court. The west frout has a profusion of miches and earsel figures, and the west window has leautiful tracers. In the choir is a dark array of oaken stalls and cumopies, hesiles the lishonis throne-an exquisite airy fabric towering 5 . fect to the roof of the choir. In one of the tonvers is the great Tom of Exeter or I'eter's fichl, $12,500 \mathrm{lbs}$. weight, and a large curions antigue elock. It has a large floating shif, basin, 917 feet loag, 90 to 111 fect hroan, and 18 feet deep; and a ship-canal, 1.5 feet depp and 30 feet broad. This canal extends is miles, and terminates at Turf, ahout $?$ miles from the head of the estuary of the Eie. E, has mazuiticent nurscries, and expmots dairy, farm, and oreharl promee from a neishbouhnorl rich in such 1 ronhucts. l'op. (1s61), inchuding st Thomas, which is sefarated from the city by the river, abont 41,014 . The tom sencls two members to parliament. In 1500, 750 vessels, of 78,227 tons, entered ani eleared the furt. E. was anciently the chici resilence of the West samm kines. Exeter hishopric, fixel here in 1051 ly Elwart the Comfessm, includes Devn and Cornwall, 93 deaneries and $5 s$ b lenefices. The city was formerly surrounded with walls and strongly fortitied. On a 10.
height to the north of E. are the ruins of Rougemont Castle, built by William I., on the site of one sain to lie as uld as Casar's time. Many Roman and Greek coins have loen found in E ., besiles tesselated pavenconts, irarments of colunas, ami small hronze staties. ( 1571 -1op. 4,248.)
EXETER collegh, lowforl. This college was founted in 1315, ly Walter de Stapledon, Bishop of Exeter, who rexoveal from Hart Hall to the present site of Exetur Collece, a rector and twelve fellows. In ly0t, Elmmin stafforl, Bishol of Salisbury, abdel two fellowshins, and qave the college its present nane. Sir William l'etre, in 1565 , foumlen cight more; and in 163ti, Charles I. annexel one more for the islands of Jersey and Cuernsey: In 1760, Mrs Sheers left certain ronts for the establishment of two followships. All these fellowships were origimally apmoprated to various archedenomies or counties, especially in the west of Faghand. A peculiarity in this colloge was. that the alose fommations. throgh generally called fellowships, were, strictly speaking, noly scholarships. lmportant changes were introlncen by the rector and fellows, under the authonity of 17 and 15 Vict. c. Sl, and approved of by the eommissioners appointed to carry nut that act. The number of frllowships was reducel to 15 -all open without any restriction as to place of birth. The revenues if two felluwships were divined amony the rectorship and the I5 fellowships. The remanines fellowship were devoted to the fommation of 20 scholarship; tun open without restriction; ten limited to persons lurn, or for three vears ellueated in the diveese of Exeter; and two limited to persons hom in any of the Channel Islands. several exhilitions also are attached to the collecge ; and there are about 16 benetices in the gift of the suciety. The number of names on the looks in 1561 was alout 20.

## EXETER or EXON DOMESDAY. See Domesdif book.

ENETER HALL, a large proprictory buiding, on the north side of the Strand, Lomion, is 131 fect long, 76 feet wido, and 45 feet high. It was completed in 1831, and contains upwards of 3060 fersons. It is let ehietly for retigions assemblies, ant is in great request luring the "May Mectiogs? of the several rehgions societies. It is also let as a concert-room, and has been the scene of many great musical fêtes.

EXHAU'STIONS, MEmon of is a mode of proving mathematieal propositions regarding ymantities ly continually taking away parts of them. The mothod was frequently empliged by the ancjent qemmeters; its fundamental maxim, as stated by Euclid, being that those quantities are equal whose difference is less than any assigmble yuantits. Euchil emplogs the methor in Buok x. l'rop. 1; and it was used ly Archimedes to prove that the area of a circle is equal to that of a right-angled triansle whose one les adjoiming the right angle is the ratlius, and the other the circumference. In this ancient methonl we may see the rodimentary form of the molern transcendental analysis.

## Exliflitiont, Aft. See Aht Exhmimoss.

Exhililtion. Indetstrial. (Fr., Expocition de PIndustrie). Exhibitions of this kind ariginated in France, where the first trok place in 199s, at the suggestion of the Marquis diAreze. It was held in the Maison dorsay and its grounds; but it aplears to have been rather a collection of such objects of French art-mannfacture as could le borrowed frum their owners, than an assemiding together of conpetmy artists and manuacturers

## ENHHBTION.

with their reapective warks. It is, nevertheless, interentime is is historical fact, having been the first of these displays of which we hase any chear and anthentic recorl ; aul its more important eflect was to familiarise tho Prench mind with natimad exhilitious.
ln the same yar, anther exhibition was holl in
 enecess. It embraced all kinds of mambictures: whereas that at the Maison a dorazy was chardy devoted to those of artistic merit; henee the credit has been clamed fur the lattor phe of bing the commencement of imlutrial exhibitions, certamly, howerer, without justice or truth.

In ensepuence of the obrinas ntility of the exhilitions of 179s, another was held in 1802 , untor the consulate of Naphom, with equal sucecss, and thus led to the estahishment of triemmal exhinitions, which were, with ocasional intemuptions fron relitical canser, hoh until the movel inlea was originated in this country, in 1s.0., ly His liny:al Highmess the Jrince Consort, of holding a maversal exhibition area to all womere.
That was not, however, the first industrial exhibition held in the Enited Kinghom. The Royal bublin Society, fussibly from the Freneh sympathies of lreland during the Revolution, as early as 1829 alopted the pian of triemual exhibitions, which was several years beforc any ather part of the United Kiuddom; they took phace in the Soeiety's rooms in Dulbin. Like the French, however, they at first comprisel only specimens of native inclustry.

In Enclamh the first well-organised exbbitions were those of the Cinnish Polyterhmic Suejets, in which were illustratel the mineral wealth of the comoty, and its mochanical applianes for minnur purposes, \&e. These were contimed ammally withmit intermission until 1s.50, Manchector, Liminighan, and Liverponl also hodia local exhibitions: that of the seeomi tom was by far the most important, and is fairly entitled to be considered the prototype of the 15s1 rxhinition ; indeed, it is loy mo meaus certain that both did unt arise from the same cause-the aritation in favour of a great nationals exhibition, commenced by Mis linyal Highuess the Prince Comsurt and the society uf Aits as carly as 1848. The Iirmimehan exhinition was held in ls49.

The Manchester exhbitions were the earliest hoh in the ereat Enelieh indhstrial tuwns, lat they, like those whech were hehd in the Mechanits' Institutes of Liverpmol anml Lacels, an! sulsedracatly in the collegiate Institution of Liverpoul, haul a mixed character, the illustrations of art anl mamfactures leing prety well mingled with objects of uatural history anil varons miker curiosities, for the amuscment if the visitors. That of Birminghaus, howerer, was much mare completely devoterl to the the objects of imbustrial exhbitions; it was held in the spacous apartments of l'ingley Hall, and was a great sucecess, especially when it is lome in mind that it was carrica wht solely by private enterpises. The multitudinms manuactures of that wonderfn! plave ware amply illustrated, and a most eareful attention was paid to the exhinition of those oljepects of art which were lost ealculated to foster the taste of desieners, aml others, whose haty it was to give redimenent to the masses, by grablually imporing those objocts of necessity aminmament in evorybiy nse. The success of the lingley Hall Exhithiom no doubt acted most beneticially ifom that of 1 s.i. Which was approabine, for it gave an umistakable inturtas to the indastrial pusnits af the people of Dirmingham, and throngh them acted widely upon others.

The first metrophlitan movement in farour of lowhing a national exhilition in this country was immediately after the Freuch Expesition of 15th, tho results of which were 80 benclicial, that several applications were male to the govermment requesting that the matter shomble be alticially taken appo 'The furernment, however, as namal, proved itself to he simply exective, and the mothing.

In the meantime, the sumber of Arts tried the experiment of haling exhinitions annally in their own buidino in the Adelphi but these, thonen cminently suceessfin, were mot suflicient to satisly those with whom a matimal exhilition had become a tixed idna. In 1849, lis Royal lighmess devoted himself thoroughly to this dijget, amd made the harpy surgestion of throwing "pen the exhibition to all natims. The plims, tom, were suggestel for raising the nocessary funds and ot her essential points, and the schome sonm took a tangible form; and it was finally determinel ly the gevermment to issue a royal commission, which was gazetted Samary 3, 1850. From this mument the (Treat Exhibition was fairly lamelied. In under to uable the commis. sioners to enter into contracts, and otherwise incur obligations, it was necessiary to procure subscriptions to a guarantee fuml. The subscription-list was openel by the Gueen for 51000 . The exhibitim took thace in a vast stracture of iron and glass, called the Crystal Palace, in Hyde Park, Loudon. The ellifice, plamed by Joseph Paxtou (q. v.), was Grened lay Her Majesty, May 1, 1851. It was 185l fect long by 456 fect lrome and 60 feet ligh, the entive area envered leing 13 acres. On the ground Hom ant salleries there were 5 miles of tables. The glass employed in the strncture weighed nowards of 400 tons. The number of exhibitors exceeded 17,000. The exhibition was open 14 days, being closed Octaber $t$. The entire nmmber of visitors wat $6,50,010$, wharging 43,536 per day. The largest mumher at ane time in the luiling was lob, 200 , on otober 8 . The entire money drawn for tiokets of ahmission amounted to ti505, t07; and after all expenses were llefrayed, a badance of d50,000 was left war ; so that there was no call on those who subseribed the gmarantee fumb. lopmanly, this great exhinition was properly enough called the Wiohls bair, for it attracted visitors from all parts of the womld. When the exhibition was over, the brilding was cleared away.

The inportance of this celebratel exhibition was so obrions, that uther comatries beame anxions to have something of the same kima. An exhihition was hold in Cork in 1852: althongh not of an international chanacter, it was the first for which any special structure was erected in lreland, and deservally gave wreat satisiaction. The home manufactures of Ireland were admirably displayed in conjunction with theose of other parts of the lingdom. Dublian on up au international exhibition in 1853 , and by the princely moniticence of Mr bargan, was emablel to make an admirable elisplay, in a haidine of creat bearty. The Dublin Society adncy a new feature-high art was associated with inlustrial art, amb a gallery of pictures, the fimest ever hrought together in this linglom before, was there exhinitel with great success. In the same your, a similar exhibition took place in a crystal palace in Now York. France, in 1555, repeated the same experiment with immense success; both the imhastrial and the art eullections were such as the work hat never seen before. Thongh wanting the imposing magnitule of the Hyle P'ark buildiner, the contunts of the Palais de l'lmdustrie, with its retacher J'icture-gallery am its Annexe, were of the choicest descripition, ind rellected the highest crealit on l'rench taste and skill. Several other

## EXMOOR FOREST-EXODUS.

continental nations followed with various success. In Europe, it has now taken root, aml every country looks npon an exhibition of its industrial resources and productions, from time to time, as a grand necessity which mnst be met. In 1S61, there was an exhibition at IIaarlem, in which a vast assemblage of almirably arranged slecizoens illustratel every industry followed by the most industrious and philosonlsical peuple of Europe. In Belgium, also, a small industrial exhibition was held in 1861 at Brussels, consisting chietly, however, of articles of use, in which tasteful design was the chief consideration.
Such is a very brief outline of the history of these exhibitions, which now form a prominent feature in this era of the history of civilisation. The fulness of their etfects is still to be seen, but, juiging of the beneficial effects they have already produced, it ja not too much to say, that they appar destinel to help most largely in diffosing a love of industry, and a peaceful emolation over the whole globic. Commerce may lave its weak points, even its meannesses, but it cannot be denied that few of the occurations of man are more humanising, or tend more to teach the value of pace and good-will; and if this be conculen, eertainly nothing emn more assist it than these great gatherings, in which each nation shews its own specialities, and gives to others the ideas which it has acenmulated throngh its centuries of progress in imlustrial art. Like the social interehange of thought, this interchange of inventive genius brings out new talents; and succeeding generations will reap a rich harvest of results from our industrial exhilitions. To mark the adrance in the arts since 1851 , and promote manufacturing and commercial activity, an exhilition, the greatest jet achieved, is to take place at Kensington, London, in 1802; and in which are to be comprehended paintings in a hiuh style of art from all countries. Some notice will lee taken of this expected magniticent display in our Supllement. See Official. Descriptive, and Illustrated Catalogue of the Great Exhilition of 1851 ( 3 v vols .) ; also Reports by the Juries ( 2 vols.); and likewise the magnificent set of works printed for the commissioners ( 13 vols. folio). See Exhbitions, in Sumplement.

E'EMOOR FOREST, a moory, mostly meultivaterl waste, consisting of dark ranges of hills and loncly valleys, 14 square miles in area, in the west of Somersetshire and north-east of Deronshire. It is bordered by dep, worded glens. The lifls rise in Dunkery Beacon to lCbs feet, in Chapman Barrow to 154), and in span Ilcal to 1.510 . Vevonian clates, with some new red samlstone in the north, form the sulstratum. It is cosered with heath, interspersed with juniper. eranberry, aml whortleberry, with much meaduw-lind. Throurhout this tract there is a native breed of promies, known as Exmoor ponies, reputed to be stout and hardy. Since Isini, E. lias become an irun-miming district. The river Exe, and its tributary the Barle, rise in Exmoor. It is sulject to winds and mists.

EXMOUTH, a tom in the east of Devonshire, on the left bank of the mouth of the Exe, 10 miles south-east of Exeter. It stands at the base and on the slope and top of a hill rising from the samly estuary of the Exe. It is nuted for its mild climate. From about 1700, it was the chief watering-place on the Devon cuast, till the rise of Torgaay. 'There is a fine promenate on a seawall is feet high. The Italdon ridge of hills on the east, 800 feet hich, protects it from the east winds. Here Sueno the Dane landed in 1003 . It was taken by the rogalists in lG46. Pop. (ISG1) 6025.

ENMOUTH, Edward Pellew, Viscouxt, a famons naval commander, was Lurn at Dover, April 19, 1757. He enteral the nayy when 13 years of age, and first attracted notice by his gallant conduct in the battle $m$ Lake Champlain, Oetober 11, 1776. In 178\%, he attainerl the rank of post-captain. In 1793, having been appointed to the command of the $N y m p h e$, a frigate of 36 guns, lie encountered, and, after a hard-fought liattle, captured $L$ a Cleoputre, a lirench frigate, which carried the same number of guns. For this victory, he was knighted. In 1799, he received the commanil of the Impetuoux, 78 grons, and was sent to the French coast, where many of his most brilliaut actions took place. In 1situ, sir E. I'ellew was advanced to the rank of litar-almiral of the Red; in 1808, to that of Vicearlmiral of the Blue; and in 1814, he was raised to the lewage, with the title of Daron Exmouth of C'anonteigh. Devonshire, with a pensiun of $x=000$ a year. In 1816, he was sent to Algiers to euforve the terms of a treaty regarding the alnolition of Christian slavery, whieh the Dey of Algiers had riolated. With a combined fleet of 25 Englishand Duteli vessels, he bombariled the eity for seven hours, and indieted such immense damase, destroyinf all the Alperine fleet and many of the public builings, that the Dey consented to every demand. E., who had heen woumded in the leg and cheek in this action, received on lis return tu England the thanks of both Houses of Parliament, and was promoted to the rank of viseount, luth inecember 1510. In 1821, he retired from public service, luaded with honours. He died 234 January $15: 53$.

## EXOCETUS. See Fling-Fisu.

E'XODUS ('the departure'), the mame given to the second hook of the l'entateuch. It may he regarded as composed of two parts-the first historical, and the secmud legislative: The historical extends to the end of the 18th chapter. It embraces a narrative of the various preparations, matural ame supernatural, male man the providence of Gorl for the deliverance of the Frraclites from their bondage in Eeynt, and also describes the acenm. plishment of their duliverance, and the journeyines of the people in the wilderness as far as Mount Simai. The lecislative is levoted to a mimute and elaborate aecount of the institution of the theocracy. The book presents us with three aspects of Hebrew history. We have, first, a picture uf a peoplo enslaved; second, uf a 1 rople redeemed from bondage; and third, of a peorle sanctified and set apart to the service of Grul. The period embraced hy the history of the bouk is usually reckoned at lid or 145 years, which number is olitainel as follows: From the death of Joseph to the binth of Moses, 60 or 63 years; frum the hirth of Moses to the departure from Eryit. So years; and from the leparture out of bryp to the erection of the tahernacle, 1 year. It cannot he deniel, bowever, without wildly violating all the ordinary laws of the increase of population, that this is much too short a periol tu account for the existence of sueh a number of Hebrews as left Leypt-viz., 600,000 . exelusive of women and children-i. e., in all, at least $2,500,000$. Those who went dorm into Egypt with Jacub were 'threescore and ten sululs,' and in $\because 15$ years, these, though prohibited from inturmarrying with the Erg7tians, had amonated to letween two and three millions. 'f'he writer of Exodus, indeed, says (chapter xii., verse 40) that 'the sojourning of the chidren of lsrad, who dwelt in Egypt, was 430 years,' addin: that they left the land 'even the sclisame day' on which they had entered it. This statment, however, does not seem to harmonise with the author's previous narratirc,

EXUOENOU'S l'LANTA, or ENOGENS (Gr. , ro, cutwarls; (\%nme, to produce), are those in Which the wondy substane if stem increases by hambes of vascular tisube added extermally, the
 wheh movlullory reyss proceed to the Bark (q. v.), and the hark is very distinct from the tibro vascular or worly part which it surmmuls. The exogenous is thas rery datierent in structure and manaer of Ewowth from the embonems of the acrogenous stem. Amidst the cellabar substance of the young stom. when it has developed itself from the seed, womly corls are seren comanting the eotyledons, amb ifterwads the leaves, when these appar, with the ront, in the central ixxis of which they join. A section of the stem exhilits the celludar substance trasersed hey vaseular lomulles (womly fibre), which in the section are mene us less wedgeshaped, radiating from the evontre, lat yot nut prolonged into the centre itself, which, cren to the greatest age of the stem, remains oreophed ley the cellular pith. - Dilitional mumbles are interposed, as growth proceds. diminshing the proportion of cellular sulintane in the stem, vet without the be bundes ever lacoming so compacted tugether as to cat on the commanation letwen the cellular centre of the stem and its lark, whieh is mantained by means of the medullary rays, often, imeded, imperceptible to the naked rie, but always present even in the hardest ant mont lose-maincl woul. The wooly lages which ate fommel in successive years, as new leaves and hamehes are developed, are formed amidst the 'emdium ( 1 I . W), into which the woorly fibres of the new lewes deseend, between the hark and the former wood, Thus the concentric circles are formed, usallly one for each year's growth, elistinsushathe cteri in the noret matured timber, and by which the age of trees is vory emmonly computed. The hegiming of each new layer is generally marked
 ings of which are conspichons in the transverse scetion. In jines, the line of separation between the haves is marked ly grater density of texture, and often hy deper cohnor. The age of trees cannot, howerer, buc calculated with gericet eertanty from the concentric circles of the stem, as any cireumst:mee which temprarily arrests the growth in any summer. may produce an effect similar to that ordinarily protuced by the change of seasons; whilst in the trees of tropical comentries, at least where the wet and dry season are mot very marked, concentric circles are ciften not to bedisenved.

The structure of the hanch of an exogenons tree prifectly corresponds with that of the stem. The vasendia buntles of the stom or hrach form a loop whore a leaf legins, mud those of the leaf and its axilhary lud sping from the loop. The roots of exugemons plants have not a central pith like the stum, lout in a few trees, as the horse-chestnut, the pith is prolenged to some extent into the rout.

Anmalies are mot mimpuently to le met with in the structure of exoyenoms stems, and particularly among the twining wooly flants of tropical comutries. There are als, very many herbaceous phats, in which, althugh the structure agrees with that of an exusenoms tree in its first year, no further development is ever attained ; whinst in many, eren this is very imperfectly reached: but yet these are on other acemuts munesitatingly classed with exogenous phints. The exngenoms stem and dicotyledonous

an action at law in Scothan almost always asks the conat to pronounce necree in his favear for the expme of the procerdings which he has finm? it. or may tind it, necessary to institute. On the "ther hand, the defender usully hemands the expense attending his retence: and the sencral rule wrung the barty foum ultimatcly to ${ }^{\text {an }}$, in the expence which he has vecasimed to his cophoment. as well as fur the suliject-matter of the suit. Is it is yuite usual for a party to sucemd in one lranch oi his action, and to fail in another: or tonecasion umpecssary expense by the unskition or careless mode in which le conducts some protinn of it, even though on the whate be be in the right; the adjustment of the amounts burured by the partios respectively uften iurolres not mily much nivety of calculation. hut questions of very consilurabie logal ditticulty. la so firr as the atjustment of eximuses is a matter of calculation, it is effected oy the auditor of the Comrt of Sussion, or of the inferim courts. Be Achithi, sheliff Cocrts In so far as it iurolves questims of law. these, if not previously deciated thy the juthe, must be carried baek to him from the aublato. If either party meaus to olject to the amount awarled to him ly the auditor in his report, he must lolge with the clerk of the process a short nute of his olijections without argument. A copy of this note must be furnished to the agent for the oplosite party, and the court, or the lurd Orlinary, lefore whum the action depended, may direct the ohjections to be answered either cimb roce or in writing. Shomll the objector fail to make good his njijection, the expmse of discussing it will the laid on him. If the oljection Las been stated to the auditor, and he has reported it to the court, it does not follow that the expense of discussing it will he laid wholly on the edpinetor, even if unsuccessful. Where am anpeal to the llume of Lorls has becn actually presented, and service of an order therwon has taken face, a mution for expenses is incompetent, but a mere intimation of an appeal is not enowgh threvent arre for expusps
 the cause wish it, the decree for exprases will he fromonced in his favour ; and the party found liable will not be allowed to phanl a comutere him against the client, as ly that means he mingt prevent the arent from recovernm what he very probally has disthused. The taxation of expenses is sail to lie between party and mesty. and not hetween agent and client: that is to say, the losing party hats to pay only the "xjenses which have heen necessarily inenreet in disenssing the question hetween the partios julacially, wit the munetssary cxicnses which the overandiety of the succesfal party maty have led him to incur to his own arent. Practically, there are very fow cases in which the expwhes recoverel do conser all the fomitide chaims of the agent against his client, which is the chicf reasmen why litigation is always attended with expense, even to the wiming party.
EXPERIMAST ami observation are the menns ly which we extent and contim wor knowlenge of nature. An experment is prow a a proceding By which the inguiver interfores with the ustal couse of a phenomenon, and makes the powers of feremee wonhl never, perhaps, have jresentel themselves all together. The intrometion of experiment distinguisues the modern methon of investigating nature from that of anciont times and of the midde ages. It is ly this moms that fhysies and chemistry have made such rupin stride within the last two centurics. Thruph expriment, the investgator
becones master of the phemouna he is consileting;
for be can contrive to set arite the unessential circumstances that so often conceal the real relations and comitions of things, and make these come ont into the lipht. Bxperiments exhihitel during a lecture on any lranch of science are maile, not with a view to the diseovery of trath, but to aid in the exposition of truths alrealy discoverel; they are sometimes called demmastrative experiments.
EXPE'RTM (Lat. copertus, from $c x$ and peritus, specially skilled), a min of special practical expericnce or ellucation in regard to a prarticular sulject -a worl conmonly apphicd (after the Freuch) to medical or scientitic witnesses in a court of justice, when selected on acerunt of special qualifications, as in the case of an aulysis of the coutents of the stomach in suspecten pisming. The term is similarly applicd to a persua professionally skilled in handwriting, for detection of forgery of deels aul signatures.
meponent and exponential. When it was wantel to express the multiplication of unity for any number of successive times by the same number or quantity, e. .g, $1 \times 5 \times 5$, or $1 \times a \times a \times a$, it was foum a convenient albreviation to write $1 \times 5^{2}$ and $1 \times a^{3}$, or simply, $5^{2}$ and $a^{3}$; and the mumbers, 2 and 3 , indicating how often the opreation of multiplication is repeated, were called exponents. lint the theory of expments gralually received extensions nut originally contemplatel, and has now an extensive notation of its own. Thus, $a^{0}=1$, $a^{1}=a, a^{-2}=\frac{1}{a^{2}}, a^{\frac{1}{2}}=\sqrt{\prime}^{\prime} a, a^{\frac{1}{2}}=\sqrt[3]{a}, a^{3}=\sqrt[3]{ } a^{2}$, or the cube root of the square of $a$. Also $a^{x}$ is the $x$ th power of $c, x$ being auy number integral or fractional; and, a continuing the same, $x$ may be so chosen that $a^{z}$ shall he equal to any given mumber. In this ease, $x$ is called the logarithm of the number represented ly $a^{x}$. Considered by itself, $a^{x}$ is an exponential. Generally, any quantity representing a rower whose exponent is variable, is an exponential, as $q^{x}, u^{x}, y^{2}, d c$. Expmential equations are those which inwolve expmentials, such as $a^{x}=b, x^{x}=c$.
exposure of heants. See lafanticide
EXPleEssio'Ni, Con, or Fspliessivo, Italian terms in musie, meaning with expression; impassiment, with pathos. Where the worl appears at the le riming of a conposition, the piece must he excentei thronghont with feeling. 'Expressione' frequently aphears alove eertain passages which aloue are to be preformed so, while the harmony in the acempaniment goes on quictly.
EXTENSION, in Logic, is a word put into contrast with another term, Compremensios, and the two mutually expluin each other. A general uotion is sail to be extensive according to the extent of its apylication, or the number of oljects included under it. Thus, Figure is a term of very great extension, because it contains in its compass many varieties, such as roumd, syuare, oblong, polygonal, ice. In like maner, European is moro extensive than German, man than Luropan, animal than man, organisel being than animal. The highest genera are formed by tiking in a wider rango of oljects. Matter and Minel are the most extensive classes that we can form. For, although a higher grums is sometimes spoken of, viz, Existence; to call this a class is to generalise leyond real knowlelve, which dues not herin till we have at least two actual things to contrast with eacla other. What can he contrastell ouly with pon-existence, nonchtity, or nothingmess, is not gemine knowledge: mo property ean be altirmed of it apart from the thing itseli. Matter, in its contrast to mind, is a real cognition: and rice versa, mind in its contrast to matter. These, then, are the most extensive
terms that have any real knowledge attached to them. But this property of extension is cained by dropping more anl more of the [eculiarities of the included indiviluals; 'organised being' in order to include both plints and animals, must drop from its signification what is peculiar to each, and mean only what is common to both. In short, these very extensive notions have a very narrow sionitication: it is the less extensive that have most meaning. The meaning of 'Man, or the numlure of attributes implied in this generic expression, is large. Were. thing that ghes to a luman being-the homan form aud organisation, the mental attrilutes of reason, speech, \&e.-is expressed by this term, which is on that accoment said to be more Compremensive than animal or organised being. Thus it may le sean that the greater the extension, the less is the comprchension; and the greater the compreheusion, the less is the extension. An individnal is the term of greatest comprehension, and of least extension. 'Socrates' comprehends all that is common to men and to philosophers, together with all that is peculiar to himself. On the logical uses of this distinntion, see Sir W. Hamilton's Leclures on Loyic, i. 140.

EXTE'NT, in English Law, a trit issuing not of the Court of Exehequer to compel payment of dehts to the crown. In order to warrant the issue of this nrit. the debt must be a debt of heord (q. r.). Extents are in chicf or in aid. The former are issued against the crown delotor, and under it the body, land, and goods may all be taken at once. An extent in aid is issuen at the surit of a crown delotor against a person inslebted to the crown debtor. On this writ, the chattels only of the person against whom it is issned ean be attached. Writs of extent in aic were at one time made the means of great abuse; persons who were not crown delitors were in the Iractice of assigning elelts to the crown, and thereupon obtainins a writ in aid. This practice was stopped by 7 James I. c. 15, forbidding assignments to the erown. Persons then resorted to other means, snch as taking the debt in name of the crown, or getting thenselves ajpminted bailiffs for the erown, and in that character procuring the issue of the writ. At last, the practice was finally stopped ly 57 Gco . III. c. 117 , ly which it is enacted that the amonnt of the crown debt shall le endorsed on every extent in ail, and that any overpus beyoud the crown debt shall be mail into court to be disposed of as the cont shall direct. By the treaty of Union, cxtents were introduced into Scotlan! on revenue matturs; but the sheriff is only entitled to take the deltor's movables.

EXTENT (in Scotland). There were no taxes in feadal times. The king was supporterl ly the rents of his property lands, and ly the occasional profits of superiority-ward, nou-entry, marriase, escheat, and the like-which were known by the general name of Casualties (q. r.). Beyond these, and the expenses which the discharge of his orimary duties to his smperior imposel on him, the vassal was not Tiable to be taxed. Fut to this mle there were some exceptions. When it became necessary to redeem the king from captivity, to provide a portion for his eldest dayghter, or to defray the expense of making his eldest son a knight, a general contribution was levied. One of these occasions oceurred when Alexander III. betrothed his danghter Dargaret to Ence, the young king of Norway, and engaged to give her a trocher of 14,000 merks. This sum was far beyond the personal resourees of the kine, and conscquently fell to be levied by a land-tax-land and its fruits being then the only arpreciahle species of property: But if the tax
was to be levied fairly and equally, this could be clone only by ascertaining the value of the ridole lands in the kinglom, as had lreen done in England in the time of Edwarl I. (4 Elw. I. i. anno 1276). Whether this was the first accasion on which a general valuation of all the lands of Scotland had been made, as Lord Kames thought (Iow Tracts, traet xiv.), or whether there had been earlier valuations of the same kinl, as others have supposed (Cranston 2 . Gibson, Nay 16, 1818, Fac. Cnll.), is still a subject of dispute amonast antiguaries. It is certain, however, that the valuation here spoken of was long known as the old extent. As such, it is spoken of in the act or indenture of 15th July 1326, ly which the parliament of Sontabl wreed to give to King Fobert Bruce the tenth penny of all the rents of the laity during his life. In this latter act it was proviled that such lands as had been wasted by the war should be revalued by an inquest before the sheriff, aul the retour, or formal verdict, was so framed as to contain a statement Joth of the present value of the lands, and of what they were worth in the time of peace.' In almost all cases, the new was consilerably under the old valuation, a fact whieh shews how widespreat must have been the devastation of that terrible war. The same deplorable fact is brought out by the Extent taken with a view to raise the smm necessary for the ransum of David Il. On this oecasion, the new extent of the temporal lands scarcely amonnted to $⿷^{2} 25,000$, whereas the old extent excected $£ 50,000$ (Cranston $\because$ Cribson, ut sup.). İut this state of matters was reversed when James 1. suecceded in restoring peace and prosperity. Indeed, even before the influence of his personal qualities could have been felt, the condition of the comatry mast have improved, because the extent which was taken in 1424 , for the $p^{\text {man mse of realeming him from captivity, shews in }}$ atucral an alyance now that even of the time of Alexander III. In several later cases (1481, 1488, 1505 ), in which grants were made to the crown, the assessments were levied from tempral lands by a series of new extents, according to present value. During the minority of Mary, the assessments, which were heary and numerons, were levid accurding to an old extent, but it is dunbtful Whether it was the extent of Alexander III., or of Davil II., or a later one than either. The extents of which we have spolsen did not apply to church lands. The share of the sulsidies applicable to them was levical aceorling to the value of the benefices as settled by ' lacimont's lioll.' which was made up in the time of Alexander III. by Benenmmdus de Vicci, vulgarly caller Bagimont. Cromwell introduced a more equitalle rule of assesement, and fixed preeisely the ratio to he laid npon each county ; and his system was alhered to, with littlo variation, after the liestoration (Act of Convention, 231 Janaary 1607). The rent fixed by these valuations, commonly called the valued rent, was that according to which the land-tax and most of the other public and paruchial assessments were imposed till the passing of the recent Valuation Acts, 17 and 18 Vict. c. 91, 1854, and 20 and 21 Vict. c. 58, 185\%. See Valeation.
EXTRACT OF MEAT is obtained by acting upon chopred meat ly cold water, and gradually heating, when about one-eighth of the weight of the meat dissolves ont, learing an almost tasteless insolulle filrine. The extract of meat contains the savonry constituents of the meat, and is a light nutritious article of food. See Beef-tea and Broth. It may be coneentrated into stuall bulk, and when desirel, may be afterwards treated with water, and being heated, forms an agrecable, light, and nutritive sonp.

## EATRACTION OF ROOTG EXTRAVASATON.

 The routs which have in patice to he most fire quantly extracted are the squme amh colde rents. It is furnmad to explain the rule for the extractinn as it is given in lonks of arithmetie. Aml firat of the sofure pemt. The stuate of $a+b$ is $u^{2}+$ $\because t^{2}+b^{2}$ anh we may obtam the rale by masting how $t+b$ may be deduced from it. Arramins the wpreston aceming to pewers of some letter $a$, we observe that the spuare ront of the tirst turn is $t$.

$$
a^{2}+2 a b+u^{2} u+b
$$

$$
a^{2}
$$

$$
\begin{array}{ll}
2(t+b) & \because \quad u+b \\
& \vdots(b+b
\end{array}
$$

Subtract its stuare from the expression, and the
 result is $b$, the other term in the ronit. Multiply $a_{a}+b$ by $b$, and sulitract the prowist from the remander. If the "pration dows mont teminate, it slews that there is innther term in the root. In this case, we may comsiler the two terms $a+b$ alrealy fomb as unt, ami as comesoming to the torm ot in the precedins opration; ithe the syuare of this patatity having beren liy the preceding process subtractel from the miven expresinn, we may divide the remamber by $2(4+$ b) for the next tem in the rowt, amb for an new subtrahnme maltiply $\ddot{-}(a+b)+$ the new term, ly the new term; anit the process nay be refnated till there is momemTher. The rible for extracting the sumare root of a mumber is an adaptation of this algeltrateal rule. In fact. if the number be expressed in terms of the ratix of its seale, it is secu to hes a concealed alpelmaioul expression of the order we have hen considering. Thas, $\mathrm{N}=a r^{n}+h r^{n^{-1}}+\ldots+\%$. The number 56 in the denary sede may be written $5 \times 16^{2}+$ $7 \times 10+6$; and treatime it as an alsebracal expers-
 The ming part of the arithmetical rule now mating explanation is the rule of juintins. As every number of one tigure is less thath 1t1, it: supuare mast le less than 102: gemeally, wery mumber of $n$ tientes is less than $10^{\prime \prime}$ (which is 1 follinwel by 1 "ipherst : lut also cyery mmber of $n$ tigures is not less than $10^{n-1}$ and therefore its syme is not less than $100^{2 n-2}$-which is the smallest number of $2_{n}-1$ tigures. Alsw, $16^{2}$ is the smallest mumer of $2 n+1$ fienses. It follows that the spaire of a mumber of $n$ tigures has vither $\ddot{z}^{\prime \prime}$ or $\ddot{Z}^{\prime \prime}-1$ tigures. If, then, we put a $l^{\text {wint }}$ wer the units $p^{\text {bue }}$ of a mamber of Which the ront is to be extracteel, ant pnint crery second timure from risht to left, the mumber of prints will always cumal that of the figures in the ront. If the number of figue lie even, the monber will be divided intor grougs of two each; if odd, the last group will contain maly a simgle fogure.

The rule for the extraction of the cube ront of a monbre is teducel from that for the extraction of the culte rome of an aldethraiall expression in the stane way as in the case of the seprare root. The culue of ( $t+h$ ) is

$$
\left.3 u^{2}\right) \frac{a^{3}+3 u^{2} b+3 u^{\prime} b^{2}+b^{3}(a+b}{n^{3}+u^{2} h+3 u^{2}+b^{3}} \begin{gathered}
3 u^{2} b+3 u^{2}+b^{3}
\end{gathered}
$$

It ne the rule in alacera. Armath the expression
 of the lirst term $u^{3}$ is $u$, the first term of the root. subtract its culbe from the expresson, and hing Ahwn the raminler. Divide the tirst temm by $3 u^{2}$, :unl the quatinnt is $h$, the secomi term of the root.
 is mo remamier, the ront is extracted. If there
is, presed as lufore, reganding $a+b$ as one term,

 disisur. If $i$ be the now torm or thirl tigare of the ront, then the quantity to bee subtracked to get
 on till there is no remainater. The rule of pointing in the: "xtraction of the cub, root may lne proved, as in the case of the sumare rost, ly shewing that the cube of a munter uf $n$ disures contains 3 , $: 3 n-1$, w $3 n-2$ fignes : and, therefore, it we put at pint over the mats phace and on each third ligure, we shall have as many furints as there are figures in the ront.
It may le olservel that a male for the extraction of any root of ammato may le wot from considering how, from the expansion of $"+$ 2 to the nth power, ar $a^{n}+m e^{n-1} \%+$, $x$, the ront $a+b$ is to be

EXTRACTMEK MATTER is the tern applied to certain organic matters resemilins humine foum in suils durime the decay of veretilide matter, and which are preeipitated ilume the concentration of water solutions.

E'NTRAC'TS, in a technieal sense, are medicinal preparations of vegetable principles, got cither by putting the phants in a sulvent on menstrum, and then evapurating the liquid down to abont the consistency of honey, or hy expressing the juice of the phants and evapurating ; this last is properly inspissutul inion Patractr, therefore contain only those repetable principles that are cither held in sohutim in the juices of the phants themsclves, or are soluble in the liquid employed in extracting thom, and at the same time are not so volatile as to le losi huring evapmation. Now, as many extractive matters are more or less volatile, it makes a grat difference whether the operation is comincted at a low ar at hish temperature. Extracts are callod wotrey or alobktie atcording as the menstrum caphencal is water or pirits. Ether is also usel in cextratins. Witherent panta of enarse atfond ditierent cextrats, some lacint of the mature of biters, whers bing usel as phaments, tamin. Se. Extracts are liable Le creat meertainty in loint of strenuth and eompasithom, and reyuire to be prepared with grat carce Evaperation in vacho is fomme to be a creat inpmoment.

KXTRADITION, the Liviur ur, ly authority of haw, a persen acensed of a crime, to the foreign jurisuliction within which it wats committed, in onder that he may be trien there. Extralition is usually the suliject of international treaty. A treaty or comocotion for this prorpse was entered into letween this comitry anl Pronce in $184 ;$, and between this comatry and the Cnited Ntates of America the same fear. (ilses lave frembently acenred where warrants hase hern granted, and their execntion by the wimmal oflicer aided ly the authoritics of conatrios with which we lave no such convention. 'I'low authorities at Itanhorg and Antwerp, and in Russia, have given Lusfishotienders Mrer to the custonly of the affere, wr fined them on loward a British vessed. (Wa wher cheasions, they have convicted them, and punished them there, recouving a cortified mopy of the lejositions as evidence of the erime emonithen in this comatry
 l, cial Pormalist, whore the forms of warrants will $1_{x}$. foumd for the suidance of justiens).

BNTRADANATION is the escape of any of the fluils of the livinu lonly from their popre vessels (eres) throuh a rmpture or injury in their walls. Exermentitions mater thus sometimes escapes into the abolomen through a wome on aleeration of the
bowels. But the term is oit nost nsed in speaking of the escape of haod from injured himot-vessels. Extraxasation is distinguishel from exulation by this, that in the last the vessels remain entire, and the eflision takes phace liy tiltation through their walls; non does more than it part of the blool so escape, the hool glomles being retainel, while in extravasation perfect home is eftrseal. Many kinds of extravasation are immediately fatal, such as that of arine or of gall into the abionew, ir of blood from the versels of the hrain in many cases of apoplexy. The dark colonr resultime from a bruise is owing to extravasated blend from rupured capillary veesels.

EXTREAE UNCTION, a sacrament of the Roman Catholic ('hureh, which, as the wther sacraments supply spitital and in the varions eitemmstances of life, is helieved to impart to the Cluristian in death grace and strength $t_{0}$, encrmater the struggle, as well spiritual as bedily, of the dying hour. The rite of unction in different fomas is common to several of the sacraments; the name 'extreme' is given to that of the present saerament, because it is reservel for the last act if the Christian eareer. The conncil of Trent isclares this sacrament, althmorh "promulgatert' in the wenlknown passage of St James v. 14, 1.5 (which Protestants regat as having more to do with the gencmal belief in the sanative pronerties of oil), to have been 'iustituted' ly Christ. The Fathers frequently allule to the rite of unction, and althongh many of these allusions certainly rofer tor the ranctions of bantism and confirmation, got Gatholies rely on several passages of Origen, thrysuctom, C'iesarius of Anles, amel Pope Immeent I., as decisive regarding the unction of the lyins, ats also unon the fact that in the varimes sepriated churches of Oriental Christians-Greck, Contic, Armmian, aml Nestorian -the rite is fomml. althong with many reremomial variations. In the Romin l'atholic Church, the sacrament is administeral by the piest, who, 'dipping his thmmb in the holy" oil, anmints the sick person, in the form of the cross, upon the cyes, cars, nose, month, hands, and fect; at earb anointing making use of this form of prayer: "Through this holy umetion, and his most tender mures, may the Loril pardun thee whatever sins thon hast committed by thy sight. Amen." And so of the hearing and the rest. alditing the form to the several
 Extreme unction is reputeal hy (atholios one of the sacraments 'of the living: "that is, it ordinarily reguires that the reciphent shonhl have previonsly obtaned remission of his sins ley ahsolntion or lay perfect contrition; but it is lield to remit, indirectly, actuml sins not previously remitteat, amd also (although mot infallills, hut aceorking to the mercifn designs of lrovilenees to alleviate, and even to dispel, the pains of lowlily tisease. 'the holy oil which furms the "mattur" of this sacramont must be blessel hy the bishop-a ceremony which is performed with great sulcmonty once wach year by the hishon, attemed ly a numiker of priests, on Manndy-Thursday. The oil so beseed is resepect for use during the year. In the cinck Church, the sacrament is alministered ly several priests eonjointly. In its most solemu form, seron priests unite in its alministration; in oninury circumstances, it is conferred ly two. 'The fireck form of words also differs. althouth mot substantially, from that of the Latin Church. The (iretks call this sacrament. 'The Joly OiJ,' and smetimes 'The Oil of Prayer.'

EXTREMITY. Sue Sikenton.
EXUMAS, eomprising freat Exuma, Little Exuma, and the Exuma lieys, form $1^{\text {nart }}$ of the
group, of the Balanal lolands. 'They eontain abont cono inhalitants, whan are cmpocit partly in agriculture, incluling at one time the growing of cotton, hout chiefly in salt malsius. In the last-named business, the E. rank secturt anomeg all the suls. divisions of the prup, lavius expurtal, in 1851, 115,300 hushels of salt. Nest to Nassan in New Providence, little lixmma is the most consideralk fritt of entry in the Bahamas.

ENU'V1st, a term aplied to manic remains, now selton employed, hat fremondy ased ly the older geoloyists.

EYALET is, next to a province, the laruect and monst important of the divisions of the Turkish empe, which contains in all $: 6$ eyalets. These are arginn disided intor lects or sunjoks, the livas into cazas or districts, and the cazas into noliofs or commones, containing rillages if hamkets. Eirch calet ur general gevernment, as it may be called, is aministeral hy a pasha, who is gnvemor, and the gencral name for whom is veli or vicerng. The governors of the cyalets lelonis to the Diguities of the swod, ant are pashas of two tails; and when they are raised to the rank of vizier, as is frequently the case, they bocome pashas of three tails.

EYCR. Hemert and Jin vas, two illustrions painters of the ad Flemish schonl. Much dis. cussion has arisen as to the time of the linth and duath of these brothers, amb the rarions lates assigned range from 1300 to 1400 . Stme mantain that llubert was born in 1366, and Jau in 1370; while kugler-in general a suol authority on ancient art-states the lates to lie 1366 and $140 \%$, making lTubert 34 years older than Jan. Their birthylue was Maas-Eyck, and they chiclly resided at Brages and "hent, and became the fombers of the Flemish school of priuting. The honour of being the inventors of onl-manting is clamed for them, thourh sufficient widence has been adducerl to shew that it was practised previously. liefore their time, the enstrm, howerer, particularly in Italy, was to gaint with gums or other sulnstances of an whesive nature dissolved in water ; and if not the inventurs, they were at least the first who brought into notice and perfectel the mode of mixing colours with oil or some medium of which bil was the chief ingerlient: while, for transparent and lanliant colnuring and minute tinish, their wriks have urver heen surpassed, Till the death if Jan, the bothers generally grainted in eonjunction: we of their inest important works was an altar-phece with folling-doors. representinor the Ehlurs aduring the Lamb, a suloject taken from the Apricalyps-panted fur Joumus loyts, whopresented it to the cathedral of st baron, in Ghent. The two central dinisions of this pricture are all that now remain in the churel at chent. Some of the wings are in the Ciallery at Eerlin. The masterbieres of the louthers are for the most part in the citios of Ghent, limges, Antwerb, lierlin. Munich, and laris. In the National fallery, Loudsm, theres are thrce pictures of Jan wan E., which, though small, well exmplify the hing qualities of his works. These are portrats of a llemish merchant and his Wife, stauding in the midule of an aprartment, with their hands jumed-signed and rated 14:31: of the portrait of a man in a cloak and fur-collar, with a red hamberdine twistad romm the heal as a turban-paintesl, accoming to an inseription on the bower purt of the frame. October $21,1433:$ anl protrait of a man with a clark-red iress, with a Green head-covering-sigued and dated 10th GetoFer 1 132. Itulnrt dieil in 1426, aurl Jan in 144. ('mupare Wangen, l'ber Mub, whe Ian ven Eyfols (Ereslan, lsog).

## EYE.

EyE. Anatomy and Pursology of thr. In this artiele we shall cousider: 1. The structure of the haman eyeball, and of certain accessory lants or appendares which serve to protect that organ, and are essential to the due performance of its functious. 2 . The most striking molitications which this ergan presents in some oi the lower animals. 3 . The special uses of the various parts of the cre considered as an optieal instrument; and 4. The action of the retina.
I. The globe of the cue is placed in the anterior part of the cavity of the (urhit (I. Y.), in which it is held in pasition ly its comection with the optac nerve posterincly, and with the mastles which surround it. and by the eyclids in front. It is lurther surported behind and on the sides hy a quantity of loose fat, which tills up all the interstices of the crbit, and facilitates the varims movemonts of wheh the eye is capable.

The form of the cyelall is nearly s]herical ; but on viewing the orvan in profile, we see that it is composed of serments of two spheres of different diameters. Of these, the anterior, formed ly the transparent cornea, has the smaller diameter, and is therefore the most prominent; and hence the antero-posterior slightly exceeds (by about a line) the transyerse diameter. The radius of the posterior or sclerotic segment is about $\frac{1}{4}$ ths, and that of the anterior segment about $\frac{1}{4}$ the of an inch.

When the ejes are in a state of relose, their antero-posterior axes are parallel; the optic nerves, on the other hand, diverge considerably from their commissure within the carity of the skull to the $p^{\text {nint }}$ where they enter the globe; consequently, their direction does not coincide with that of the eye. Each nerve enters the back of the globe at a distance of abont $\frac{1}{8}$ th of $a n$ inch on the inner side of the antero-posterior axis of the eye.

The eyeball is composed of several investing membrases, and of certain transparent structures, which are enclused within them, and which, together with the cornea (one of the membranes), att as

Fig. 1.
A longitudinal section of the eoats of the eve.
1, the aclerotic, thicker behind than in front; o. the cornea; 3 , the choroid; 6 , the iris; $\overline{7}$, the pupil; $\dot{8}$, the retina; 1), the anterior chamber of the ere: li, the posterior chamber: 12, the crestalline lens, enclosed in its capsule; 13, the ritreona humour, encloced in the hyaloid membrane, and in cells formed in its interior br that membrane; 15 , the sheath; and 16, the interine of the optic nerve, in the centre of which is a small arters. (The other nunibers in the figure refor to parta not noticed in this article.)
refractive media of varions densities unon the rays of light which enter the eye.
The mintermost coat of the eye is the sclerotic (from sk.ros, hard). It is a strong, dense, white, tibrous structure, covering about four-fifths of the eyeliall, and leaving a circular deficiency anteriorly, which is occupied ly the cornea. Posteriorly, it is

Werfarated by the optic nerve, and it is there contimuons with the sheath which that perve derives from the dura mater, the fibrous investment of the hrain anl spiual cord. Near the cutrance of the nerve, its thickness is about $\frac{1}{20}$ th of an inch; from this it diminishes to about ${ }^{\frac{1}{0}}$ th ; but in front it again lecomes thicker, from the tendinous insertions of the straight museles which blend with it. This coat, hy its great strengt hand comparatively unyielding sirncture, maintains the enclosed parts in their proper form, and serves to protect them from external injuries.
The cornea (so called from its horny appearance) is a transparent structure, filling up the aperture left in the anterior part of the sclerntie. Its circumference is overlaid by the free elge of the sclerotic, which in some parts presents a groove, so as to retain it more firmly; and the connection ly continuty of texture letween the two structures is so close, that they cannot lie sejarated in the dead body without considerable maceration.

The cornea, in consequence of its greater conrexity, projects beyond the line of the sclerutic; the degree of convexity, however, raries in different persons, and at different periods of life. It is thicker than any part of the sclerotic, and so strong as to be able to resist a force capable of rupturing that tunic.

Although beautifully transparent, and appearing to be homogeneons, it is in reality composed of tive layers, clearly distinguishable from one anotherviz. (proceeding from the front backwards) I. The conjunctival layer of epithelium. It is in this epithelium that particles of iron, stone, \&c., forcibly driven against the eye, usnally lodge, and it is a highly sensitive memhrane. ? The anterior elastic lamina forming the anterior boundary of the cornea proper ; it is not more than rove th of an inch in tluckness; and its function seems to be that of maintaining the exact curvature of the front of the cornea. 3. The cornea proper, on which the thickness and strength of the cornea mainly depencl. 4. The posterior clastic lamina, which is an extremely thin membrane, in which no structure can be detectec. It probably contributes, like the anterior lamina, to the exact maintenance of the eurvature of the eornea, so necessary for correct risinn. 5. The posterior epithelium of the aqueous humour, which is probably concerned in the secretion of that theid.
For further details regarding these diferent layers, we must refer to Todil and Bowman's Plysiological Anatomy, vol. ii. Mp. IT-2I.
The choroid coat is a dark-coloured rascular membrane, which is brought into view on the remoral of the sclerotic. Its outer surface, which is Dearly black, is loosely connected with the sclerotic by connective tissue, in which are contained certain nerves and vessels - termed the ciliary nerves and vessels-which go to the iris. Its inner surface is soft, villous, ant dark-coloured. In front, it is attached to the membrane of the vitreous humour (see fig. 3) hy means of the ciliary processes, which consist of aliout sixty or seventy radiating folds. These are alternately long and short, and each of them is terminated by a small free interior extremity; and they are lodged in corresponding folls in the membrane of the vitreons humour. In other parts, it is loosely conuceted with the retina The choroid is composed of minute ramifications of vessels-especially of reins, which, from their whirl-like arrangement, are termed vasa vorticosa -of eonnective tissue, and of pigment cells, which usually approximate to the hexagonal form, and are about rot th of an inch in diameter. In albinos, this ligment is alssent, and hence thir eyes have a

## EYE.

pink appearance, which is due to the unconcealed bloul in the capillaries of the choroid and iris.

Choroil and iris, exposal by turning aside the sclerotic.
$c, c$, ciliary nerves going to be distributal in irls; $d, d$, smaller chlary nerves; e,e, reins knomn as vasa vorticosa; $h$, eiliary liganient and muscle; $k, l$, converging fibres of iris; o, optic nerve.

The iris may be regaried as a process of the choroik, with which it is continumes, althourh there aro differences of strueture in the two membranes.

Fig. 3.
The irts and aifacent stuctures seen from behind.
1, the diviled chap of the three coat-, the cboroid being the dark intermediate one; 2 , the pupil ; 3 , the parteriur surfare of the iris: 4 , the cilitry processus; 5 , the scalloped anteriot border of the retina.

It is a thin flat membranous curtain, hanging vertically in the aqueons hmmour in front of the lens, and lerforated hy the puphil fur the transmission of light. It divides the space between the cornea and the lens into an anterior (the larger) and a posterior (the smaller) chamber, these tion chambers frecly communicating throush the prinl (sce tiot 1). The outer and larger border is attached all romen to the line of junction of the sclerotic and cornea, while the imer edse forms the lowndary of the pupil, which is nearly circular, lies a little to the inner side of the centre of the iris, and varies in size according to the action of the muscular fibres of the iris, so as to admit more or lass light into the interior of the eyeball: its diancter varying, under these circumstances, from about $\frac{1}{3}$ d to $\frac{1}{2} \frac{1}{2}$ th of an inch. It is muscular in its structure, one set of fibres being arranged circularly round the
pupil, and, when necessary, effecting its contraction, while another set he in is radiating direction from within nutwards, and by their action dilate the lupil. 'Ihese filses are if the unstriper or involuntary variety. The inerves which are concernel in these movements will be pesently noticul.

The varictics of colum in the eycs of different indiviluals, and of different linils of aninals, mainly dernd unom the colour of the pigment Which is deposited in eells in the substance of the iris.

Within the choroid is the retim, which, althourh eontinnous with the optic nerve-of which it is usmally regarded as a chiplite expmonom-ditters very materially from it in structure. Before anticing the chalorate eompusition of this part of the eye, which has duly leen revealed lyy recent micruscopiciol insestigation, we chall brinly mention those prints regarding it which can lre established hy orlinary canaination. It is a delicate semftramsparent shect of nerrons matter, lying immediately lochind the vitreous lamomr, and exteming from the gitic worve nearly as far as the lens. On examining the concave inner surface of the retimat the lack of the eye, we olserve, directly in a line with the axis of the globe, a circular yellow sumt (limbus luthas), of ahout $\frac{1}{2}$ th of ab iuch in rliancter, callech, after its discoverer, the yellow spol of sünmering. As there has leeen much discussion retgrting the structure and function of this sjot, we may ohserve that Dr Told
and Mr Bowman, two of our most emident Enghish mieroscolnints, after several examinations, regaril it as a small mound or projection of the retina towards the vitrentis Lumour, with a minute aperture in the summit. The only manmals in Which it exists are man and the monky. Its use is unknown, lut visiou is remarkaluly perfect at this spot-a ciremostance which, however, may lossibly be accounted fir by the fact, that it is singularly free from blomlvessels, which curve romed it, and aqmarently awnicl it.

The structure of the retina, as revealed by the microscope, is in the hithest degree remarkable. Although its greatest thrickness (at the entrance of the ortic nerve) is only about tis th of an inch, and as it extemls anteriorly, it soon

particles directed against the eye, and assist in shaming that orean from an exeess of light.

The lechrymal "ppureters consists of the bach. rymal gland, by which the tears are secreted; two eanals, into which the tears are received near the inner angle of the eye; the sac, into which these canals open ; and the duct, thrugh which the tears pass from the sac into the nose. The gland is an whong horly, about the size of a small almond, lying in a repression in the upuer and unter part of the orbit. The duid secreted loy it reaches the surface of the eye ly seven or eight ducts, which open on the conjunctiva at its uprer and wuter part. The constant motion of the unter eyctid induces a continuous gentle current of tears over the surface, which earry away any foreign particle that may have been deposited on it. The thuid then passes through two small "perings, termed the panctu lecramalia (see 9 in lig. 6), into the camals; whenee its further conrse iut, the lower partion of the nose is sufficiently obvious from the figure. The conjunctiva (or mucons coat) which covers the front of the eyeball, and lines the inner surface of the lids, passes down and lines the canals, sae. and duct; ard is thus seen to be contiunous with the nasal mucus membrane of which it may" le regarded as an offishont or di_ital prolongation. See Mucors Membiane.

We shall conclude this sketch of the anatomy of the human eyc liga brief notice of the nerecs going to this organ and its arpendures.

Into each orlit there enters a nerve of apecial sense-viz., the ontic nerve, a nerve of ordinary sensation-viz, the ophthalmic hranch of the fifth nerve, and certain nerves of motion going to the muscular tissues, and requlating the mosements of the varions parts-viz, the thiri, fourth, and sixth perves.

As the "ptic tracts from which the optio neres originate are noticel in the article ERAN, we shall merely trace these nurves from their chiasma or commissure forwards. This enmmissure results from the junction of the optic tracts of the two sides: and it is especially remarkalle for the fact, that it presents a prartial decusation of the nervous filures; the central tibres of each tract passing into the nerve of the opposite side, and crossing the corresponding filses of the other tract, while the outermost tibres, which are much fewer in number
than the coutral mes, pass to the optic norve af the sume side. In frout of the commisure, the nerves enter the optic foramen at the apex of the orbit, receive a sheath or investment from the dure muter, acquire increased firmases, amd finally terminate in the retina.

The peculiar mode of termination of the optic nerves in the curdike expransinn of the retina, the imparment or loss of vision which follows any morlid affection of them, ant the constant relation in size whieh is olservel in complarative anatony between then and the organs of visim, atfurd sullicient evidence that they are the proper comductors of visual impressions to the sensorimm.

The first or ophthalmic divisiun uf the fifthe or trifacial nerve sends lornches to the skin oi the eyelids and to the conjunctiva. That it is the merve of ordinary sensation of the eye, is sutificmety obvious from the fullowing facts: (1) That in discase "f this norve in the human sulject, it is mot uncommon to find the eychall tutally insensible twevery lind of stimulus (partinles of dust, ]mngent vapurs, se.) ; and ( 2 ) that if the nerve be dividend in the ctamim (in one of the lower animals), similar incensibility results.

The most important of the nerves of mution of the cye is the third nerve or motor acnli. It supplies with motor fuwer the clevator of the upper eveIid, and all the museles of the ghole, except the saperion oblique and the external straint muscle, anil, in allition to this it semds filaments to the iris and other muscular fibers within the eye. The auplication of an irritant (in vivisection experiments) to its trunk induens comvolsive contraction of the principal muscles af the bill ami of the inis; while division of the trunk vecasions an external splunt, with palsy of the mper evelid and tixen? dilatation of the pupil. The squint is caused by the action of the external straiglat aml the superior ohlipue muscles, while the other maseles are para. lysed dy the operation. The nomal lantur action of the nerve uron the iris, in causing ematraction of the pripil, is excited throngh the optic nowe, and affords a comi illustration if Redex Action (4. w.) ; the stimulus of light falling upon the retina, and, through it, exciting that partion of the lomin from which the third nerse takes its migin. This nerve clearly exerts a donble influence in relation to vision: (1) it manly controls the moments of the eyeball anit the mpre (reliat; and ( $\because$ ) from its comection with the muscular structures in the interior, it requlates the amome of light that can enter the nuil, and probably takes part in the adjusting power of the eye to varims listances.

The fourth nerve supplies the shiperior olliguo muscle with matos power, while the sixth nerve similarly regulates the movements of the external straight muscle-the only two muscles in the orbit which are not suphlied by the third pair.

Althomath not entitled to be termed a nerve of tho ortit, the facial nerve deserves mention as sendiner a motor branch to the orbiculeris muscle, lyy which the eye is closel.
2. Compuration Anatomy of the Eyy. - In mammets, the structure of the cye is usually almost identical with that of man. The orgen is, however, aceasionally momitied, so as to meet the peculiar wants of the ammal. Thus, in the Cetacen, and in the amphibious Comivora that atch their pry in the water, the shape of the lens is nearly spherical, as in fishes, and there is a similar thickenimg of the pogterior part of the selerotic, so as to thrust the retina sufficiently forwarit to receive the image formed by such a lens. (See the subsequent remarks on the eres of fishes.) Again, insteat of the dath-irown or black pigment which lines the hman choroid, a pigment

## EYE.

of a hrilliant metallic hustre is seeroted in many of the carnivora, forming the so-ealled teft tum luchitum at the bottom of the crebial, which seems according toln,wman) to act as is concave reflector, cansing the rays of light to traverse the retina a second time, and the probably incrasime the vismal power, pheticularly where only a feche light is admitted to the eye. The pupil, moreover, varies in fom, being transbersely ohlour in the fimminants amb may other Ilerhivora, and vertically ohbogs in the smaller anera of Cats. These shapes are apharently comnected with the positions in which the dillerent anmals look for their fool. Lastly in some manmals (for example, the horse), there is a rudimentary third wehl, eorresponding to the membresa mictituns of birls.
In birds, the eye, thon-h prescnting the same general emmesition as in man, lithers from the mammalian eye in sereral important puints. From our kaowledige of the hathits of birls (especially birds of prey), we shouh maturally expect that from their rapid movements they should be ahle readily to alter the foous betwen the extremes of long and short sighted vision, and the nomitications we shall now proced to notice clanty have this object in view.
In reference to the firure, which represents a

Fig. T- Wye of Bird.
anction of the cye of the owl. we see (1) that the shape If the organ is not spherieal, as in mammals, nor fattencl anteriorty, as in fishes aml aryuatic reptiles, lant that the cornca is very frominent, and the antero-msterior diancter lengthened: the conse${ }^{\text {f }}$ uence of this arragement being to allow room for a larye guantity of aucous humour, and to increase the distance between the leus and the posterior part of the retina, ami thus to proluce a greater conversence of the rays of light, by which the animal is a mablal to discern near objects, and to see with a faint lieht. In order to retain this elongated form, we tind a series of lony phates, forming a broul zone, extending lackwarls from the margin of the cornea, and hime embeded in the sclerotic. The edges of the Ineces formins this bony zone overlap each other, and :are shighty mosable, anal bence, when they are compresed ly the ation of the museles of the ball, thene is protiusim of the apreons humon and of the comea, whyting the eye for near sision; while relization of the muscles induces a corresponding recpssion of the hammer ind flattening of the cornon, and lits the eye for distant vision. The foeal distance is father regulated ly a highly vascular organ called the marsuman, or pecten, which is loolged in the
 is attached to the optie morve at the point where it ('xp:anls into the retina, and scems to be cudowed with it J"wer of dilatation amd contraction; as it eularyes, from distensim of its homi-vessels, it eauses the vitrenis hamur to pash the lens forwards, while, as it collareses, the lens falls backwards agin towards the rotna.

さuc

In addition to an upper and lower eyelid, hirds have an clastic fold of conjunctiva, which, in a state of repuse, lies in the inner angle of the eye, hut is movable ly two distinct museles, which draw it over the cornen. It is ternall the membrana nictitans; it is twa curtain degree transparent, for (aceording to Cuvier) birds sometimes look through it, as, for example, the eagle when looking at the sum. The lachrymud gland is situated as in mammals, bot there is here a seemel gland, the , plandula Harderi, which yields a labricating seeretion.

There are no very special peculiarities in the eyes of reptiles, and we therefure proced to notice the most remarkalle prints presented by the eye in fishes. From the eomparatively great density of

Fis. 3.-Lye of Fish.
the medium (water) though which the rays of light pass before they impinge nom the transparent strue. ture of the eye of the fish, it is obvious that this organ must act as a very powerful refractive apparatus. The main peculianty in the eye of the fish is the size, extreme density, and spherical shape of the lens, which give it such in extraorlinary magnifying power that it has been employed as a simple mieroseope. See Brewster's Treatise on the Microscope, 1. 31. But its forus being shontened in proportion as its power is inereased, it is necessary that the retina should be lirought near its posterior surface. For this purpose, the cebeball is tlattened hy diminishing the quantity of vitreous humour, which, being of nearly the sume deusity as the external water, exerts no preceptille power in bringing the rays of light towards a foens; and this thattened form is maintained by the existence of two eartilaginous plates in the tissue of the selerotic, which in some of the larger fishes is actually eonverted into a bony cup. The aqueons hanour having here no refractive power, is harely sudicient to allow the free suspension of the uis. The pupil is rery large, so as to take in as much light as possible, but is senerally motionless. Their eyes leing constantly washed hy the water in which they live, no lachrymal apparatus is necessary, nor does any exist; and the same remark applies to the cetacer amongst the mammals. We thus see that throughout the sub-kingdom of the vertbrata the cye is coustructed according to one general scheme, with moditications to suit the mode of life of indivieluat classes.

In all the above cases, the structure of the eye is essentially the same; that is to say, we have certain dioptric media for collecting the divergent rays to their proper foeus on the retina, and we have the means of adjusting the aye for different distances. liat if we examine the eyes of insects, we find that they are constructed on different prineiples.

In these mimals, we have simple and compound eyes usually associated in the same individual. The simple byes resemble in many respects the corresponding
organs in higher animals, but the compoumd eyes are extremely claborate and complex in their structure. They are two in number, appearing as hemispherical mizsses on the sides of the heal. When examined with the microscope, their surface is seen to be divided into an enormous number of hexagonal facets, which are in fact corneie. In the ant, thero are only 50 of these facets in cach eye ; in the cummon house-fly, 4000 ; in butterties, ujwards of 17,010 ; and in some of the leetles more than $\underline{0}_{5}, 000$. Each cornea is found to belong to a distinet eye. proviled with a nervons apparatus, and exhibiting a lens, iris, and pupil. Strauss Durchheim, who has carefully studied these structures in the cockehafer, suggests that, the eyes of insects beind fixed, nature has made up for their want of motility by their number, and by turning them in all directions; so that it might be said that these little animals hare a distinct cye for every object.
Compound eyes of similar structure oceur in many of the crustaceans.
3. Having now described the anatomical structure of the eye in man and certain of the lower animals, we are able to proceed to the consiluration of the uses of the various F arts of this organ. Assuming a general knowledge of the ordiuary laws of geometrical optics (see Dioptrics, Lens, \&c.), we will trace the course of the rays of light procecling from any luminous Jooly through the different media on which they impinge. If a luminous object, as, fur example, a lighted candle, be phaced at about the ordinary distance of distinct vision (alount ten inches) from the front of the eye, some rays fall on the sclerotic, and being reflected, take no prart in vision; the more ciutral ones fall upon the cornea, and of these some also are reflecterl, giving to the surface of the eye its beautiful glistening anpearance; while others pass through it. are converved ly it, and enter the aque ous humour, which probably exerts no perecptible effect on their direction. Those which tall on and pass through the outer or circumferential part of the cornea are stopyed loy the iris, and are either reflected or absorbed ly it ; while those which fall upon its more centrat part pass through the fupil, and are concerved in rision. In consequeace of its refractive power, the rays passing through a comparatively large sufface of the cornca are converged so as to pass through the relatively small pupil and impinge upon the lens, which, ly the convesity of its suriace, and by its sreater density towards the centre, very mucb increases the convergence of the rays passing through it. Thes then traverse the vitrenus humour, whose principal use appears to be to afford support to the expanded retima, and are brought to a focns upon that tunic, forming there an exact but inverted imace of the ohject.
This inversion of the imate may be easily exbibitel in the eye of a white rablit or other albino animal, after remoring the museles, \&e., frum the back part of the globe. The tlatue of a candle hed before the cornta may be seen invertel at the back of the eye, increasing in size as the candle is brought near, dinininishing as it retires, and always moving in a direction "Hhosite to that of the flame.
The adaptation of the eye to distinct vision at every distance beyond thit of a few inches, is extremely remarkable, and numernus attempts have been made to explain the mechanista ly which its focal length almits of alteration muler the influence of the will. One view that has met with much support is, that the focal lensth is modified hy a slight movennent of the lens. In the eye of the birl there is a structure termed the ciliary muscle, which ohviously ayproximates the lens to the cornca when a short field of view is required, and although the corresponding structure is only slightly
aleveloperl in man and mammals, it is probably sufficiently strons to produce the slight action required; while for the vision of distant objects the lens is carried back townals the retina by the elasticity of the connecting tissues. It would aypear, however, from the recent researches of Cramur, Helmholtz, Allen Thomson, and others, that the accommodation is effected rather ly a change in the form thau in the position of the lens. It has been experimentally proved, that when the eye is turned from a distant to a near oljecet, the antero-posturior diameter of the lens becomes clongatel, and the anterior surface becomes mure convex, while the orposite changes take phace in turniyg the cye from a near to a distant object. According to Helmloltz, the radins of curvature of the anterior surface of the lens diminishes on turning the eye to a near orject from ten to six millimetres (from alont 0.4 the 04 of an inch), while the most projecting point of the same surface is brought forward about ow of an inch.
Whichever view be alopted, the ciliary nuscle takes an active part in the process. According to the observations of Hueck, the fucal distance may be changed about three times in a second. The accommodation from a near to a clistant olject is eflected much nore rayidly than the converse 1 rucess.
There are two well-known furms of defective rision in which this power of alapatation is very much limitel-viz, short-sighteduess or myopia, and long-sightedness or presthopic. The linitatioss, however, is not due to a defect in the muscular apparatus to which we have referren, hut to an atnormality either in the curves or in the density of the refracting media. In short-sighteluess from too sreat a refractive juwer from either canse. the rays from oljects at the ordinary range of distinct rision are bronght too som to a fucus, so as the cross one another, and begin to diverge before they fall on the retina; the eye in this case being able th bring to the pruper focus on the retina only thos rays which were jrevionsly diverging at a larse angle from a very uear whect. The correction for this deticiency is acconplisleal ly interpusin: between the eye and iudistinctly-seen ubjects it conctere lens, with a currature just sufficient to throw the imaces of external ohjects at the ordinary distauce of distinct vision buckwards upon the retina. In lom-sightediass, on the other haved, there is an alnomal dininntion of the refractive power from too flat a corna, a deficient aqueous humour, or a flatteming of the lenas, so that the focus is behind the retima. This defect is currected by concer lenses, which increase the conversence of the rays of light. Lont-sidhtolness, as its name phesbunpia indicates, uswaliy comes on at a comparatively ailvanced jeriol of life, while short-vightednes3 is most communly met with in yound hersons; but both these males present occasional exceptions; and the cummon belicf that the latter affection maturally disappars after the middle perion of life, is altogether crroneous.
We have alrealy noticen the most essential use of the iris-viz., its fuwcr, whaler the indurnce of light ugon the retina, of modifying the size of the puyid, so as to remulate the amnint of light entering the cye. But this is unt its ouly uss; fue of its offices being to present the passage of rays through the circuaferentiad part of the lens, aud thus to obriate the indistinatuess of vision which wond arise from syherical uberration (the mequal refraction of the rays passing through the centre and near the margin (ff the lens), in the same manner as the diardracus employed by the aptician. But there are allitionally two other means by which this spherical aberration is $l^{\text {revented, which sin well }}$
illustrate the womdrous mechanism of the bye that We comme onit tumice them. They are denerand ly Jrofessor Wharton , lones as follows :
(1.) "the surfaces of the dintric parts aif the exare nut spherieal. hat those of the corneathan pasternor surface of the has are hyperimbiend, and that of the

 alneration. 'This discowny was makn at it timu whon it was not known lan that the dinptric parts whe the hand sherical surfiaes.
(ㅇ.) "The elensity of the lens diminishine [as wo have already shewn from the centwe to it feriphery the eiremmernatial rays are less refouctol than
 similar suffaes. This clegatly simple contrivance las been hitherto inimitab, liy human art. - The

 for a lowne furine atter the monal of the wheme Thus, a bummeg stick, moncil raphily in at circle
before the eyos, gives the appearance of a contimems rihbon of hight, Ineratuse the impression made ly it at any one point of its conrse remains on the retima until it again reaches that print. It is owing to this property that the rapid and involuntary act of "inking dows not interfore with the continuous vision of summunding oljoets ; and, to give another illustration of its mse, if we did mat possess it, the act of rabline wonld be a far made dithentt performance than it now is, fur we shomble repuire to keep the eye tixed on each word for a longer period, wherwise the mind woml fail inlly to percese it. Sam, in eonserpenee of the ratention of sensations by the retina, the image of an objeet may eontinue ti be seen. expectally in cortain morlnd states of the system, and in twilight, for some secomis after the cyes have been turner away from it, and this physiological phemmemon has prolithy given origin to many stories of ghosts and visions. Thas, if a person has unconscionsly fixed his "yws, "pecially in the dusk, on a mark just or stump of a tree. he may, on looking dowarts the gray sky, see projected there a gigintic white imbe of tha whect, whel may realily lo mistaken for a supernatmal appearance. These venlar spectra are always of the complementary colour to that of the object. Thus, the spectrinu left ley a red spot is green; ly a violet spot, yellow; anil ly a hae spot, wange. Itowerer Weat may be the relocity of a luminous berly, it ean always lie seen; hat if an upaque body move with such manity as to pass through a space equal to its own diameter in a less time than that of the thation of the retinal impression, it is altogether invisilfe ; and hemee it is, furexambe, that we cannot sece lallets, de... in the mapid part of their flight.

A small portion of the retina, correspondeng to the entrance of the "ptis nerve, is incapable of axiting the semsation of risim when it receives the inage of an oloject. Aecording to Volkmanar, this small imrisilhe spot exactly corresponds in size with the artery lyins in the centre of the "ptic never. If the 'hlind smet had been situated in the axis. of the eye, a blank space would always have existen in the centre of the fiell of vision, since the axes of the cyes in visum correspmel. liut as it is, the bimi rats chome comespmin when the eyes are directed to the same oljecet; and hence the blank which one cye would present is tilled up liy the wher eye. Mariotte carly in the last century, first hescribed the existemee of these hliml spots. Any one may satisfy himself of their existence ly the followings simple experiment. Let two small black cireles be mate um a pipee of paper, alont four or tive inches apart, then let the left eye le closed, and the right cer he strongly fixed mpen the left-hand circle. If the paper bo then mowed hackwarls and formarls, a point will le fomed at whicl the righthame circle is me lomger visible, although it reaprears when the peper is either bronght nomer or removed finther. Although no other purt of the retima fursesses the enmplete insensibility pesented by the lolime spot, it is probable that it in anterior portions have very little to do with visiou. When using only one eye, we direct it towards the object we wish to inspect, in such a way as to throw the image to the hack of the ulowe; and when the eye is thus fixed, abjeets near the lumalary of the field of vision are less distinetly sem than those at its mentre.

The extent of the ficld of vision for a single eye,
 Fomme De fomm that the cyoball was eapable of if movement of 5. heqrees in every direction, so that a single ere may have perfect vision of any point within a ramge of 130 denters.

Wri hate mot pet refered to the longitudinal range, or greatest distance of humau vision; indeed.
this range varies suextremely that it is difficult to assign an arbitrary limit to it, Dlany meivilised races, as the North Abucricm Indians, amd the inhabitants of the vast isiatic stepres, possess mwers of sight which would ajener alnust increlible if they hail not liem throughly and frequently corroboratel, Our information is more definite regarding the limits of hmman vision in resard to the minuteness of the objects of wheh it ean take cognizance. Jhmolerg hats varefully stutied this sulject, and has armed at the fullowine results. The side of the smallest semare mannitule nsually visible to the maked we-tither of white particles on a black gromi on conversely-is ahont $\frac{1}{80}$ th of an inch: amb with the greatest combmation of light and effirt on the part of the ubserver, splares with
 aised, lant withont sharpana or certainty. Romlies smaller than these, when ubservel singly, camot bo diseerned by the noted ere lnot may be sem when placed in a row. Nach smaller particles may, however, be distinctly seen, if they ${ }^{\text {now }}$ werfully retlect light; thus, goll-flust, which in none of its diameters exceeded mieth of an inch, is easily discernible in common daylight. The delicacy of vixinn is far greater for limes than for minnte armas, since "pronts threads of wion th of an inch may be discerned when held tenwards the light.

Carious topies which the realur might perhaps have expected to find nuticed. such, for instance, as 'siucle risim with two ever,' ' the appreciation of solit forms ly the sense of rision.' 'correct visinn with an inverted imase on the retina,' \&e., which helong fully as much to motaphysics as to physiohose, will be diseussed in a future article on Irsion, In the meantime, we may refer those who desire information on these points to Professur Bain"s treatise on The Sinses and the Int,llect.
EYE, Diseasma of the. The biseases of the eye emmerated by the surgeon are very mumprons. partly from the wariety of the tissues amd parts of which it is formed, partly because the exprosed sitnation and transmrency of the eye enable the diseases to be sten. Nearly all its parts are liable to inflammation aml its consequences. See Ommithmia. The evelids are lialile to rarious diseases, as growths of several kinds, most of which the surgen may remove: intlammation, as hearcye (ophthalmia tarsi); to he mishirected inwards or outwards, Entropium aud Eetropion (q. v.) ; and the uper eyedil may fall down (finsis) irom jalsy of the emmmon mution oculi nerre. The evelashes may grow in upon the eye (trichiasis), and ponluce serious results. Whan plucked out, they grow acain; and if they still mow in upon the eye after this palliative treatment has been tried several times, the surgem has to cut down on their roots, and destroy them. The duct which conveys away the tears to the aose is liable to inflammation and oinstruction, cansiny watery eye Se Lacmiamal Ohgans, Dramase of, the comen is liable to opacity in varinus dentrees. The more afondre or cloudy condition, cither limited er penembl, may pass off, and loave the comea asuin clear; lont the white mark, which is the cicatrix ir scar of an nleer, is lermanent. althourh it may heonm swaller by the disappearance of the surrombling haze. The pupil may he chosed as the result of initis, or of operations for eataract, and an artificial pupil may be made hy cither of the three methals-incisin. excision, or separation-but the "pration is scldom attended with suceess. Fiur "qucities of the erystalline lens, sce Cathinact. For an aecount of diseases of the nervons larts of the ey, see Amaciosis. Varions allections of vision may arise from leculiar or altered conditions of the refracting humours of the eye-as
near-sightelness (myopia), far-sidhtelness (gresbyopia), the apremance of buties (muscre) floating in or before the eye: and there may lec dumble vision (diplopia), with two eyen mithene. Se Visma, Absormal Conimtrosis of. The jarts between the cye and its bony orbit max. low the seat of indlammation, abscess, or tumar, making the eye protrude. The movements of the eveballs may l affectud from palsy of the motur nerves or from contraction of the lateral recti museless, cansing inward on out. ward sfuinting. See stambancs. The eye may luse all feeline. from pabyon tha fith pair of nomes. The whole of the sane sildo if the face, mostril, and nouth, will be in the sane connition, ami the we hecones intlamed and disomenmsed. Subatonces thrown against the eve may injore it. Guicklime is raphly destructive to the eye, slaked line and mortar less so. When one of these, or any other canstic, has got into the eye, sweet ril is the hest thime to introluce, matil the smemen arives $t$, remove them. If it is oil of vitriol (sulphuric acill) that has bean the canse of the injury, a weak sulation of sonda may be ased in the first place to neutralise the acid. In gunpowler exphusions near the eye, loesides the bura, the particles are driven into thes surface of it, anl will canse prmanent black stains over the white of the eyr. unless they are carefully removed at the tim. Whan chip of glass, stone, de., are iriven into the interime of the egt. there is little hope of it being saved from destruetive inflammation. When maly lartially sunk int the curnea, as is often the case with sparks of hont iron, or 'fires, as they are called, the pulhing of the projecting part on the cyelin canses great pain, and the surgeon has not much dificulty in romoving them. Nust commonly these, ur wither foreim bodies, as partieles of tust, sand, semts, Hies, de. merely get into the space lnetween the erball ami the lids, almost always concealed nader the uryerr, as it is the larger, and swolls the eye. They canse great pain. from the fimmess and sensitivences of the papillary surface of the lil, soon excite intlammation, ami their presulee, as the canst, is apt to be nerlooked. The bil must be turned round to find them. To do this, pull the front ar edge of the lid forwarls by the eyelashes, hede with the dinger and thmmb, and at the same time press lown the back part of the lil with a small lencil ar key. The lid will readly turn romm, when the boty may be seen about its mindle, ani may he remored with the corner of a handkerchief. Anotlon phan, which the person himself may try, is to 1 mill forward the apper lim by the cyelashes, and push the lashes of the lower lin up betionl it. when the foreign body may be brushed ont. After the bodies are removed, a feeling as if they were still there may remain for sone time.
EYE, a parliamentary and munsipal borough in the north of Suffolk, near the source of the Waveney: 21 miles math of $1_{1}$ swioll. Its streets are rather narrow and irregular. Pop. (1561) 2430. It sends one member to parliament, the proliamentary borongh inchuding eleven parishes. Eye, in Anglo-saxom, means island; the river surromating the tuwn. There was formerly a castle and priory

EYEBR1GHT (Erqumasia), a gemus of $1^{\text {lants ont }}$ the natural order Scrophuldurizte, baving a tubnlar calys, the upher lip of the corolla diviled, the lower of three nearly equal lolnes, the cells of the anthers spurred at the base, a two-celled capsule and striated sechs. Some of the species are rootparasites. The only British species is the Commos E. ( $E$. ancinalis), it little plant of at most six ar eight inches in leight, with ovate semated leaves,
and white or rodulish flumers streaked with purpla, arpearing singly in the axils of the leaves. It is very alhmant fu many pastures. and even on hish momutains, whore-as in very mowthem reatons-it is witen to be sorn wi an! an inch in height, ormminer the sromal abmmabutly with its lrieght littie: flowars. It is a virs whely distributed pant. a mative wi most parts al Finvope, the morthe of Asia, the Hinad.evi, \&e It was once in ervent raphte ats a cure for "dhelahmia, amal is still much weed in runtic praterie for diseases of the eye. I sunt on the corolla, simething like a pupil, sum it mucl of its reputation, whilst the fanciful dontrine of stometures prerailed in medicine: lont it h.os been found ratlly etlicacions in catarraal inflammatious of the ese inm in other catarrhal aflections.
 It is a weak antrinenent. It is the Eur)luasy of Milton, with which be represents the archangel Nichad as purging the risunl neree of Adam.

EYE-PIECE, the name ziven to the mieroscore by means of which the inste of the oliject formed in the fuens of a telesenpe is ubservel. Sue 'Tlelescare.
 in the povemment of Kmissberg and $\because 2$ milns sonth of the town of that mane, contains about :3001) inhabitants, and is celelorated for the battle fought there lietween Napolenn and the allies- Ianssians
 The Fromb force amonnted to abont 80,000 , and the allies mmberd 55.0 , bot were superior in artillury. The batthe was upenol som atter daylight liy a furions attack made ly the Fronch left on the liussian right abil ecentre, which, however. proved utterly mancecssfal. the attacking wopls being all hat completely lestroyed. The marderons strutete was ropentaly rencwed, and the pomise of victory alternated nows to the we side and now to the other. Sight elosod ujum the whole allied line pressitag onward and iriving the Froneh before them. Severtheless the fietory is onedrally claimed ly the latter, chintly hecmse the allied forees, nombe to rembit their strenuth, were ordered to retreat fiom the fiela on the morht of the battle, and to retire "pon Konigetsers. The lass of the allies is estimated at about $\boldsymbol{2}$ ?, Mom, while that of the French must have been considerahly oreater.

ERELII:L (me:ming 'God will strengthen.' or "strenerth of (ion'), whe of the Ilebrew jroplects, was the son of the priest Buzi, and along with Jehoiachin, king of Indiah. was couried captive, when still a young man, to Mesopotamia. by order of Nebubhumezzar, alont ESOS 1s. C. He was a mem? the lanlss of the river helar, and first appamel
 phetie nixar extended over a perion of $2: 2 y$ yars. The ditte wif his death is not recorded.-The lowk of Dizekiel eromists of three great parts: the firat (chibiters 1-2t), composed betore the timal conimest
of Jerusalem by Nebnehadnezzar, anmonnces the complete averthrow of the kingiom of Judali, on acount of its increasing unfaithfulness to Genl; the vecond (ehapiters 25-3: $\mathbf{3}$ ) threatens the surromediner mations, which were exultins malieionsly over the ruin of Jwhah, with divine lunishment; and the thiod (ehapters $33-45$ prophesies the future deliverance of the llebrew nation, and the rebuilalint of Jorusalem. This last protion is generally leplievel to contain several Messianie predietions, three of which are eonsidered specially remarkahle (chaps. 36-37, 3S-39, and $40-45$ ) ; and it is beyome all question that only under a world-wide dispensation like the Cliristian, ean the glorions visions of the proplet recive a historical realisation. The book is full of mognitieent lint artificial symbolism, and of allewories didienlt to understanel; whence Jerome calls it 'it lathrinth of the mysteries of Gorl; hat here and there, as in chapters 1 st and :2d. it contains visions that indicate the possession on the part of E . of a most vivid and sublime inagination. W's antlorship of the book has been puestioned. The 'lalmud sass it was witten ly the ireat Synagorne, of which $E$ was not ia nember: and Ewall, beliering that traces of later claboration are quite obvions, suggests that the collection and combination of the varions prophecies into a book may not have been the prophet's own doing. The minim of most eritics, however, is, that a prophet who was so much of a biterary artist as LD. Was more likely to have completed the hook himself than to have left such a work to athers. The text is far from being in a perfect condition. It is partly corrupted by glosses, has butly leen retonched by later hands, and may aften be mented by the Septuaint version. Tho lnst commontaries on the book of Ezekiel are thase if 1 ivermels (Erlangen, 1S43) and Mitzirg (Leip. 1st

EXZlRA, : Tewish law iver of the oth e. before Christ. He was descemied irom a distinguished priestly family, aml was rosident in babylon in the reign of Artaxerxes Lomgimanus. With this monareh he seems ta hawe been in considerable
 tor retura to Jerusilem with at lamd of his country. wen :nonontine to lait. His services to the new chlony in regard to thair civil and religious condition were very inportant. IT endeavonred to ri-imgase more strietly the liw of Jloses, forbidding marrizges with heathen women, and disannulling such ties where they had been formed. He also intrmined into Jewish literature the square Chalate character. insteat of the ohl Jhemew or Samaritan me, which bad luen customary till then: bat the tradition that he re-vrote from menory the sacred books lurned at the destruction of the temple, deserves no regard: and it is likewise a mero tralition that is president of the so-called Great virnagoyne (an assemhlare of Jewish seholars) he arranged and completed the canon of the Old 'l'estament. Sue Bimin--The book called by his name, almer with the bonk of Nehemiah, formed, among the Jews, the first and second books of Eara. It records events whinh extanded over a period of nearly So years, and divides itself maturally into two parts. The first six chapters embrace a period of $2 l$ years, and relate the history of the first roturn from the bibybonish ealtivity; the rest of the book chmoneles the second return under Ezra the priest, in the reign of staxerxes Longimanus. Thu houk is partly witten in Chaldee, and is prolably the work of various authors.

 :and mure frequat siunifation of the word, it d-sutes a special kime of litury composition, either ponse or rerse, in which a stry of some kimh is made the veliole for converime a miversal truth. It dielhers frem a parable in this resperet, that whit. the later never transecmets in comepotime the lumals of the fruballo or the l"ssalle, the former ahwass and if nomesuity thes. The stery of the" 'Gumb Samaritan' mand ly the אowmor, is a paralde' ; if it was not tries, it minht have leen, fur it contains mothing either imprublule or impersibla: but Whon A.ehan went up to the the of Mannt lamizm, ame spake to the non of shechem aloont the trees
gome furth to annint a king over them, he malo use of a fable prowe The peculiarity, therwore of the wheture of the fable comsists in tha transterence tor hammate whente, or, more frequmtly, the the lomer amimals, of the qualitios of rational being By the very novelty and utter impossilility of the remersentation, the interest of the hearer or rombre is exital, and thus its symanic meaning amd moral income transparent th him, at least if the iable is wedl contrived. The andent fabulists wow simple. dow, and varnest in their remesentatimes. They som to have spung up in the bast. Amone the mone mblatal are bilpai (q. v.) or l'hait aml the Arahim loknan, who is said to have lived in the time of King bavil. Among the circks, the greatest mane is that of Aisop (if. w) whose fallise at andelater perint-the precise time is nut wactly linown-were versified hy a certain Bahorise (of v.). Among the Romans, Pbedrus devery imitated Sxnp, lint with considerable molifieations, thos giving a certain amount of independent valne to his wark. It is perhaps worth mentioning here, that the well-known falble of the Tomen Monse and country Monse, toh ly Horace is of purely Roman urigin, and is probally the only me in existence of which that ean be athrmed. Leaving the classical perion, and before entering on the dark ages, we encounter the mane of Aphthonins, who thonishel in the carly part of the the century, and who wrote indifferent fables in Gireck prose: : mal still later, the name of Flavius Avianns, who emmped furty-two, no better, in Latin eldequcs. During the dark ages, the fable in varims furms apuars to have been cultivated in the monasteries, although nothing meritorions has survivel: but in the millle ages, it acquired fresh hite and vicour. In cdition of the fables current in Chmany in the time of the Xinnesingers bas been publisherl by linimer. 'The whest known (ierman falmist is Stricker, who heal abont the midule of the 1Bith e: b but the famms medieval fable of
 Fox, stretches in some of its mmorous prinitive forms much furthar lack. In later times, most nations hase cultivated the fable with nore or less sucess. We maymentin amond the English, Gay : anmong the Cemans, Hagedorit and Ciellert, and Lessing: amone the lablims dizaotti; and above all, among the Fromb, La fontaine, whose fables are remarkahle for the ir arch and lively humow, their delicate saremm, their samaty, and felicity of expression. Now, howerer, the fable has gone entirely out of fashom, and there secms little chance of its reaplearance.
FAlblALT, phur. FABLIAUS (from the Latin fabuluri, fabollew, to spak or to tell), was the name given in the ohd french literature to a class of short metrical narratives, intender merely for recitation, amb which hat for their subject-matter the talk amb news of the day in the middle ages. The narrator of such news was called a fableor Ghar. fibbiere), in ormsition to the chanteor, or smed proper, whe composel pems not only for recitation, but also for simginc. Besides the fablian, the department of the iableor embraced the homans diaventure (in short unstrophied (ompleta), usually called comes, whence their anthor or reciter also bure the name of contenr: and the dits, or sayines, the special coltivator of which was termed it dis'ur. As the falbliaux were fundanentally distinguishat from the more genuine forms of puetry liy the evervilay character of their sniject-mater, sio the mole of treatment which thirir anthors adopted was also more ancedotical, charammatic, ant witty-the wit being richly spiced with scaudal. Tliey appear to have mantained
a sort of ironical and parolistic antaronism to the idealism of the epies of chivalry. In these fabliand, the esscutial character of the French people manifusted itself, and that opmosition of the real to the ideal, of the murrstanding to the imagination, which, after the time of Francis I., hegan to characterise French literature sencrally. Thus they lashed not only the prisesthon and the nobility in their actual decrencracy, but from the very character of their satire, they engmieral a contempt for the religious-chivalric spirit itscle, and for all ecelesiastical and kuightly hotions and ceremonics. The oldest fabliana are not of French origin; they are a fruit of the Crusinhes, and were brought to France from the East, but they receivel a national colomine, and sonn trok wiot in the West. From them sprung the drama of France One of the most fecund fabliere was Ruteleuf, who flomished in the reigns of Louis LN: and I'hilippe III., whose works were published by Jubimal (2 vols., I'aris, 18.37). He was a truc Parisian, and the prototype of Villon, La Fontaine, and Voltaire. The hest collections of fablianx and contes are those of Barbazan ( 3 vols., Paris, 17 ãt), of Mêon (2 vuls, Paris, 18 23 ), and of Jubimal ( $\because$ vols., L'aris, $1839-$ IS43).

Fabre'tTI, liafraele, a distinguished antiquary and archeologist, was bern at Urhine 1618, and was attractel at an early perion to antiquarian stalies ly the great classical remans of Liome. Under Pope Alexander VII., he became papal treasurer, and sulisequently was appointed chanecllor to the paral embassy at Malrill. A residme of 13 years in Aman enabled him to exphre all the antiquities of the kinglom, and to carry his studies to a point which remdered imdispensable bis return to Rome, the great parent fonnt of ancient learning. He was there made jndige; and umber lmocent XiI., became kecper of the prapal archives of the eastle of St Angelo, a post which affirded the widest serge to his favourite pursuits. About this time, he wrote his two important works: De Arus et Aquentuctibus Ietoris Rome ( 4 vuls., l6so, repriated with notes and additions in 1785), and smbugme de C'olumni Trajani (Lome, 1683). II is treatise entitled Inserij)tionum Antipuctum Esplicetio ( 1699 ) throws invalnable light on the discormies male by himself in the catacombs; and his ermbite investigations eoneerning the reliefs known as the Iliac Tables, amil the grami subterranean canals of the Emperor Clandins, are equally fall of interest to science. His rare collection of inscriptions, \&e., is deposited in the ducal palace of Urbino. F. diech in 1700 .

FABRIANO, a city of Italy, in the province of Macerata (formerly part of thi. I'apal States), is situated at the castern lase of the $\Lambda_{p}$ pemine range, as miles west of Macerata. It has a catherlral, and several convents, but is chictly worthy of mention on account of its sreat paper manufactures, which were establisherl in $1564 . \mathrm{F}$. has also numerons tanneries and powder-mills, and manufactuces of lates and cloth. Pop. Toso.

FABRIANO, (ienthe da, an 1talian painter, who flourished in the carly part of the 15 th ceatury He was lom-it is not exactly known when-it Fabriano, and received his furst instructions from his father, who appears to have been a man of superior culture, as he taught his son the elements of physics and wathematics. F.'s first teacher in art was, it is supposed, Allegrette de Nuzin, Subserpently, he went to Florence, and stadiei umder Fiesole. Among liss earliest works of note is a freseo of the Madonar in the eathedral of Orricto. In I423, he painted an 'Adoration of the Rincs' for the chureh of the Holy Trinity in Florence. This picture is one
of the mat atuivalle helonging to the schoul of Ginetto. To the same prrien belongs a Alaloma with saints (now in the brrlin Mnsenm). F. aiterwarls went to Vouice, where he freatly increaser his reputation ly a picture of the boorly engagement between the flect of the Repullic anl that of the Emperor Barlarossa wil the heiphts of Pirano. The Yenctian senate was so drlighted with the piece, that it conferred on the fortmate artist the dignity of a patrician, and a pension of a ducat per diem for lifte. Unhappily, this work has perished. Pope Martin $V$ : now called $F$. to homae, and cmployed him, along with Vittore Pisanello, in adorving the church of San Giovami Laterano. As his share of the work, he paintel varions incidents in the life of Juha the baytist, five prophets, and purtraits of Pelu Martion himself amiten cardinals. He hich, while engaged on this luiluling, some time aitor 450. 1 .'s pictures indicate a cherrul and joyous nature. lle had quite a chiliflike love of splendure and rich amamentation, lout is never extravagant or excessive in his colouring.

FABRI'IUS, or FIlSIIZR1O, Gmolamo, consmomly manch from his hirthplace $F$. AB AcQuifoviexte, a culchratel anatmist and surgeon, was hom in 1597, amf died in 1619 . He was the sum of humblo larents, who, nutwithstanding their poverty, sent him to the miversity of Padua, where, in andition to the naual instruction in the classics, he stulical anatimy and surgery under the celelmated Fallopins with such strecess, that om the death of the latter in 3502, was apminter to fill the vacont [mofessurship. He rontinuml to huke this office for nearly half a century, during which perion his high charactur for eloquenec, general crudition, and mofessional knowledge, attracterl students from all parts of the civilised world to the emirersity of Yadua. Amonest these stiments vas our comatryman Harrey (c.v.), whattented his pelections in 1598, and who, as will he seen in our notice of his life, derival from F.'s observations on the ralves of the veins the first elue to his great discovery: Nle was a munt lathrious investigator of matnre: and We fiml him comparing and contrastime the same organ in man, and in several of the lower animals, on a nore me thodical 1 lim than han been attempted by any of his predecessors. In this way he treated of the eye, the larym, the ear, the intestimal canal, the Revelnpnent of the fortes, and many other subjects. The innurovements which his knowled re of anatony onalheal him to introlnce into the practice of surery Whre very great: anel his Opere (thermeter, which cmbraced overy complaint curable by mamal oneratien, was so highly raherd, that it passed through seventech elitions. IIe was reatly eatemed by his fullow-citizens, for we thm that the Tenctian repulatio not only arecterd for him a spacious anatomical amphitheatre, in which his name was inseribel, lut at the same time conferred upon him an annal stipend of a thousand crowns, and cratel him a knight of the arder of it Mark. A few years b froe his death, he retied, with an ample fortune, from all professional duties, and clied (some belinve he was pisoned hy his relatives) at the age of 8 , in his villa on the hanks of the Brenta, which still lears the name of the Montagnuoles d'Acquapendente. We have not spree fur a list of his mumerous anatomical anil surgical works. Upwards of a century after his death (in ITO3), the celelorated anatomist Albimus collected and 1 mblished a complete edition of all his anatowical and physiological works.
FABRIClUS, Joh. Cmistiax, a Danish entomologist, horn at Tondern, January 7, 1745, ant dicel at Sic in in $180 \%$. He studied at Copenharen,

F.'s death was said to have heen hastened by the orief which he experiencal in consequence of the pulitical misfortumes of his country.
 writer, was bom at Maradi, in Tuseany, Th Fehraary 1732, educated at laenza and Lame, and in 1773 , was appinted tutor to the sens of Leopoll, Grand Duke of Tuscany. He thed 2ed Neptember:

 175-1805), is one of the intst ltalian works of its kind, and contains guite a treasme of information;
 and l"ite Mromi Cosmi Mrlime ( $\because$ vols., Misa. liss 17Sil), are reckoned model hingraphics.

FACADE (Fr.), the exterior front ar fice of a buiding. This term, althmerh fropently restricted to classic ar bitecture, may be apmon to the fromt flevation of a huilding in any style. It is huweror, wherally used with reference to luildinge of some masituide aml pretensions; thas. we sjuak of the iront of a lonse, aml the fayade of a palace. Tha inck clevation of :m impertant huilding is callal the rear facale, in the same way as in Euglam? the lack of a hamse is called the 'imeth frome.'

An celifiee may lave :ny momber of fagules when it shews a face in from in cach direction. An clevation of the since of a buibling is called the leterol facale. The siles of a cont or cortile are also wallul facales, amb are distinguishel as north, soath, dic. fugales.
 and critic, was lorn at Tureshia, not far from 'ama, in 16s?. He was culucatel in the religions minary at l'alua, where he beenue suceessively I'rumeser of Theolegy, Irofossor of Philosophy, anit Sum rintembent-genaral of the classes, or rector of the institution. F. Jirectel lis attention chiefly to the robis: if the study of anci+nt literature and with this ohjoct, limught ont a new elition of the Lexiem sip'em lin!morm, called, from ita origmal author, the monk Ambrosins of C'alepio, the Calepine Le tirn. H. was atsisted in this work by his pupil. Forcellini, to, whon is mainly owing the conception of a totally new batin dictionary; an armous undertakina, which f: continued till his doath in 1809 , and which was afterwards completwl by Forcellini in 1771. F. and Forcellini, assiston hy several athers, likewise publishat a now edition of Nizoli's Theseurus
('iomomimus. F's Latin cpistles and orations are remarkable for the Ciecroman elegance of their style, and his nutiens on soveral philusophical writings of Cicero fur their solinlity, elearness, and tant.

Fd'cI:T, a term cmploy to denote the glane surfaces of erystals, or those artiticially cut upou yrecima stones.

## FACLAB, ANGLE. See Axom:

FACI'LITY, in the legal teminmogy of Scotland, is a condition of mental weakess short of that which will justify (oumition ( $1 . \sqrt{\circ}$ ), but which calls for the protectinn of the haw, which is exercised by means of a promess calleal Intoritiction (q. v.). The whject of introdiction is tw frevent the facile person from granting dowls to his own produdice, and after it has taken phace, he camnot contract without the consent of his interdicturs. Even withont interdiction, the neels of a facile perern, if to his prejudice may be set a-ide, if there be proof of his laving bern circumbented or imposed on; and Erskine say that where lesson in the leed, and facility in the grauter concur, the most slender circmanstances of fran? in circuarention are suthcient to set a deed aside.'-B. iv. tit. 1, s. 97 . See Frade, Łestos, Inslativ. There is no corresponding torm in English law, and the remely of interdiction is unknown, lont weakness of mind anmaching to iflocy will of course form an important clement in poring framd.
FA'CTOR, in Hathomaties. The numbers 6 and 4. multiplied tagether, wake :4; hence 6 and 4 are enllon fertoms of the product 24 . Nost numbers are prolncts of two more factors; thus $10=2 \times 5$; $12=3 \times 4,02 \times 4$, or $2 \times 2 \times 3$. Every product can la: divided ly any of its factors withont remamber; a factor, therefore, is often calleal a Whiser, on mante. $2,4,6.8,12$, are all factors ne divisurs of $\because 4$. Numbers that have ne factor or , livisur ahme unity, such as $2.3,5.7,11, \ldots 23$, \& $\mathbf{c}$, are called Prine Numbers ( 1, v. $)$.

FICTOL, in its most momal sense, is the term apherl to any one who is cmployed to do business for another. liactory differs from the mandate of the lioman law in nit bing gratuitons. In mercantile transactions, the sale if goots is gencrally athected either ly incturs in lnokers, buth of whom are whents, remmerat d menally by a commission. but the powers of facters ase ligher than those of brokrs, inasmull as the fomer are intrusted with the $1^{\text {nissession }}$ of the gools, and authorised to sell then as if they were their own; whereas the latter have no pasitsxim or apparent ownership, but aet not only really but ostensibly as agents. Faetors frequently act on the principle uf the del credere commisuien ('t. v.), recervinge that is to say, a higher remmeration in consideration of undertaking to suarantee the solvency of the purchasers. At eommon law, a sale or other transaction ly a factor was had, if it was not fully warranted by the mature of the anthority which he lerivel from his prineipal; lat this ductrine has been moditied hy several statntes which have bern passed for the protection of strangers dealing with persons intrusted with the posecssion of gouls, the extent of whose authority they hat no neans of asertaining. by 6 Geo. IV. C. !i- , ealled the Factors' Act, it was provided that any 1 erson in $1^{\text {wssession of a }}$ a bill of lading is to be decmerl the true owner of the gools therein described, so far as to give validity to any contract or agreement made with him regarling them. 7 and $S$ fen. N. enacts that if any factor shall, for his own lomefit, and in violation of gond faith. deposit or pletue tuy goots, or order for their delivery, he shall be guilty of a misdemeanour. In 1842, the
214

## FACTOR-FACTORIES.

powers of 6 geo. IV. e. at were defined and extembel by 5 and 6 Vict. c. 39, which enacterl that bomt fide altances to persons intrusted with the possession of gomels or ilownonts of title, thomgh known to be agouts, should be proticterl; bond fide deposits in exchange wre also putected, hat it was provilent that thate shonlal be nos lit on ligeond the valne of the gomes given up. 'The arentis rusumsilaity to his prineipal is not diminisber, lant it is providerl that if he shall make consigmonto contrary to the instructions of his prineipal, he shall h, guilty of a misclemennour.
In Sentlank, the term factor is aphtich furn arent manaring beritalle estates for another. 1etting farms, draming rente, and the like. in which sense it is mearly symonymous with the Enelish steverel, a term which, in Secotlam, again, is employed to dmote an agent whose powers are of a far dure limitnd kiml than those of a factor, and who gencrally acts umber bim. If a factur pay mome intria fank on his own acemut, he takes the risk of the bakk's failure. A factor canmet delyate his purers, but he may employ a thim party tur and lim in their discharge. He binds his principal to any encagemont which be contracts within his powers. Factory may be realled, and falls by the deathe of the principal ; lint actions alrealy berin may go on, aul thon lone in ionmance of the revaration or death are linding. lievocation is implice in the appnintment of a new agent to do the same act. The mandate of factory subsists notwithstanlinc the supreming iusanity of the mandant. Factors maty le empoweren th grant leases and pursue removiles, loit for these acts special powers are requiret. Writers to the Signet in Elinburgh, amb witers in country towns, frequently act is factors for the nuighbouing landed proprictors. Eut all the great limdowners had formerly, and many of them still have, fincturs resident on their estates. See Aeext.

FD'CTOLIES are establishments where large numbers of persons co-mperate in the protuction of some article of consumption, the primeiple of the division of labour being in all cases applion, amd erenerally wachinery to a greater or luss pxtent. The factory-system is apposed to the practice of individual lahme at the homes of the artisans. Fvery production of art requires a longer or shorter spries of oprations, often varsing eonsidurally in their mature. The hand-worker performs most of these himself; one and the same person makes the complete artiele. In a factory, every article goos thenth as many hands or machines as there are separatio pousses rumired ; cach worliman performs ouly one and that always the some, process. Ther chief alrantages of this way of procreting are the following: Loss of time is armidon in prassing from oue poration to another, a loss which is the greater, the greater the diffrenee in the nature of the operation. The workman, continel to ome thing, in itself usually simple, not only leatus it somer, hat attains a quidkoss aml skill that wm distracter with a variety of merations em never attain; leesiles, the comatrut necunation with one kinil of work leads the workman to boght upan impnovements in tools an! machines so as ti incratse their rapility of execution and their precision. Is comly fow of the processes are very diffientt, it is possible to turn to some account less skilful workmen, and cven chilhen, and to assign to cach person that kind of work at which he is most effective. AII prarts of the work, too, that are quite uniform in the case of eacls article, can generally be done by machinery. Lastly; in factories, there is more opportunity of twoing to advantage all kinds of refuse.

A necessary consequence of these advantages is,
that the cost of production is less on the factorysystem than in the other way; and more than that the artieles themselves, when of a nature alapted to this more of 1 roduction, are better, and of a uniformity otherwisi mattamable. Wharever a enmparatively homogencons material has to be made into a large number of mifoman articles, there the factory-system is in its pruner llace. The best examples are spinning, weaving, eloth-printing, 1 in and acelle making. \&e. But ewen in the mamfacture of emplex artieles componed of dillirent kinds uf materiad, the factory-system nay le pursuch with alrantage whenever the mminer of the articles requirvi is great, and the sepurato parts of such a kind that in great momber can be male exactly alike. This is the casc with watelses, weagons, loclis, \&e. Such a manuiacture divides itself into as many seprate employments as there are parts in cach article, and the putting together and aljustins forms another. The clegree of complexity is carivil still further in such cases as the manuacture If carriages, where operations of the aust heterogeneous kind lave to concur. In some cases, factories do unt concern themselves with the putting together of the pata, int merely poduce them fur hand-workers ant special professionists, as is the case in watch-making. In making clothes and shoes and the like, where each indivinual article rerpuires special allaptation, factory work is not so suitahle. How far it is alvisable in any case to cuploy madinery, depents on the nature of tho work, the cost of the machinery, the scale on which uperations are to be carrier on, \&c. Nowhere lare the factory-system and the employment of machinery been carried furtber than in America. In Cincinati. for instance, one estalmshment in 1854 prohuced 200 dozon chairs a week, another 1000 berlsteals, most if the work heing done ly machinery: and one bont and sloe factory used fio hushels if sheeregs. Evin the killing of pigs is done on this grand scale, one estahlishment killing and pickling 12,000 hang and 3000 wen in a season. -Factories cannot succeel in great numbers except in localities where the populition is sufficiently dense to afford a suffienont chaice of hamds, and also to canse a compratively low rate of wages. Other conditions of a fomen fity fur factory production are abundance of water-power or the presence of conl for stem porra, marm in to the raw material, and goon commanications.

While the rise and extension of the factury-system, when looked at from the point of view of material conomics, must be promonnced a decided improvement, it camme le thened that, sucially and politically consilurel, it bas its slark sile. The greater the capital amy the training neecssary for carying on an extensive establishument, the less prospect the workman has of ever raisins himsulf to independence. The chasm that seprarates the mill-owner from his olependants is infinitely grater than that which exists between a master artistm and his jompneymen. The hope of cradual advancement afforded in the last case suphties a lowerful moral support and means of discipline; the inmassable gnif in the other acts as a stumbling-bock and temptation. Factory-workers are especially disposed to enter heedlessly into marriage, as they require to make no $p^{\text {rovision }}$ for a workshop, tools, and other outlay once necessary for entering life; while they have the prosject of the wife, and soon of the children, as contributors to the support of the family. It may, at all events, be affirmed, that the increase and accumulation in masses of the class called protutures, who have no jrovision for a weel: lont the lahowe of that weck, is faroured by the factory-system. Morcover, the cmployment of wife

## FACULTY. Sce Tiniversities,

FACULTY, a naruc applied to cortain aptitudes or powers of the mind, especially those of tho intellect. Lieid consillered that the characteristic of a faculty was its primitive character, as mpsed to the acquirel powers, or hahits. Sir W. IWanitom remarks on this distinction as follows: 'Puwers are active and pussive, metural and arguirel. Thowers natural and active are callerl f"cultios. Powers natual and jassive, cupucitios or reerphititios. Powers acquired are halits, and habit is uscul both in an active am? passive sense.'-licil, I' $^{\prime}$ 221. Hence, in discussing the intellect, whatever are consideren its 1 rimary or fundanental functions, are its facnlties. I'ereption, Momory, heasoning, Imagination, are the lealing intellectual faculties. aecorling to the wher metaphysicians. who followed the pophlar classitication. These wouki nut now he considered as givine the ultimate analysis of the intellect. Comscience, or the mumal sonse, has sometimes been called the moral faculty. Sice Inteleect.

FACULTY, Giant of, ey tie Ohdiahiy, an order by the hishop of a diorese to awanl some privilege not permitter by common law. A faculty is necessary in order to effect any important alteration in a church, such as the erection of a sallery of of an organ. Without a faculty, a person is notentitled to erect a monument within the walls of a church. But a monument having been prat up, though withont a faculty, camot be remorel! till a faculty or order to that chlect has been oltainca. By the common law of England, every barishioner is entitled to a seat in church, but no me las a elam to any particular seat, menless the right has been given loy a facnlty. See I'ews.

FACULTE OF ADVOCATES. Sce Advocates.
FAECES, or SOLID DXOLEMENTS, are the matters which an anmal cjects from the lower ead of the intestimal camal, and in greater part, consist of those portions of fom which, on passing throuch the alimentary canal, have hicen rejecterl as combaratively worthless in the office of nutrition. In the higher ammals, the faces generally contain ahmut the e-fourths of their waight of water, the romaming one-fourth consistime, in greater part, of organis remains; in the case of the ux, sleep, and other herlivorons animals, of undigested wooly time. In the hmman subject, the prantity of feces yiched daily by an average hatilly man is 5 to 6 onaces; the neculiar bromin colour is due to the presence of deemposing biliary matter, and the odonr to fartially changed nitrogenous substances resembling casein. The following table sives the composition of human and ox faces:

For use as manure, these faces are of little value as compared with gunno, dissolvel bones, or snper$p^{\text {hosposhates, and, indeed, the princinal etrete matters }}$ of importance to the asticulturist are resident in the mine or liqnid excrement of the higher animals. In the case, however, of birds and reptiles, the urine and feecs are voidel together more or less moist, and hence the richncss of such excrementitions
matter. and its hish agricultural value. See Guaso. The following table crives the composition of the feeces of the hina comstrictor:

FAED, Jous, a popular Scottish manter, was born in 1820 at lurley Mill, in the stowartry of Kirkeulloright, where Jis father was an engineer and millwright. His love of art was manifestel at an early perion, ani when harlly entered on his teens, he was in the hahit of making tours through the rillages of (xalloway, painting miniatures. In 1841, he eame to Elinhurgh, where his talents nitimately wom him a high reputation. The first pirture of F ’s that olltained grat mpularity was 'The C'ruel sisters,' the subject of which was taken from anoll scottish ballarl. It was exhibited in 1851. Since then, F. has exerutes, amons other works, 'Shakspeare anil his Eontemporaries,' 'licasm and Faith,' 'The Conter's Saturday N"ight' (probahly the must wilely admined of all his effints), "Tam o' shanter,' and 'The Moldiors Return.'
FAED, Thomse, hrother of the proeding was born at limely Nili in 1824 , ani has also followed the carcer of an artist. One uf his earliest efforts was a drawing (in water-colnurs) from the ehl Englizh Bamo. In 1st9, he liceame an Associate of the Royal renttish Acalomy, and shortly after exemed a very attractive work, mititen "Sontt and his Frients at Almotsforll.' In 180n, he removed to Lomdon, where his'Mitherless Bairn," exlibited in 185.5, was declavel hy the rrities to be 'the pieture of the seasm.' (If his subsergent works, we nerd only mention, 'Home and the Homeless,' and 'The First bueal in the Family,' the latter of which is remarkable for its simple and homely pathus. $^{\text {and }}$

FAE'NZA, a town of Italy, in the prosince of Ravema, and og miless sonth-west of the town of that unne, is sitmated on the left hank of the Lamone, in a loantiful and highly coltivated plam. It is sumomer with walls, is will huilt, and is in the fum of a ermare, livided by four great strects, which mont in the entre. The strects of $F$., though in wenoral narrow, contain cronl louldings, among Which the chicf are an impusing eatheilral, a fino market-ibace, survoment with areales and aloned with a fommain, amb muncrous palaces amp ecelesiastical edificus. It is the suat of monsiderable manufactures of glazed ami coloured cirthenware ressels, winch in Italy are called 'Majohien, ant in France 'Faience' (g. v.). Linen has an high phatec in the proviucts of the town. Por. 20,3\%.
F. the ancient Formtit, was at one prioul a tuwn of the livit, was aft rwarls a municiznum under the Fomans, and was anmexed to the states of the thureh in the lothe be Pope Alexander V., in whid eomition it remained till 1 Stal, when, with the Emilian prowinces, it was annexel to the Lingrdom of Itily muluc Vietor Emmanuel.

FA'GG1NG is the name given to a usure peculiar to the great puldic schomls of England, the nature of which will he presently describel. The origin of the practice camot he traced. No school statutes refer to it, no sclmol traditions speak of a time when it was not. The statutes of Cum College rather inlicate precautions against it, for they ordain that there he thirtecu pour youths in the establishment to work fur the college: Lut in Edward IV's time the: collese was much impoverished by royal depredations-the fellowships were cut down from

## FAGGLNG.

 How ver, be the erigin what it may. the inetitution, as we hase sain, exists, and in very nearly the same cm. in all the puldie schools- that is tosay, btom, Harrow, Wiestaninster. Winchester, ambllugh Its win fontures are in wery ease much as fillows: In aroly schol there are two limits: the apper linat, Atombing to the luotom of the tiret ame or two foms (the pullice sultwh designation uf chaserst. Inlow which a hoy may not fire: and the lower limat. ampising the last fene or five of the low et forms, bowe which a boy may not be faste al. The luys letween these limits, as also thowe whe, although momprised within the how limit, have heen mote han in ecrain time in the shand, are sleveid alike $i$ inghts and dutits in manation with this practice. The sertices oi a fage are of two kimk-the one comprising his duties to il special master, to whom he has heen assinnel: the "ther wasisting of these due to the whele of the upper boys. The formar comprise such taks as preparing his mastor's brakfast, stuking his master's tirte carryine his master's
 delicacios fin his master's consumation, and in this instince, if detected, beariu; his master's pumishment. Thase servies which a lower buy owes to the whon of the uper loys, consist of attendance at the games. In the cricke season, the fags perform the functions of a net, and stand hehind the wickets to stop the balls while their seniors are practising: and at all seasoms they are liable to the drearice tack of waiting att adane on the racket-players, aul retrieving the balls which have been 'skyed' ont of the court. All cases of diffonlty arising ont of fosing are within the jurstiction of the hem-toy in the homse, or the hear of the shool, and are settled by reference tu him. Sinch are the mam pathers of farging at the pescnt day-the ihn pervaling the institution beinse that no bey shand le ling t, the perfomane of any thaties wally menial, bat only such as, in the absence of the practice, womh maturally he perfomat by canth hey for limstif. Xtany of the almses of this jractic. which have from time to time leen disenvered amt suppressad, afforl whimsical ilhastratims of the perant ingenuity of hey-nature. In what sehol, a conion boy unce had a studs, hat was not stmbinis; he might have let it out to a younger hoy in want If a crib to raal in at a rent of some five or tha hillings a term, hat his mind soared heyod sudt paltry healines; he conceibel vastor and pander duas of the management of his jomerty: ha set up a ta]. H1. smuretel into his fonm a nime-gahom
 asaion of govemors, and a brisk demand for bet;
 whtur tarecise the enders. The donty crew
 amblaphly in the fathful lischatge of his hatios. rumther inntane eonsisted of an equally whimsial Wh widely difirent exercise of power. A sixth-
 twa wry nice wellewndition-l ymmeschelars, fit mo arly and come to his rom ary maming before hand int pays.
Sn fromanot a iatare in the rmstitution of Enelish publi, achoula :t the institution of fargins, of "onrse, rewived meth criticisu from e hacthal seformers. The well-kmown anthon of tha 141, Is from I'it rfamiliss to the Gornhill alumesime, himalf in Etronan, and one of those rare instaners
 that of his swluldife, swaks of the practice with the createst hithomes. Fatume, says he, "now
 hrealuesporket question. I nsed often to donbt,
when catled of from my stadies, whitst a lower boy at Hardester, tomon my masters fire, to prepare his meals, or to hrush his clothes, whether a system which promitted and mphehl such practices could really the benedicial to hine or to me; but I never han any dombt that it was very beneficial to our thtur, imasmath as it sparel him the wages of some two or thee servints, whose menial work was perfimend lhe lower loys. Of course, the ingennty of war masters disconcial plenty of excellent argumonts in support of practiers so comvenient to themsthers; our parents nsed to he told that carrying coals for the uper beys, and toasting their mothos, made us helpful and imile, aml towk the nonsense ont of bumptions lads ; lout such arguments would have applicd just as aptly towards establishing the wopricty of sotting yonds noblemen and gentlemen to assist the scullion, or tor surt out the dirty linen for the wash." These are certanly sharp words, but doulthess many persons may he found to sympathise with a grat deal of the censure containel in them. They will tell us that much vigilance is necessary to prevent the abuse of the power of exacting casual scrice on the part of the senior boys, and that the rules of fageings such as they are, give no adequate security against serious rexation and waste of a small boy's time. They say that the farourite apology, on the ground of its taking the conceit ont of those who have leen spoiled at home, is fallacious; that foothall and 1 barsing are sufticient curatives of this evil tone of mind; and that if the necessity to render survice to a senior takes the comeeit mut, the sulsequent privilage of the early excreise of 1 wow only ton rapidy pours it in again. They theny, alse, the ralility of one very favourite assertion of the upholders if the system, that the rolition hetwen master and fag often, and indeed formatly; gives rise to rery pleasant intimacies lectwen the mper and lower boys, and intimacies very bencficial to, the latter. On the contrary, they mantain that no case of attachment between master and fag ean be $\mathrm{m}^{\text {wintal }}$ to which would not have existed under any ciremmetances, and that this ratation may often be foum to have marred what woull otherwise lave been a very friendly recollection. The alrowates of the system tell us, on the other hamd, that the attemant erils are greatly exagerated, aud in whe cases purely fictitious, while it is in many respects of very great, if not essential, service to the existence of a pablie selool. They deny that it has been originated and upheld by the tutors from purely commercial considerations, as asserted by laterf:milias; for, as has been already sait, no really menial services are exacted of any lay, hat only such as each boy might reasonally be "apecter to perform for himself, inasmuch as, in wint of fact, many melu at the miversity-not choosing or not being able to afford a gyp-do really prepare their own brealitast, stoke their own fires, and go on their own crranch. That while abuses do weasimally vecur, everything is against the probalulity of their frefuency or extent, as the utmost finelity exists on the part of the juwiors for bringing their iricuaces before the proner anthorities, and ohtaining eluely relress. They say that, as a fact, the survices of a fag are so light that be does not "are or think about them, and they appeal in support of this statement th the tone in which the boys thomstres are in the labit of referring to the subject. See the Rtominn, a periodical published by sme Fitun boys ito ar +11 years ago; and the Triumpirato, a similar and more molem periodical from Harmo school. But the principh argument in the winne of the system must always rest, its suphrters tull us, mon the security aiforded by it agamst lullyins. In pmblic schools, where the ages
of the loys vary from ton to trenty, a much greater liberty is given to the loys, and much greater contidence is reposed in them, than in private schools -the idea being, that their characters can only be truly formen by as umestricten interomuse as possible amous themedves, not hampred ly the eonstant presence of a superion. This mustant presence of a master is, therefore, replianed by the traditions and constitution of the schon, in whinh wach buy has bis assigned position, and his definite rights ind duties; a constitution, therefore, whirde cach loy feets a persmal interest in uholding. sach a saciety necessarily requires a purision fin thu rolation between chler and younger hows, lietween the weaker and the stronser; for in the absunce of this, the ordinary aspects of barbarisu would he prosented, and lwite fore he alome prodomimant. Such a prorision, aceptalde and intri. ligible to the boys. and reasmable in itsolf, is believed to le fonmil in the farging system. Tiy this system, it is athrmen, provision is mate alike fur the chans of age and intellect, imasmuch as it is scarely imssilte that any very stuphil hoy should fag, while no very wh hoy ever can he farded.

These are the chicf fatmes of the taguing systom at pullie schons, and the pincipal argunents for it and against it. Sec Deadilism.
 of the themometer, was hurn at Danzig alout the ens of the 17th c., and was originally thesigned for the commercial lutession. Itis inelination for atitmal philosoplay induced him to quit that business, and having travelled through Gertany and Sngland for the purpse of entargint his knowbugge, he setthe in Holland. In igo, he first conceived the jlea of using quicksilver insteal of phirits of wine in the comstruction of thermaneter:, by means of which the accuracy of the instrument was very much improved. Sue Thfmometer. In I-O4. F. was elected a Fellow of the Foyal coriety of London; and the Philosontictel Transections of that year coutain several papers hy him on points in maturaI philosophy. He dict in $17 \pm 0$.

FAIENCE, on FAYENOE, a gencral term for all sorts of glazen earthenware and dorelain. The origin of the name is disputed. Sume derire it from Fayence, a small town of I'rownee, nthers from Funma, a eity of ltaly; while certain writers consiles that the isle of Jiajora is at least the place where it was orisinally manfactured, in prof of which they apmal to the fact, that the Italians still call Faienee Mogralien ur Morqulinet.

FAI-FO, a seamert oi dmam (4. $\because$ ) is whe of the mure consilerable marts of the empire. It stands on a river near its month, communicatiug with Turon. 15 miles to the nuth, by means of a eanal. It expurts sugar anel cinamma, its pincipal trade being with china. It coutains 15,1000 inhalitants, whan are mostly Fmblai its.

FAINEANTS ROIS (the "Dn-mothine Kings"), the sarcastic lesignation of the later lle rovingian sovereigns of Franee, muler whose name the famous Mayors of the I'alace really suverned the country. The first of the Dornothing Kiwes was Thierry IIİ., nominally monarch of Emrgnidy, Alcustria. and Austrasia: the others were Clovis Ill.. Chillebert 11I., l) agobert 111., Phitpéric H., Thimry IV., and Chitheric III. The last of these was aethroned in 7.30. 1. I., and he being shut up in a monastery, Pepin be Lim Mayo of the Palace, canser himself to be formally froclaimed king. This was the end of the Norovingian dynasty ; it is curions that Louis V., the last of the Carloringiaus, aml a descendiant of Pepin le Dref: also receivel the contemptuous
opithet of Freinétht, as those mamachs late who were dethroned by his ancestor:
 fall (lown), is a contition in which, from a smuden mental or hodily improsion, the circulation of hood is temporarly arrested or very much diminished in force and fohum. the respiation and the functions of the nervos system loing likewise sus. ponled. The indications if fanting to a lystander are chiefly a sudhen pallor, actmpanied ly loss of power ore the limbs, with disalucarance of the pulse and morments of respiration; the eres are commonly half "pen or clised, the conntinance hoodluss, fout quite at rest, and not indicative of suffering or "listurimace : the flaceid, motionkess comblition of aill the limbis also tends to distinguish simple fainting from eprilepsy, and the other diseases attumat with quam: Hhilst the ranishing of the colour, and the suppression of the pulse, make a marked distinction letween faintime and Catalcpy ( $\mathrm{f} \cdot \mathrm{r}$ ), and wher forms of Hysteria ( (I. t. ) ; with which disorhers, lowerer, fainting may in some cases be associated. The mode of urigin of fainting, and the staty of its phenomena, alike lead to the conelusion that it is primarily an impressinn upon the mervins system, buy minch of the same nature as the Collarse, or shock of at severe bulily injury; this racts, in the first instance, on the heart, and through the circulation on all the other functions of the body: Finntins may end is dath, if tom polouged, or if associatel with disease of the internal organs, and especially of the heart: lonce a particular variety of tainting has been separately studich, ank named stmeope anginown, or vitherwise Angine pectoris. Sue Ilenfat, Disfate of. Ortimarily, a purson who faints from mental emotion, is hot aul close atmosphere, or other transint cause, is rentily restored by loing laid on the back with the heall low, and sinrounded ly alrudance of cool fresh air. Any tight articles of dress shouk lue loosened, and a strean of cold air, w a little cohl water, shonk be directed to the frem and neck, so as to ruse the respiratory movemonts. It is common, also, to apmy ammonia or amatic vinemar to the ustrils; but a mure eflective way of exciting the respiration is to compress the ribs. ami allow them to expaml again altermately, so as to imitate the matural movement. Care shoull hatakn ascertain that there is no obstruction in the thruat or airn paskages, as suifocation frum mochanical causes has heen mistaken for faintiñ, and the real oricin of the mischief overlooked, with fatal consequacts. Should
 sucecel in ratorin!s the respamtine and heart's action.

This treatise is still in manuseript.
FAHEFAK, Thomis, Lutatameral of the parliamentary trome in Endam during the civil wars unter ©handes T., was the som of Perdmand. Land Fairfix, nall was lmon in Joll. at Wenton, in Yorkshire Ho stwhed at it hom's 'ollege, Cambidere and afterwarls served as a rolunteer in IIollame, umber Lard Vere, whose fonth dangher, Ame, he married shatly after his return to bogland. On the watheak if the cisil war in 1642. F. warmly paponsen the emase of the parlinment, and was aymonted cavalryonoral under his father, who commanded the prirlinmentary forses in the north. Ho distingushed himself so much by his valour. pendence, and mergy, that in 164.5, when the Earl of Essex resimed his willew of sencrat of the parliamentary forces. F. was apminted in his romer. In a shont time, 1 romwell. who hal been apminted lientenantgencral, obtainend monaded intlume over him; and from this time, althemph nominally head of the [ambuntary fows, be wally played a secmary pert. At hist, in Jum 1 li, ", he refused to mareh arainst the sonts, what han proclaimed ("harles 1I. king and cromwell was apmonted commander-inchici in his steal. F. now withelrew into private life, and did not come forward asain until after the lath of Cromwed, whon la shewed at real for the restoration of the kins, gathered trops for that purnse to assist Cencral Momk aqninst Lambert; and was appointed one of the delegates despatched tu the Masue in 1 hino to promote the return of 'harles IL. He died at Bilburgh, near York, 10th Folmary 16al. F. hate a slight turn for literary Imsuits, and wrote sereral works, prose and puetic; anomy nthers, one chtitled Short Memorials, which was published in 1699.
FAIRIES, ELAES (Ger. clle, or me'; Sw. elf: Dan. cllojuth; Ohd Norse, alfr; all allied arparently
to Lat. uhtus). White, amd signifying a loright, benign spirit: Fr. fer : Ital. fute) supernathral beings, generally of dimintive size, a helief in whom has been anomy the sujerstitions of the greater portion of the European nathens. The etymology of the worl fieiny is doultinl; sume derive it and the Fre fee from a celtic word fiter, to cham ur lewitch : otlacs associate the Pr. Fill all the Talal. fatio (a friendly gendess or spiris) with Lat, fimem. fate: others, again, trace fition to the furi of the dernans (pronouncel firi by the Arahians, homane it to hawe bern brought to Europe by the Cmadero. Be this as it may, the Celtic fees on fanies are undoubtedly relics of those mufors and mutront, which aprear on fallo-Konan inscriptions as
 the 'lentomic and sonthem nations. the northern elves (which were ariginally of two kinds-the: light elves, or elves proper, aml the hark ebse or flwarts) becane mixal w, with their celtic kindred the faries in inextricalile cominsion.

It is gencrally dithenat to give any scientific definition of the nature of a superstition, becanse its phenomena are comtinally varying according to time, place, and other emulions. The fary superstition especially defies definition, becanse it was the peculiarity of the creathes to, whom it referred that they followed no resular law, human or divine, hut wheyed the imple of their own candiee: hence evry fary tale difters fom an ther. Still. there are distinctions anol suechalities that ean be malu out from the examination of a large nmmber of these narrative In the tirst piace, the superstition peculiarly ledongs to modion Eurone: We find nothing like it amon' the idolatries of the heathen referred to in scriptare, nor does the word oecur in the English Lible, or its eruivalent in the original texte. In classical mytholong, there is nothing nearer to it than the nymp of the fombain or grove among the Grecks. In the next place, it may be detcrmined that the varieties in the surerstition correspond, in sume measure, with those of the physical exergapyy of the districts in which it prevails. In those parts of the world where there are momintains, mists, langernos morasses, cataracto, anl strmy veans, all superstitions, being a belicf in supernatural azencies, are naturally exacgerated, and, from the dangers to which the perple are liahle from the agencies they deem supermatural, the belief takes deep rout in their minds. Aceorlingly, in flat and well cultivated countries like Luglaml, the fary superstition is simple and homely, connerting itself with matters of elrmestic rutine, such as the sweeping of the dwelling-homse the skimmine of the milk, the preservation of the butter, and the har: white in Seandinavia and the Highands the fairy people are connected with stoms ani convalsions. lietray people to their leath, fly away with them into the infinite clomd-land, or heml them thromp endess caverns within the earth. It has luen olserved. as a further distinction, that the faries of the German or Teutonie tribes are more lawsh, ticree, uneoracly, or deformed than those of the Celtic nations, which have a tendency rather to the aërial and the graceful. Sithl, there is so ereat an ammat of eommon characteristic in the saperstition thronghout Eurone, and its peculiarities havie heen fond so much more emphatically displatyed in siommaria than elswhere, as to have sumested to some the view, that the superstition is a rommant of the old mytholegy of the northern ations, commmicated by them to a greater or less catent in all the countrics over which their viking earried their ravages.
There is a further distiuction-at least in this country-between the faries of Imetic and heroie
literature and thase of lopmar blici-the former being princes and pincenses of chivalry, only distinguished from hmon beines by their superhman sunnerity in all the qualitios which elicited resperet in the age of chivalry; white these of p"pular liclif are small in stature, sobuetinus dectepit. and endower with dispusitions qenerally more alloen th malignity than magnanimity. It is common to all classes of then to be deemed untur the conmomation of the
 or unenditionally exchated from the aloules of the righteons in the next worl. In freliand and the Jhghands, they have bern knken of as wandering remmant of the falloll angels. It is sometimes if symptent of geniality all kindlitess in a penpl. when their fairies are suphned to low capable of caming their own redemption. Sometimes the y are
 dindmberlien, and this from of the surerstition has mate faryland a place of purgation fur thase whose sins have cond momed them to it. The analugy is caried out in the lehef that the servies of thes livine can extricate the souls so situated; lat it is mather through dexterity and courase than pare piety that the feat is adieved, amb the rescues from faryland fom some of the mast wind amt excitiug of the alfin marratives-as, fir instance, the strance, whid hallad of Trombrue.

There is still another hroad distinction into those that dwell in the nuper air amd those that hwell within the lowels of the earth, while a third elass frepucnt the waters. The surface of the carth on which mankind riside is mot demment the profere place of any class excelt on specjal recamions. The scaminarians callwl the fary inhalitants of the air white elves: those of tho carth, Wack. Whaterer was genial, lisht, playful, and benevolent in the superstition. flustered ramul the fommer the later did all the work that was dark, cruel, and raphecious. Natmany ennash, the black on sulterrancan kinl frephented winine districts, where they might lue serh "xtracting the ore for themselves, and thus unsittingly lealing the miner to rich reins of metal. They might he seen in an oceasional peep thrombly an anture of a hill in their undergromin retreats, in chambers supported on jasper columas, where they were stowing away thar hampers of gold and silser-for they were gencrally bell tube very affnent. Some of the most exciting takes alout the ferman gnome, and the lrish leprechan, who was a creature of the same kinl, are founded on the ffonts of alventurous mortals to get presession of their riches. There exists a legenl, occurring in nealy identical terms in sowral countries. which conncts some piece of valuable phate lo longing to a church with $^{\text {b }}$ the muluground faries. The story of the hom of Oldenbires is a type of these narratives. The pictures of it represent it as a beatiful irinking vessel, in the shape of a horn, expuisitely ilceorated with the finest fanciful siver-work, in the style contempurary with the richest Gothic architecture. The legend is, that ane day, Otho of Ohlenhurg, being exhansted with hantins, anm very thirsty, exclaimed: " 0 (erel, wond that I han a cond drink!' Thereunn there appeared before him, as if coming out of the rock, a lovely maden, who ofered him a drink in the fairy horn. He male of with it, and savel himself from uril cunseduences loy lestowing it on the church. Hence these relics are generally in ehurches; but one of them is, or lately was, in the fussession oi an Enylish family, and as their prosprity was tralitionally belicved to depend on retaining it, it was called 'The Lack of Elen Hall.'
Puck and the pixies belong to the same class of beings. Of the ell-folks of Scandinaria, the
male is ohd and ill favorurel, but the evil element in the ell-whman or ell-maid consists in her heants. which omables har to bee very dangerems to fondia youne senthem, whon she waylays rither bey her
 of their ationenons.

In Irelami, and also in the lember comentre of Sontland, the fatys sumertition has been the the me

 fions of the simeth of folemel, at rols. Lans. presents a full and amment accomat of the lriah faimes on elves, which he describes as "a few inches hish,

 danere on it, urmbles imfond. lint never laraks hoth sexes are of extmombinary henuty, aud mortal beines cannet the fomparel with them. They do, mot live alome, on in pairs, hat always in lare Eociotios and are germed loy a pheen. The same antlow mhls: Phar am invisild to man, particularly in the da-tion and as they can be present amd har what is said, the fobantry newe speak of them hat with cavition and restect, terming them the and jowhe or frimbs. They have their lwellinge in chofte of rodis, cates, athd ancient tumuli. Every pat within is dowated in the most splemdid and magniferent manner: and the fleasiny music which sometimes issurs fom thence in the night, las delightent the whe have lemen so fortunate as hear it." Thore are Irish inirime howerer, of more simeral harator: Ammor thes are the banshee, or fomap spurit wha wathes a particnlar family: the Clumatune, an elf if evil di-pusition, who nsmally alpears as a wrimkled ohd man, and has a knowledg of hahen treasure: and the Mhoka, a spirit of diabulien dimpoition, who sumetimes appentine as an engle on it hack horse, hurries the

In $W^{\circ}$ istrm Eurme, the eronls exposed for sale at fairs are cheny thense in respeet of which there is in frepment change of fashion. Provisions are seldom an article of merehanlise in them: and while in sme parts of the continent persons of all ranks atill wait for the erat yorly fairs to make their principal furehases of clithing and of manufactured articles if every description- such things as corn, wine spirits, thas coffee, sumar, trobace, Mil, \&c., aro sidnon sem in thom. It is otherwise, however, in flaces on the ontskirts of rivilsation: aml almost all the prombe of grast provines is sold, and all that their inhalitants remuire is loutht at such fairs as those of Kianta and Xishmij-Noverod. The Lritish fairs really of much use at the present day are chicthy thase at which cat the are expused for salie: uf these some hold on the horders of the sontish Therhlamis, and elsewhore in Scotland, are frogurnted by havers and sollers from all prates of tha kinglom, and brime torether the brecters of cattlo and the graziers, ley what the amimals are to be fool for the buther. surla sue the fairs or trysts, as thes are callah, at balkirk, bome, Ehlinburgh. No. At ether erat femly fairs in the sonth of
 for the sate of the ammal probluce of pastoral distrid ts are common in almost all parts of the world.

The greatest fairs in the word are the Easter and

Michaclmas fairs at Leipsic. These are not to be confounded with the Leirsic Book-fair, which is chietly an oceasion for the settlement of accounts amoner hooksellers and publishers. Next to the Leipsic fairs, those of Frankfurt-on-the-3laine are the most important in Germany. The fairs of Frankfurt-on-the-Oder, and of lirunswick in Germany, of Zurzaclu in Switzerlaul, lesth in Ituncary, Sinigaglia in ltaly, Beramo in Lombardy, Beaucaire and Lyon in France, ani Nishnij-Novermint in Itussia, are among the most important in Eurnme. After the great fairs of Leipsic, that called the Fair of St Peter and St Panl at Nishmij-Nommod is the greatest in the world, and is frequenten by lmyers and sellers from differat parts of Europe, ant of Northern aud Central isia. The fairs of Tanta in Uper Eespt, of Kiachta in the sonth of Siberia, of Irbit, also in Siberia, of Neeca in Amalia, anl of Hurdwar in Western India, are also oi very wreat importance, and are the most considuable fairs mot of Europe. That of Kiachta is a surt of bartermarket, where almost all the commereial trims. actions between the Imsian amb Chinese cmpites take place. The fairs in fritain have latterly sunk for the most part tos insignifieance, and in many instances have entirely disindrated. They were gatherings mapten to a comparatively backwan state of society; when the provincial stores of grouls were few, and the means of commumication ilvective. The prevalance of gool roals, puluns tuwns with dealers in miscellaments wares, and other tokens of adrancement, have shifersoled the neces. sity for the ordinary chass of fairs. and in cons. quence they have in some cases denemoted into scenes of merriment, such was Iartholnmew Fiur, London, now extinet; alsu Greenwich Fair. Glaszow Fair, and Donnylronk Fair, near Dublin; this last being likewise cither axtinet, or nearly so. The boisterous merriments at these fairs wire of ahl the derices eniphoy as likely to attract a great comconrse of people; hence culch fair hat its spurt or drollery-foutball, wrestling yawning, cudel-phyinc, throwing at cocks, sack-races, Hyins drayons, grinning through horse-chlars, mock-gi.ants, momstrous fishes, smped pics, smukinc-matches, eating hot hastypuding, whistlins, whetharmw races. M. Bottio, the arthor of a statistical liew of the Fotirs of France, says that on examining his work it will appear that they were placel for the most part on the frontiors of the kingilum, or on the marches of aucient provinees; or at the foot of ligh mome. tains, at the becgminy or end of the suow-seasm, which for months shits up the inhabitants in their ralleys; or in the neighburhood of famons eather drals or churches fregmonted by thocks uf lilgrims: or in the mihule of rich pastures. A fair in the north of Scotland, bell in June, when the nights are very short, began at sunset, and culdel au hour after sunrise : it was called 'sluepy thamet.'

FAIRY RINGS are spots or cirches in patures, which are cither more bare than the resi of the tield, or more grem and lnxuriaut. Fresucnty a bare ring appears, like a fontpath, with ureen siass in the centre, and the circle which the ring foms, or of which it might from a part, is oftent sume yanls in dimmeter. These rings herin to attract the attention of men of science in the latter part of the last century, and rarious hyotheses were suggested to account for them. Some imacined that they might be the cifcet of lightnin:- 10. Withering aplears to bave been the first to ascribe them to the growth of mushromms. Dr Wiblaston further investigated the sulbject, which has more recently been very fully investigatel loy lrofessor Way; and it is now perfectly ascertained and universally admitted, that fairy rings result from the centrifugal develop-
ment of eertain kiods of funci, especially of Agaricus oreules, I. tremboste, A. soccineus, and A. personatus. The 'mmun ilnshrom (A. campestris) shews a tentery $\begin{gathered}\text { to grow in the same }\end{gathered}$ manner. Probably the spot where the agaric has already grown is untitted for its continned nourishment, anil the motiom (s]awn) extomels ontwards to new soil, the fumgs matitting the suil to which it extends for the immetiate nourishment of grass, lout emichine it afteryath by its uwn decas. The myelimm of many furg has certanly a tundency to extend outwards form a centre: and decayed inni, containine not a little of the phosplate af potash. are is hichly stimulant manure for trases. Fairy rines of large size sometimes nemp the wane situation for many sears. The circle is ahmost always imperfect, some arcidental ciremostance haviig arested the growth of the mycchum on me sime.

Filltil is used ly thendogians in various semses. It is sometimes taken to lenite the more assent if the undurstanding to a set of facts or of prowitions set lefore it: it is more peculiarly usch to experss the livint recuption loy the heart of the 'truth as it is in 'hrist.' Some lisines have enumeratal an fewer than four kinds of faith: 1. The faith of miacles, ur that immediate prersuasion of the Aluighty preswee and bower of their Mastar, which enable the caly Clistians to work matacles -a prenusion, aprarently: which might exist and i-sue in astomshing restato withont foing assuchaterl with mural execllence. "innuch I have all faith," says st P'ald. so that I could remove mountains, and have not charity, I ano mothing. ?. Ilistorion faith, of the assent of the malerstandiug to trath the evilence of which is irresistithe, such as we hase described alowe. 3. I'artial or temporary faith, such as mul Lord implics in his exprasition of the larable of the sosmer, and at appeared to and mate those whan after havine followed after thrint, turned back nal walked no nore with him; :mm 1. S'aving faith, or the persuasin of Cliristian truth woulht in the beart lig the Jflly spirit.
These distinctions are rather the- blasipal retine monts than anything clse; the porper and chate acturstie meaniug of the tom fath in soripture han little to dow with any wh them excent the las - Faith.' says the write of the $E_{\text {pistlo to the Hetrew, }}$ 'is the substance of thimus honed for, the evishome of things not scen.' It is a visim, quality. wh capacty of som whernd spivitual trath is an'mo. bended, and spinitual life angemberal. The di-tint
 ated: the unscen is felt to bon a reality: Faith is the oram by which the soml prases leyond the present and the visible the the eteral amb the invisible. Still mor" haracteristieally. perhaps, fath is the livins affectino which hams the Christian to Chriot as a semour. "Faith is a savine grace wheredy we recmive and rest upon christ alone for salvation, as he is freely ufferch to us in the cospel.' Thin is its highest aml most comprehonsive meaning, ont of which all the rothers comes. What shall I ino to le savel?' askel the I'hilippian jailur of Pran. 'Believe on the Lend Jesus Clirist." he replied, 'aud thom shalt tee savel.' And it is remarkahle how frequently it is christ or Goul-a liviug persunrather than any mere truth or sories of traths which is representen as the proper whet of Christian faith. 'lo believe in Cond: believe also in me.' 'We believe in him that raiscl up Jesus our hord from the deal.' 'Shrahm lelieved Gen, and it was aceunted to lim fir rightemsness.' 'Come unto me all se that lalour and are heavy laden, and 1 will give you rest.'

Faith, therefore, in this its bighest view, is nothing but trust in Gonl and in Christ. This is

THe ethical cocle consists in the abservance of truth. chastity, intermal purity, (mastant repentance, and conternplation of Deity. Aiter these monkls lekirism seems chiefly to have heen framel, and its adherents were not only pinns men, but cecasionally saints, workers of miracles, and healers of all ills, especially epilepsy aud sterility. The halo whieh from the dirst sumpandel Fakirism, and the realy worship uffered liy the prople, attracted to its ranks, at a very eanly date, many Whase matives wore anything loat pure, and who, under a dant of humility and memdicity, colleeted fabulous treasmes. ntmon ancaly distingushes these vagahonds from tha, ware hancent menilers of their class, :mal if we may trast the travellers of nur uwn lay, the more rejectalile ehment has now altomether disapleared. Their monlere is varimsly stated. In the time of Thermer's visit, there were more than $1.200,0001$ Hindu, and 800,000 Mchammedan falsin's in the list halies and their present mamber is sail to exceed sitho,90\%. l'api deserites the Nohammedans as entilty of the ereater follies. It tinos, especially in their return from distant phermages, they are even dangerms, as the killing of an mbleliever is supposed to the an infallible intruluction to the ghories of paralise. They live enther separately as hermits or solitary mendieants, or unite in large qats, carring ams and a banner, beatme irmos, and sometinis homs as they approach a town or vilhare. Their apmearance is disgasting in the extreme: they go naked, hesmeared with the dume of the holy anmal, the cow. Some bedeck themsclaes with the skins of serpents, some with buman lones; others array themselves in the garb, of women. Their fearful shacks, and the hideous rollings of their ayes, ald to the diagnst of their apparance l mitating malmen, they generally end ly becoming matmen. The height to which selftinture is frepuently carriod by these wretehed fanaties, and of whiel we meet with signs even so for bick as the Ramizama, where a penitent is descritud as ferpetually sittins with mpaised arms letwern form tires, the sun fomme the lifth, is so appalling that homan mature shanks from the mere deseription. Some pass their whale lives in iron eages, baden with heary chams; some clench their fists till their nals grow thonah the hand; others holl aloft bath ther arms till they become like witherell hraches; while uthers, again, tie their
hands and fect torethor, ant woll head over heels for thousands of mikes, Sot the least sal feature in all this is, that these relicions anties are not contined to men, but that youtho and even chidren of truler age, are necasiunally initiaterl therein.

FALAISE, a town of France, in the department of Cahadus, is situated on a loity jhatform lordering on a precipice, wr fitaise, whene its name. it is situated on the Ante, a frexler of the Dive, os miles sonth-sonth-cast of licen. It has threen suhurbs, we of them, fuilmay, a mile to the wast, rivals the town itself in size ind jupulation. The buildings of interest are the ecelesiastical alifices, the hospital, the public library, amd, more than all, the ohl amd rumed eastle, once the seat of the dukes of Normandy, and the hirthplace of William tha Conguerer. In the castle, the chamber in which the Comqueror was lorn is still shown, as wedl as a tower callen "Tallot's' 'Tower, Which is surlmsed to have bean built by Tallat when Jayl Wariten of the district. after the capture of F . be Howry Vo rif Euglaml. F. has manufactures of cotions, livsiery, and bobinn-nct. At fuibray, an important ammal fair is held, at which great numbers of horses and eattle are solis. It takes place betwe en tice loth

## FALfHON. Sedword.

FAldor (Folen), in the Limmean zonhoy, a monus of hirds, including all the diumal hirds of Irey, now known as the family of Felconilun: lut in its present use as a semeric mame, liniterl to noarer acordance with its papmlar nse, as a desip. nation of thase species whith, in the languase of falenn'r, were styled mole birts of form. The true fakeons are chameterisel by a bill eurbed from the loise, the "phr mandible homkenl at the point, and the cutting caloe of the upher mandibh fmonshel with a strons projectins noteh, or touth. The claws are alsw sharp, curved, abl strong: and in aroordance with all this powerfal armature, the whole frame is very robust and musconlar. 'The logs are rather shont, and have ureat pown in striking of seizing proy. The keel if the st rum (hreasthone) is very large, and allapter for the attachment of powerful muscles; the furcula aus enracoill lomes (sembinds) are also very ftrong, so as to aflom a sunthcient resisting lose fon very powerfu! action of the wings. The wincs are long and lwinted, the first aml thire quill-feathers of erpual hacth, the socom rather the loncest, the first and seomel quill-feathers manmimatel near the tip. The trub fillons are bolder in prowetion to their size than any other Falrmilat-cren catas. "Their achtemess of visim is womlerful ; ont the $y$ have very ereat powers of flight. A $l$. is known to have traversal the listance between Fontainheme and Daltin, not less than IBor miles, in -4 hours a and as these birds do not neually tly durn, the night, its flight was probably at the rate of 70 or 80 miles an lonur. They suar to a pronigions height in the air, always endemwning to ontanar any bird of which they may lie in pursuit, and to swool down uno it from above: althoug it is far more difienult for them to rise vertically in a ealm atmosphere than for birds of short and rounded wing, and they either rise obliquely-uften also making their omward flight in a s.rie's of ares-or awail themselres of the wind, and ly dyins arainst it, are home aloft as a boy's kite is. "The species are pretty numerons: some of them are of very wile gearraphic distribution, whilst uthers are preuliar to ecrtain countries or climates. The British species are the Griflleon (q. $\because$ ), or Jerfalcon (I. Gyrfalco), also known - althuagh, perbaps, with ditterence of varicty-as the leeland F .
and Greenlami F ; the Pbearive F. (f. $\because$ ),
 the $F$ of falcuners (see liseovies), and the mate is
 ( $b$. subbeteo) ; the Jied forted F ., or lied-legriel F :

 Fov the sixecios chindy usid in falconry see Fargiat:

Fery closely allion to the trite falmons are the species constituting the grmus Mioror, very small, liut remarkable for strength and comas, nitives of the East lnilies. The nequer mamible has two notches. In the Harpergons. (Herpeqpes or líilons) of Sutls Anerica, both mandilis have two not hes. Come of these, howerer, are efual th the true falmons in length of wing.

For particulars regardiag the Falenatie, as subservint to dieh-sports, see Facounhy.
 I minter, harn at Narles in $160 \%$. A follow-stment of salvator liosits at spacmolettios studio, he himself sulisernently fecame the fommer of an acander of mouch resort. In arcondance with his turbulat mundsive matere, he thom himself jnto the politiond strumes of the times, and hlurity Masimiello's rutbreak, wramisol his mumerwes soltolars amb rependants inter a seeret lamel, whim intlicterl Wadly rataliation on the paniaris. Un the suppression of the insurvection, F. flel to Frane, lut subsequently roturned to Niples, where he died in 1663. The works of this painter, representing chicdy, military scenes, are fow in number, and watly in price: they are prizel for their axtrone fich-lity to natiore, as muth as for their harmony and brilliancy of colour, ame their varicty of (ajucession.

FALCONBIR, Whlethy, was lom in Eilinhargh in J732, ind was the of a fanily of whom all, excepting himsclf. were deat and dunh. Ile went arly to sca, sorving his alpmenticeship on beard a merchantman; and before he was Js yoars of are he was secomel mate, in a ressel in the bevant trate, Which was shipwreded ofl Cape Coloma, himsulf aud two nthers freine the omp portion of the crew savel. Ile jublishet Tho Shipmort in 1762, and durine the next ran lur conterel the navy as minshipman in the liomel deortp. When jeace came, lee resincal in Lomion, where he wrote a satire on Wilkes, and compile! a Famtioub liethomery. ITe procealed to sea in Soptemher 176! , as pursm in the Actore frizate; reacherl the Cape of (iond Inope in December: and perished with his compranomsthe A comot hasing gone duwn-in the shombique Chamel.
F. wrote soveral mems, , ut the shipureerk is the one on which his fane rests. It almands in natical limonage, and has the raremerit of heing interesting. It is not a great poom. hut it has always had its realers amb admirers. In the seenal edition, the anthor alled the characters of Albert, Lindmont, lalemon, nul Anna-charactors learing the same relation to actual sailurs that Alexis and Chloe bear to actual shepherds and shepherdesses-aml to some extent destroyed that singleness of inpression Which was the chive merit of his work.

FA'LCONET, a name used in the J.th and Joth centurics for the smallost class of cannon. The ball wedrel from 1 lb . to 3 lbs , and the gro from s cut. to 15 cut.

FALCONI'DAE, a family of dimrnal lirds of pey (see Accipitees), corresponding with the Linnam gems Faleo, and exhibiting those characters of muscular rigour, armature of beak and talons, and power
of thigh, which are to le found in their highest perfectim in the trine Falcons ( $\mathrm{q} . \mathrm{r}$. ), and in a soaredy infering dentee in the Eigles (f. v.). The specties are anmerous; the liritish Masemon alome contains specimens of almost soo unquestionathly distinet species: hat bery many sumperd sumber have bem nouned and described hy ornithologists, which, in the pantess of science, have been ateertaimel th owe the distinetire characters mer ly to are and sex. The female is generally lume thim the mate; and

Head and Foot of brazilian Engole.
the phomage of the young different from that of the ainlt. There are, in the difterent grous, eonsinerable diversities in the carvature and strength of the hill. which also has the cuttine oberes of the mandibles cither nuthon, festmond, or $1^{\text {lain }}$; the leas and toes also malihit liversities as to leugh, strength, foathering, fe. ; and in some groms, the wints are much longer, and at the same time mare puinted, than in athers. This is particularly the case with the true falcons, as contrasted with canfos, huw ks, hazarde, kites, harriers, \&c, ant, in the lan ruage of falemer. the furmor-having the sccom quill-feather longest, and the first nearly equal to it -are callen nolle bireds af pon (sce Fancusiny), heing these nsually Inmestieated and trained fon the service of man; the latter-having the fimuth quall-feather bomest, and the first bry slom-are called imoble hichs
 "The F.are distributed over all parts of the word: nom almost all kinds of vertelnate animals, except the larest quadrupuls, are the frey uf some of them. Fome alow derour insents. Like the Fetlele
 fent on carrion, lant qenerally seize and kill ther wwa prey. As in the Fhtip, also, there is a prowision for the preswation of the claws from being huntel hemmerespary what with the semud, or with any haril sulstance, the F. contracting the tnes so as to clevate their claws. The F . generally live in Inirs.

The: Limmer-gever (q. W) connets this family with the Vultures; the Secretary ( (q. . . ) , whist in a any requets anemin with the $F$., is peculiar in somie of its hamaters.

MaLCONES, the term applied to the art of Traming cortain of the falcon tribes the pursuit and eaptura, on the wint, of birds such as the haron, parthitige, lark, rook, magpie, will-theck. jingm, de. In ancient times, this sport was called Hawhme, a torm still jreserved in many phaces, anl which, pulape, is the more strictly correct of the twe Now a days, Felleonry is the term
apried to the sport and all that pertains to it ; Mrucking to its actwal practice in the hied. F . is of rery ancient orisin, and has been traced lack, as an Eastern sirort, to a periol anteriore to the 'Christian era. In Britain, it seems to have heen followed before the time of the lleptarely ; and ia the embleated layeux tapestry, Harold is tigured with a hawk upa his hand. It scems, how. ever, to have leen mactised iu Dastern countries, ant in Central Vhrope, long before it hecame (stallished in Giveat Britain ; amd to such a height did the sport reach in Germany, that nobles, amd wen kings, seem to have deveted to it the greater lart of flam time is an instance of this, the Emperor Frederie 1I. of (inmany was a passionate admirer of the sport, and is still to have written
 I-so (Z vols. Ledip). In Englimb, after the Norman Conquacet, F. seems to have taken rapud strides, beiug much indalged in her kines, nobles, and hadies; and in those days the rank of the individual was indicated hy the particular succies of hawk carriend on his wrist. Thus, an carl carried in Pererine Fateon. In the 17the e. the sport declined; in the 1Sth e. it partially revivel, hat acain fell off about the year $1-2.5$, when the art of shooting birds on the wing came into fashim. In the pesent day, an attempt is beinat made in several guarters in Lagland to restore this molle sport, and already its restoration is being attended with growing shecess. in India, Persia, aml other Eastern countries, F. is still eagerly practised, the methonls there followed being for the most jart nearly similar to those of Great Britain.
In B., two histinct limuls of harks are uscuthe lons-winged or true falcons, and short-winged. The first (noble hirls of pey) are represented chiotly ly the Grrialcon and lerquine: the second by the forshaw and farmow-hawk: and though fir certain jumposes the mate is sunurior, as an me the femols of each sucties are mach more hishly estecmed for sporting porposes, forn their being larser and mone fowarful. 'Long-wingent hawks may also, as a rule, he distiusuished from the 'shirt-wingel,' ly their having it 'twoth' or noteh on the uper mandille; from the second feather of the wing beine either longer, or as loug, as the third; ant from their impetnous "stoop" at the ir pery.
The (iyraticon ( $\mathrm{f} . \mathrm{x}$ ) is the largest species, but from it extreme rarity in the British 1slands, is sellom usen. The loregrine taleon is the bird in gratest farmur with filcoacrs, and if taken from the mest, as is usually the ease, aud carefully trained, afforls hetter sport than any other British suecies. We shall therefore cunfine our remarlis, for the must part, to the sport as it is practised with this bind.

Fo lawk is fit for sportime purposes until it has undergone a careful process of training. The young hawk is more easily trained than that which has been canght in a wild state, lat in cither case. a nmmber of operations require to the wone through before the sportsman ventures to take his faleon into the field. Tuken from her nust on some high and dangerons cliff whou nearly thedred, the eyess, or ymung falcon (with her companon-fledglings, usuatly two in mumber), is carefull: conveyed to the fakonar's hame : there she is kept in an open shed in a nest of straw, and fod several times a day upn frush beef, with in occasional change of lirds or rallits. At this somewhat critical period, she slunuld never be handled, cxcept to put on the jesses and bells (see dis. I), which afterwards become permanent fixtures. Her powers of flight. tow, being as yet very limited, she depends upon her master for

## FALCONRY.

regular supplies of food, and soon learns to come for her meals at his call. Her meat is usually lixed

to an apparatus termel the lure (see fis ? 9 , and thus the hawk is early acenstomed to that important instrument, the further mas of which am explainal below. By

Fis. $2 .-T h e$ Lure degrees her prowers of thgit are strungthchicl, and she is jer". mitted to fly at larse (moturning to the lure at her master's will to le fed, or in hawk. mglanguage, to remain nt lereck for several weeks, during which time her meals are gradually redncel to one a tlay. While at Laek, she sometimes becomes wild, wanders far fromt home, amel kills game for berself; and when this is the case, she is usually caucht by enticing her to a bow-net, close to which a pigeon or some meat is fastened to the ground. After beine 'taken up' from hack, she is kept at the hook (see fite : :')-the stanel 1 unon which she sits-for a fow days before her regular training becins. At this time, alsn, hawks require a bath twice or thrice a week.

The first of the prinejpal operations in training is hoorling, in queration which, if snccessfully 1 erformed by the tramer dwing his earher efforts, 1 nves the way for overcoming many subsequent difficulties. It demands the greatest patience and the tenderest manipulation. The hond is a cap of leather (see fig. 3), male to fit the heal of the falcon in such a manner as totally to olscure the light, a single aperture only being left, throngh which the beak protrudes, and a slit behind, through which are passed the hraces or ties that secure the hood to the head. By shatting out the light, the hool is serviceable in tending to make the hawk quiet ant tractable, lnt to acenstom the falcon to submit to its use requires much time and great management. When, after great perseverance, this is achieved, the hawk is said to he 'made to the hool,' during which process she also learns to sit halanced upon the fist. Besides tending to intuce docility by liding the light, the hood is of further service in shutting out from view any object which might canse the hawk to flutter or bait off the fist or calge on its way to and from the hied, \&e. Hence the hawk is carried always hooked-the shortwinged only being exempt. To the falcon's legs are attacheil two small hollow globes of thin metal,
called bells; these, aumin, are fixed to their place ly leather straps callosl bexits; and both, torether with the jesses, beemme 1" manent fixtures aven during the bird's lights, Jesses are two leathern straps, five or six inches in lencth, attached to each leg immediately belnw the bells; the jesses,

Fig. :3.-IVooked P'eregrine Inalun on its block: Whe ent of the leash is attached to thu jessen, the other to n rimp dirien into the side of the block; and thus the hawh io bevented from escaping.
again, wre themselves altachod to mother leathern strap, called the leesh, abont forme tinues the thiohnoss of a bertlace (sce fig 1), ly two rings on morects; and the hird heing thas calrursoned, the falconer wiuls the lean through his dingers, and so prevents the falkon's estale while on his wrist. Instent ut yarvele, some falconers follow the Dutch plan of nsiny a swivel; the former methol, however, is now considered the best. I long cord, called the cranct, i., further attached to the lensh, and is used for the purpose of giving the liral greater freedom during her training than that afforded by the leaslı alone.
The lure is a bunch of feathers attached to a cord and tassel, and in the centre of the feathers is usually a riece of spliced wood, to which a picee of meat may be attached. By acenstoming the hawk to feed ofit the lure, or to come to it at a certain

call or whistle to be fed when Firs. 4.-Tabur Styeke. on the wing, the lure becomes
an important adjanct to the falconer's apparatis, as liy it he is enabled to entice his bird back after

 Having previmaly aseotained the feedint phe of that hert, the hawhens party makes for the spet, nomally thwats erening, if possible in a direvetion dumbinind from the hemory, so as to intereppt the bird in its "p, winel fight lambewards. When a hata is sien to phas, al emple (a east) of hawks are mannulal an 'cost off, and the chase commences.

 the ar? the lawks eager in pursuit, and puicker of What sincolly make upan it, ame strive to gatu a Greatur olevation by as series of inamiful grations. When one of the haw saceeds in rising alowe tho hom, it stom,s. that is, duscends swiftly, and in of lure to lime un the same aming a stroke with its matstretelend leps and talons at its bomy; this the herom almost ahwas sucecols at lirst in eloding, by a raphe aml smblen movemont asilc. The spembl hatw, which by this time has ilson soated, then stenps, while the efrst is regaming its former altitnate; ;ind son on for many shecessive times, till ons hawk at lengtly elatens the heron or bineds, M"n which her companion jome her, and the three. lomgant ly the motion of their wings, desemd acnitly to the earth, The falceners imprative duty is mow to be ur a near the sont where the three hirds are desmanting, to divert the attention of the hawks lefore they wach the grommb, and entice them from the fuarry to him, ly means of live piseons as lures. This is very nocessary as the heon is extremely hamerms, and has been freGuently known to injure the lawks with its sharp beak when on the fromb, thongh it is all but periectly harmess while in the air. When the heron's winits hawe been dressed-for this bird is ravely killet in such "ncounters - a ring with the captors name is navilly affixel to its leg, after which it is set at liferty, and so lecontes availalile for future slurt. Thu falemers nsual cry of encomagenent th his hawk upu the springing of the quarry is "Hman-ha-lin-ha!', His ory when the quarry is killeat, is "Whow!! A faleon takes its prey cither by tearime or raking it with the hind daw of each font at the instant "f passint, or hey chateling the vietim with its talons, and when she thos succeds in handing to her quary, sloe slowly descents with it to the Eraunl. "The sulpmesition that the lawk strikes it 'Inarry with the beak "a brastbone in its sworl is a mistaken me.

Besides tha Peregrin Falem, the Merlin is traned for Fo. and is extremely beld. I'lis birl, however, is hown at small game, chictly larks. The (tos hawk, thongh it docs not suar and stoop, ilies rirect at its gimme: it is used chiefly for pheasants, rahbits, hares, \&e, in an coclosed comotry. The Sparmw-hawh, from its extreme lollness is a great fivomrite. lat is flown at smaller kinds of hirds mhy, snch as hackbirds and thoushes, fe. The Hubhy is sehdom or never used.

The following are the princinal terms used in falcoury. A falcon's legs, from the thigh to the foot, are termed arms: toes, jetty singles; cliws, pounces: wings, weils; tail, treit: crop, gorte: lower stomach, punmet: liathers, hair, \&c., ejected at the mouth, the cosidings, A yomm hawk from the nest is an tht in or eghes : ons thit can hop, but not ily well, " hrencher: a nestling hawk reared at liberty, is a hook-howk: a young lawk able to take game, a sener-henti: a mature wild bawk in a hutgarl or blue heurk; ymum hawk taken in their migrations, are
 aprial merely as a title of distinction hetween the young hawk and the eyess or nestliug, the cohnirs of the two being in realty the same. The tranine of the passage-liawk and haggard is termed roflomimg: flutfering, is lothiny; lighting with "ach other, crabding: sleepint, jodking. The prey is temerl the quary. Whin the hawk strikes lue quarry in the air and clings to it, she bimes: When she flies ofl with it, she rames; when She placks it, she drphemes. Deal gane is the
 with closed wings from a height at prey. Direct
flight, without swaring, is rekian! off: changine from one lirel to another, checking. When wane thies into a hergon, it puts in. When the hawk is moulting her feathers, she is moring: after her first moult, she is internomel; with complete phmape, summed; When in ewnl comdition, she is phsemmet: when out of combition, secmed. Mentiner the feathers artificially (an operatiom irerpently purfimmed When one has been accilentally brokin) is tirmed imping: hlunting liill ant talons, coning. When the falcon is whediontly flying roum? in the air, she werits on her masfor: Hying long-winctel lawks from the wrist, is termed Aying out of the hoonl: a couple of lazws is a cust. The crulye is a frame of wool with four legs. It is carricy ly mans of straps, which pass over the lwarers" (the callecers") shoullers, ant is used, when there are several casts of hawks, to be taken to the theld. The hone (sue fig. 3) is a woud piece of woud, such as wombld be made ly sawing a font of woud out of a fellem larchtree of some twenty years cwoth; and unom this the hawk sits when ont of doors. Throued the bottom of the lowek runs an iron spike, which being driven into the gromm, secures the hock to its place, and so mevents the hawk from hascing it away, Folcons are rory phgacions, anl if not carefully kept spparate, wuld som kill each other. Thescren or purch is a perch guaridet hy a falling piece of cantas, to suphert the hawles in colse rif their lealing down; unn this, the hawks are placed at ni,ht in an apartment called the merrs.
The best works on the subject are those of Turherville and Lathom, respectively, is wh treatises; and that of sir John sebright, as emmparatively molern. Of the more recent treatises. Fulumery in the Bratish lasis, ly salvin and lirollick (Lomit.
 lireeman and salvin (Loml. 1859), are the best anthorities.
The village of Falconswaerl, near Buis-le-Ince in Itolland, has for miny years furnished falconers th almost all Europ. Sir John Sebright says: I have knwn many falconers in England, and in the service of different princes on the continent, hut I never met with one of them who was not a mative of Faleonswacrd.'

 hats mat yet becen fully exphoret.

FLLEALIL, a city of ancient Etruria, was sitnaton Went of the 'Tiker, ame north of Mount Soracte. Its carliest historical appearince is in 4:5 n. . ., when, :urcordind to Livy, the inhahitants (whe were callet Falisci) jomell with thesw of Vii in assisting the Fidenates areinst the fommes The Folised were anony the hast hanzermas ehmies of lomm, and were the lact of the Etrmians who submitted to its luwer. Their rity was at last destroged by the
 pelled to chouse an new site it fow miles offi. Here at loman coluyy was settleal in the time of the trimavirs, whene the place tork the name uf Colonin Janonint Gibliscornm. but this Limman F. looes nut appear to have ver acquired any induntance, for the temple which ancrently attracted so many pilquims stom on the site of the older town. Buring the midlle ass, howescr, a new city sprmer up ou the ruins of the litruscan $R$., which fimally ditained the name of Cibiter (ustelloma (r). r.). Tiuns of the foman on later $F_{0}$ ennsisting of a part of the ancient walls, are still visible.

FALEANISN WINE, so called from Falernus Ayer, the district in which it was grown-and which lay in the morthern portion of Campania,
between the Massican llills and the morthern bank of the Valturnus - was one of the favonrite wines of the liomans. It is Anseribed ly Jorace as, in his time, surpassing all othor wines then in repute, and srems to have heon in wreat favon with the puet himself. In the time of I'liny, luweror, as he himself informs us, Falernian wime had already, owing to a want of care in its chltivation. lneran to decline in ruality; and the wine then estermen the best Was a varicty grown in the Falumian neiblumarluorl, anl called Fíhustimum.

FALIEARI, Marima, a celehratel Vonctian, was lum alwut the year lost. Ho was electen in 130.4, at the age of 70 , Dore of Venice, and was the thint of his name calleat to this surme rimity, hut was lecapitated in the following vear for his daring comsinacy against the rights of the commonwealth, which, revions to his election, he bad zaalonsly serbed in the capratios of commander of the furese, commanile of the flect, and ambassuler. It the sicce if Zara, in 1 : 46 , he defeated an army of so,000 1 humearians, vigorously pursning at the same time extenswe simse-uprations, and in the course of the war. havine assmed the commanal of the fleut, captured day in Istria. sinssequently, he became ambassaler of the republic to lione and dicmon, of an mercovornable and implacalble temper, his litter resentmont seems to have been rousel by a crossly effensive hibel on his fair and youthfrit wife, the ruthor of which, a yomur patriciain named Michele Steno, used some gruate to the loge. The pmishment awarded to the yomit noble loy a patricim tribunal secmerl to $F$. whilly inadequate to the offence by which his ducal dignity had lecen intraced, and in order to arence this double slicht, he organsed an audacions phet, with the oljecet of owerthowing the repullic, mon massacrin" the hembs of the aristocracy, to le followed by his own assumption of sovereino rights. The comsjiracy was, however, revealel on the rue of its execution, and $F$. was arrestent. He suffered death by decapitation on the 17 tl , if April $1: 35$, on the very spot where, a year previonsly, he had been trindored miversal homase as sinmene magistrate of the state. In the hall of the ureat mmail, which contains the purtraits of all the dures, the space allosted to that of $f=$ is draped with a veil of salole, and lears the following inscription: " 1 li . est locus Maina Falembu, Ierapinati pro criminimes.' I faithful repesentation of the phot, and of its Whici confenlerates, is given in Syrous drama of Merino Firlert.

FA'LKIRK, a Somtiol parlianentary lureh, situatol un a rixing somm in the midst of it popalons numeral and mandacturing district in Stielinsshire, near the dhl Ioman wall of Antnninos, with mo, pretension ather to beanty of situation or to arehi.
 1601, it was makl" a burgh of barony ly fine James Vh, in fivanr of Alexamler Lird Livin:stonc. afterwarels barl of callender, in whose fawour also it was in 16 fio erated it hargla of reality ly fine (harles i. In 1715, it passeal to the cruwn liy the forfeiture of the Earl it Limlithgow and Cailamer ; and it was not till the passing of the lieform Jill in 1530 that it was made a prarlianontary burgh, ind reccived a municipal constitution, with a comull of twelve, inchatina a prowst, three hailins, ami a treasurer. it unitus with Airdrie, Mamilton, , anark, amb Linlitheow, in stmling a member to pertiament. It has nine yearly fairs, an extensive inland trate sarious local mamifactures, amd charitable institutions. Its parish church-the Eglais lihree, Varia 'apella, or speeklen Kink of our chartularics and of local tradition-has

one or two monuments of some antiquity, but was itscli relmilt in the year 1S10. The chureh, churell landz, amd harony betonged of old to the Sthey of llolyrmod. Xear lo, in [ows, sir Willian Wallace mani his masterly retreat from the alisastrous hatthe
 - "mpanions in arms, Sir dohn (iraham amb sir John stewart, loth sain to lue interred in the parish thurehyard. The inscribed stone allesed theover the grave of Nir John (iralam, is apperntly mome monern than his time. In $17 \cdot 16$, the neighmarhond of $F$. was the scene of author battle, in which the royal trous were defeatelly those of lrince charles Eilward. It is now chictly notel for its well-known cattle-trests, at which stuck is yearly sold to the amonnt of ahont $£ 1,000,000$. In the immediate ricinity are the Carron Lromworse, th. Furth and Clyle ('amal, amd the Bdinhurgh and Glassun, and Sentish Cutral Railways. (1571-pop. 9547.)

FAIKTRE, B.atcr: of. Wallace had followed uly his virtory wer the Luglish mear stirling in 1297, ly taking pussession of some of the more impartant fontresses of Scotland. In the following yaur, King Etward, having returmed from Flandere, summoncd a great army to meet him at lork, and marehed northward to liosburch, and thence alones the east coat if Seothand and the shore of the Firth of Forth. It was not till the day of the battle, the ~d July luns, that Elward first saw the cheny. The Scottish infantry, much inferior in mumbers to the English, were arranged in four ivenlar bodies on a small cminence near palkink, and were armed with lances, and with hows and arows. The cavaby, mumbering only $10 \%$ men, wre phared in the rear. This array was chaveed loy the English cavalry: The Scottish fontruen bravely withstond the onset of the well-appintal laclish forse; but the cavaly, dismaged loy the prepuderating numbers of the enems, rode from the fich withont striking a blow. Thus laft withont support, the spormon and archers were compelled to vield, and the retreat lecame general. The luss un the Fouttish side is said to have amonatell to li,00M men. The results of this defeat were, that the military power of Scothand, such as it was, was broken : and Elward returned to England mastor of all the impontant strongholds of the south.

FALKLANI, a royal bargh of Sotland, in the county of Fife. is situated at the north-eastern base of the Lomond Hills, 22 miles north of Edinburgh, aml 10 milcs south-west of Cupar: The cast Lumond lill rises so ahruptly behind the town as to interecpt the rays of the sun from it for sereral weeks during winter. F. was in carly times a manor of the Earls of Fife. It passed from them to the crown in 142., and was made a royal burgh by James 11. in 1 -.5s. Within the town are the remains of Falkland lalace-a large tower (in the same style als the north-westem tower of Ifolyrood) above a vanted doorvay lading into the courtyard, built alout 1:co, and two siles of a quadrangle, huilt butwen 1530 and 1500 , tine and interesting examples of sonttish architecture. 'Ihu palace was a favourite rusilnence of King James IV., iml after his deatl, in $1.0: 8$, his wilow, the impetuous sister of Kiug Henry Vill. of Pardanl, was hore kept in restraint for a :risum. IItre her son, King dames V., clied in I512. The lat line who necupicet the palace was 'harles Il., who passed a fow llays in it in 1650 . Oi the now encient eastle in which Divid. Duke of hitheway, was imprisoncel and starved to death ley the Duk. of Albany, in 1402, no traces now
 Sir lhad Lindsay lop. (IS61) 2938, who support
thenselves mainly by handloom weaving. themselves mainly by handloom weaving.

FALKLAND, Leciss C'mix, Vhsocxy, was lwin, it is leclieved, at Burforl, in Oxfordshire, in 1610, and elucated dirst at Trinity College, Dablin
his father, Ilewry Gary, Viscount Falkland, being at that time lord-deputy of Ireland-and afterwards at st Iohus's College, C'ambridye. Even during his iather's lifetime, he enjoyod in ample fortume, left him hy his grandfather. Mis earlier years were whelly deroted to stuly, and to the eonversation of dearned men, amonis whom he himself, by all aceounts, mast have oceupied a first place. His residuce (Burford) was only ten mike from Oxford, and here, accurding to Clarendon, 'he contracted familiarity and friendship with the most polite and aceurate inen of that university. The praise whieh that historim hestows m lim is extraminary; but F . is one of thos historical promages whose character and abilities we mast take on the worl of friends ant panegyrists, if at all, for his deeds and writings are not chal to his fame. In 1633, he was mate one of the gentlomen of the privychamber to Charles l., amblank part in the expedition igainst the Scots in 1639 . In 1640 , he entered prlaiment as member for Nerport in the Isle of Wight, and was at first distinguished by his patriutic zeal for the laws and constitution of his country. Against such men as Strafford and Finch he exhibitel great severity of sjeech, though even in their case his almost finical love of the forms of lesal procelure was manifested. Shortly after, he conceivel it to be his cluty to assume quite a different political stand-point, and to oppose what seemed to him the excesses and illegalities of the popular parts. On the breaking out of the civil war, he conseguently took part with the ling, though mourning dechly the miseries which his conntry was about to sutier. 1 l . died a soldier's death at the battle of Sewhory, Sepember $\because 0,1643$. F. was quite untitted $t$ o play a practical part in the sanguinary politics of his time ; hat his qemime lowe of Encland and of the rights of the nation, which burned in him as strongly when a royalist as when attacking Straford and the hishops, chahles us to understand. lecter than we might otherwise have done, the decp indignation that pessessel the Enelish gentlemen whin represented the Commons, at the arrogat and mumeindel puliey of Charles's advisers. F' wrote varims treatises, de, the prineipal of which is a Jiscourst on the Infulthitity of the (huerch of Rome.

FALKLINI liLANDS, the only eonsiderable cluster in the South Atlantic, lie alomit 300 miles to the east-morth-east of the Strait of Magellan, stretching in S. lat. from $51^{\circ}$ to $52^{\circ} 30^{\prime}$, and in W. long. from $55^{\circ} 40^{\prime}$ to $61^{\circ} 20^{\circ}$. After having successively belonged to France and spain, they have, since 1731, formed part of the liritish empire; and in 1833 they began to be settled, bing, as it whole, the most southerly of the orsansed colmies of lingland. They number ahout $2(0)$, presenting is total area of about 13,000 square miles. Pop. (18,5) 691. The two largest menbers of the group, Fast Falkland and Wist Falliland, comprise between them more than half the surface; and of the remainder, the elief ones are Great Swan, Saunlers, Krppel, Peble, Eirgle, and Jason. This possession is valuable mainly from its position with respect to the Southern and l'acific Oceans, heing in this comnection all the more valualle on account of its many excellent harbours. Both the soil anl the climate are much better adajited to jasturage than to enltivation. While the natural erass is extremely luxuriant, scarcely anthing bat a few regetalbes is grown in the settlcment. The enasts teem with lish, more especially with cod ; and in certain seasons of the yoar, penguins and seals are killed in great

## FALKLAND ISLANDS-FALL.

numbers for the sake of their cil. The temperature is very different from that of the corresponding parallels in the sonth of England, being both lower in summer and higher in winter. The mean of the former season is about $53^{3}$ F., and of the latter, about $40^{\circ}$. These averages considerably excecd the vame estimates of carly narigators, who, coming suddenly down from the tronical heats, appear to have here fult, by comparison, something of hyperborean cohl. Though there is no timber worthy of the mame, jet jeat abomels to the deph of ten feet. In 15\%\%, the rovenue and expenditure respectively were $\delta 5040$ and 50.56 ; whle, in the same year, the arrivals from abrom shewed $4^{0}$ vessets and 18,415 tons. In 185 , the imports amomatel to $£ 11,300$, and the exports to $\pm 11, \mathrm{~s} \%$.
According to an ofticial return for 1558,20 acres have heen reclamed for horticulture in the neighhourhood of Stanley, the sat of government; and the sheep, chietly Cheviots and southdowns, amounted to 8000 ; the wool commanding a gond price in Loudon, and the mutton finding a ready market on the spont. The peace of the colony, pretionsly guarded by a single constable and easual aid, had been securel by the arrival of a small garrison of emlodied I ensioners.

FALL. The doctrine of the Fall is the moctrine of the historical iutroduction of evil into the world, as described in the third chapter of the book of Genesis. The statement of this chapter in its natural and obrious meaning is to this eflect, that the serpent, which 'was more sulbtil than any least of the fieh which the Lord Good hat madr,' temited the woman to eat of the tree of the knowledge if good and evil, regarding which the Lord God had said, 'Thon shalt not eat of it: for in the day that thon eatest thereof thou shalt surely die.' In contempt of this command and warning, "the serpent said unto the woman: "Ye shall not surely fie: for Goil loth know that in the lay ye eat thereof. then your eyes shall be openci. and ye shall ine as gols, knowing good and evil." And when the wroma saw that the tree was gond for foml, and that it was pleasant to the eyes, and a true to be desired to make one wise, she took of the fruit thereof. and did eat, and gave also unto her husband with her; and he dit eat.' The result of this was, that their eyes were opened, and they lanew that they were naken; and when they heard the woice of the lord in the garden, they hid themselves: and om heing summoned, they acknowleded their transeressinn, and were driven forth from Eden. Ciparate pumishments, also, as the eonsequence of the transgression, were denounced against the serpent, the womais, and the man. The first wis cursell above all cattle, and condemned to ero upon its lelly, and to eat lust all the lays of its life. Enmity was to lo put between it and the woman, aud between its sced and her seed: "it shall hruise thy hoad, and thou shalt bruise his heel., The woman was to bring forth chillren in sorron, and to be subject to her hushand, to whom her desire was to cleave. The cromind was cured for the man's sake, and he was to eat of it in surtow all the days of his life: in the sweat of his face he was to eat breal till he returnal to the grombl

Such is the narrative of fenesis, upon which the doctrine of the Fall is basel. The doctrine assumes varions forms, according to the interpetation which the narrative reeeives. Some thenlugians interpret the marrative more literally-althongh none can be said to do so quite literaily-and others interpret it more figuratively; while others reject it altogether as a namative, and look upon it merely as a mythical story of the early time-mirroring the lapse from a primitive golden age, or age of innocence.

1. Even the most orthodux theologians so far spiritualise the narrative, or recrard it tiguratively. The serpent, for example, is with them the devil, although the text in Gencsis itself gives no bint of such an interpretation. The enmity between the serpent and the woman is the enmity letween the devil and mankind: and the brusing of the head and the ined is supposed to represent the victorious con-frest-although not withont wounds and lirusesof Jesus Christ, as the Messiah, over the elevil. The doctrine of the Fall, aceording to the most common mode of interpretation, may be stated in the follow ing terms: 'Our first parents benos selnced ly the sultalety and tempitation of Satan, simed in cating the forbidden fruit. By this sin, they fell from their original righteonsness, and commmion with Gorl, and so became dead in sin, and whotly detiled in all the faculties and parts of soul and hodr. They being the root of all mankind, the guilt of this sim was imputed, and the same death in sin ami cormpteal nature eonveyed to all their posterity, leseending from them by orlinary generation.'Hestminster Conjession of Fuith, c. vi. "The Fall. in this view, is the tempitation of our first parcuts to cat by the devil, and the inheritance of this act in their natural descentants. This may le sail to le the orthodox doctrine of the Christian chureh.
2. Other the ologians consider the third chapter of Cienesis to be in the main allegerical-representine a pleture of the violence of appetite in our first parents. In this view, the serpent is a mere imaginary acecssory-the emblem of temptation: the supposed interview between God and our first parents is of the same character-the emblem of the vice of conscience following umlawful indulsenc"; the tree of the knowledge of good and evil repm sents some form of sensual indulgence. The ouly realities in the picture are the moral reatitien, conscience and temptation in some carnal formrealities which were no move powerind in the case of our lirst pareuts than they are in the ease of all their descendants who pich to malawfod indulgence, as they dicl. The elnctrine of the Fall, acrording to this interpretation, is simply the doctrine of the almse of tree will in un first parents; and the question of the relation of this urimary sin to all subsequent sim, is variously regarded hy this chass of theologians. All of them would repuliate any formal imputation of it : yet all or most allow some actual transmission or inhuritance of corrupted will, as the consequence of the original aluse of it.

The Pelagian theory maintained, indech, that the race was not the worse of Allam's fall ; hut that, as our tirst parents ' were to hame for yiblinis to a temptation whith they micht have resisted, so all of us, hy a moner attention in cultivatiog our natural powers. may maintain our imocence amilst the temptations with whiels we are surrounded; and, therefore, that we fall short of that which it is in ou: power to do, if we dor not yich a more perfect ubdience to the law of Gol than Adam yiehed.' The Armmian theory, again, contended that the chiof luss of the race, as the consernence of the trangression of our tirst pareat: was the subjection to death thereby incmrem, ami the moral disadvantages arising out of the fiar of death. Uthers, more orthodox than cither, onntem that the spinitual maty of the race necessarily implies that the depraved will of our first parents las descented to their posterity as their humpry lurtion.
B. The quinion of those wholork uron the ehapter in Genesis as a mere myth or fahle, representing a deam of the religions imagination, withont any special moral meaning, eanot be said to cume within the pale of Christian theology. The doctrine

## FAIS OF THE LEAF-FALLAC'Y'

of the Fall is with them only a devont bua, ineon sistent with their prineples of phandiny and histury, and which, accombindy, they disumsis from their speculatam or macern altase ether.
 and lachre
 chusetts, in the Linited intates, is only almut two mides long. Throwhent nearly the whak of its

 fect. This lower section of the toment is hat rally trewded with mills, which satedy have ram for air and light letwen wach wther: 'lhe month is on the eastern arm of Narmemert lay. F. R. is the name likewise of the anjant lowatis. The town, or rather the township, contanis atume 15 somo inhabitants, who are chindy cmployel in comection with the water-puwer alrealy mentioned. The principal manufatures are woulles, cotons, and ironware. 'Hhe place, moremer, hits an excellent harbur-safe ;ull capacious, with ilecp water, and of easy aceess.

FAtLACY. 'The incorrect perfommace of the prucess of reasoning, so as to leul to crror, is satil to, be a fallacy. 'llae science of Larice reduces somin masming to certain mbes, and when any of these rules is vidated, a legical fallacy is the result. There is always inchuled in lomigal tratises a chapter on fallacies, in which the seseral kinds are classifich amb illostrated. In the old writers, there was always a livissom into two classes. acording as the error lay in the fimm of the reasoming, or in the buttor the formal were entitleal in lictions. or those applearing in the expression ; the material were cutitled ertre diotion, implyme that the fault could mot be detected from the lamgazer, hat must he somethe in a consideration of the meaning on sulbject-matter. As some of the desigmatums employed in detailing thess varions kinds of erronerons reasminn have passel intw common wee, we shall first give a short motice of the anciont classitication.
The formal, or those in firtione, were dirut breaches at the laws of sybugism, on of : wammatation from promisos.
The fallacy of undistrilnded mithll is one of the rasers where what is called the milule torm of a sylheism is usen in two senses. 'A torm is sain to bie "distributed" when it is taken universally, so as to stand furevorything it is capmble of heing applien to; amb, comsergently, is "umbistributal" when it stande for a portion omly of the thines desigenated lyy it. Thas, "all fomit," or every kind of form, ar. expressions which ingly the distribution of the turn "foom;" "sonbe fornl," would imply its nomristribution.' In such a proposition as "all fuob is ohtaind from the veretable or ammal kinuloms, the term is distributch, hecanse it is meant to be atlimed of every article bed as fomb, that such article is derived from one or other of these two sonrces. lint whon we say food is necessary for hin.' we mean maly a limited mumber of articles. Hence suhh a syllogism as the following: "Foum is Wecesary to life; com in forel: theretore, corn is nowsisary to life, is fanlty from undistributer midhe; the mand prowsition, 'fond is necessary, \&r., has the fom of a anicersal moposition, with the wollty of a particular one.
 whar an worl is nsed in two senses sodillarent as to give propely mo midhe tom, and, therefore, ne comaneting link butween the premises and the eomChasion. A faborite example af this is the follow ing: 'Eycry dow runs on four lecs; sirius the dorgstar) is a dhe; therefore sirius rous on for
lews. This is merely playing with the ambiguity of a word. Dr Whately hats shewn that this faliacy may ,ften arise with words deriwd from the sume whit, bot acyuring from usage different signitictthan: thas, projectors are untit to be trusted; this man has foment it preject, therefore lee is unfit to be trusted;' where the argument suppuses that the mo:ming of "projector' and '"me who has formed a project' is the sime, whill it is not.

The fallacy of composition dud dirision arises by using a wod distrilnatively that is meant collec. tively: thas, dive is cipal to two and three; two ami then are even and ohld; therefore five is even :min 'mil.'.

The fallacy of fornt was anmiguity arising from promnciation. Thux, ly a false accont in realing the commanhent, "thon shalt mot liar false wituess
 submation is not formidan, or that anything false excopt exidence is formitted, on that false cridence may le given for him, or that it is may against neimhkurs that false withess is not to be lume?
The fielloriar uccilontis is still a form of the amhigums mithlle. It is when we conclude of in thing something that is only true of it aceidentally, as. 'wine is pernicions, therefore it ought to be frombinden.' The monise is trite only of the immond rate use, the conchusion refers to its use in cvery form. Amother fallacy, the comserse of this, is aryung it Nictu secumhum quid mh dictum simpliciter (passing from what is trie in some respect to what is true alsolntely). of this the stuck example is: "What you hwight yesturday yom eat to-day ; you bought raw mat yosterlay, therfore you eat raw mat to-day.'
The mont usually gunted of the secom class of fallacies - ${ }^{2}$ thot ditioner -are the following:
Ifmorution +lenchi, or "ignorance of the refutation." This means mistakine the print in dispute; or proving something that an ofprone does not dony. This is common chough in controversy. See an example in puint in Ennms.
The petitio principui, on' 'butging of the question.' This is when, instead of provine it position hy some lifferent position, smmething is assumed that is identical with what is to lee prived. The most emmon form of this fallacy is what is termed reasoning in a circh, whre we make two propsitions mutnally powe each other. The following would le an example of this muln of reasming Sulumse we asked why smoke asemds, and any the were to answer, 'hecause it is light:' we then inguire low it is known to be limh, and the reply is, 'heranse it iscemis.'
The non couse pro coush. This is a fallacy of insudicient indaction, or the inforring a connection of cause and etfect where there is only a mere soquene or acempanment; as when we allege that the prosperity of Englam is che to its havinc an aristocracy, or an Lstablished Chureh, or any other circumstance that has attached to the country, withont ascertaining that there is any real cansation between the two ficets. bimpiricism in maliome is of this nature: such a one tionk a cortain medicin*, and recovered from an illness, therefure the medicime was the eanse of thi recovery. The pant hoe. eryo propter hoc, is another expressim for the sanm fallatey, which is one of wide range, ami whose rectilication far transcents the limits of scholastice or formal logic.

The arymmentur abominem is is reference to the circunstamers of the party ahlressen, and means that although a certain reasoning may le goon in itself, such party is not catitled to urge it, having perhaps alrealy repmiated the sune reasoning in other cases, or acted in a mamer inconsist wht with the employment of it. (For a full excmplification of fallacies accorling to the foreroing emumeration, see De

## FALLACY-FALLNG BODIES.

Morqan's Formel Lonit, Whately's Logke, Sir Wal liam Hamilton's Lectures on Logic, \&e.)
The subject of fallacies has receivel a much more compremasive treatment in the work on Lugic lyy Mr J. s. Will, who has colarged the bavis of the science itself, by plawing Induction at the fombation of leasoning, and ley recomising the newssity of laying down rules for the correct promance of that por
 phace to some of the preceling follames, sum as the poat hor, ato propter tur. which, althond oecurring in treatises of sylloristic loric, woes mot virlate any rule either of syllogism on of any proess inchuled in such treatises. ln fact, if we take a conndete view of all the carlinal nperatioms that entor into. the estalishment of truth liy evidener, wh metht to enumerate four such operations- Ohservation, inchasing experiment; Jetimtion, ar the right use of general terms; Induction; and Dealuction or syllogism. Now, any one of these "flerations liady perionmal wonld necessarily letal to a wrong result. in other words, a fallacy: loat in aldition to the mistalies arising from the almission of insutficiont evidence at any mint. there is a class of eroms (as well as troths) that arise from our receiving propositions withont any evidence at all, on the gromed that they are soliecribut. In abery case of rasuning. we mast come at last to soncthing tlant does mot new a reasm, as, for example, the evidence of our senses, or omr actual ohservation; hut we may sometimes almit :is silfevilent what is really mit sa, owing, perlapis, to our having a strong sentiment in the matter on hand. It is usual to consider the existence of an extermal material world, altugether indepembent of our minds, as eortain in itself withont requiring auy moof or reason for the belief. It is fund that we often commit mistakes in this way, and the mistakes thence arising Mr Mill illustrates malor the title of Fallacies of simple Inspection, or Fallacios a mion, which inclutus the whole of what may he termed Natural l'oumlices. The ather members of lis classifieation follow his division of the jrucesses concerneal in the investication of truth: they are Fallacies of Ohservation, Fabacies of Ceneralisatiom. indothe Induction, and Fallacies of Jatiocination or sylugism. H: romarls, morenser, that error doues not often take the form of a deliberate infringemant of the rules of goom ohervation, induction, on dednetim. but rather consists in a confused percepr tion of the fremises incolsed. In uthor words, it is the "not concoiving an premises with lue chearness, that is, with dhe fixity: fommine one conception of our evitence when we enflent on receive it, :mul another when we make use of it : or unatrisedly and in gencral mamsemaly, substitutine as we por ceed, diflerent promises in the place of thase with which we set ont, or a difherent comelusim for that which wo malertomk to prove. 'Jlas sise existrace to a class of fallacies which may low justly callen Fallacies of ('onfusion ; comprehending, among others, all those which hase their sonree in langnage whether arising from the ragumes or ambigity of onr terms, or from casmal assumiations wath them. It is in this gronp, that hr Mill fhan's the petion principit, the ifmoratio, 'lonche, ami ambiguons languge gencrally (Lomir, lowk w.).
The schulastic fallacies were ramsiumer monstly in the light of weaknesses of involuntary errors of the intellect, to be corrected hy somind rules or a gool method of procelnr: The syllucristic logecian made little comint of the natural prijulices, or strong fomotions and passions of mind, wheh foreibly $\mathbf{f}^{n}$ "rect the intellectual views, and render men averse tu sound reasumine. This grand omission was first eflectively surplied in the immortal first book of the

Torem Orgonom of Bapon, whe, in a vigorwis and telling exposition, sit forth some of the most powerful prejudices of the natural mind. and their inththee in comploting scionce amb philosophy, as well the evergetay judrments of mankiml. Cuder the name of "intolia' he classatl forme differant species of these moral somures of uror, acainst which the mind had to he fortified, not hy syllonistic rules. hat by a self-lomyins disciplinw, and a highly cultivated preeption of the true cme of science, which was to increase homan power in all the arts of life. His first class of idola were idele tribus, of delnsions common to the human mind fenerally, such ats rrons of the senses, the oreresnscopitility if the mind to impressions of sense, the limits of the laman faculties, and the interforence of prejublios and passions: a very comprehensive das, whith even he has faiked to do full justice to. The next chass are idolit nperte, idnls of the den ar cavern, hy which ho understames the peculiarities aml ibiosynrrasies of indivituals. The thive class, intobe fore idnds of the market, are intended to include the aluses of lamenare, on the various ways that one connelitions of thmos are distorted by names. The last chass are the infole thertri, theatrical illusions, under which he rebokes the great system-huilders of antiguty, surll as Aristotle, for intromucing fanciful and irrelevant consilerations into philo. suphy: and dwells especially on the computing influmees of sumerstition and thenlory and also the proction temblencies of the mind, whin are not satisficl with truth muless it can take on in muldion a certain warmeth or brilliancy of coburing.
fallivg bodies. Owingto Gravity (q.v.), all terrestrial horlies, if unsugmortel. foll, ur move towards the earth's centre, When a falling boly is absulutely without surpont, it is sail to foll freely. as distinguished from one desconding an inclined finue ar curved surace. Wie shall here conside. the two rases of free descent and of descent m inclincel planes.

1. Podies fielling fioche-The tirst fact of abservation regarding falling bowlies is that they fall with a variable velory; from this we infor that they are acted mon by same fore. A ain, on olsorving huw the velocity varics, we ime that its increments in equal times are "pual; from this we conclade that gravity is a mifurm foree, which it is, at least sensibly, fore small distances alwo the earth's surface. We have next to time ameasure for this forec. By expriment, it is foum that a lowly in 1 falls through lis 1 fert, and that at the cum of 1 "it moves with sucle a velucity, that if it continned to move mifomly after the '1" expired, it whald pass over
 measure of the relocity which has been generated in $1^{\prime}$, and is therefore the measure of the acecleratine fore of gravity; for the measure of acceleratin? force is the bucity which it will produce
 fuet is usmally denoter by the letter !a ami it is poper to mention here that this pantity measures the aceplerating force of the carth's attraction on all bonlics. Jxpriment shews that moder the "xhausted receiver of an air-gump all landirs fall with equal ratudity: and that the dienence of relocities of falling bobles in air is the entirely to the action of air ulun them:

As the arceleratiny fore is uniform, it follows that the velocity generates in any time, $\ell$. will he given $h y$ the formula $r=n$. since the force is umifum, it mast gemrate an equal velocity every second. In $t$, therefore, it must gencrate a velocity
 will be mosing with a velocity of $64 \cdot 4$ feet-i.e., were the velocity to become constant for the third
secomb, it would in that second move throngh dit: feet.
We are now in a position to inumire mare particulaly low benlies iall, and to answer suth questions in first : What time will a horly falling freely the to fall thenagh a givenspace? Sucond: What solonety will it kim in falling thromsh a siven -pates Thind: How high will as lonly ascond when projertal straight up with a given wheity? \&a, let A be the 1 nint from which a londy falls, amellits fusition at the end of the time $t$ : aml let $\therefore 1 ;=\therefore$ Than we know that at 1) the lunly has the velueity at. Su!plsse. now, the boly to he projectol upwards from in tuwarls I with this volocity gt -gravity actiny nganst it, and tembin: to retarl its motion. We know that at the cand of a time $t$ it will be aqain at $A$, harint exactly retracel its course, and lost all the velocity with which it started from B , because gravity will just take the same time to a lestroy the relocity of which it tomk to prome it. From this consideration we may obtain an expesshon for the space $A 1$; or $S$ in terms of the time $t$. In the time to the boly rising from I; with a velocity $=y^{f}$ would ascend, if not retardel, a height ( $g t$ ) . $t$, or $x^{2}$. But in the time $t$, sravity, we know, carriel it throuchs ; it will tharefore, in the same time, by wtarding it, prevent it guing to the height $t^{\prime \prime}$ by a space $=$ S. The space through which it actually ascemls is then represcuted by the difference gt $t^{*}-\mathbf{S}$; hot this space we know to be AB or A . Therefore $\mathrm{S}=\mathrm{g}^{2}-\mathrm{S}:$ or $\Omega=g^{2}$, or $\mathrm{S}=\frac{1}{2} y^{\prime 2}$. We may give this equation another fom. For o leing the velucity acmuiren in the time $t, x=\left\{t, \therefore t=\frac{n}{!}\right.$.
 these iommule. we see that when a lorly falls from rest unler the action of gravity, its velocity at any time varies as the time, and the spane of it whecity as the space deseribed.
If the buis, insteal of starting from rest, las an initial wheity $\mathrm{V}^{\circ}$; and if $\tau$, as before, be the velocity at the time $t$, then evidently $v$ is $=$ the uriginal whecity + that which is generated loy gravity, or $x=V+\pi t$; and the slame will be that which womb have heen deseribul 1 g the hody moviar uniformly with a velocity $\mathrm{V}+$ that which it wonld d scribe under gravity alone, or $s=V t+\frac{!t^{2}}{2}$. With rozarl to the last two formule, it is easy to see that they may low made to suit the case of a body projuted upwarls with a velocity V , by a change of sing; thas, $x=V-f t$, and $\mathrm{S}=\mathrm{V} t-\frac{a t^{2}}{2} ;$ gravity lave acting to destroy velocity, and diminish the ind attaince. From the general formule in the atie of an initial velucity, whether the body be frojucted mpards or downwards, we may express $r$ in terms of $s$, as we did in the casc of motion from
$\mathrm{r} \cdot \mathrm{tom} z^{2}=\left(\mathrm{V} \pm f^{2}\right)^{2}=\mathrm{V}^{2} \pm q_{g}\left(\mathrm{~V} t+\frac{y^{2}}{\underline{2}}\right)=$
Thuse are all the formalas aplieable the cas: of fulling budiss and by their means all problems in this lifunch of dynamins may he solved. It also aflyars that the fomme above investigatel aply t" all "ans of rectilinar motion of bodies consibleme as harticles under the action of any umiform fores. In all sula eases, if $f$ meanure the acelerat-

from rest: and $s=V t \pm \frac{1}{2} t^{2}$, and $v^{n}=V^{*} \pm 9 \Omega$, for the case of an initial velacity.

The rader can casily frame examples illustrative of the formula for himself. We subjoin one: A stme falls fown a well, :and in $2^{-1}$ the sontme of its striking the hottom is heard. How Wep is the well? Nowlecting the time occuphed in the transmission of somm, the formula $\mathrm{S}=\frac{1}{2} \int t^{2}$
 $=2 \cdot$, $0 \cdot 64+4$ fect.

2 Borlics desemting inclimed phans.- In this case the formulas alrcaly investirated apply with a slight change in the figure, if P be a berly on the inclined plane AD, descembing under stavity. we obsurve that whly that resolved jart if fravity parallel to Al; is effictive to make it desemi, the other jart at right ancles to 11 ; merdy promecing luessure on the 1 lane: The
ancle of inclimation of the flane being a, we know (sec Comionition and lienoletion of Fonces) that the resolved part of eravity parallel to the plane is $a \sin$. $a$. The bouly, then, may be conceiverl to he deseending under it uniform accelemtinu force $a$ sin. $a$. We obtain the formula, acenrdingly, for diescent on inelined planes hy substituting !f sin. a for $f$ in the general formule given alrose. Whe notice, howerer, that in deseent on inclined thans the velocity acquired is, as in the case of horlies falling freely, clue soldy to the rotieal height throngh which the bonly falls. By one fommala, $c^{2}=9$ sin. $" . S$, where $S=A 1$, if the holy falls irum 10. This may be writtea $\boldsymbol{a}^{*}=\mathbf{0} g$.

 redocity acquirn by a band in falling ereely
 the velocity acruirel by a bory falling down the smane of any smooth curve is that due to the bertieal height through which it has fallen; which might be proset in varions ways, but is sufficiently dear from this, that ang curve may le considerei as a suressinh of indined plans. indefinitely short in hoth, and mreat in mumber; for the propinsition being truc, as above provel, fireach of them, will be true fur all, and therefore for the curse.

For an account of the variations of the value of $a$, Whe to the earth not beine a perfect spluere, and other causes, se Jintin. The realer is also referred to the article Arwonds Hammere The theory of the descent of bodies malle gravity was first discorered and taught lig Galileo.

## FALLING SICKNESS. Ste Epiderss.

F'ALLMERAY'ER, Jacon Phminp, a German travelher and histurian, was born luth December 1791, at Tschotseh, mar lixixen in the Tyrol; studied at Irixen, and in 1 so9 went to Salzhing, where he gawe instructions to pupils in hintory and Latin. It ter university of landshat, be studied lan; history, and phinilocy. Whom tromany rose arainst Namben in 1si:s, he putered the bavarian army, ant tow part in sewral cheapoments. After peace
 be vas apmeinted to the chair of history and phalolngy it Landshut. In lais, he acempanied the linssian general, Coment Ostermam-Tolstoy, in a juarney to the Last, visiting Egyp, I'alestine, Syria, "yprus, Rhodes, Grecce, Turkcy, and Italy. Buin: $1830-1840$, he resided with Count OstermannThlntoy at Coneva, and in the course of the next cight years twice revisited the East. The events of

## FALLOPIAN TUBES-FALLOW.

1548 recalled him to Bavaria, and for a short time he sat as a depnty to the lrankfurt parliament, but sine 1850 has lived privately in Munich. $F$. is a distinguished polyglott, and sjeaks it great number both of European aml Oriental tonsucs. His principal works are, Geschichte dis huiserthums
 Morea im Mitthlaltor (2) vols, stuttg 1530-1836), and Frogmento coes den Oricne (2 vols, stutte 1845 ). His views on the origin of the molern Grick langnage have excited the liveliest controversy both in Grecee anil elscwhere A complete elition of $F$ 's works is at present (1801) aphearing at 1.ipsic, entitled Gescmmolte Werke cun Jukul Philind
F'allmerayer.

FALLO'PIAN TUBES, THE (so callel after Fallopias, who is usmally, hut incorrecth: regarded as their discoverer), or oriducts, are cinals alumt four or five inches in length in the humans suljuect, "rening at their inner extremity into the "um P angle of the uterus or womb, aml at the other cmid. by a fringed funnel-shaped termination, into the civity of the peritoneum. This fringal or fimbriated extremity at cortain premps masps the ovany, and receires the on7m, which is disclargent hy the rupt ture of the ciratian vesicle. See wrimy. The orom usually passess alonet the Fallopan talies into the uterns, where it is either impregnateil by contact with woe or more sucrmatozoa, or is absorbed. cometimes, however, the ovam beconaes not only impregatel bat retainel, and futher developh in the Fillopian thbes, thus giving rise to one of the Enms of extra-uterine pregnancy.

FALLO'PIUS, Gabmel, a celebrated : matmint, horn at or near Modena, ahout the year $1 \overline{5} 23$ (this date, however, is very mocertain), and lied in 150 . If the date we bave assigned is correct, he was only twenty-five when he was promotell from the university of Ferrara to a professorihip, at Fisa, whence. after a few years, he was callel to Paima, to succeed Vesalins, who hal been compellel by the Inquisition to resigh his oflice. Sce Vessits. Curier characterises him as oue of the three scrants who restorel rather tham created the seience of amatomy in the
lith c., the two others luin Viealins and Eustalith c., the two outhers heing Vicalius and Eustachins. After a short but brilliant carcer, he hime at the age of 41, and was succednal by his fawowrit. pupil, Falricius ab Aequapendente.

He follishel mamerons whes in sarions departments of molicine, of which the most important is his, obserwethones Andomier, in lifrosquinquen digestor. lis61, in which he comperts many crrors into whicls lis predecessur, Vasaline, had fallow. Ite was the first to deseribe with acemacy the ethamil amil sphenoid buncs, and the mimate structure of the ear
itlue camal alone which the facial nerve wasses, after (the eamal along which the facial nerve passes, after leaving the amditory, is still known as the adneduet
of Fallopms) : the moseles of the suft palate and the of Fallopins) : the maseles of thes suft palate, amb the
 In some of his surposel diseweries, ho had hem the ovary un either sulde to the uterns. num which buar his name, were kiowni tha and accurately deseribel 1 bs: Terophitus am linfus of Fiphesus, : 300 years hefore ont era. In ahdition to his amatomieal fame, he had a considerable reputation as a butanist. Me was the supcrintendint of the motanical garden at Padua : and agenus of phants, Lelltipia, has been named after lim. A complete clition of his works, in form folio volmmes, was 1mblished in 1600.

Filloutr, Frǵderic A fafeed l'ierme, Vicomte ne, a lirench autlor and statesman, was borm at Angers 11th May 1811. His family was distinguished for its legitimist zeal, and at the Restora-
tion was rewarded by receiving letters of nobility. Youns 1 . first drew attention to limsclf ly two works penetrated by an arilent luve of the old Bourbon uder of things- L'Mastore de Louis I Y 1 . (Paris, 1540), and L'İintoive de Sreint I'ie 1", Papo, de lurdre des Ficres prochuras (Paris, 1844). These indicate the lovel of his political and religions faitl. In the elections of 1846 , he was choseb depaty for the department Haine-et-Loire, In religion, ho inlvocated the ideas of Montalembert; in politics, thase of Berryer, but united with his legitimist sentiments a lose of liberty and elucation strandely. incongruous with the historic claracter of his party. After the revolution of lemmary 18.15 , he exhibited much carrgy as a momber of the Comstituent Assembly, was one of those who orgamised the resistance to the insurrection of the 15 a h Hay, amb, as reforter on the national workshope, prononnced for their immediate dissohtion. Ife Was alses one of the most ardent promoters of the exjudition to lime, which has since entaileal so much tronhle and even danger on the governmint of Framer. After the election of Lous Aapmeon to the presideney, F . was apmomend Minister of Prablic Instruction, an ollice which be lield vily for ten months. Since the events of the al December 1sish, he has retired from mublic life altoecther, to a conatry-seat in the nejhbourlinod of Ansers, where he ocenpies himself with agriontural pursuits. In 18.7, lue was almitted a member of the french Acalemy, and in the same yoar published at Tours his Sourenirs de Charit:-F. has a bouther, a camm at the court of lome, who datters limaself that he possesses the veritable handkerchict of St Veroniea, bearing the imprint of the Savion's comutename.
FA LLOW (from the same rout as Gier. fithl or fiflh Lat. julne: expessing a pale dun, tanny colour). This wom sometimes simufies waste, untilied lamd; but usally it is applied to land that is plon la it and "therwise stirrel for a season withont heine rroprod. The most of the wheat raiked by the Rumans was sown after the lame was fallowerl: imleen, the nsnal rotatim was fallow and wheat iultemately. It was only fertile soils that couki long supput such an exhansting system; benee resultal the decrasing prohluce which the later Roman agricultomal authons soften sjuak of amd liment.
'lhe fallowing of lame was introtuced into all tho conntries which fell mader the dominion of the Ramans. During their sway in Iritain, it som ropotal larse quantitios of wheat; and Em eraturiss after the limaus lift it, no other mule of cultivatime thas lanel was fullnwel. It maty here he observen, that wherever tha system of falluwior, without sivine manare to the erops, is pratised, it necessarily sulposes that the suil is at least mmilerately fertih. This system is most surcessful on argillicemas soils, which are retentive of owanic manare. It must le lorne in mime that the chief use of fallow is to liferate the pant-focul
 matter. The phonehing and stirring, ly almitting air imomotes decompusition, in the same manner as the turning over of a durnhill dues: it also destroes the routs of the woals that inpurerish and chake the erols.
It was long before fallowing was introluced to any extent in scotland; lut almot the beginnim; of the present century, it was larsely practiseil. Owins lowever, to the draining of the soll, and the exturnion of the green-crapling system, it is now conimen to the most retative clay-soils, where it affurts the only means of thoroughly cleaning the land. In a rotation of beuns, clover, oats, fallow,

In the former casc, he may be punished ligy fine and inumisonment in the latter, he must pay such danaigus as are awardel. Any me iletaned without sutlicient eanse is entitled to apmy for a writ of Meleces Corpess (1. v.) to procure his liberation. In Scotland, this species of othence is called Wrongons Imprisoument (i. F.).

FALSE NEWS or RUNOURS. Spreading
fake news to nake a liscorl betwern the socereim and nobility, is a mishlymanur, aml punishable hy the commen law of Encland with time and inmerisonment. Bre statute of Wimaninstor the tirst, c. 34 , this penalty is rmarmal. This statute is said by Lorl Coke to lave bean 1 rased in consentucnce of the rehellion of Simon de Mnantfort (roke, Inst, ii. $\because 2(6)$. The law hefore the Conduest had been mere serere, and rembired that the authum ammater of false rumburs shombl hate his tomerne rut ont, if the remecment it mot hy estimation of his heal (ar eatio tation tax). One of the artioles asamat cardinal Whalsey was fomeded on this principle if commom law: Also the sail cardinal has mated and endeavourel hisuscli by crafty and untroe tales arainst Four nolules of your realm.' - Cokn, /nst. iv. :IE. 'rin feeling of the presmat alay is mone in actordance with the axiom of Tacitus. Contirit, si irowerio. ture
 stamilers. You pmblish them as Jour wen; if san depise them, thes vanish).
fillie pleftences, Ohinisge Money by: By the comman law of Euglant, aman is not punisiable as a cimmal who las intuetel another, ly framulent repersmatimes, to part with the mandy
 decertion low of a puldic nature. Lameny or thert was the only soeries of wromeful alistraction of articles of vahe which was rommisel. ame where the romsent of the enner to the transaction wats
 Inft to a civel ation for his relief. "To remedy" this defect in the law, the :3) Meny VIII. e. i was paseal, vherely it was curatel, that if any lexam should fabely ant deceitfully uhtain any mones. Enots, de, ly means of any false token of comentifeit letter marle in any other man's name, the offender showld suffer any ]nuinhment shont of death, at the discretion of the jmise. This stitute, howerer, only reacheal the case of deception ly us.

 all false pretenes whatsoever. Futher alt rations were male by subsequent statnates, mint. by ani 8 Gen. IV. \& 9 , the previons lamisham in the subjeet was eomscolinatel. "lhis is now the mhine statute in regaral to falne preteraces. Tha general principle is that, whower a pursom framuluntly reprements as an aridiug fitet that which is unt an cxisting fact, and so gets monery, \&e., that is an
 (1. 2 otio. The false protence must rdate to sume present fiect, and therefore is promise mernly to do some act is mot such a false reprecutation as will shatain a conviction. It is not necessary that the
 aet tomline to flecrive, will hriug a persmb within thi. statute. Thus, a main at Oxiorl wearing a ap and Ennon, in onder to imince a trahlesman, of whom ha arkerel ghonts, to belive that he was a membin of the university, is sutlicient to warant a romsiction. The decration practiseal, homeser, must not be simply as to the qumlity of an article. for this is regariled as morely at dishonest track of trate, and nut urimimally pminhalle ; it is alse merssary that the owner shonk $\mathrm{I}_{\mathrm{n}}$. deveived by the pretwee: and where a tradesman is inducel tio part with groods in a regular chstmmer, makins a false statcment, not on account of the statencut, but from his belief in the eredit of the party, the transaction is not punish-
 is enacted that it shall lie mo har to a conviction that the crime , on lemine proved, amomen to lareeny. and that it slall not be necessary to prose an intent to lefrand any particular person; that the delivery of money, \&c., to another person, for the lenefit of

## FALSE RETVRN-FALUN.

the party using the lleeption, and also the obtaining sichature to. or destrution of, a raluable seemrity, de. ly a false representation, shall subject thas offonder to puashment. The same statute, ss, 46 and 4., contains a salutary provision, that ay persom attrmpting to extort money by threatening to acouse another of eertain felonies, or of an infonous crime, may le transported fer life.

In seotlam, this offence is known as Falsehumb, Fram, and Wilful Imposition. Each species of the oflence which in England is pmonshate maler the statute, in Scotland is imilictable at common law. Thus, false persomation, as where a man, in thi assumed character of an exciseman, recived money as a composition for smughed gools, has been heh to warrant a conviction of falsehoml. Sio, also, where the deception consists in fictitious apperances: as where a man, by fittime his shop with false lades, induced auother to trust him with goods. Obtaining moncy ly bearging-letters, and the common practice of cham-thoming, fall muler this denmination of crime.

FALSE RETURN, Actios rof. Where a sheriff makes a false return to a writ, the paty injured sayy mantain an action against him for damages. Thus a return of non cet inventus to a writ if capias, when the defendant might have been appechended, (ur a return of nulle bona to a fievi fiecias, when there were gools which might have been seized, renders the slacriff lialle in damages to the amount of loss oceasioned by his negrigenes.

FALSE SlGNALS. By T Will. IV. and I Vict. c. 89 , s. 5 , the exhibiting any false light or siznal, with intent to bring any shipmerssel into danger. is made folony, and pinishable with death. The felonions intent may be proved by declarations made by the accusel, ur ly circumstances which fairly leard to the conclusion of a guity purpose. The punishment of death is reeorded, but is not in fact carricd ont.

FdLSE SWEARING. Pb; 19 and 20 Vict. c. 79 , s. ITS (Bankruptcy, Scotland), any person guilty of falsehood in any oath made in the pursuance of the act, shall le liable to a prosecution at the instance of the Lord Advocate, or of the trustee in the sequestration, with consent of the Lemi Advocate. But in the latter case, the prosecution must be authorised by a majority of the erediturs present at a mectins called for the purpose. The person, on ronviction, is lialsh, in additinn to the pumishment awardeal, to forfeit, for behoof of the creditors, his whole claim under the sequestration. In England a hankrupt is not put upu oath; but on makins in false decharation, be is decmed guilty of a misdemeabon ame pmishable with the penalty of jerjury:

FALAR VERDICT. The remedy in eases where it was alleced that a false verlict had been returned, was furmerls by means of a writ of attaint. This writuricinally lay only in cases where the jury had roturnet at varict on their own knowledge of the facta, and proceeded on the assmopition that, in returniur a fialse verdict, they were necessarily perjurel. The case was heard hefore twonty-four men, and in casp the oricinal verdict was fumb bat, the jurors incorred the peaalty of infany and forfoiture of their genals. liy statute of Wrestminster the first, c. 34, a writ of attaint was allowed upon an inguest; i. e., where cases had been decided upon evidener adrlucel. In this ease, the evilence produced on tha scoond inguiry could only be such as had been laid before the lirst jurs; as it woud lave bern manifestly minust to punisli jurors on fresh evidence which they han not learol. Writ of attaint was abolished ly 6 Geo. IV. c. 50, s. 60 . 239

FALSE WEIGHTA AND MbASURES. The use of false weights and seales is an offence at commen law in Englani, and pmishable hy imprisomment.
 are punishable ley condiscation of movables.
Falshallood. See Fhatb.
FALNET, or FALSETTO, a term in singing for the highest regist $r$ of a man's woice, which joins tho matural or chest wine, and which, ly practice, may bus intemed with the chest-voice as to make no percivable break.

FALSLFTVNG RECORDS. The injuring or falsifying any of the docmunts of a court of justice is, by several munderu statutes, male a serions offence. Any persmonlitcrat ing, injuring, or destroying any record, writ. \&c., ir any orimal tocument lelonsing to any cont of reen orl of of equity, is guilty of a mishemenour, and may le transported for seven years (now penal sorvitmle), or he punished ly fine or imprisomment, with or without hard labour, 7 and 8 Geo. IV. e oq. By 18 and 14 Vict. c. 99, any proson emploged to furnish certified copies wilfully certifying any document as a trae cops, knowing the same is not so, is guilty of a misitemomour, and way be imprisoned for eighteen months. This act lucs mot cxteme to Scothmel. Ey 1 and 2 Vict. e. $0 \cdot$, any prrson employed in a mbic roond offecertifying any writing to be a the eong, knowing the sanie to be false in any material part, is guilty of felony, and may be tramsuretel for life.

FA'LSTEle, a Dunish islant in the Baltic, south of Seelamd. hes luetwern lat. $5 t^{\circ}$ : $0^{\prime}$ and $54^{\circ} 6 s^{\prime} \mathrm{N}$., and hatween longe $11^{\circ} 45^{\circ}$ and $12^{\circ} 11^{\prime} \mathrm{E}$. It is seprated he the strait called the Griinsumb from the islam of Mocm, amd ly that called the Gind burgsund from the islime of laalam, together with which $F$. forms the stift or province of Latand, : province which contains in all 635 soluare miles, $: 1: 1]$ which, in $185 \overline{5}$, han 196, 511 inhabitints. $F$, is about $\boxed{6}$ miles long, aml 16 wide at its widest part, ant has in area of aluht $1 / 5$ square miles. It is that, remakally fraitful, amt well cultimated, so that it resembles an attractive parden, amd maintains in all about as, ofo inhalitants, who rmploy themsclyes chietly in adriculture and attle-hreeding. The elief town is Nykjuhing, on the Culdhorgsumd. It is very ohl, bas a castle and a cathedral, has some commere ant shiphuilding, and a population of Qans. The only other place of any note is Stulbek. jubine.
 Kopperterget, i. e., the 'ol] copper-mine'), is a town of Sweden, capital of the lian, or prosines, of the same name, formerly the province of Dalcearlia. It stands on the north-western shme of lake limm, 120 miles north-west of stuchbolm, and has lou: been, and still is, famms for its copper-mines, though the quantity of ore now ohtained from them is much smaller than formerly. The greatest yich was ahont 1650, when no less than 3 ©िn tons were ammally got; this, however, declined, in 1600, to 1900 tons: while at present it is only alonat 400 tons. Gustavas Adolphus used to call the mines the 'treasury of Sweden.' The excavations are immense, extending for miks undergwomd, aml containing vast chamhers, where Bernatote, the late king of Sweden, gave splemitr banpuets, on which necasions the mines were hrilliantly lighted up. F . is an old town, regularly huilt, but has on the whole a gloomy effect, as its honses, which are of wool, have become blackened by the funnes which arise from the numerons smelting-furnaces of the town. These fumes, though destructive to all vegetable life in the neighbourhood, to not seem to affeet the health of

## FALUNS-FAMILLAR SPIRITS.

the inhabitants ; on the contrary, it is resorted to for safety during the prevalence of contagious diseases. F. has a High School founded by Queen Christina, a museum, an institution for instruction in the science of mining, several cotton and flax-spinning mills, and some manufactures of blankets and carpets-which are made from cow-hail-tobaceo. pipes, leather, \&c. I'up. 4615.

FALUNS, a term given liy the agriculturists of Touraine to shelly saui and marl, which they spread over their lands as a fortilising manue, and cmployed by geologists as the vame of the drposits from which those materials are ohtained. They are looscly aggregated beds of sand and marl, in which are shelis and corals, some entire, some rolled, and others in minute fragments; occasionally, they are so compacted by calcareons cement as to form a soft build. ing-stone. They oceur in seattered yatches of slight thiekness in the lower part of the valley of the Loire. The animal remains contained in them are chictly marine, and have the stanp of a more trupical fanna than the Mediterranean. A few land amb fluviatile mollusca are fombl mixed with the oecmice forms, and with these are associatel the remains of terrestrial quadrupeds, as Dinotherium (q. v.), Mastodon (r. v.), Rhinocerus (q.v.), \&e. It is jruballe that the falmu-beds were deposited near the shore in shallow water, and at a tinu when the temperature was warmer than it is now. About $2 \bar{y}$ per cent. of the organic remains are said to belong to recent species. The strata form the typical heds of Lyell's Miocene Feriorl ( $\mathrm{c} . \mathrm{v}$ ) , the midde division of the Tertiary rocks.

FA'MA (Gir. Pheme), the godless of rumour, appears in the works of the earljest pots. Sommoles makes her the chill of IIope; Virgil, the youngest danghter of Terra, the sister of Encelalus and Ciens. Terra produced her to avence herseli unon the armls for the defent of her sons the giants, as F. wonh everywhere prochaim their evil deeds. Oriblescrilnes her ilwelligg as a falace of sounding bass with is thousand entrances.

FA'MA CLAMO'SA, in the ecelesiastical law of Scotland, is a wiflespread report, imputing immoral comduct to a clergman, pronationer, or eleder of the chureb. A fama clamosa, if very clamant, may form the ground of process by a presbytery, withoit any specific complaint being lorought before them, or the e being any particular aceuser. In these circumstances, the presbytery act for the rimelication of their own order, and in behalf of the morals of the commmisty. Shond the inquiries of the prestytery leal them to the consiction that the rumour is not withont fommation, they will serve the accused party with a likel, and this bring him fir trial beiore them. (ifills Church Prac. 49; Cook's steles; and Wood On Libels.)
FAMILALR SiPllits, a tom employed to denote certain sujernatural beings, in attendance upon magicians, wizards, withes, cunjurors, and other skilfinl yrofessmes of the black art. The word 'familiar' is in all likelihool lerived from the Latin fomulues (a 'domestic,' a 'slave'). The helief in such sririts gees far back into the history of the race. We real of them in the time of Moses, who admonishes his emuntrymen to "recard not them that have familiar spirits' (Lev. xix. Bi), which would imply the prevalence of the superstition among the Egyptians. The worl in the original rondered 'familiar spirits' is olooth; it is of frequent oecurrence in the Hebrew Scriptures, and literally signifies 'leathern bottles;' therely indieating the antiçuity of the idea, that magicians were wont to imprison in bottles the spirits whom their spells had subdued (whenec our 'bottle-imps' and 'bottle-
conjurors ") ; the origin, again, of which grotest pue belief is perhaps to lre sought for in the eircum. stance that mystical liquils lept in vials lave been immensely in rogne amontr the conjuors of all ages and countries. It is not clear, as some think, that we can inchule socrates among those who shared this vuluar superstition, for although he spoke of his attentant 'diemon' in vory amhiguons terms, the opinion of all enlighteued critics is, that he racant hy the worl nothing more and nothing less than whit Christians mean by the presence of a divine loht anl suide in the heart and conscience. But according to Delri, -a great authority on this subject-the belice in familiar spirits in the grosser and more magital form did exist among the ancient irecks, who, he athrins, desiguated such beings Peredrii, 'companions,' as locing ever assiduously at hand. The story of the ring of Gyges, king of Lydia, as narratel lay. Herodotus. is hed by Heywood (see Hierarchie if the Blessed Angols, \&.) to prove the existence of the belicf in that country also; and it is quite: certain that luring the midulle ages the belief in 'enchanter riugs' containing familiar spirits was widely ditfused thronghont Europe, the magicians of Schamanca, Toledo, and those of Italy, being especially famous for their skill in thus subjugating and imprisoning demons. Asin, in fact, would sem to have heen the oriminal lome of the belief in familiar spirits, whoch has long been established as a cardinal superstition of the Persians and Hialus, and which appears in perfection in the Arabien Nights: 'The 'slave of the lamp' who waits mon Aluhm is an example in point. Whether the belief in familiar spirits sprung up independently among the nations of Western Eurepe, or was transplanted thither by intercourse with the East, dous not clearly appear. A favourite form assumelle the familiar spirit was that of a black dog. Jorius and others relate, that the famous Cornehius Amippa (I. v.), half philosopher, half quack, was always accompanied by 'a devil in the shape of a black dog;' and adel, that when he perceived the approch of death, he took a collar omamented with nails, disposed in mancal inscriptions, from the neek of this animal, and dismissed him with these menorable words: Abi, porelita Bestit, fuce we totum per-didisti-('A way, accursel least, who hast ruined me wholly for ever'). Butler, in his Hudibras, speaks bighly of this aumal:

> Agripa kept a styian pis
> I the garb and habit of a dog
> That was his tutor, and the cur Fiead to the occult philosopher.
> And taught him subtly to maintain
> All other scionces are vain.

The reaters of Goethe, too, will remember that Mephistopheles first appears to Faust and Wagner luring their evening walk in this shave; but, in truth, the earliest instanees of such transmigration are much oller at least, if mediceal tradition ean lee credited, for it assures us that Simon Magus and cther ancient magicians had familiar spirits who attended them in the form of dogs. Curiously enough, in spite of the servitude to which the attendant imps were reduced by the potent spells of the maricians, they were popularly supposed, during the middle ages, to have their revenge at last, by earrying with them into eternal torment the souls of their deceased masters. This idea of divine retribution overtaking the practisers of magic is, however, not found out of Christendom. The Jews think not the less but the more of Solomon becanso he was, as they say, one of the greatest of magicians; and a similar feeling in regard to 'wonder-workers ;

find vireins smilled at what they hlushed hefore.
Stede in a payer in the Tutlor, No, Sa, August 9 , Ton, gives an ammsins aconut of Delamira, a fine laty, resigning her fan whon sle was about to le marricel. One of her fomale acruaintances, havines ensian the manner in which this eharming atail fortumate corpette hal played her fan, asks her for it. Delamira acknowleskes the wonterifl virtaes of the fan, amd tells lim' that 'all she hat above the rest of her sex and contemporary beauties was wholly owing to a fan (that was left her ly her mother, and hat been long in the family, which, whoever had in possession, amb nsed with skill, slanill comramal the hearts of all her beholders: "and since," said slie smiling. "I have no more to do with extemiing my conquests of trimmplis. I will make you a present of this inestimable rarity:", "Cwo years
 gives a liumomus account of the tactics of copucttes in the use of fans: "Women are armed with fins as men with swouls, and sometimes do more execution with them: " then lue groes on to deseribe luw ladies are instrneted to handle, diseharge, gromme, and flatter their fans-the whole leing a plowsant satire on the fan-manourring in the reign of (uenn Anne.

Later in the 1 Sth c., fans sorvel anothor impontant purpose. At danciner asscmalites in Lamlin, Bath, and elsewhere, it waz usual for the rentlomen to select their partners liy* drawiner a fan. . All the Ladies' fans being blaced Irmoiscumsly in a lat, each gentleman drew one, and the lady to whom it belongell was his allotted partner. Mrs Montaru, in one of her letters, refers to this custom: 'In the afternoon, I went to Lord fxford's lall at Mary-lebone. It was yory agreealho, The fartners were chosen by their fans, but with a little sumercherie." Of the trick or fraud which this anthoress delieately vails under a French term, the beand of that perionl were far from guiltless. A larly's fan was almost as well known as her face, aul it was not difficult, with a little connivanee, to know which to draw. At Edinlurgh, where it appears to have
been the mactice to scluet a partnel for a whole seavon, the fans uf the lamies were carefully studied. Sir Alexander Paswell allumes to this sjectes of stratagen in one of his premes:

Each laly's fan a clacen I bamon lare,
With care seluctorl many a day lufare;
Fur unprovided witis a faventita beath,
The nymph, chagrimed, thar lall mast nueds forego.
In Italy, Spain, the Wist Imlies, num also sume parts uf the Quitorl statos, fans are largely in use for wiving the sensatinn of combess ihning luot Weather, and fur this purpuse they may sometimes lue sewn in the lamels of gentlemnen as well as linlies. ln Shain, the old fashion of fan-fliting apuears to leestill in voguc. A lati traveller in that country says : 'l was vastly interested in the movements of the landes fins at church. All the womld knows that spanish fans are in prpetual mution, ant hetray eath focelimg. real M4 assumed, that Massu* thromirl the mind if the learer, I felt convinced 1 conla gress the nature of the service at every par* timlar manaut ly the way in which the fans wore waving. The lifferonce between a litany and a thankisiting was ummistakable; and I ledieved that minutur shatus of "lesotinn were also discoveralule." Irecetion Tomrists (1561).
With other chames in mamers, fans are bo lomeror used in Euglish fashimathe cireles for the frivolums parpises noticed in tlein $1^{\text {nast }}$ history; thoy still continue, lowever, to furm an artielo of ceromomial dress at dimeer anol otlur evenines parties. In empellishing them, foreint as well its mative art is exerted on a scale commeusmate with their price. From the suterior kinds, ermposed if ivory ink silk, ersting twenty, gumeas, buwn to thosio uf woml and liner, which are soln at $]$ s, there are varieties to suit every toilet aml locket. Lately, fans marle tastefully of fuathers, also fiuns constructed of straw and variously culoured ribloms, have buen among the noselties of fasbion. In the case of a pencral cont mourning. ladius are enjuined to use "hats paper fans.' The manuficeture of fans of rarions limuls is carried on in Ensland, Flance, Belgum, spain, and sther Furopean countries, like wise in the Thited states; antl nuw, as formerly, the fon is an article of export from fhina to miny parts of the world.

FAN PALAI, a name cummon to all those palus which have fan-sharul leavos, as the slecers of

 The unly truly Eurchean palm, Chomeropos humilis (4. r.), is a E. I'., as is also the North Amerinan Palmetto. The Talijnt Palin (Formpha unlmoculifrow) is somotimes callell the (ireat Fian loalm. The loulnyra Palm is another fan ballu. The fan-shaped leaf is 1moluced liy an ablureviation of the midrib of a piunaterl leaf.

FANAPIOTS, the gencral name given to the Gresks inhaliting the Fanar or Fanal in Constantinople, a quarter of the city which takes its name from the beacon ( (ir: phonariom) situated in it. 'They first allear in listory after the taking of Constantimope ly the Turks, ame appear to have hewn orisinally descendants of such noble Byzantine families as escaped the fury of the barbarians. Afterwards, lowever, the class was recruited hy emigrants from lifferent parts of the old Byzantine empre. Sulitle, insinuating, intrigung, they soon tows adrantive of the jurmance of the Turkish governors, and made themselves potitically indisIensable to their rulers. They filled the offices of dragomans, secretaries, bankers. \&c. One of them, named P'anyotaki, at a later periol, was appointed Dragoman to the Divan, and his successors obtained

still greater homours. 'lheough their inllamese, the lumative ollice of Wrasman of the Flee was callow into existonce, which save them alnont malimited puwer in the islands of the Archipelam. Beside. irm them were chasen, until the mathouak of tho revolution in 15\%2, the llospodars of W"all whian and Molitaia, while, in aldition, the dioprose of mont of the civil and military posts umler the Turking gavermment was in their hatals. In spitio of than finwer, however, the $F$ nowe ixhihitad murd patriutism; they were amimated by the buty motives of a caste, aml whon the war of liberation broke out among their conntrymen, they tomis mo part in it. In the present altemed state of aflairs in Curkey, they have no fulitical intlu-ace. Sce Harco Zalloni's Essed sur his Fummets (Marscille,
 of the freek Revolution (Edin., Blackwoul and Sons, 1561).

## FANCY. See laligination.

FANDA'NGO, like the Bulero, is an old Spauish national dance, in time. It is danced most gracefully in the comutry, usually to the accompaniment
of a quitar, while the dancers beat time with castants, a costom borromed from the Monss it promeds grahnally from a slow and uniform to the liveliest motion: and notwithstanding the simplicity of the $p$ mes, wiridly expresses all the graluatious of the passion of lore, in ananer sometimes lerderin: in licentionsmess. The peoph are so passionately fomi of it, that the cflorts of the clergy have never been able to suppress it.

FANEULL MALK, a spmedus pultio hall in Imsten. Massachamtts. crected in 15 to by l'eter Fancuil. and presented hy him to the town. In its ariginal momlitmas so gitem, the building comtaned a hall for fuldic meetines, with lesser apartments alowe, amil in hasment nsed as a market. In 1 .61. it was destroyed hy fire, amd rebuilt. Iharing the rewhotionary stioughe with England, the hall was so ofton ased for important pobtical metinges, that it heame known as 'the eradle of Americin liberty:' In 190., the loulding was increased in heioht ly an aditional story, and also increased in with, It is now an clitice about so feet square; the hall contains some fine pantings: and the bremment is now loger used as a market. The ent

Fanemil itull,
here given, which is taken from an original drawing, represcuts this interesting historical edifice as it existed in 1768.

FANF:SID is the French name of a short and lively military air or call, exceuted on brass instruments. It was brombt ly the Arabs into Sman, whence it passed inti, Dexieo and the New Whold. Finfterom, derived from fonfare, is the name given to a swagecring bully wenardy haster, prolathy invarse of the empty noise he makes when howing his own trampet.' or threatenims timid permbe, am the term aphied to his idle braesgubeis ant baporing vanuts is Fonformande.

EANG (Anc-Gax and dice, anything canght of taken, from the verb fiongen, to catch). In the 242
termimolary of the law of Seotland, a thief taken with the yites is one appobembed while carrying the stonengoods on his persins. It is not very long since this word formel jart of the common speech of Scotland:

> Suap, went the shears, then in a wink,
> The fung was stowed herlind a bink.'

Morisom's I'vems, 1. 110
In England, also, the verl fithg was still in use in Shak preare's time: 'Inestruction fieng mankind!' (T'imon of Athens, iv, B) : and 'Master l'ang,' in Hemy I ${ }^{\circ}$., is manel after his affice. We still use the plarase 'in the fanes,' for in the clntelnes; and the tangs of a thig or of a serpent are its teeth with which it catches or holds.

## FANNEIS-FAN-TRACERY VAULTING.

FANNERS, a machine employed to winnow grain. In passinis through the machine, the grain is rapidly agitated in a sieve, and falling through a strons current of wind, createrl by a rotatory fan. the chaff is blown out at one end, and the elcansed particles fall ont at an orifice beneath. The apparatus is composed chietly of wood, and thrugh ordinarily muved by the hand, it is sometimes connected with the driving power of a thrashingmill. The fanners superseded the old and slow process of winnowing, which consisted in throwing IIP the grain ly means of siewes or showels, while a current of wind, blowing across the thrashingfloor, carried away the chaff. 'A machine for the winnowing of corn was, as far as can be ascertained, for the first time made in this islaml hy Andrew liodger, a farmer on the estate of Cavers in lioxburghshire, in the year 1737. It was after retirimer from his farm to induler a bent for mechanies, that he entered on this remarkable invention, and leegan circulating what were callerl Fonneis throughont the comtry, which bis descemdants contimed to do for many years.-Domestic Annuls of Srothent, by If. Chambers. vol, iii. Strancely enomol, there was a strong opposition to the use of this useful instrument; the oljectors being certain rigid sectaries in Scotland, who saw in it an impions evasion of the Divine will. To create an artificial wind, was a distinct flying in the face of the text, 'Ife that formeth the monntains, and createth the wind.' -Amos iv. I3. Aprart from the folly of the Whjectors, who carried their fancies to the extent of petty persecution, we are amazed at their apparent neglect of the fact, that the wimowing of corn by artiticial means, in which fans perforined a conspicuous part, is mentioner repeaterly in the Oll Testament. Sce Fan. The allvantages in using the fanners soon overcame all prejulices on the sulhject, and the objections to the use of the machine are now rememberel only ly tradition, and loy a passage in one of the imperishable fictions of Scott. In the tale of Old Mortality, Manse Healrige is manle anachronously to speak to her mistress abont a newfangled machine for dighting the corn frae the chaff, thas implously thwarting the will o' livine Providence, by raising wind for your leddyship's use by human art, instead of sobiciting it ly prayer, or pationtly waiting for whatever dispensation of wiud Provilence was fleased to sem upon the shiteling-hill.'

Fi'No (Lat. Fiumon Fortunt, so called from the temple of Fortnne which the liomans erected here in commemoration of the defeat of Asirubal on the Metaurns) is the mame of a town and seaport of Italy, in the province of Urhimo e Pesaro, finely situated in a beantiful and fertile district on the shore of the Adriatic, 30 miles murth-west of Ancona, and near the month of the Mctaurus. It is well bnilt, is surrounded with walls and ditches, bas a eathedral ledicated to St F'ortumato, and numerons churehes containing may valuable paintings, among whieh are several of the lest works of Domenichine, and an excellent 'Anmunciation' by Guile. The remains of atriumphal arch of white marble, raised in honour of Aurnstus, form perhaps the chief object of classical interest at Fano. Pop. S 9160 , who earry on considerable trade in corn and ril, avel in silk goorls. Here, in 1514, lope Julins H. estallished the first printing-press with Arabic letters known in Europe. The port of F. was once well known to the traders of the Adriatic; its commerce, however, has leelined, and the harbour become, to some extent, choked up with sand.

FANS, Tue, a race of aborigines in Equatorial

Africa, residing on the trilntaries of the Cabom river, and said to be camilnals; the accounts of tha: savage race are, however, still imperfect, and what is mentioned respeting them wants enntirmation.

FANSHAWE, Sir Lithmed, was born in 160 S at Ware Park, in the county of Hertford ; stndied at Jesus Colluge, Cambridge: and in 1626, became a member of the Inner Temple. On the outloreak of the civil war, be took part with the king; and in 164s, became treasurer to the navy under Prince Fiurert. He was taken prisoner at the battle of Worcester; anl on his release, withdrew to Breda in IIolland, where Charles IL was hulding his court in exile. After the liestoration, be was appointed ambassator at the corurt of Malrid, where he died in T666. F. was an author of consideralle reputatinn. ITis most crlelrated work, now very rare , is a translation of Guarini's Pustor Fidi, the lyrical passages of which are rendered with remarkable skill aud elegance. The volume in which it appeared was pablisbed in 1604 , and contains other pheces in prose and verse.

FANTASLA, in Musie, the amme of a eomposition of a similar character to the capriccio; also given to extempore eflusions performed by a musician who possesses the rare gift of rroducing, as it were, offhand music like a well-studied, rechiar composition. Hummel was more celebratinl for his extempore fantasias on the manoforte than even for his puln. lished compositions. Frederick Schneider was equally great for his free fantasias on the organ.

## FANTOCCF'NI. Sce Puriet.

FAN-TRACERY V゙AULTING, a kind of Late Gothic vaulting ( $15 t b$ c.), so called from its resemhance to a fan. The ribs or veins spring from one Ioint, the cap of the shaft, and rauliate with the same curvature, and at equal intervals, round the surface of a curved cone or polygon, till they reach the semicirenlar or polygonal ribs which divide the roof borizontally at the ridge level. The suaces between the rilas are tilled with foils and ensps, rescmbling the tracery of a Gothir window; bence the name fon-tracery. "The spaces between the outlines of the fans at the ridge leval, are called by Irofessor Whewell (ferman Churchos) ritge lozences. In Henry VlI.'s Chapel, Westminster, one of the

Fan-tracery : From King's College C'bapel, Cambridge.
best examples of this kind of raulting, these lozengea are occupied ly pendants, which produce a most astonishing effect, looking like arches resting on
nothins 'lhey are hawerer, supported with grot insembity ha internal arches, rising high alume the

He was varly apmentiwed to a hookbinder: ret even then lee ilusutel his lefare time to science, ams anmost other things made experiments with an electrical mathine of his own constraction. Chame having prewred him admission. in 1412 , th the cheminal hetures of sir H. loars (If. $\because$. , then in the zenith of his fame, he ventured to send to bary the motes he hal taken, with a mondest expression of his desire to le employel in some intelhethal pursuit. Dury secms to have at tirst endeavenrel to discoura- him, lat fimbing him thoroudhly in carnest, soun engacel him as his assistant at the lioyal hastitution. He travellel? with bary to the continent, as assistant amb amamensis. On their return to Lualom, Davy contideal to him the premrance of certain expariments, which led in has hames to the chulemsation of gases into liquits by gresstre. Here be first shewed some uf that extraurdina:y power and fertility which have remered his name familiar to cvery une even slightly acyuantel with physios, and which led to his apmintment, in 1527 , to Sir H. Inarys pust of Iretessorr of Chemistry in the Royal Institution. We shall give a brief summary of his more important diseoveries and publishad works, arrongine the different subjects accordiner to their position in various branches of science, rather than in their chronological order.
In chemistry, we have his treatise on Chemical Momipulation, 1527 ; al al. ls4:, even now a very valuable book of reforence. His Lectures on the Fon-metullic Elements, and Lectures on the Chemicol Mistorig of a Centle, delivered at the ligyal Institution, were pmblished within the last few years. As discuveries or investigations of a bigh order in this hrach of science, we may mention-New Compounds of Chlorine aul Carbon, lsol; Alloys of steel. 1so2: Compumels of Hydrogen amb Carbon, 1se5; Action of Sulphuric Acid on Naph thaline, 15os: Decompersition of Hydrucarbons 1 y Expansion, $180^{-2}$ a aml the very valuable series of -xpriments mane in 1599-1830, on the Mamafae thre of Glass for Uptical Porposes, which resulted in one of his entatest discoweries, to be afterwards nemitioncd.

As praction applieations of scienco his l'reperation of the langs for living, and Vontilation of light-house Lamps, are consphemons, ats are also his velebrated leter m Tible-tmrning, and his lecture in Matal Eduation.

Th enmacrate only the most prominent of his
 with the comdensation of the Gases alreally referred to): then we have limits of Vaporisation, Optical 1) eeptions, Acoustical Figures, Regelation, Iaclation of Cind and ether Metals to Light, and Conservation of Firree Of these, the condensation of gases into
limults and solids. though previonsly edtected hy nthres and $F$. has ever been the furemost to an knwhlye anothes prority, he has really mande his own, not only ly the extent and accuracy of his apmiments, Int ly the exquisite experimental mothonds liy which he fllinterl the results Kis buats on regelation, ame its commection with the mution of glanders have not met with universal
 is mo dispute as tw his being sorrect in his facts. In rearad to Conservation of force there cau be nu homent that be las been hed into a fallaces, by mistaking the technieal use of the word force (swe Foncel. for in his artich. on the sulject he deseribes experiments mate with the view of proving the conservation of stoticel. not dymamical iorce, whereas the loctriue of conservation asserts meroly the conservation if 'anersy', which is not statieal fores. He may le riuht also, hut if so, it will be lig a new dincovery, having no comection whatever with 'conservation of cuerty.'

His Christmas lectures at the Royal Institution, though professedly ahtressed to the young, contain in reality much that may well be frutered lis the uld. His manner, his unarying suceess in illustration. and lis fulicitous choice of expression, though the sulbects are oiten of the most abstruse nature, are such as to charm and attract all classes of hearers. Besiles two sets (already mentioned) on chemical subjects, we have his Lectures on the Physicul Forces, a simple work, but in reality most profoum, even in its slightest remarks.

Lint the ereat work of lis life is the series of Frperimporal Rescarches on Electriritu, published in the Philosonkicel Fransactions during the last thirty years amp more Fully tommenstand all the discoveries contained in that extraordinary set of papers, would repuire a knowlelge of all that has Tren discovered luring that time as te Electricity, Magnetism. Electro-magnetism, and Dimnarnetism. We may merely mention the following, ahnost all of which are disenveries of the firmt order. They are civen in the order of $p^{\text {mbllication, which is }}$ nearly that of discovery: 1. Indued Llectricity, 14:3. comprehending and exphaniug a vast rariety of phenmena, some of which have alreaty been applied in practice (espeejally as Magncto-clectrieity) to hight-honses. electroplatiug firing of zumes, telegraphy, and medical purposes. Ehectric eurrents derived from the earth's magnetism. ․ The Electrotronic State of Matter. 1831; 3. Hentity of Eleetrieity from lifferent Suurces, 1533; 4. Equivalents in Electro-chemical Deeomposition, 1534; 5. Electrostatie Imluction-Suecitic Imluctive Capraty, 1833; 6. Pelation of Electric and Magnetic Forees. 1535 ; 7. The Elcetricity of the Grmmotns, 1539; S. Hydro-electricity. 1943: 9. Magnetie Rutatory Polarisation, 1846, cffected hy means of the optical class already mentioned; io. Diamagnetism and the Magnetie Condition of all Matter. 1St6; 11. Polarity of Diamarnetics, and the lielation of Diamagnetism to Crystalline Forces 1849: 12. Relation of Gravity tu Electricity, 1851. This, as before remarkent, is F.'s attempt to prove a conservation of statical fures. The results are all mergtive, hat are none the less worthy of eareful study : the mode of experimenting detailed in the paper, and the percautions taken and required, rember it a model for every physisist. 13. Atmo. spheric Nagnetism. 1851. An attempt to explain the dimmal clames of the carth's magnetic foree liy the sular effect on the oxygen of the air; a very interesting paper.

We have nmitted many things well worthy of notice even in so slight it sketeh as this, but F.'s vame will be found in these pages in eonnection
with something new in nealy every hanch of physies. (Diel [25th August 1867.)

FARClis, a dramatic piece of a low comic claraeter. The dafference letween it and enmerly proper is one of degree, ant not of kint. The aini of buth is to expite mirth: lat while the former denes so by a comparatively faithful alherence to mature and trutl, the latter assmmes to itself a muels greater licence, and does mot scruple to maku nse of any extrawagance or improbalility that may sorve its purpose. It does not, therefore, exhibit, in gencral, if relined wit on humunr, lout contents itself whth grotesque rencontres, and diahones prowative of Fun and jollity. The name is differently explaineel. In any case, it comes wiginally from the Latin fiurcier to stuff; lut while Ademes syss that, in the mildle ages, force signitied in Ciemany certain songs, whieh were sung between the prayers marine divine service, others derive it from the Italian firsel, this from the Latin forsum (stuffel); while l'iolo Bernardi states that it comes from a l'rovençal word fiersum, meaning a ragout, or huess of different ingreatients, an minim whith has this to say for itself, that the elremutis persome, Juthpudding, \&e., were generally mamet after special dishes or mixtures. The first farces are sain to have bean emposal hy the socioty of the chres de Buzocke in Paris, abont the year $14(0)$, as a contrast to the ecelessastical plays prorfomed lay the religims onders. The mast widely celehrated and the oldest is the Fitce li, Matre Fio rre Pothlion, which sume consider to be a emprusition of the 13th c., but which was more prolahly exceuted by one I'eter Blanchet, about 1450. Subsequently, Aloliere elewated and rufined the farce into pure comedy, in his Miducin Mfelyre lui, Matude Imatinaire, Les Foubluies de Scopin, and othor inimitahle productions. In lingland, the orgin of the montern farce dates from about the commencement of the 1 Sth century, It them hegan to he regaridel as something distinet from comedy moper, and to constitute a special theatrical entertaimment. Of all the mumerons farees which have been performed lefore English andicnees, only those of samuel Fuote have kept a place in literature.

FAIICY in horses depends ujon the same canses as Glauders ( $9 . v$. ), which it usually preenles and accompanics. The absorlent clamils and vessels, usually of one or hoth hinal limhs, are inflamel, tunter, swollen, harl, and knottel. The vitiated 1 ymph thus poured ont softens, and ulcers, or farcy louds appear. Unlike the ulecrs of slanders, they
are curalife, but require time and eare. They must he searific! with the hot iron, which, to prevent their spreating, may also be geutly run over the aljacent sund skin. Gool feriling anl comfurtalle lolfiners are essential, and if they do not interfere with the apetite, wive tumics, such as a drachm each of sulphate of copler and inlinc, repeated twice a day.
FARDEL-BOUNH, a disease of cattle amd sheep, consists of impaction of the farlol bag, or third stomach, with from, which is taken in between the leaves of this globular stomach, there to be fully softened and reluced. Whan the food is unusually trogh, dry, or indigestillje, consisting, for example, of owerripe clover, vetches, or rye grass, the stomach cannot moisten and reduce it with sufficiont rapility; fresh quantities continue to be taken יnl, until the orergurged or ran beeumes laralysed, its sceretions dried ap, and its leaves affectel with chronic inflammation. The slichter cases so common amongst stall-fed eattle are " luss of eud,' indigestion, and turpidity of the bowels. In severer form, there is also fever, gronting,
swelling up of the first stomach, and sometimes stupur or epilepsy. The overgonged stomach can, morenver, be felt by persine the clused fist npwards and hackwarls milumath the false ribs on the right sille. The symirtans aftem exteme over ten lays or a fortnight. I'mergatives and stimulants are to be given. For a full erown beast, give, ia three or four hattles of water or thin smel, 1 lo eaels of commod and Ejsom salt, 15 mamul (ritan heans, a drachm of calomel, and two mones of ginges. If no ene is pmolucel, repat this in 10 or 1.5 hours. Inject soap and water clysters every ham, withomd atl sohnd foon, and allow only shapy mathes, treacle aml water, or thin linsecd tea. An nceasjomal bottle of ale, with an ounce or two of ginger, often expedites the action of the physic, and wards off nausea and stupur.

FAREHAM, a town and sea-bathing place in the sonth of Hampshire on a creck at the northwest ent of l'ontsmonth harhour, 12 miles east-sunth-cast of southampton, and 9 miles month-north-west of Portmonth. It has manufactures of arthenware. 1ין' (1861) 6169.
FAREL, GCllasume, one of the most active pombers of the Thfomation in swit\% rlaml. was bra in the year 1459 in Dauphine. lle studied at Poris, and was at first distinguishem hy his "xtravagant zoal for the juratices of the Catholie Clmoch. 'Truly,' says he in one of his letters, 'the papacy itself was nut so mapistical as my heart.' laterourse with the Wildenses, and with his friend Leferce detaples, inducel him to stanly the Siriptures; the result was his conversion to Protestantism, and $F$, who was 1 , y nature vehement even to indiscretion, immediately commenced to proselytise. The ehicf scone of his labours was Franee and switzerlanl. It Basel, 15th Filmary 15:t, be olened his eareer of contrmersy amil crangelisation ly pablicly sustajning 30 theses an the points in lispute between lioman "atholicism and Protestantism. In less than two monthe, he Was compelled to leave, mainly on account of a quarrel between himself and Erasmus, whom, on acomut of his moderate or trimming policy, F . han combared to Balanm. F. next went to Strashourg, and afterwards to Montbeliard, where his iconoclastic way of preaching the gos 1 el excited the alam of his friends, sereral of whom, Eeolampatins amone others, censured him sharply for his riolence. Iis zual was next manifestul in the canton of bem. It was also ehiefly through his excrions that the tuwns of Aigle, lex, Olon, Nomat, and Neuchatel followed the example of Bern in embraeing the Foformation. In 1532, he went to Geneva, where his success was at first So ereat, that on account of the acitation excited, he hat to leave the city. He retmmed in 1533, was acain compelled to withdraw, but once more enterel it in 15:4. This was his year of trimmph; the lieformers filled the churehes, and the Catholie clergy, who had manke themselves odious to the citizens by ahetting the despotic schomes of the Inke of Savon wirel to Lausanne and Fribourg. In Angust 1535, the town eouncil of Genevia formally jroclaimed the Reformation. F., however, was a missionary, not a lerislator, and the organisation of the Cienevan chareh passed into the bands of Calvin $(q, \%)$. The sererity of the new ecelesiastical discipline prohneed a reaction, and in April 15:3s, the two refomers wre expelled from the city. Fook up his resicicnce at Neachatel, where the reformed church was in a state of deplorahle disurder. He emmposed its ditferences, and drew up a constitution, whinh it aceepted, after
long and stomy duates, in $] 542$. In september
of the same vear, we timl him fulhting the hattle of the lieformation at Mota. Siter lis return to Nomehitel, he frequmely wisited calvin, whese anthority in Geneva had heen ommpetaly restured. It was on me of these oreasions thait lee was present at the hurning of Servotus, aml thmug not, comparationly spanking, a higntal ('alwiniet, lev allowed his orthomay on that wemsion to chake his hmmaty, exclaming as the monarly herctic uttered his last prayer to Ciml from the flames: "Nee what power the devil has nete one wha has fallen into his hamls." In line, ahome with bowa, he was sent to the T'rutestant pomen of Cormany, to implore their aid for the Waldenses, and in bis return-inexhanstille in his artivity-he songht an new sphere of evanchastic labour in the remines of the Jura Donntams. When trembling mum threcscore-and-ten, he marrice a vonns wife, very much to Calvia's disgust, who sareastically speak of him under the circumstances as our poor brother.' Dut neither bis newly formed domestic ties, mer the intirmities of afe, conlal quench his missimary zen. In 1.00-1.561, he proceded to his mative lyaphmé, and passeal sereral months at Cap, preaching arainst Catbobism with all the ardour of his youth. In Nowmber lifit, he was thrown into prison, lat was shortly after rescued by his frieuds. In latet, he mid a visit to the Rying Calvin; his strength, howerer, was now nearly exhansted, and on the listh september 1.505 he expired at Neuchatel, leaving a son mamed Jean, who surwiyed him only three yars. F. was a man of extensive scholarship, and wente largely, but bis works very indequately represent the genius of the man. Compare Kirchbofer's Ints T.eben Wilheln Furels ( 2 whls, Zurich, 1931 -1833), and C. Schmidt's Efudes suer Ferel (Strasbowre, 1834),

FAREWFLL, CARE, the southern extremity of Greenlianh, lies in hat. $59^{\circ} 49^{\prime} \mathrm{N}$, and long. $40^{\circ} \mathrm{b} 1^{\prime}$ W. It is generally besct with iec, which, according to recent authorities, apocars to come from the north-enst, and to sweel romm into Davis' Strait. Hence it is lout little known ; and, in fact, the Danish traders, in jassimg to and from the sittlements on West ©recnland, secm uniformly tomaintain an ofing of more than 100 miles.
FARI'A Y SOTSA, Mivare, a Porturucse historian and poet, was horn of an ancient firmily at ('arawilla, in the province of Eatre Minho e Domo, 1 Sth March 1590. and studied at the univereity of lraga. For some time he was in the service of the Bishop of Oporto, but shortly after 1613 he went to Hadrik, where, however, he did not lone remain, as he foum no opportunity there of improving his circumstances. In 1631, he ohtainent the oftice of secretary to the Spanish cmlassy at Rome, where his extensive acquirements procured him the notice of I'ope Urlan VIII. and of all the learnel men of the city. After some time, he returnel to Spain, and died at Madrin 3d June lG4!. V', writings are partly in Spanish, and partly in lortaguese. Of the former, we may muntiom, biscursos moralis If priticon (2 vols., Mahr. 16:3-1626), L'pitome do

 (mese ( 3 vols., lisbon, 1660-1675), Nurope Portu-
 (Lishon, 1681), and the ereater portion of his fuens, which he collectenl undur the title of Fiumter de Agonigpe o Rimes Jirias (Malr. 16.1-1616). These fung consist of sumets, eclogues, canzones, and matrigals. F., bowerer, wompancl alout sow Somnts and 12 echanes in the Promenese langave: and it is manly ly theso and also ly three theo-
retical tratises on Poctry, that he has influenced the develnment of the puetic literature of Portural, in which hew was long regarded as an uracle. II is poetry exhilits talent and spirit, but is on the whole tastuless and bombastie. F", is not to be eonfommed with another Porturuese anthor of the same name, Who was born at Listum in 15si, and died at Evora in 16.5, and who was one of the most learued mumismatists of his are.
Filli'Na is the term used by many writers on loes, instean of pollem, ta denote the pullen of Howers collected by hees for feeling their larva. Sec Pre.

FAlis'NA, a Jatin tem for meal or four, which has hem adoped into tha Enclish and other lansuages, 2 nol is very frephonty employed both in scientifie aml proular works. the tem farina is also frequently extended to many substances, which agree with the meal of the enri-plants or Cerealia (f. v.) in containing much starch, and food mate of such sulstances is often rilled jurinaceous, its Tranhties nure ur less resembling those of the food derived from the cercalia. Of the different kinds of farina, those froluced by mere trituration of the sueds uf grasses (corn), hotel the first place for importance am usefulness. Most similar to them are those obtaned in the same manner from certain wher sedds. See Cerealis. The farina of the dibierent kinds of Pulse ( q . $\because$ ), or seeds of leguminous plants, bas considerally difierent properties. For the qualities, chemistry, commercial importance, $\& \mathrm{c}$., of the different kinds of meal, see Meal.-Other farinaceous substances, eonsistiog chielly of stareh, are ohtained from ruots-often from tubers-uf plants of very diflerent natural orders; some kimps alsu, is saro, from stems. Cassina meal, which contains, alon: with starch, much vegetable tibre and protein or albuminons sulstances, is commonly called forina (Furinhet) in many jarts of South imeriea, where it is a 1 mincipal article of food.
Fussil fierine, momatein mill, or Agarie mineral, is a depesit of silicitied animaleules, ohtanct from
 ahmina 20.1 marnesia 9 water and orgmie matter 13, with traces of hime and axide of irom.

Falif'NI, Cario forgr, an Italian author ami statesmin, was lourn in 1820 at linssi, in Ravenan, in the northo of italy, Ilaving, with great success, stmided medicine at Bollona, F. first became known by several publications frlonging to the science of medicine, and swon afterwards by contributions to various scientitic periedicals, In 1841 and 1842, having mixel himself up with politics, he was obliged to leave the Roman States, and change his residence repeatedly until he fimally settlod at Thrin. The amnesty following shortly won the acression of Pio Nono, nuened to F nut only his mative country, but also a new career, throngh the liberal system inaugaratel by the surwe pontiff. In 1sto, he was called into the reformed ministry, as a subatitute to the home secretary; in 1848 , he was present in the suite of Carlo Aberto at Colta, and after the thight of the king, protested against the proclaming of ar repullic. During the short ministry of the mufurtunate Rossi (q. v.), F. was directisegeneral of the sanitary and prison depart. mont at home, from which post, however, he retired as suma as the raction umder Antonelli began to be estahlished, ${ }^{\top}{ }^{2} \times \mathrm{n}$ the accupation of Rome ly the Promoth. became once more an exile, but for ir shant time only, for in liedmont he fonnel a home as well as [ull) lic lumis, In 15:0, he lehel the seat of Minister of l'ullic Instruction in the cathinct of Victor Emmannd Il., and on retiring from oflice, was named a member of the supreme

FAIM（of nneertain derivation），the term nsually employed in Lritain to sionify a pace ui land， ather in pasture or in eultivation，held in lease ly a temant from the pronrietor．In the Enited States，the term farmer is uiten applicd to a person who owns as well as eultivates land．The temure on which land is helil ly farmers difters in tiflerent countries．In some parts of continental Europee the farmer hires the land on the principle ni a kimd of partnership with the proprictor．Sce Metarap．In Lugland，land is usually let for a certain annoal rent，and either by a yearly terme or at the good－will of the landlord．In Scotland，the process of land－ letting is on a footing remarkably alvantageous for tenant and proprictor，as well as serving the best inerests of arricultme，and on this acconnt it is gradually being intronlucel into England．Ender
the heal Lense will he presented the details of Scottish tenautey；a fow leading fontures need liere only be adrerted to．The scottish farmer is pre－ sumedly a capitalist able to work the land in the lest mamer．Ite is given a lease of 19 years，during which period he has entire possessinn of the land， and from the lengtl of tenure is eneouraged to sink moncy that will be amply repathl tu him by inereased erops．He cannot sublex，but his laase is heritable ly one of his family．＇J＇he lamilond at the nutset caects farm－buildings，constructs fences and roads， and otherwise puts the farm into a froper condition －the whole of which operations may cost him from £2000 to $\pm 4000$ ．Iuceiving his farm in this state， the temant is buund to keep it so，and to deliver it ur in a properly tenantable condition at the eon－ clasion of his lease．By these explicit arrancements， the ontgoing tennt can make no claim for improve－ ment．either from the landlord or from his suceessor the incoming tenant，who is merely called on to bay for such crops as happen to be on the gromul ； and this is settled by arbiters mutually chosen． see Finlow：Cuntests about tenant－right，such as ncem in lreland，from the practice of assigning to farmers the elnty of erecting buiddings and making permanent improvements，are thas totally unknown in the Boottiol system．The method of jaying rent for firms in Seotland is not uniform．In some distracts the ammal rent is a fixed sum，hat in other places it is a common practice to pay partly a fixed sum，and to leave another portion to be paid in grain，or rather the money value of so much grain according to the average market priees each year， as determined by a jury in every county．See Finfs．This last plan is the farrest for all parties， but some farmers preier to pay a fixed sum－total， and so sjeculate on a rise in markets．In whatever manmer the rent is adjusted，it is stipulated to be paid，as nearly as possible，in two equal portions， at Whitsunday（Nay 15 ）and Martinmas（November 11），but in practice the landlorl gives three months＇ eredit on each accasion－the Whitsunday rent lieing exigible at Lammas（iugust 4），and the Martimmas rent at C＇andlemas（February $\because$ ）．At all times， however，the lamdurd has a right of IIypothee （q．v．）over the crops amel can take measures to avoil heing defrauded of his proper claims．Usually，the very lest fecling subsists between laudhori and temant，aml extreme measures are of rare oecurrence．

Pursmin＇r this alistract of the Seotish system， the landlord usually bimpls his tenant to farm ol cultivate the land acoording to the most approved systems in use in the district．Such a course is no dinut necessary，to prevent the abuses that might arise from neglifence or ignorance；but the restrie－ tions have often heen carried too far，and have formed barriers in the way of improvements．It is not，lerhaps，very uasy to define what is liberal and what stringent，as practiees vary according to eivelumstinces of soil or loeality．So far as regards mere cropling，it would not be moch amiss，how cver，on most arable farms，to forbid mure than one－landi of the land being in white erops during the last four years of the lease．Green crops，it may be stated，du not prevent exhanstion so much as they brevent the land leing overrun with weads．It is Perhaps mot supertwous to observe here that leases should be written in clear and conelse lanouage，and as far remored from ambinuity as possible．

The size of farms is regulated by many circum－ stances．On land adapted for green croplinge，and remote from towas，larice farms form good snlijects for caputalists，and consupuently prevail．Stiff clay suils are rather arainst extensive culture．Where crojs are frown that require much hand－labour， farms bucome swall in size．Flax，rape，vines，and

lentilution.-Without good rentilation, a covered bomesteal must be a misance. All the apartments are so arranged that, unless fresh air circulate through them, and they are kepet perfectly clean, there must eonstantly he umblalesome efiluria in the interine - the fonluess of one apartment being communicaten to another. The system of ventilating this firmsteal is certain to give most satisfactory results, if only mdinary are lo taken to keep the different houses as cllan as the $y$ ought to We, The armusements are brictly as fonlows:

Whder each fecoling passage is maitt a cirendar air-shaft, 30 inches in dianeter' ; in conmetion with these there are feeding mouthe with gratimes on the outside of the builling ; insile, there ar mumerous finely $]$ wrforated gratings ; boy shintingvalves. wrompht by a cord and pulley, the supply of air is regulated. Besides these, there are gratinus cvery 10 or 12 feet along the exterior wills, furforated so as to ulmit hear the foor a consiulerable quantity of air. The rumf, too, is proviled with ventilators with vertical spars, ami olenings are left lore and there in the sarkin!, to ant as induction and eduction tubes. The mumerons perforated ajertures thrumghout the lonileling will aimit twice the guantity of air regnirel for the respination of the amimals, and are so under command that they will neither almit flies in smmer, nor too large a supply of cold air in winter. A covered steardings somewhat similar in comstruction to the alwore, has been creeted at dien, in l'eeldesshire, where the rentilation of the enelosed cattheconts, \&c. is ammirable.
We would only remark, that to carry out this principle of rentilation is somewhat expmense. A cheap and yet etficient system "f rentilation for eattle is to cover the yarils with pran-tiles withont plaster or lath. Those who wish to see farm-otfices ceonomieally erecterl, at the same time combincil with the most perfeet rentilation, we wouli recommend to visit some that liave leen lately luilt on the property of Lorl Kinnairl, liossie l'riory, Pertlishire, As a general rule, farm-steadings are erected at too great an expense. For further information, see The Book of Prarm Buidings. loy Itenry Stephens, F.R.心.E., and İ, scott Inom (Etin. Elack. wool and Sons, 1561 ).

FARM-AERVANTS. The intruluetion of large farms eaused a wide difference to arise hetween the condition of master aml servant. The latter has no doulat hat his condition meliorated, though much remains yet to be done. Large farms effect economy in the monont of labar, and where these superseted the small holdings or pendicles, a certain mumbr of the penlation hat to betake themselves to the towns or the colomirs. This latter runcess had the effect of diminishing the population in the combtry districts. The gencral alvance, however, which las taken place "o the wages of the labuming-classes has heen happily shared in ly farm-servants. They haw now the means of increasing their I lysical comforts, and in gencral, whereve hetter coittages hase hen luilt, farm-servants have pruwel more trastworthy. Wages vary much, aceorling to the locality. In the strictly arricultural comnty of limsctshime, they range from Ss, to los. a weok. In the manuface turing distrints. such as in liurkshire, on the wther hand, they run up to lise to l6s a week. In scotland, ploughmen are generally paid partly in produce, hut taking everything into acconnt, wages will amount to nearly los o week all the year through for goon hamis; ench fimily heing provided with a honse at a short distance from the farm-ottices. See borny. Female farm-servants receive from $£ S$ to $£ 10$ a year, with food.
 of the last century was lorn at Lacicester, Aunust 오, $17 \% 5^{3}$ and was entered a pensionar of Emmamel College. Cambrilse, in 173. In 1760, he touk his degree of $31 . A$., aiml was appminted classieal tutor of his own endege. He dien Neltentier $8,17: 7$.

FATMERSGENERAL (Fr. fermion-gint. mar) was the name given before the lievolution of frey to the mumbers of a privileget association in France, who farmed or leased the public revenucs of the nation. This peculiar system of tax-gathering lates from an ancient perind. For each chass of impusts there was a special alministrative loard, $f^{\text {mesided }}$ wer ly one of the farmers-general, or by one of his assistants. At first, the leasing of the malic revennes was lased on the eompetitivesystem. amd determined loy the estimates handal in ; lat latterly, every fomadity, every peliminary gavantee of this nathre disappeared, and the leasing wholly dependin in the favenr ur joblery of the government officials. The minister of finance selected the farmers-general it his pleasure, bat his choice was always remulated hy the present, or rather bribe (pot-de-rin) offered to him ; ame which, we may presume, was never inconsideralbe, inasmuch as its value was fixed ly the minister limself. Generally, shares in the concern were assidnel by the king to his favomer, male and female. The numbur of farmers-weneral was ordinarily 40, but shortly before the lievinution it had risen to 60 . The lease was sigmed ly a salaried ileputy, who was responsible to the kins alonc. The king ocenpied the position of a crentitor towarils the farmers rencral, and could conce them into payment of the stipulated sum as a just delot; the farmers-general, on the other hand, wenpied a similar position towards their submimates. The entire sum which it was ncesssary to place in the niational treasury -or, in other worls, the annual national revenues-amomed to 150 millions of lives. The rest was emmonons profit, for we are certainly within tho mark in estimating it at seven million of livres. The powers, rifhts, amb laties of the famers remeral were letined hy special lecrees; hut howerer severe may have bern the fiscal liws against fravd and contrabanl, it is notorions that, shortly hafore the licoohution, ahoses of the nase Hlarrant description had hemoralised the system and the men. The conseruence was inevitable. Durines the lievolation, most of these alious tax-gatherers berished an the scatloh, the immocent among then bemor occasimally confonnderd with the ganty--the real eapitalist with the selfish and gredy adrenturer. Even the virthes and the learning of the illustrions
Lavoisier empl not save him.
Farmers if the reverme are an institution of ancient arign. Thu" limman phbliani (! 1 - v.) were wheers of this limis: amd duties of varions kinds were at one time farmerl in Great britain. See Excrse.

in the Nonth Iacitic Ocean, north of the Sambwich
 furnally taken possession of, for the Gucen of lingLatal. on the Sth Fehruary 1Sti, by her Majowty stamer fothert. The harbour was calted La_lish 11:abhem, and a puint, on which there is an suthement. was termed English P'oint.

FARSE, FEARNE, or FERX NLES or the Sraples, form a group of 17 ishets and rocks, some heing visible only at low tide, two to five miles ofll the morth-east coast of Ninthmberland, "pmesite bimborongh. On one of the isles is the tower of a priory, built to the momory of at cuthbert, who spunt the last two years of his life here. There is a hole eallen the chum, thround which the sea rises. The passage betwem the isles is very dangerons in rounth weather. Two of the islets have each a light louse. Here the Forfurdhere was wrecked in $18: 38$ (see Danlinc, Grami) ; amb here, in 1St3. the I'mesus mot the same fate, and 60 persons ware crowned.

FAlde'sfor the name uf an illustrius family in Italy, whose origin can we traced to the middle of the 13th c., when it jussessed the eastle of Farneto, near Orvicto. Many of its members have filled the highest ottices in the chusch. In 153.4, Cardinal Alemsiviro Fabenen was raised to the papal see under the title of Poure l'aul III. (q.v.), and as his great aim was the aggrandiscment of his family, he crected Parma and I'iacenza into a duchy, which he bestowed on his matural son, I'remo Lemer. l'ietro was one of the most dissolnte men of his priod, and after many tyramical attempts to limit the privileges of the nobles, he was assassinated loth September 1547. He was sncceeded hey his sun Ortavio (born 1520, died 1555), who married a matural danghter of charles V., and whose reign was marked ly an unlmonen geace, and ly varius allorts made for the goon of his subjects.

Alessqudio Fafsesf, son of lituwio, was horn in 3-titi. Jle served his first campaign under his uncle, Hon dohn of Anstria, and distinguished himstlf at the liattle of Lepanto, in the yeur 157. He afterwards fillowed his mother intu the Law rountries, then in a state of insurection, and aided in obtaining the victory at Gembomx, 31st Jamary 158. the was mate governor of the Spanish Netherlands dy Jhinip II., and carricd on the war against the lunce of orange. The ill success of the expedition arainst England, to the command of which he had luen alpomted by Philip Il., grieved him the more from the contrast it presented to his former sueansses. On his return to the Netherlands, he was aminted commander-in-chief of the army deslatelned to the assistance of the Cathories in lrance, :mbemplled Henry IV. to raise the siege of I'aris. deing, however, ill supplied with provisions and money by Philip, and insuffieiently supported by the Leame, he was forced to yiell to the superior power of llenry IV., and died soon after at Arras, in 15y2. F. was really an able warrior, and though severe in his diseipline, was ahnost worshipped live his suldiery. liavecto, his son amb successor, did not ghasess the lrilliant qualities of his father : he was smmbe, auster:; grecty, and proud. A con-- biraty was hatchosl arainst him, and lanuceio was sicizel, and thrown intu prison. He dimi in
 was in prince remarkable for the cleganee of his mamers, and alst, acomding to Muratori, for his marmaticener, magnamity, and likerality. Ne alima in listi, at the are of 34.- The fanily beame "stinct in the persim of Axronio l', who derl in 17:31.

The name of the Fornese family lans lren liestowed
njen siveral celcbrated works of art. These are-1. Thlw Fomese Paluce at Iome, an edifice raised lyy Ph" l'and 111 ., hefore his acession to the holy see, affer the desime of Antomioda san Gallo. It is in the form of a qualrugle, and was enmphed hy Michaed Argelo. The palace is une of the linest in lime. The antipuescupptures for which it was formerly renowned are mow in the Hnsemm at Naples; a few classic Works, however, are still to be seen in the great halls. The trallery contains the frescoes of Anuibal Camect, which are very raluable as exhibiting in the most eomplete manner the new line of art whieh he struck out. In a rom andening the gallery, are some mythongical freseonaintings le Domenchino. -. The Formentu is a wry chont palace in Trastevare. It ow its celebrity chindy to the frescoes of haphael : hut it also contains frescoes ly l'ernzzi, sulastian del Piomho, mat a colussal head in charoseuro, attrilates to blachal Anato. Among the antigucs, formerly belongims to the Farnese finmily, now in the musemm at Naples, are two which still bear the name of their whimal owners. 3. The Fornese Bull is the nane given to a colossal groul attrilmed to Apollonius and 'Iariscus of Tralles, in Asia Dinor, who probaldy ledonged to the IShodian selool, and lived alout sime 5. e. The group represents Dirce bound to the horns of a bull by Zethus and Amphon, for ill usate of her mother-a subject which, notwithstanding the vigorous mode of treatment, is on the whole unsatisfactory. Pliny mentims the transference of the group to Rome, where it first alurnct the library of Asinins Pollio, and afterwarls the Baths of Caracalla. It was discovered anew in the year 1546, restored by Bianchi, and placed in the Firmese J'alace. 4. The F'ernese Hercules, copied by Glykon from an original by Lysipms. It exhibits the hero, exhansted by toil, leaning upon his club; the museles and veins are still swollen, the heal inclinat, the expression melanchuly; one hamd rests $11^{\text {on }}$ his back, and grasps one of the aples of the Jesperades.

FARNHAM, a town in the west of Surrer, on the left bank of the Wey, 10 miles west-south-west of Guidford. It consists "dicelly of one street ruming east and west. The primeipal fature is the stately Wh castle of the hishop's of Winchester, first built by Bishop te Blois, brother of Kiug Stephen. The castle was razed ly Hebry 11 I., relnilt and garrisoned by Charles I., and restored in 1654 to its present state loy Dishop Dorley. It is an embattled quadrangle of lorick, covered with stucen. F. has belonged to the hishops of Winchester since S00, when Ethelhate of Wessex bostowed it on thern. Some parts of the parish church were lmilt in the 10 th, 15 th, and 16 th conturies. The chaiel trade is in hops, a very time varicty of which is grown in the vicinity. Pop. (1861) of town abernt 4501 , of prish 9351 . Willian Cobbett was lorn and is laried here. The vieinity of Aldershott camp, which is only about 6 miles $t$ o the morth of F ., has increased the activity of the town during the last few years.

FARO, a plasant and wealthy episempal city of Purtugal, capital of the provinee of Alsarve, is situated in a plain at the moth of the Fermoso, in lat. $37^{\circ}$ N., and long. $7^{\circ} 52^{\prime} \mathrm{W}$. It has, on the whole, a mondro aspect, but its houses are not hamdsme, and its strects are in general narrow. It is surrounded with walls, which are said to have hea built by the Mroms. The harbour of $F$ is comowhat confanel, hat the mad formed by there islands at the month of the river affords good anchorate. F. has consideralbe exports of oranges, fizs, anchovies, and cork. It has also a prosperons fishery: l'op. Tine. The number of blind people :

six together being frequent! y ohservel. This is aeconnted for by the light sandy soil which prevails.

FAldo, or PILARO, a game at cards of the nature of hazari, phayed chefly at gambling estallishments. See Hoyle's Ciumes.

FAlion IsLES (Dan. Faar-orn, shmpr-islandsi, a froup of islands, 20 in number, of which 17 only are inlabited, belonging to Dommark, and lyine nearly midway between the shothants and lee
 W. Kong. The principal island, Stromue (eapital, Thorsharn), is 97 miles long, and 8 miles broant; those next in importance are Osterme, Vagoo, Bordoe, and sudaroe. Their entire area is mearly 500 square miles; papulation about s.5(m. The F. I. consist of basaltic clevations, none of which attain a height of 3000 feet, and trap formations, coverel with a thin vegetable soil, which tiellels pasturage to the cattle and numerous sheel whith are reared in the islands. There are no considerable valleys or streans, hat small fresh-water lakes are numerous. The coasts, which are sterp and lofty, are broken hy deep inlets, whirlporls, and rapils, which render navigation perilous. The furions hurricanes which prewail, prevent the growth of trees, or even of most of the cirlinary vegrables and cereals; lint the elimate is so treatly modified ly oceanic inflnences, that, notwithstanding the high latitude, snow rarely lies long on the ground, and the eattle can pass the greater part of the year in the open air. Peat aul conl are used fin fuel; traces of iron and colper, and opal. chaleedony, se., are found. The chief sources of Wealth are thocks of sheep, and the multitules of sea-fow which irequent the rocks. The islanders shew consilurable skill in climhing the dangerons cliffs in seareh of birds, and they are also expert in fishing for seals and whales. Their manufactures are of the homeliest kind, int in return for the numerous articles supplied to them by the mother-country, they yield tallow, train-oil, feathers, skins, and butter, to the lanish markets. The people are of Norwegian oricin, a visorous, laborions, loyal, amd religious race, and belous to the Lutheran Clurch. Thaty are governcel by a banish emtment, on hailitf, and a landwat, or director of the police and municipal ilepartments, and are represented in the Ilanish Scislature hy a deputy apminted by the king. The islamds, which were discovered in the Gthe. hy Nomeqians, have lofroud to Demmark since the incorporation of Sowny with that kingdom by the Union of Calmar, amp the language of the people is only a slichtly moulified form in the Old Norse. England beld the islands from 1807 to the treaty of V"ienna, in 1814. For further particulars, see Trucings of Ioland and the Furie Isles, by Robert Chambers (W. \& R. Commbers: London and Edinburgh).

PARQUIIATA, Gmase, was born at Londmalery in 16:S, and receiver his culucation at the Dublin University, where, althongh be slil not take any degree, he secured among his commales the reputation of a wit who was a spendthrift of his witticisms. When he left the university, he was engaged as an actor by one of the Dublin theatres, hut, like most clromatists who have fighrel on the stage, he proved lut an indifferent performer. l'laying a part in Dryden's Indion Eimperor, and forgetting that he wore a sword instead of a ioil, he accidentally wounded a brother-performur, and was so shocked by the oceurrence that he at onee quittel the boards. Accompanied by the actor Wilks, he proceded to London, and shortly after received a commission in the regiment commanded by the Earl of Orrery, which was then stationed in Ireland.

Urged ly Wilks, and perhaps stimilated by the gatety and leisure of a military life, he, in 1605 , prolucel his lirst comedy, entitled Love and a Botle, which proved a success. Two years afterwards, his constant comple apreard, which met with a brilliant reception, anel to which lie wrote a sequcl, called Sir Hurry Itiduir. In 170.3, he produced The Inoonstunt, founded on the IFildtrose Chase of Buaumont and Fletcher, a version in which all the coarsoness, and nome of the portry, of the older tiramatiots is retaned. He married in the same year, and falling into, sermos pectumary difficultios, he suld his commissinn, amb, struguling with alverse fortune, succmond. He dical of decline in 1707, leswing 'two helphess aith' to the can of his frient Wilks. During his last illnese, he wrote the hest of his plays, The Rerene stortopemin six weeks, it is said-and died while its wit and invention were making the town roar with delight.
$F$. is one uf the thest of our connic emmatists. althongh Pope called him a farce writer.' He is less icily lirilliant than Congreve, and pussusses on the whok mure variety and character than any of his compeers. He had wit in abundance, lut he hal hamanity tom. He was a tender-hearted anm somewhat melancholy man, and-what was rare in his school and in his time-tears are found glittering anong the brilliants of his fancy.

FARF, Whllam, M.D., F.R.S., an eminent statistician, was horn at Kenley, in Shrophire, Nusember 30, 1807, became an assistant-surgenn at the Salop Infirmary in 15O6, and after attending privately the medical and scientific elasses of the day, went to laris l niversity in 1829, where he attendect the lectures of the most emment medical professors. In 1ssi, he returned to England, and became a member of the nuiversity of Londra, where be completed his professional curriculum. $F$. has derotel himself mainly to a consideration of the impurtant questions resulting from medical statistics. At first, he found it very diflicult to draw the attention either of the public or of mentical societies to the sulpect; , hat in the year 1837, his article. 'Vital Statistics,' in M'Culloch's statintes of
 of certain inthential persous. In the same year, the registration of all the cleaths, ann of the canses uf death, was commencer in Enolam, and in 1539, F. recopecel an appomtan int in the General liecistrar's Office. Since then, he has heen male superintement of a statistical department. the memhers of which have drawn up the new Lomion Tubles of Howtoltity, the equerterly Interns of Dirths, Deuilis. and Martiagers :unl the Ammal ibstracts. In 1s.51, he was one of the gentlemen cmployd in taking the ceusus of Grat hritain, in emnection with which he drew up several extremely interesting reports. E: is the anthor of a new Statistical Fosulong, and of varms ralnable papers on the Finance of Life Assurane , the Income Tax, the Public Mealth, the Cholera, \&e.
FARRIER (from fermem. iron), a lerson who shoes horses and treats their diseases. The better class of farriers often were, and indeed still are, men of great =hrewdness and observation. sometimes "rsessiny considerable experichee, and with skilful, nscful hame. Their manarement of sick horses is weatmally sensible, but generally altogether empirical. They have nsually hat crude ideas of the structure, functions, or liscases of animals, and hin their faith manly on a few carefully cherisbel recipes. Tin their ealling as horse eluctors anl shoeing-smiths (see ShoEsici), they usually unite those of eow-lecel and cutter of colls and ligs, and although still met with in many

Fidside were bumble of rouls usually made of lineh, hat sonnethues of chas, with an axe projectimg from the mindo of them, when were earried lofore the chinf manistrates of ancient liome, as symbols of
their pawer war hife and limb. 'They were lame bey the lietors, at first lechore the kinges in the thane if the repulice, before consuls and prators ; and afterwards before the anperns. 'Iheir mumber vaniod, a comsul having twelse, and a pator, six ; Pat within the city mbly two Vaherins Publicola introbuch a law that within the eity the axe was withlrawn, excopt in the. case of a dietatur, whe was precened ly twenty-finur heture, bearing avomy fitsece. Publicula also made the farsers lo lowered at the assemblites of the people as an akmerbedement of their sureme power.
FASClA, in Arelniterture, in Hat space ur hand, like a hrand ribhen, namally hetween mondinges, as at op, i, of of the architrave (see fis.). Arehi-
 traves are called simple, domble, or triple fascia architrayes, aceoriner to the mumber of faseix into which they are divided.

FASCINATION BY SERPENTS. A power has long becn poppularly ascribel to serpents, or at least to some kinds of them, of fascinating by their ege the small amimals on which they prey, so as to prevent the escape of the intemed rictim, when its eseape would wherwise be easy, and to cause it rather to ran or ilutter into the mouth which is men to devour it. This fopular notion has been ridieuled, but is supported by a large amount of cridnce, and has been fully adopted by some of the mont scientitie olservers. In the earlier part of last centurg, Kalm described the rattlesmake as frequently lying at the buttom of a tree. on which is squirerel is scated, and fixing its eves on the little animal, which from that moment canot escape, but begins a choleful outery, comes towarls the suake. runs a little tht away, comes nearer, and finally is swallowel. Le Vaillunt dseribes a similar scenc, as witnessed by him in ffrica, a shrike incapable of moving awiy from a serpent which was gazing fixedy at it, and dyine of feat, althong the serpent was killed. 1) A Aidrew smith states that the presence of a non-Femmons Sonth Afrien tre-smake, Bucephalus firime, in a tree, eauses the hids of the neighbourthonl to collect arombl it and tly to and fro, uttering piercins crics 'natil some one, nore terror-struek than the rest, actually seans its lips, and almost withont resistance, lecermes a meal for its enemy.' ILe ahls, whatever may be said in ridicule of faseination, it is morertheless true that hirds, and cren quadrupeds, are under certain cireumstances. wable to retire from the presence of certain of their unemies; and what is even more extraordinary, unable to resist the propensity to alvance from as situation of actual safety, intu one of most imminent dauger. This 1 have often sech excmplitied in the case of hirds amd snakns; and 1 have hearl of instanes "qually curious, in which antelopes and othw qualrupeds have hean so bewildered by the sudfen appearance of crocodilos, and by the grimaces ant contortions they fractised, as to be mathle to Ay, ur cren muse from the slot towards which they Wre approaching t", seize them.' Ellis, in his Them Fiwits to Ifuhemesar, recorls ancelntes of the same lind, aun! one in partienar, of a frog apparently mable to move, until in ohject was fhand hitwem it and the eye of the shake, when tho from immeliately hartel away as if relieved from sume mesmeric influme exerted over it.
fiscliNes (from lat. fiscis, a hundle) are figots for military purpuses made of yonamben are
of trees or lirushwood, and alsin of osiers, bound together with yarn or withes. They are about a foot in diameter, aul of various leniths, averaging 12 feet, according to the object for which they are intemled. Faseines are used in the construction of temporary works; for tilling a ditul, and sometimes, in a pile, for setting fire to int wotruction. Fefure a sieqe, the suldiers are emplyed in makins fascines in reat number: and wheil needed, cach soldier bears one to the flace, casts it on the heap. and the quantity required is thus acemonatated in a remarkably short tine.
FASCIOLA, a generic name formerly employed tn designate all the Trenntole Fintoone, as Flukes. Re., which are now, however, dividel into many genera.
FA'SHION, or, as the French terns it, Lu Mote. almits as little of exact delinitime as of being refierent to any intelligible principle. In crery a-s. and conntry, there has beea a reemmisable enstume or seneral style of male and female attire, along with certain niceties in the shape, whour, and texture of dress, which, fluctuating aecordins to taste on whin, are knomi as the fashion-a wid which etrmolocically signities makine in a particular form. The terms fachion and fithionalle are, however, so comgrehensive as to include minch beymd the splere of the toilet; as, fur example, a style of speahing, livinc, and forming minions: there being, to use is cummon thrase, 'a fashim in everything.' It is only in China and some other castern eonntries that. in consequence of dress heing reculated ly sunptuary laws or some equally strict trulitions, the fashions oi attire remain from generation to generation with little or no chauge.
The nature of cluthing, and the necessity fur its use, being treated in the artieles Ifentio and Textule Fabrics, what sems desiralle here is to glance at the leadims forms of dress and more conspicnons fashions that have prevailed in Western Europe, and more particularly in Euglaud, since the dawn of civilisation. Uur moderi costmme has seemingly had a double origin-that of the Jomans and of the Tentonie people who in different branches invaded France and Liritain. The usnal Fmman dress, in the latter period of the Empire, cousisted of a tumic, or loose upper garment, with a dress for the lower limbs, called brucce; hence the moleru term breeches. Over all was uceasionally worn lyy the higher classes the lugu, or mantle. It is beliered that these lioman costumes were gencrally copied by the greater number of Piritish, at least amung the more opulent classes. In the dress of the women, bowever, there was but little change. They aprear in two tunics, the one reaching to the ankles, the other baving short sleeves, and reaching about halfway down the thigh: in other words, they resemble a round gown, or bedgown and petticoat, though the latter, distinct from a Loly, anel sleeves, 18 not considereI to le ancient. This thnic was called in British gurn; bence our warl goven, of which we still see specimens of short dimensions worn by women of the humbler classes in Enghaud, scotlaud, and Wales.
The Anglo-iaxon and Tauish periouls of English history are marked by new peculiaritics in costume. Soon after the departure of the Iiomans, and the arrival of the Saxons in the Jth c., fashinns of apparel were introluced from Jorthern Gernany, whieh continued witl no material change fur several centuries. The most important improvement in the ordinary dress of the people was the introlnetion of the shirt, a linen garment worn next the skin, for which we are indebted to the Saxou invaders. The common dress of the Sth c. consisted, as we find, of linen
shirts; tunics, or a kind of sureoat ; clonks fastenest on the lireast or shoulders with lncoches; shurt drawers met by bose, over which were worn hanls of cloth, linen, wr leather, in diammal ernssiness. Leathern sandals were worn ly the carly AngloSaxons; loat afterwards the sho becane emmonn: it was very simple, and well contrivel for comfurt, ieing opened duwn the instep, and there, lyy a than, lassed throngh holess on carly side of the slit, drawn tight round the feet like a purse. A felt wr woonlen cal, called hat (bence rint mumpria worl hat). Wats worn by the higher class of Angle, axous; but it is senerally believed that the serfo ir lower orlims were without any other covering for the heal than what nature had given then The Anglo-Gnxan tunio still exists in the whemblach, in speetes of "werall generally worn ly the basantry and som farmers in Enitand. The blunse, worn ly worknon in France and switzerlam, hats au equally early origin.
The Norman Conguest intrulueel greater taste and splendene into Disitish costume. Now, were introducel (ilores (1. v ) alones with the fashums of chimalry. The annextel engraving refresents a sentleman of the reign "f IFenry V.: he is itresscal in a shurt tunic, lonttoned in front, witl' girdle, large lonse sleeves, tight hose furminy prantalonos, and strickings in a single liece, pearked shows. and head-elothrir car. Abont thus perion, sills and velvets of divers culours came into use among the hiyhler classes, ly whom gold chans were denerally worm. The dress of ladies was of the richest kimd. Gowns were anbroidered and horderell with furs or velvet: and the

Gentleman of Fifteentle Contury. bodice, laced in front over a stomacher, now first arpwarel. Put the greatest ecentricity was the lufty steeple head-hress, shewn in the annexed lurtrait ; this consisted of a roll of linen, earserel with fine lawn, which hand to the cround, or was mustly tucked under the arm.
In the 16th ce, the upper part of the lons liose or nether garments luequ to be worn lonse, or slasherl with lieces of different colours let in, and the arms and shoulders of the douldet or jacket were fashioncd in a similar style. Boots were also worn lunse on the lea, with the urper part falling down ; hence the arigin of the Luwkin. Infis or rulles, collars. aul velvet bomets with fuathers, came likewise into nse, as may he seen frum the 1 nintings of Henry VIll. Hall, the chronicler, describes several of Henrys supert, dresses, and among them a frocke or cont of relvet, embroilered all over with gold of damask, the slueves and breast cut and lined with clath of gold, and tied together ' with great hattons of diaminds. rubies, and orient pearls.' The eloaks and mantles were of correspouding magnificence. The shirts wero
pinched or phated, and mombered with ghld, sitrer. or silk. The term hose continned to be"apheal t. the entire vestment, from the waist to the feet, thrmaneat this century : the material is more uistimetly stated, for Henry wore knit silk ats well is Whth hase: the precis " ${ }^{\text {a }}$ rind of the stepration of the hase into hreches and stockines, is mot so Whar as the derivation of the lather t am frem the 'stuckerany of hose;' 'that is, alding the lowerr part that cowerd the kegs and feet to that which was fastemed ly peints to the domblet, and was "alled the storks. The sheres and haskins were of the Gorman fashion, very liroad at the twes, and of velvet and sath, slashend and puffed. The hats, cops, and lumets wore of almont challess forms atal colours.

The dress of the midulle ranks is the reign of Hony VIll, may be seen in prints of the time; pain russet coats, and a lowse kind of kersey hrewhes, with stockings of the same biece, were the ordinary suit; aud the Lomdon apmentices wore hlue clonks in summer, and gnwas of the sane colour in winter, as ladges of seritume; for this appears to have heen the age of dumestic distinctions- the relies of the fendalism of the midelle ages. The women wore russet, or long woollen gowns, worsted Lirtles (hereafter called pellicoots), and white caps and aprous: and white underlinen came intogeneral wear. The engraving shews a man and woman in the ardinary dress of this perionl.

Man and Woman of the sixtenth Century The nincinal wenelty of the reiges of Edwarid VI. and Mary was the tlat rimul bomact or eap, of phan relvet or cloth, worn on one side of the homb, and decorated with a jewel and single ostrich feather. The lomet itself is preservel in the eaph worn at the present day ly the loys of Christ's Ilusital; and their bhe cont and yellow stockings are such as were worn by the Lumdon arpentices at the date of the fomulation of the huspital by the youthful Eimarl. Suestockinge.

The male costume in Elizaloeth's reign was the luye trunk hose, hong waisted dumbet, short chak, lut, lowd, and feather, show with roses, and the laree rulf'; but the great brechaes, 'stuffed with latir-like womsacks, after the separation of the lose intu this garment and stuckings, ippear to bave heern Wom throughout the reign: they were manle of silk, relvet, satin, and damisk. The Iouldets were still more oostly, and quilten and stutfod, 'slashech, jagitel, pindwal. and lacel ; and owe these were worn conts and jorkins in as many varicties as there are days in the year. The cloaks were of the Nomish, French, :wil I hitch eats, of cloth, sill, relret, ind taffeta of all colours, trimmed with gohl, silver, and sill-lace and ghass bugles, insile and outside equally surerl). The stockings, shoes, slippers, ant rufls resembled these of the liwlies.

Hofts now beran tu stupersele the lmonets of a fornere erat Those of leaver were excendingly "apmsive, and the were for the most part made if filted woml, dyed. The most remarkille thing about the se hats was their munernis shapes: some were sterepleorenmed; others were that and braad, like the hatelements of a honse; and others with rombl rowns, and bands of all colours, and wriabuntenl with lume foathers and hrooches, clasps, and jewels if great ralles. see llars.
A. recats femate attire, the more comspinnous features in the reign of Elizabeth were the farthin. gale (q. v.) and rutf. The farthimpale, or fardingale, innsisted in an extravagant expansion of the lower waments, ly means of cane or whalchone, by wheh the lady seemed to walk in a kind of tul. The farthingale. which is referred to ly Shakspeare, lintler, and other writers, mostly in a satiric rein, was the pretecessor of the hoop, which in its turn, after an interval, has bern suceeded by the Crinoline (I. v.) and hoop-work of stecl. The widely patomded ruth of line limen, liko a huge frill, is seen in the pietures of Plizabeth and her enviel rival, Mary (encen of Scots, both stars of fashion in their day:

L'mer James I., the male costume was somewhat more spanish, as respects the slashing and ornamenting of the doublet and breceles. Late in the rign, however, the jackets or dumblets were shortchend, and the breches reluced in size, and fastened in laren luows at the knees: the well-stockinged leg was almired, and the hat worn low in the crovn, and with broad brim, as seen in portraits of the date 1619. Beards and whiskers had become almost universal in the reigr of Elizabeth; but in that of James, the former was sometimes worn trimmed to a point, hanging down at the division of the ruff.

In the female costume, there was little change. The farthimate contimued to be worn ly ladies of quality; a strong passion for foreign lace was introduced; pearls were the favourite jewels; and the miff maintaned its sway, so as to be anathematised from the pulpit; and the fancies of female costume were glanced at in a sermon preached before the king it Whitchall in 1607-1605. as 'her French, her suanish, and hor foolish fishions.'
Thie fashinm of dress in the reign of Charles $I$. became still more decidedly Spanisli and pieturesque. There were now worn collars of rich pint-lace, large and haming duwn on the shoulders, held by a cord and tassel at the neck, and now callecl lomidice, from its beiner the most striking part of the dress in which Vample at that time painted portraits.

The princinal habits were vests and cloaks of whet, ur silk damask, slart-trousered breeches terminating in stuffed rods, and fringes and points, and rery rich boots, with laren projecting laee tops. A dress of tharles is thus leseribed: A falling band, green doublet (from the armpits to tbe shoulders wide and loose), zigzag turnel-up ruffles, long ereen breeches (like a Jutchman's), tied below the kneo with yellow ribhons, red stukines, steen shoe-roses, and it short red cloak
lined with hue, with a star on the shoulder; the king sometimes wore a large eravat, ami at other times a lony falling lami with tassels. The dress of the gay courtiers in cavaliers consisted of a domblet of rilvet, silk. or satin, with large loose slucres, slasheil, and cmbroidared: Viandyke collar and hamd, and short cmbroidered clank, worn on one shomblder: the long hreethes, fringel and printed. net, the rutiled tops of the bonts: the embroidered sworl-

Citizen in the time of Charles I. nelt was worn over the right shoulder, amd in it was honga Spanish rapier, and in the dapping beaver-hat was worn a plume of fathers cuntined ly a jewel. A buff coat or jerkin
was often worn, as a better defence than the doublet, which is sometimes covered. The engraving represents a citizen of this period more plainly attired.

The female costume of this jeriod was rather elegant than sIlendid. Gowns with elose bodies and tight sleeves were worn, thongh the farthingale was retained, with a gorget rufir standing up about the neck like a fin. French hools were still worn, though with little distinetion as to rank. The hair was worn in small curls, and the hoods, of all colours, fastened umder the chin with curious effect. Earrings, necklaces, and bracelets were much worn; but the Puritans forbale the females to wear lace, jewels, or even braided hair ; and they retainel the close hood and high-erowned bat.

Towards the close of the reign of Chantes I., the cumbrous farthingale disajpeared, with the rellow starched ruff and band. These tasteless fashions leing dismissed, the female dress became very elegant, with its rich full skirt and sleeves, and fibling collar edged with rich lace, and the hair worn in graceful ringlets ; but these vanities were condemned by the l'uritan prarty.
With the restoration of Charles II. came certain tasteless innovations upon the elegant Vandyke eostume of the time of Charles I., which were the first resemblance to the coats and waistcoats of the present day. Thus our most picturesque attire lasted little more than a quarter of a century. Its decline was gradual ; its chivalric character soon degenerated into grotesqueness, which in its turn changed to stark meanness. Early in the reign of Charles II., the doublet was much shortencd, and worn open in front, where, and at the waistland, the rich shirt was shewn; and the loose sleeves and breeches were deeked with ribbons and $\mathrm{I}^{\text {wints, and }}$ from the knee-bands hung long lace ruflles. At the Wrists, too, ruffles were worn; lat the lace-collar was shorn of its points. The cloak was retained upon the left shonlder, and the high-crowned and plumed hat remaised for a short time; but the crown of the hat was som lowered.
The pretticoat breeches were another alisurdity; although ornamented with riblons at the sides, the lining strangely allleared below the brecches, and was tied at the knces; to mateh which, the sleeves of the doullet only reached to the ellows, and from under them bulged the ruflled sleeves of the shirt, both leing ornamented with ribloos. Meanwhile the skirt of the donblet had been lengthened from above the waist nearly to the knces, and had lonttons and button-holes in its entire length, thus becoming a coct, and so named in an inventury of 169 ; wherein also are the items of waisicoat, breeches, pantuloons, drawers, and trousers, being the carlicst mention of these articles. Stockings of varions kinds were common; and 'the lower ends of stockiug' are understood as socks. Insteal of the lace-collar was worn the long square-endel eravat, of the same material, from Brussels and Flamelers.
Passing to the regns of Janes II. and William III., we find the male attire grabully fashioned accorling to the artificial enstume of the court of Louis XIS. Every article of dress was now more 1 mim and exact. The petticont loceches were exchanged for the elose-fitting garments tied below the knee, and therefore called lneebrecches; the broad-brimmed hats were turnel up on two silles, ancl edged with feathers or riblons; we began to see the rich long lace eravat and mulroidered waistcoat: asel the band was now warrowed, so as to rescmble that worn at the present time by clergymen. Wirs, which had been some time in use, were worn stilt longer than hitherto, hanging down in frout, or Howing upon the shoulders, though the colour was altered from black to suit the complexion.

From the 17 th to the end of the 18th c . Was the era of IIuir-pouder (q. v.), II igs (q. v.), and cocked-hats; in these as in other matters there loing an excessive artificiality in the tastes of the higher classes. In the amexed cut, we ofter a representation of a gentleman of 1750, with his
owing eont and ample cuffs, frills at the wrist, deep waisteoat hanging over the legz, long white hos. drawn over the linees, his coneled-hat folded unler his arm, and in his hand the open Suuff-box (q.v.). Such was the appearance of what is tra. ditionally known as the 'old Enylish gentleman.' The coats of the 1Sth $e$. were of velvet. silk, or satin, as well as hroad. cloth, and thcir colours very fanciful. Hogarth's favourite colour was sky-blne; Reynolds's, deep "rimson and vio. Int; and Goldsmith rejuicerl
 is phum-colour. About 1790 , cluth became the general wear ; the waistcoat being of the costlier materials, and embroidered, and sometimes the brceehes. Buckles were worn at the koees aud in the shoes till the clase of the century; and the large square phaited lnekle was the ton witil 1791, when shoe-strings becane gencral. Amony the artificialities of dress during the greater part of the ISth c., none was more odious than that of Hoops (q. w.), worn by ladies, who, by these means of expansion, were made to arpear as if standine in an inverted tub. In the reigns of Georice I. and II, a loose tind of drapery at the back of the dress, callen a sacque, and hooded silk-cloaks, were worn, also a very small muff, such as have leen lately reviveil. In the ISth c., after the disuse of towering homb. lresses, Teils (q. r.) of an clegant fabric were intmInced, and the Fan (q. r.) was an important artime $\mathrm{f} \mu \mathrm{m}$ ornament and dirtation.
The formalities of the ISth c. received a setere how at the French Ferolution; and in the tun years from 1709 to 1800 a more complete change was effected in dress, ly the spontancons action of the pople, than lad taken place at any previons priond in a century. The change began in France, partly to mark a contempt fur whe court usares, ame partly in imitation of certain classes of persoms in Emslanci. whose costume the French mistook for that of the nation gencrally: This new French dress was introduced ly the party who were stylen the sar Culottes. It consisted of a romm hat, a shout coa: a light waistcoat, and pantaloons; a hamkerehi was tied loosely ronad the neck, with the cauls lan and hanging fown, and shewing the shirt-collar above; the lhair was ent short, withont powder, it lo Titus, and the shows were tied with strings.

The eomparatively simple form of dress of tly Sans Culottes fund many almirers in England, and soun beame common among yurng men; the chaneco from antique fashions was also greatly helped ly the imporition of a tax on the use of hair-poweler, which was henceforth generally abandoned. Pautaloons, which fitted chascly to the lec, remained in very common use by those persons who had allopted then till about the year 1414, when the wearing of tronsers, alrealy introduced into the army, beame fashionalile. It is proper, however, to mention that tronsers had, fur the previous fifteen or twenty years, been used by hoys, and were perhaps from them admited lyy the army. Previons to the French lievolution, the dress of boys was almost the same as that of men. Nthough trousers-called by the

 was the em of this signal imprownmet ha costume.

Whin these leading danges wore dhetine, other alterations of a less emspinamos nature wore form time to time takiaf flues. The diskmbine of the army after the peace of 151.8 led to vames tranaformations hasides thase we have monament. Whato pantalona were tha fashomalle leese, it heame custhany to wear II "ssian lants; these, which ham ariginated amome the 11 ssian trans, were withent thom and wew worn with mall sill tassels hamgher from as ent in front; ] ing drawn wer the lower part of the pontaloms, they lad a neat ajpename; lout the kenping of them clean formel a tomment that proment thein miversal use. Sice boors. Whan trmsers were intrmbed from the patice of the army, the use of Whenarton buots to beneath them also hecame common. Ieferring to the era of $141 . \mathrm{g}$ to 1 sen as that in which tronsers, Welliarton hoota, and hack arckeloths or stocka rane into rowne we may llace the intreduction of thas surtont in the same perion of history. From the time when the collarless and houd-skited enat had disapmated about the commencement of the century, the fashion of erots had clanetel in warions ways till the abore-mumera, when the lowe frock corit w surtmit was anfal to the list of girments.
sheh is a memer acmant of the prumess of fashoms in England until nearly the present day In these fa-hinus, the Welsh, Irish, and senteh have participatel, and there is wow little to distimguish the inhathitants of were of the Cnit al Kinglom from innther. What difimenes exist in partionar localitics-as, for instance, the romm hats of the women in Wales, the cheeked sray plate of tho Lowland Scottish peasantry, anil the kill of the Highbaders-will reecive some motice under their apprepriate heads.

The general simplifying of dress sulsequent to 1815, wis not unacempanioll an expiving eflort tosustain a high style of fashmin. The mararoni. or highly dressed bean of the 1 sth e., was mow shereedect $\mathrm{l}_{\mathrm{y}}$ the shondy, who, with minciare affected mamers, priked himeself on his starched collars. his trousestrals, ant the flasly bmeln of seals which dimblal from hiw watch-chain. The Revener was the ura of this limu of supreme famlyism, hat it contimed till later times, and chanaterised a mumber of lealinur public eramazes of whan notices wem in Laikers Ripminisentes, from $18: 3$ to 1851. In the present day, may low noted a kind of break Buwn of everything hikn formality in ementlemen's walling comtunes. 1'lain ehthes, of divers hats, called Twe da (I. w.), liave almont superseded matu-

 hean: and the foet are previded with short ankle. bunta instand of Wi.llingtons. In erening or dinner
 and when beckethes is still mantamed. Amones the whang that are talong plow in the moning or walkine fless, mone is so remakable as the frow. ing fashon of wemine khathothockers. Thest are wide lense tromers to below the knee leaving the lower part of the lag anly stuckinged or covered with
loweines. This fathom, which has been confed more imatiately from the Fremeh Zanaves (sec\%orave), and part) ${ }^{*}$ perfalis fron the common praction of staling the low prate of the tromsers rombly intu lanits in the western regions of the Hnited Stater, is wery mum a restmution of the costumes sem in wh luth prists. Shombl it become general, lesegaters of lants will emon atain into use, and thie present wementinn may liwe tor ste the fashion of make attire work whee thore round to the kneeloreches of the listh century. In female as well as in male costume, farhion serme to have a tenWeney to work in a circle; of this, the resumption of the farthimgale, or honj, muler the name of crinoline, alrealy refored to, offers in sufficient "xample, heveles athorting a budicous instance of the unceasoming maner in which extravagances in dress are mathatly follownel. It is to be ohsorved, however, that lindishwomen, chargable as they are with thes alsurlity, set a most creditable example to their sox all ower the world, in allowing no fantastic chance of fashion th prowent them from taking mation excreise in all weathers, to which the recent intrometion of imlia-rulhner (ioloshes (1. v.) has materiatly aisted.

As to the moral view that may lue taken of the whimsiealities of female fashioms, we might refer to the wumerons pares uf stede in the Tutler and Sometetme and also the writings of other 1 Sth $c$. dsaysts: paswing these wer, it is congh to gunte the words of lazhitt, a more reeent essayist.
 in two thince it abhers must-singularity and valgarity. It is the propetual setting up and then disuminer a rertain standard of taste, elegance, and retinemont. which has no other formation or antlority than that it is the prevailine distraction of the mument; which was yesterlay ridienlons from its leing new, and to-marom wild lee owlious from its leing common. It is one of the most slight and insimitiont of all things. It cannot he lasting, for it depents on the constant change amb shifting of its own hardequin disonises: it camme be stemme, for. if it were. it could not depend on the breath of eaprice: it must he superlicial, to prowluce its immeWhate the en the gaping row : and frivolons, to admit of its being assumed at plasure by the number of those who affect to le in the fashion, to be distinguishal from the rest of the worll. It is not anything in itself, nor the sign of anything, but the folly anil vanity of those who rely upon it as their greatest pride and ornament. It takes the tirmest hold of weak, tlimsy, and narrow minds, of those whose emptiness ennceives of nothing exeellent hat what is thonerht so by others. That which is gowe for anything is the bitter for locing widely diffinsed. But fashion is the abortive issue of vain ostentation and exclusive egotion: it is haughty, tritling, affected, servile, despotic, mean amd ambitious, precise and fantastical, all in a breath-tied to no rule, and hound to conform to wery rule of the minute.' Fur a large variety of amosime particulars concraing fashions. 'stars of fashom,' de., during the past $^{\text {ntw }}$ twenturies, we refer th Mrs Stome's Chronites of Fostum (Lumbl. 2 vols. 18.t5).

experience of the salutary influence which alstinence exercises on the lealth, and with his more or less instinctiv conscionsuess of the necessity of retaining the benly in duce suljection to the soul. By degrees, the self-mortification which it implied raised it intor a sacritice offered to the 1reity: it became a religions olservance was surminded with rites and comonics, and tinally bore the stamp of a livine law. (limate, tho habits of a people and their crued, gave it at heterent periouls different characteristies; lut it may bw promoned to have been a rechgnised institution with all the more civilised nations. esfecially those of Asia, throughout all histomie times. We time it in high estimation amony the ancient Farsues of Irania. It formed a prominent feature in the ceremonies of the Mysteries of Nithras; amb fomm its way, together with these, orer Armenia. ('appalucia. l'mons, and Asia Minere to Palestine, and northward the the wikls of Scythia. The ancient 1 'hinese and Hindus, and principally the latter, in acendane wath their primeval view-which they hell in common with the Parsees - of hearen and lull, solvation and dammation, of the tramsmigration of the soml, amb of the body as the tomporary perisen of a fallen spirit. carried fasting to an unnatural excess. Althongh the Vedas attach little impmayce to the excmeation of the louly yet the l'waka, by the due olsemance of which the Himdu believer is partion from all his sins, remires amming ather things an unintorrupted last fin tho space of twelve dars. Egypt secms to have had few or no compulsery wenerat fasts; but it is established berond doubt, that for the duitiation into the mysteries of Isis and Usiris, temporary abstinence was rigurumily enforetal. In Sian, all solemo acts are preceden he a prim of fasting. the seasons of tho new and full moon being especially consecrated to this rite. In Java, where abstinevce from the Hesh of oxel is part of the religion of all, Budthists and wordighers of Bralma alike, the manner and times of the chservance vary according to the religion of the indivilual. Auain. in Tibet, the Dalai-lamaites and Bogho-lamaites Lond this law in common. That breece observen and gave a hish place tuoccarimal finsthays - such as the third day of the festival of the Elensinian mysteries, anct that. for instance, thoise who came to consult the oracle of Trmhonins. lial tu ahstain from fool for twenty-four hour-is well known. It need hardly loe adiled, that the domans dil mot omit so imprortant an clement of the festivals and ceremonies wheh they allontend from their neighbours, though with then the periols of fasting were of less frepuent recurrence. Shee Thesvophorit.

As $t$ the somitic races, although we find the people of Nimewh umbraing occasimal fasts. to which even animals were minle to contorm, set the Mosaic law set aprart one day only in the whole year for the purpose of fasting. The loth day of the seventh month (Tishri), called 'the- itay of Atonement' (Iom Kippmr), or, as the holiest of the whole year, 'the Sohbath uf saboaths." was ordained for the chastenine of the Jephesk. which the tralitional law explains as meanide the strictest and most riontons alotinence from all foon ur lrink. as also from wahhing, anointing, the putting on of samkale, de., from the sumset of the minth to the rising of thre stars on the evening of the tenth day. Iu process of time, five days of compulary fasting were athen, in commemolation of certais days of lamiliation aul national misfurtunc-viz, the lith of the fourth month (Tamns), as the anniversary of the takins of Jerusalem hoth lev Nemochanczzar and Titus; the 31 of the serpnth month (Tishri), when Ishmat hat killet Gedaliah, the Jewish governor
appointed by the liahylonians (Jer. xil. 2) ; the luth of the tenth month (Telveth), in remembrance of the sime of Nelmolwadnezzar; the 13th of the twelftly month (Alar), the fast of Esther, and the day most rigorously kephe next to the great Day of Atomement:- the Ith of the fifth month (Al), the anniversary of the destruction of the tirst temple ly Nehuchadnezzar, and of the secmul by Titus. That the pepple hat at all times lieen prone to attach grrat importance to the use of this penance as a visible sign of ontwaril contrition, is clear from that ordinance of the Mosaic law which muts into the hands of the: heat of a family the lower of contining self-imposet yows of alstinence within ine limits. The community loved to express their penitence for sin, or their grief on the death of LTat men, by nccasional fastings. They were alsn consileret an efficient means of averting the divine wrath. if ineming victory wer an cheusy or of bringine down rain from heaven. Insides. fasting was nut unfrequently resorted to ly thuse whon wislecel to free their ininhs from all lindrances to meditation, as in the forty days of Doses (Exmi. xxxiv: $\ddot{-b}$, or the fast of Danid (Banid, x. $\ddot{-}$ and B). This fast of "ontemplation, as it might le callerl, semms als, $t_{1}$, have been the model imitated by the Cabbalists, some of whm are known to have fastel from sablath to sabuath. In later times, when, after the destruction of the temple, sacrifices liad ceased, fasting, as causiny a decrease in the tlesh and fat of the inlivilual, was considered to be in some decree a substitute for thr animal which had fummely tmen offered up by the priwst. From a means to repentance and inward puritication, which purpmse alone it hat been originally intended to serve, it lecame an end and a vi'tise in itsolf : an abose, imbed, neither unkonwn nor man.nomed aven in the days of the 1 rophets. If we add to this the emthrse chain of dire calamities ant ever-renewell fersecutions of which the Jews has. leen the victum for many a long century, the everincreasing number of their fasts commenorative of deaths and tribulations will he far from sumpising Most of these, however, which were superamed from time to time. soon fell into oblivion. Over and abore the six alrearly mentioned, but few entire days are now observed by the orthodox, and these mercly of a local character, Fisting, with the Jews, always imphes entire abstinence, and lasts.
 -when the sunset of the probus evenine is the sisn fur its commencement-from the hreak of the flay to the aprarance of the first three stars. sackeloth and ashes. the garle of the penitent in ancient times, are no lomger worn: but as the quecial heliness of the Day of Atmement is celelaratel hy various solemmitios (spe Festivals). son the deepnst monming orer the loss of temple and comitry is visibly expessen by many ceremonies in the Tewish synacromes aml homes on the 9th of Ah. On that day also, to add the individual to the national snrow. the cemeteries are generally visited (see Jewnit Riten). (if several hafiflays of fasting that haw survived, we will mention the first two Dondays and the first Thursiay in the secon? month (Iyar) and in the righth month (Cheshwan), (sheni vachanishi vesheni), in celelmation of the two m-eting-pints of summor and wintur: as also, several lays before the New-year or Hay of Jubment, and before the Day of Atomement. The individual is bound to collorate by fasting the anmiversary of the death of his parents, his own welding-day until the ferformance of the marriage-ceremony, and the lirth of his first-iom male child (up to its thirteenth sear-when the duty falls upon the latter himself), on the day proculing the Pesach (Pasha)

## FAST.

- in enmmemoration of the spariac of the lamelite finsthom in Egyt. For the several homrs' fasts on the two New-years 1ays, and on the first six huss of the Feast of "ahemacles, we refer likewise to Festrias, ant we will only adh in condusion, that the sablath causes the postpomement of any finst - that of the Day of Atonement only execeptend -which may hitumen to be windent with it : and that childeen-girls up to their twaifth. loys to their thirteenth vear-pregnant women, and the sich, are exmpted from the observance.

In the time of charist, fasting, as we have scen, was hold in high estimation. The Mondays and Thurstays-the market-diys, on which the judges sat, and the law was read in the symagues-were especially set asile for this purpese by the l'harisees. The Essemes fasted even mure frequently. The salduces alme tork exception to this rite, and were therefore comsidered unswly. Cluist himself mether apmosed nor disapmosct of the custom, lint, as in all mattors of ceremony, allowed his disciphes, Jews and contiles, to act according or contrary to their whin hats. Ite is histanctly asamst stuch a conmothlutht, and even exchses those who did net fast. His own abstinence from forl for firty deys was like that of Doses, eutirely an individual act : and auminst a voluntary and himited initation of such abstinence, to which the spirit might move a man. no oljection whatever was to be taken.* During the first centuries of thristianity, these voluntary fasts were frequent enough; the new converts athering in most cases to their ohd rite, aml omly taking eare to change the days, which had been days of abstinence in their former religions, for otbers. Besiles, they were considered a betittinn preparation for holy acts and foasts, for ordination and haptism. The time mostly eclelmater anntally in common liy all were the forty hours from Friday aftemmo to Sumblay moning during which time Clurist hay in the sepulemere But not lefore the chl oi the seconi century was anything like an urlinance $\}$ ormmanated with respert to fasting in the new religin. It wies first Montanus who, as the Paraclete, introduced, anomy other laws of excessive severity and rigmor, iosting, as an inhilition upon the faithful. The Wednesdays and Frilays, as the days when Christ was taken prisoner and crucitied, were made days of strictest abstinence from all fond; while on the other days of the week. dried, monked rictuals only were allowed. Ascetieism and monachism hat therr share in the gradnal development of the doctrine of the necessity of mortifying the tlesh, and as a matural consequence, in the urowth and dillusion of the custinn of fasting. Fet, in the first six centuries, the difference in the varions C'hristian commmities

* Roman Catholies, however, maintain that all the words of our Lori, which to Protestants appear to discountenance the boligation of fastrug, are directed exclusively arainst the ostentatious and self reliant fasts of the Pbarisees. They even miderstand the language which be used in condmning the practice of the Pharisee fasters, as containing a direct exhortation to his own disciples-not that they should abstain from fastingthat they should fast with suitable dispositions. They hohl, moreover, that in exempting his disciples from fasting, he had regard only to the actual time of his own presence among them. It was incongruous, he said, that the chididen of the marriage should fast as long as the lridegroom was with them; but, he added, 'the days will come when the bridegrom shall le taken away from them; and then they shall fast in thase drays (Mark iii. 20; Matt. ix. 15). Hence they infer, that from the time of our Lord's asconsion the practice of fasting hecamo obligatory on his discipdes, the temprary cause of the exemption hitherto existing having ceased.
was not ereater in any other doctrine or ermony than in this. lhishors and comeils. however, gradually fixed the times and seasons for the whole of -liristendom. The 40 heurs hat gradually become 40 days. calleal the Quadragesima ; and the Comeil of Orleans, in 541, male it hinding upon every Christian not to bat any meat during this time, save anly on the sumbars. The eishth council at Toledo, in the 7th c., deelarm those who ate meat durine lent, sinners unworthy to partake in the resturection. From the Sthe to the 11th, when a gradual reaction set in, the laws of fasting and the pmishments awarked to the transgressors became stricter and stricter; interilict and excommomication were among the penaltics. By degrees they had become so mumeroms and different in kind, that they were divided into-l. Jejunium generale (a fast hinding for all) ; ․ Consuetudinarium (local fant, \&e.): B. lenitentide (atonement for all transgressions): 4. Votivim (ennseguent upon a vow); 5. Voluntare (ior the better carrying out of an umbertakiag). These, atain, were kept cither as 1. Jejunim naturale (an eutire abstinence from fool or drink, especially in preparation for the reception of the Eucharist) : 2 . Abstinentia (certain food only being allowed, but several times a day); 3. Jejuninm cum alstinentia (the same food, but which must be taken once a day only); and 4. Jejuniom sine abstinentia (all kimls of food, but only ouce a day). The fool prohibited on partial fast-days inelnded, during certain periods, not only the Hesh of qualrugeds, fowh, and fish, lout also the 'lacticima'-i.e.. all that comes from qualruped and líre, as butter, eggs, milk, \&e. Wo camot here enter into detail; the discrepancies and difterenees of oprion with respect to the times and monles of fasting, or to the fool 1 rohiliten, being, even among successive popes and coutemporary bishop's anil hilers wi the chureh, so numerous, and involvel in such olscurities, that the chareh historians themselves shrink from enomerating them. Suflice it to say. that they gramally developed in the homan Chureh into-T. Weekly fasts, of which rriday, as the day of the erucitixion, scems to have heen early and generally observal. To this was ahled the Wednesilay, as the day on which the aleath of Christ was resulvel upon. These two days received the name of Stations; a term borrowed from the stationcs of the Roman suddiers, in accordance with the views held by the asectics anl monks, that they were the warriors of Christ. At a syod in Spain in the berinning of the 4 th $c^{\text {, , the Saturday was superaded, but this }}$ innovation met with great opposition, especially in the East, where Jewish notions regarding the Nabbath had oltained a more permanent recoguition. 2. Vigils, originally might-scrviees observed by the first C'hristians on the eve of Sundays and festivals, partly in imitation of the Jewish custom of clebrating the entrance of the sablath and oi festivals on the evening of the previous day, and
* It is only just to add, however, that here arain Catholics dissent strongly from the protestant view of this history. They almit that the follow re of Montamus dill introduce greater rigomr and frequency into their fasts; but they deny that beforo the timo of Montarns the practice of fasting was not fully recog. nisid in the Christian Church, and regarded as strictly obligatory. The very carlicst allusions to the forty days fast of Lent (ecessareccoste) regard it as an established and recognised institution. The very first fathers who allude to it, speak of it as 'handed down and observed by the church;' and so far is its origin from heing ascribable to the influence of Montanism. that, on the contrary, the earliest relaxations which the church admitted wero a reaction against tho excessive and intolerable rigour of that fanatical sect.

Iartly in fear of the danger to which a service in the daytime woul have exposed the carly converts. Although these night-serrices beeime nunecessary in the course of time, they were still continued np to the 4th c., when, owing to the abuses to which they led, they were almlished, or rather transformed into fast-days, kept on the eve of great festivals in honour of Christ, Mary, Saints and Apostles. 3. 'The great or 40 days' fast (Quadragesimal fast), the most important and most rigoronsly enforced of all. The 41 hours of fast, in commemoration of the 40 hours during which Christ's body lay in the tomb, gradually expanted to 36 , or rather 40 days, as mentioned before, in pious allusion to the 40 days of Moses, Elijah, 'hrist, the 40 years' sojourn in the desert, or the 40 eamps-all considered typical, and the fasting beame severer the nearer l'assionweek itself approachel, in which many other signs of mourning and contrition were gencrally exhibited. 4. The Quatember fasts on the Wednesdays, Fridays, and Saturlays in one week of each season, in imitation of the four Jewish fasts in the 4th, 5th, 7th, and l0th month.--There were still many other fasts, sueli as those of ordination, \&e., but as they had only a temporary existence, we cannot treat of them here. Nor can we enter into the varions dispensations granted by the chureh, or the special pastoral letters generally issued hefore Quadragesima, nor into the variations in the observance of fasts and fasting in our own days: we can only add, that they have in a great measure lost their former severity, and that only partial alsstinence is the rule in all cases. The npinion hell by the church in former lays, that fasting is meritorious, and conducive to the salvation of the soul, has undergone no change.

With respect to the Greek Church, we have to observe that fasting was and is kept with much greater severity, the non-observance of it being the least venial of sins. The days here extend over almost three-quarters of the year. The prineipal ones are the Wulnesday and Friday-with a few exceptions-throughout the whole year; the areat Easter fast, lasting 45 days; that of Christmas, 39 days; that in honour of the Virgin, 14 days; and that of the Apostles, beginning on Monday aiter Trinity, and extenling to the 29th of June. Besides those smaller fasts of preparation, whieh correspond to the vigils of the loman Chureh, they have many more oecasional fasts, which we, however, must omit here.
The Church of England considers fasting a praisewnthy, but lyy no means obligatory custom. Aceording to Hook's Church Dicionar!, the distinction between the l'ratestant and the Roman Catholic view of fasting consists in this, that the lioman Catholie regards the use of fasting as an imperative means of grace, the Protestant only as a useful exereise Ireparatory for the means of grace. In proof how minch the Chureh of England hats left the 'ruestion of fasting to the eonseience and discretion of her members, it may be observel that she has neither dufine the mole no degree of fasting, nor anywhere given a prsitive command to fast. It has been remark al that no bishop of the Church of England has in an episcopal charge laid down fasting as a positive requirement. The days named by the English Church as seasons of fasting or abstinence, are the forty days of Lent ( $\mathrm{q} . \mathrm{v}$. ), including Ash Wednesday and Frood Friday; the Ember (q. v.) days; the three Rogation (q. v.) days, and all the Fridays in the year (except Christmas Day) and the eves or vigils of certain festivals.

The Scottish almanaes contain lists of the fusttays of all the principal places in Scotland. These are generally one in each year, appointed by the kirk-
session of the Establisher ('burch of the parish, or lyy eoncurrence of kirk-sessions in towns, bat generally by use and wont tixed as to their date. The fastday is always some day of the week preceding the Communion sembey, or Sumby set apart in the Presbyterian charclies for the dispensation of the Lord's supper. It is ustally appointed as a day for 'fastiug, humiliation, and prayer.' Business is generally suspented, shops shut as on a Sunday, and churches opened for $1^{\text {mblie }}$ worship. By an act of parliament passed not many years since, factories are prohibited from carrying on work on the marish fast-day, but in conser fuence of the eecle. siastical divisions in Sentlanl, it has lweome more enmmon than it once was for agricultural and other kinds of work to le carried on. "The fast-day of a large town is always a busy day on the dailways, nany taking advantage of it for excursions, and making it a day of ammement ; too many, also, a day of dissipation and revelry. That it is right to keep up the annal fast-day in these eirenmstances is doulited by many who themselves conform to its religious ofservance, although of that olsservance fisting does not now generally form a part. Nany, however, doult if it ever was a good institution; alleging that it is inconsistent with the frequent eelebration of the Lord's supper, which they deem right and desiralic, and to which there is a growing tendency: The Soottish Reformers, as appears from the Firat Book of Discipline, contemplated the ordinary celebration of the Lorl's Sulper at least onee a month; and the fast-day, as it now exists in scotland, derives its origin from a later periol.

A few words remain to be said of the Mohammedan fasts. Islam, as an oftispring of Judaism and Christianity, afopted this enstom with many others from both churches. During the whole month of liamadan, in which the P'rophet brouglat the Koran from heaven, cating, drinking, smokint, smelling perfumes, \&c., are strietly forbidden from daybreak till sunset; fur the intervening nights, however, all these restrictions are removed. There are, besides, many voluntary fasts, expiatory like the luth of Moharram, corresponding to the Jewish Day of Atonement, or for the averting of the Divine wath in sudden ealamities, or as an indemnification for the onission of certain I rions acts, as the pilgrimage, \&o. See Jews, Momamedanism, Mosis.
liesides the Bible. Schulchan Armck, Koran, and the fathers generally, we refor to the following authoritics on this suilject: Biugham, Orig. wol. ix. I. 21 ; Fabricins, Bibliogr. Antiquaria, e. 11; J. A. Muratori, De Quctuor Tempurum Srmaiis, \&e.;

Fasting, or deprivation of food, is, in a physio. logieal sense, a state inconsistent with the continuauce of life in most warm-blooled animals more than a few weeks. If water is not suphlicel, the period is moch shorter, beng in mas commonly not more than a wery fuw days, or at most a week. Persons have been fomd in eoal-pits and mines, and in other situations where aceess to food has been impossilhe, but where water conld be had, as long as six weeks after their seclusion, still alive, thourh of course in a very feeble coulition; and a very small daily allowanee of food has supported life

FA'STI. Fas, in Latin, sisnities divine law, and feseres, anything in acordance witl divine law. Honee the thes fost or lawtul days, amome the fimmans, were the days on which it was lizwinl to tramsact business lefure the protor. lint the ancreal lomks, in which the lawfal ditys of the yoar ware morked, were themselves denommated yanti, and the term was employerd, in an extended sense, to sienify varinus kinds of registers, whide howe heen niten eonfoumbed with wabli other. These registers fall into two prineipal divisions-the lasti succi on Kialembares, aml the fasti Amales or 1 listarici.

1. Pasel Kiblomberes, or calondars of the your, were kopt exchasively liy the priests for ahout four "ronturies aum a half after the buibling of the eity'The aperarame of the new mom was proclamed by ${ }^{4} l^{n}$ antifex, wha at the same time ammanced to the [enplo the time which woud intervene ]retween the

 iestuable of the month, and the , lays on which they would fall. In the sione way, those who internded to go to law, learmed on whit days it would be
right (fose) tu do so. The mystery with which this lore wats surmmaled, for purpinsos of power and podit. hy the fivonrad class, was dispellem ly Cu. Flavius, tibe soribe of Aprias "acous, who surreptitionsly enpled fron the pontitieal look the redusite infor. mation, innd publinheal it to the people in the forum. Fown this. timotables (justi) hecame eqmonon, very mash resombling mondern almanates. "They contained the days aml mouthe of the yoir, the Nones, Jdes, l:wful aul unlawful days, \&e: ; astronomical observations on the rising and setting of the fixul stars, the commencement of the seasoms. brief notices concernines the introduetion and signification of cortain rites, the dedication of temples, the dates of siotorios, disasters, and the like. In later tinnes, the explints and lononurs of the imperial family ware shaly entemen in the ealembar. The celdorated Festi uf Owin is a sort uf purtical companion to the calembar, as published ly dulius Casar, who reverndelled the fobmin year.

Sevoral very emrions spoomens of fasti m stane and mathle have heen diseovered, of which one of the most remakad, ${ }^{\circ}$ is the kalembarima Prenestimum, which steme in the lower juart of the formon of pranceste, descrilnd by Stutmmins. Of these ancient fasti, cheren are commerated by Foggini, a learned Jtalian antipuary. One of the most interestins is a rumal almanac, known as the Kalendarimm Rustiemm Farnesianmm. Tt is cut on four siles of a culue, each side of which is diviled into three columns, each colmun c'mbracine a month. The varions agrienltumal eperations to be performed in each montla are given on this curious relie, in arlelition to the ordiway information conteincel in these calendars. In the numtle uf lay, for example, the rustic is told that his corn mast be weorled, his sheep shom, his wernl wathluel, de.
$\because \quad$ Fratit itmuntes on Mistorici, were chroniceles, cuntaninus the names uf the emosuls and wher maristrate's of the your. and an enumeration of the mont mararlable erents in the history of Fome, noted down opmosite the days on which they "cemrenl. From its application to these chronieles, the worl fasti came to lee wsed by the pocts as symonytaons with historical records. A very inter. estiner slechnen of fosti of this class was discovered in tlie furm at lome in $15 \frac{1}{2}$. The framents into which it had been hroken were collected and arranged hy the 1 indinal Alexamber Farnese, and phaced in the ( $: 口$ pitn), where they may still be seen, together with sone aditional !urtions which were discovered in 1817 and 1S1S. Se Smitlis Dictionary of Greek vad liomen Autromition, ruce " F'asti,' and also the artiele on ' (alembar' (loman) in the same work.

WAT LUTE is the term applied to a composition of linsem ail and pipeclay. See Lerm.

EA'TA MORGA'オA is a striking kimm of minge observel in the Strait of Messina. A spectator on the shore sees imaqes of men, houses, ships, \&e., sometimes in the water, sometimes in the air, the same object having freguently two images, one inverterl. See Nifidac.

FATE, FATALISM, express a conception which has more or hess prevaled in all relirions. The words are derived from the Satin Fulum, which has pumarily a passife signification, denoting some. thing uttered a decere or ardinance. The Grecks (xpmessol tho same thousht ly Fimmanené. Motra, arain, was the autive personification of the delenthe genlless fate or flestiny. It represented, in the wrea mythology, the inal monotheistie element the varue V'nity bimbing together and dominatiog wer the crowd of Olympian deities. In Ilomer, Moita las a donble meaning, apraring sometimes as superior to the will of Zous, and sometimes as

## FATES－FATHERS OF THE CIIURCIJ．

inferior to this will．With the course of Grecian thought，the ennception of liate becane more spirit－ nabised．In 太schylus it is an inexor：uble Destiny； in Sophocles aull llato，it is mure of a free and ordering Will．In the later firms of fireco－Iinman specolation，again，it undertoes varions monlifica－ tions．With the lpieureans，it secms ilentical with Chunce（Tuche）；with the stries，it is the sery onnusite of this．In the one case，the Alnsolute is a mere bind fatality；in the＂ther cisse，it is an immiuent ncecssity of reason，wrerning＇with irun sway the apmarently aceidental phemomena of lif．

In the twengreat religions of modern times，Chris－ tianity and Mohammel lanisn，the same conception is found in varimus forms．In the latter，the lighest is conceived as an arlitrary and inexorable law， swallowing up every lower law of activity，ani promittiag mo scope to freclemn of develprisent in human nature．In Christianity and the marlern speculation which it hiss cempurel，it shews it．elf less liroally in the well－kmon dinctrines of l＇redes． tination and of Philosopldical Norecessity：ln the Predestination theory of Augnstine，Calsin，and many others，the old fatalistic ductrine is requuli－ ated；the recognition of a free determining element in the divine Will，separates their idea of it alto． gether from that of a mure blind Destiny；but the intluence of the monle of thenght wat of which the oht idea sprumy，alpuars in the manner in which the divine decrees are sometimes spoken of as incxur－ ally overbearing human frectom．lin the ductrine of phitosophical necessity promulgatell ly Leilmitz． Elwards，and in a sumewhat diflerenit form hay Modern Pusitivism，the sume illaa emerges under the name of ineritable sequence of an invariable comection linking together all phenonema material and mental．An innnutalde law is declared to pervale and hamonise all existence．This is a much higher conception，but it is not difficult to see liow easily it may pass into the old pagan doctrine of Fate．
The doctrines of Predestimation and of Phino－ sophical Xecessity have been supposel mutually to sumpart each other；in reality，however，they are very different doetrines．The wine starts from the dominatins conception of the divine Will as over－ ruling all things，and approaches fatalism ly aserihing in curtain easus such an alsonling cnergy th this Will as to leave no ponver of free action to amy ather will．It cenccives of everything as swallowed up in the single omminotence of the Divine．It is Pentheistic．The ether starts from the dominating conception of law in nature，mul apprwaches fatalism by investiny this law with an immutalle and self． sulsistent character．It lowss at all existence as a mere undeviating rintine of duclopment，and tends in exact oppmsition to the wher doetrine，to shat ont the Divine bechinit the screen of the Natural． It is ．Itheintic：It is of course，mercly the tom－ dency of the respective speculations that is thus characterised．

The conception of Fate springs irresistibly from man＇s consciousness of the trimscending greatiess of what is outside and above his own feeble existence －of the oljective Fower that cacloses and moulds his own suljective aetivity．As such，it will never wholly disaprear from humau speculation，however endlessly modified it may be．

## fates．See Parce．

father，Sue lafemt and Cimld，Pamley， patria Potestas．

FATHER－LASHER（Cottus bubalis），a very common fish ou the British coasts，the most spiny of the Pritish sprecies of Cuttus（q．\％．），and parti－ cularly arned with strong spines on the back of the
heal－which is haree－ant un the gill－eovers．When tonchad，it distenls its，gill－covers，sets out its spines，and assumes at wry threateming alforamece．

Father－Lasher（Cutlus bubutis）．
Its arneral aspect is indend forldiddins，and even the hittle loys whu tugle from the rucks and pier－ hoals are usually averse to tonch it，although it is sail to be whilesome and arceenhle food．It is of a brown chlour alnve，whitish leneath，curionsly marbled and spotterl，the fins marbled black anil white，In sentlaul，it bears the name of Lucky
P＇romb．

PATHERS OF THE（＇HITROH（Putres Sechsiestici），certain early writers of the Christian （＇hurch．The term Ahha，Graveisen 站反us（Father）， ine nse among the Talmutista as a synonym of lialhin（my master），and comstituting，acoorlins to Maimonides，the thint or lowest homorary title of a Doetor if the Divine Law，was in the first centuries of＂hristianity appliei indiscriminately to all thenlogical writers who were distinguisholl ly their leamings，grnius，of piety．Gradually，how－ ever，the word Fathor，or，mure fully，Father of the＂Church，was contined to those teachers whose writings were considered pre－emincutly arthodox， and who might lee louked unon as the moyenitors，as it were，of certain doguns，upon the development of which they hat exercised a more or less direct inflecuce：while those writers whodiverged into the dields of heretical opinion were called simply Serip－ tor＇s Beclesinstici（Chureh－writers）．Out of the num－ lew of the former，some few master－minds，to whom the church owed a still greater tribute，were again singled out is Macturns Ecclesim（Doctors of the （lhureh），which title of preeminener，however，is lestowed on many writers who livel sulserpuently ts the time of the Fathers，in eonsile eration of their ＇purer and more excellent doctrine＇（Benctict，xiv， Lullta，Milit．Eccles．）．
The temproal limits within which the Fathers are to lee confined，as well as tha－ir proper share of withority in matters of faith，have long been wints of grave discussion．While some include the Fithers of the Ist c．，generally called the Apos－ tulical Fathers，on accuint of their being the con－ temporarices or disciples of charist and the apostles， they are excluded by others：again，by some，the 7th c．is made the closing perion，while athers carry the list down to the $1 \frac{12}{3}$ ．or even the 13 th century．
With respect to the authority of the Farthers，some， like Fredecis，held their words to be as saered as those of the frinhlets and sacred writers ；while uthers，like Alphomso if Castro，Melclius Cano，and Cardiual Cajetan，ridiculed the notion that Sym－ machns should be made equal to St Paul，or Didymns to St John the Evangelist，Others，again，like Pope Gregory and the majority of writers，thok the midulle course of regarding them not as infalibible， much less as Irophets and apostles，but held，that

## FATHERS Of THE CHURCH.

when in matturs of faith the most perfoct ami man orving manimity reioms ankog them, then and
 squak through than. See Jrammons.
hamense as is the range and varidy of their
 porat, historimal, or dommation, se also is the disersity of their individual valum. Kothing can h. further from historical justiee than either the whone. sala latation or combemation of these writers as a luly: bat whatever stand we may take, we tannot hat see that they are of the itmost moment. siretching as they do wor the entire extent of that periud which forms the thmine point between the antique and mokern world, they faithfully and often uneonscionsly purtay that awfin change, of which they were in no shall derve the instru-ments-the gradual wame of ohl faiths, amb of an oht rivilisation, and the show and struggling rise of that which was to rephee them; while they
 the same accuracy as the most monchtans event, as enoh hapmend th bear uma their subject. The Ihilusomer, the histomian, the antiguary, each ami all will find their writings, as a whate, to contain an inexhanstille fumb of instruction. Wino less interest, ferhap, are their works in rhation to the writers minithally. These, issuing from all parts of the then known worhl, from all ranke, all creeds, cond not hat inpress the stamp of their nationality and callinge, hosiles that of their yonth on age rigom or fechleness, upn their writing - Jow, Greck, loman, African, spanard-orator, finet, lawyer, statesman, priest, they all hring with then that Which was their own before the mannaced the new faith: their dialectic pawer, their fatastic pucter their graeful spech, their stern ansturity. What Greck suluthety did the retically for the dewernmont of doema in Orimen and Athansius, that lioman thoronghess did practically for the rwetion of the hierarchy in Lew the Great and Girarory III. ; white from Erypt came asceticism and momachism, the ascendency of spiritualism ever s.nnthalism is owing to those who came from the northern coast of Afrima How far Flatoni<m, and especially nea-llatemism, Aristotle and Creck philosophy generally, are fomm developed in these works, and infused into the new faith by the former toachers of the acalemies them$s$ slves, who mustly retainel their ald fhilosmpical garl, upon this, as well as upen many other points, we must furbear to mbarese.
We will now proced to take a brief survey uf these writers-referring for further information to the special articles on the moreminent amony then. Accorling to the now grmerally adopted methon of datine thom from the Ist to the 7 the., they are divilen into two distinct furjula, the first of which grees down to the Conacil of Nictu, 3 an ar. Of there who heat the list, the Apstolic Fathers-so calleth from their sulpment commetion with Christ and the ajostles-very little wed be sain, ats their writima, which are mostly of an ascetical character. have come down to as in a command matilaten! state, and as the writers themselves owe their chief calderity to the times in which they happenel to hive. We have hore Pamabas, the son of "'conster,
 (llement, suppoed to have been the third Bishop of lome; and the Clement montioned by St f'and (Philipp. iv. 3): Ihrmas plentical perhaps with the Hormas of Sit l'aul's Ejistle to the liomans (x xi. I-4); Ignatios, Bishop of Antioch; l'olycarp, Bishop of Smyrna; l'apias; Dionysius the Areprogite, de. Nixt follow the Apelogists, in those Fathers whom chiof aim was the defence of the new faitl aribuct the Jinnan state, and non-Christian anthors, and who
were the first to make their scientific culture, ame anme esperially the l'latumic phalosophy, sulservient to ("histianity, for this purpose: Quadratus the: 'Evangelist." a trawhing missionary; Bristides, an Athenian philosupher ; Justin Martyr, the well known anthor of the two Apulogies aml the Dialogue with Trypu (or rather Jarphon); Tatian of Assyria, who, hating "xamind the different forms of worship, as well as the systems of philosophy prevalent in his time, felt satisfied with mone lut Christianity, and became a disciple of Iustm, and a vinticator of the fililosophy of the larbarians: Athenagoras, who adtressel his A polugy to the Emperom Marcus Aurehins, and his son (ommolns, ani) wrote a Defence of the Doctrin: of the lisesurretion: Theophilus, Bishop, of Antinch: Diltiales, \&c. Next come the Churels Fathors of Asia Dinor, men of more prace tical and perarful tombenes: Hegesippus, pertajes an Fhionite; Jrentins, Bishop of Lyon and Vienne, who wrote a refutation of the finostic system: Hippulytus, his disciple, of unknown lirthphaco and renownel name. In the North African Church, the develoment of which is of the utmost moment, inasmoli as its handage, dumas, and laws were admend loy the greater part of the Cliristian world in the West, we fiml lentullian of Carthage, the rhetorician and atwocate, a man of profomad mind and yast inlluence; Cyman, the anthor of the Tratimonies in faviur of Christ; Commorliin, the writer of the finhs of Living; and Arnobins, a rhetorician of Nicea, in Numbin. 'The lirst comparatively barren, thounh otherwise highy jomontat chureh, is the Soman. The pre-eminently practical homan mind looked more the the warl growth and welloeing of the chureh than to literary excellence, and thas we have only two distinguished anthors to be noticed here-the presbyter Cains, kuown as an oppmont of the Montanists ; ame the Presbyter Novatian, who wroto a treatise on the bewish laws respecting fonel. Than hurch which, more than any other, cubavarem to combine spachation with faith, and which eradually became, through its high decree of culture amd erndition, the very eentre of Christianity, is the Alexandrian. And here we have l'antemis ; Clonent the Alexandrine, chielly known ly his Stromatia or Elements of the Gnosis ; Grigen, called Alamantinns, the eminent Neolhatonist, born 18.7 A. b., in Alexmmrin, one of the most influential writers of the whole Christian Clureh; Ilerenlas, with his disciple Dionysius, a hiberal and moderate man: Gremsy, the worker of miracles; Jimphilus ind Julius Africanus, the lirst Christian chorugrapher.

In the second perion, which dates from the Nican Conncil, and comes down to Gregory 11., 601 A. D., a perion allogether superior, on account of the great number of intellectual and erulite men who devoted their lives and labours to the charch. we have to distinguish the Greek from the Latin Fathers. Among the former. we have again ts draw a hine between those of the Alexandrine schoul-like Eusebins Parphili, the IIerorlotus of the church; Athanasius, the father of orthodexy; Basil the Great, Hoctor Ecclesia, atad his hrother Gregory of Nyssa; Gregory of Nazianzen, called the Theolorian, ly way of eminence; Didynus; and Cyrillus, some time latriarel of Alexandria, the chief prosecutor of Nistorins-and those of the Antiochian school, where wo find Ephraem Syrus, 'the prophet of the Syrime:' Cyril of Jernsalem, the convertel Arian; John Chrysostom, of brilliant rlopucnce; Diodorns, Jishop of Tarsus, one of the chief fountery of the Antiochian selonl; and Theodorethes, bishop of Grus. besides these, we find, of Girek lathers who lelongred to neither school - Epiphanins, the violent adversary of Origen;

Socrates Scholasticus, the continuator of Ensehius's Ecclesiustical II istory; Philosturyin; an Arian Church histerian; Logomenus: Lratims ; Macarius the Elder, chietly known throngh liis miriacles and combats with the dexil; Iropplins of Gaza, the rhetorician: and Jwannes ichulasticus, famous throngh his collections of cannical law. Among the Latins, we have to emmerate first the African Fathers: Fahins Victorimus: Ancustike of Tagaste in Numjdia, the groatest dugmatiit of the Western Church; l'one Gelasius I. (492-496), who finally fixed the eamm of the Bille for the lioman Church: and the Bishops Fulgentins, Junilius, and Facundus. Of Spaniards, we Lave l'rulentius the foct: l'aulus Orosius, whom Angustine used as his messenger to the East in his controversics with Pelarius. Oi Gauls there are Hilanius l'ictayiensis, Lishop of Poitiers about 350, the Athanasius of the West: Paulinus of Nola; Sulpitius Secerns, fricnd of Martin of Tours: Yineent of Lerias, once a sublier, who wrote under the name of Peregrinus; Sillunins Apolinaris, Bishop of Clermont; Gemadius, the author of an ecclesiastical liturary history; Eumo. dius from Arles, who exertel linuself to unite the Eastern and the Western "hurch: and Gregorims Turonensis, who wrote Ifintoried Eerlesimstien Froncorum, the hasis of Frankish history. From other countries we have Nethdus, an Irishman; Joannes Cassianus, a Seythian : aml Mereator, of nulemwa birthplace. We conclude with the ltalians themselves: Lactantius Firmianns, the Christian Cicero : Julins Firuisins Maternus of Sicily; Ambrose, Metripmolite of Milan, who raised his see to such a power that it dared to resist lome herself up to the 12th century; liutinus of Aquileia, defender of Origen against the charee of heresy lrought arainst him in the West: Euselins Hicronymus, undoultedly the most learned of all the Latin Fathers. and who mastered also the Greek and lebrew languages, collecterl in Palestine the most valualle notes for the elucidation of the serijtures, and also correctel the Latin ellition of the Tulgate ; P'ope £.eo 1.; Poéthins ; Aurclins 'assiolorus, whase Historict Tripartita, in twelve Jooks. served fur a thousmil years as a complendium of ceclesiastical history; the two procts, Arator and Vemantius Fortunatus; and Pope Gregny I. (500-bi4) is regarded ly Protestants as having first given the We estern Church its peculiarly Foman Catholic stam? ly developing the idea of the Eucharist into a Theophany, and makiny it the centre of the worslip. His works, especially his letters, ave invaluahle for the study of his own timus. especially for the history of the conversion of the Whest.
On the Mrs. of the Fathers, we rcfer to Potri Lambeccii Commentorii de Bibliotherta C'ravarea Jindubonensi. The elitions of tho worls of the Fathers are of two classes-those of the individual Fathers, whose writincs are the most roluminous and of highest dognatical importance, and the weneral Patristic collections, which comprise the writings of the less voluminons or minor Fathers. In the former elass, the first Hace, berond all dispute, belongs to the celelrated benedictine ellitions, by the menilers of the great Maurist conureration of the French Fenedictine order (sce lexemictives), of which community the task of elliting the Fathers came to be considered as the recognised work. The Penedictine culitions of the greater Fathors, with the exception of two or three, still maintain the rery higlest place in the estimation of the learned. Of the collections of the works of the Fathers (which, for the most part, consist of writers not pulblished selarately, the most important are those of La Fique, Gi, Hland, Tiösler, Waleh, Zimmernan. ani Dligne, the last still in progress. Cardinal Mai
has alsonale ensiderable alditions to the Patristic collections in his Dihliothecr Putrun, Spicidegiunn Romanum, and Clessiri Auctores, as have the Liene. dictines of solesme in the syitilegium solesmense.
FATHOM, a measure of six feet, principally used in refercuce to marine simulincs, and in mines. Originally, a fathom was takem as the width to which the two outstretched arms catendel.
FA'Tlillioes, or FATHMITEs, the name of an Aralian dynasty which reigned for nearly two centuries over Erg7t. Its fumber was MabadiObaidallah, who flumishel from !10 to 934 A. D. IIe asserted that he was descendeld from Fatima, the danghter of the Prondet, and 1 snach, a grandson of Ali. He thus wom over to his side all the alherents of the widely difflusel lismaelites, an "xtravarantly schismatic sect of Mlohammerlans in Airica, and uverthere the race of the Aghabides, whin rulech at Tunis. His suecessor extended his d,minion as far as Fez, and his desecentant, Xluëzz, in the year 9\%0, conpincred Enyt, cxielled the reigning family, renuvel his ant thither, founded Cairo, assuanch the title of Calif, thus proclaiming himself the lawful sucerssor of the froment, and subuned Syria and Palestine. After the death of 110 eizz, the F. maintaines their high position for some time: lut gradually degeneratent anl resigued all the cares of goverument into the bands if their viziers. Their frower now rapdily declined, and their vast territuries melted away. In religions matters, the F., becanse they were raisell to jower hy the followers of Ali, took unam themselves the protection of the Shite sect. and the establishment of the 1-maelitic ductrines. Beetween the years 104-1021, the Calif Hakem-Eiamr-Atlah jersecuted the ortholox Modammedans or sunnites, as well as Jews and Christians. Ife foundel an acadeny at cairo, and endowed it largely. hat connected with it a secret suciety for the diffusion of lsmaditic opimions. In the first stages, the novice was shewn the intenalde mature of the procelts of the Koran: in the sixth, the adrancel stadent fonnd that religions legislation $u n s t$ sive way to the claims of philosophy ; in the seventh. a mystic pantheism was jrovel to be the true 1 hilusondy: and finally, in the ninth, the initiated discovereth that he was not requirel to belicte mything, and might do whatever he pleasel. llis system, with consilderable molifications, foum a home among that preculiar people the Druses (q. w.). After the leath of Athin, the last of the F., in 115!, the founter of the dymasty of the Ayulides, Salah-ed-din (Galadim), thak prosession of Efgyt.
FATS are those nily sulst..nces which are solit at orlinary tomperature. They du not differ essentially from the liquid oils. See Oles aid Fits.
Fats, Amimal There is considerable difference of opinion anum, st chemists regarling the exact nature of the fats necurring in the animal body. Accorling to most chemists, they are composed of an almisture of three soprate fats-maryarine, stearine, and Meine, of which the two former are solid, and the litter fluin, at orlinary temperatures. Heintz, who has carefully stulied these bodies, Aeclares, howewer, that margarine is not a simple fat, hut a mixture of stearine and palnutine (a solid fat occorring in Yalm-cil) ; and he consilers human fat to lee a mixture of stearine, falmitine, and cleine. For the chenical eharacters of these substances, we refer to the articles Marighine, Oleine, Pammine, and stenpist, and we procech at once to the consideration of the physidlogical relations of the fat.
Fat, usually enclosed in vesicles, is foum very extensively in the animal kinglom. It is abundant in many larva, and occurs mure scantily in most

## FATTY ACIJS-FATLITV.

insurts. It is met with in the mollusca, and is comparatively abmmant in all the divisions of the vortulrata. In most tish, it oceurs thronghont the lowly, but is espocially abmatant in the hiver, where it is fomme io the hepatic ecells, amp not in its own characterntic vesicles. Jn reptiles, it exists chirely in the abolomen. In linds, we tsperially tiend it alout the furatomom, and waler the slim. In mammats, it is very meacrally dithoscal. lut the arcatest puatity is muler the shin, in the (mentum, aml romm the kivlneys.

The puantity of fat in the luman buty varies consinerably it lifforent proveds uf life. In the
 any fat; in mew honn chihmon, there is usually it comsiderable quantaty ui this substance depusital moller the skin, and the orsanisn contmues rich in f:ct till the age of palerty, when a marked diminution of the snlastane berors. It agtim inereases almon milille life, and then meastonally ocemrs in great cacess f for example thare or finir inches of fat we nut infrequently fonnd under the sline of the abdomen in corpulant pertons.

Extrambinary deposits of fat in some ponticular part of the loily are observed in ecrtain races of men and anmals. One of the most remarkable txamples of this peculiarity is afforded ly the Jouttentut womme in whom the fat acemmulates in the ghateal region to such an extent as to give a most remarkable prominence to that part ui the body; and a somewhat analogons depmist exists in a variety of shecp (theis sheutopagk, the fat-hattocked sheeph), in which a large mass of fat, sometimes attaning a weight of foirty poumls, is developeth on the buttucks, and takes the place of a tail.

The origin of the fat in the amimal body must nmatobedly be chiedy referred to the fat takem with the forid. It has, howerer, been prowed ly the most carcful iuvestigations on rarions animals sulb. mitted to the mocess of fattening on liees ful with cone-sugur, or with homgy containing searedy any wax, and on the larye of the insects inhabitiag galls, that the anmal, like the vegetable organisn, has the power of forming or problueng fat, far more fit leing foumi, in these experiments, in the lowly if the animal, than conlal be referred to the fat taken in the ford. The exeess must therefore have been formed either from the won-mitrogenous portion uf the fool, such as stareh and sugar; or from the nitrogenons matters, such as tilrin, allmmen, de. In the case of the lees, it was distinctly proved that the fat was formed from sugar ; while in the calse of the larvia of the gall-inscet, it was similarly shewn that it was producmi from the starch which foms the interior of the gall in which the animal lives; and as we lave no corresponding evidence of the convertilility of fibrin, albmmen, de, into fat (atthough such a eonversion is by no means improbable). We monst for the present regard the nonnitrurnous fooms as the chief fat-formers next to fat itself.

The physinlogical value of the fats is chue partly to their physical, aml partly to their chemical characters.
'The usas of the fat deposited bencath the skin are, first, to mutect the holy from external shoclis by a miform diffision of pressure throngh the whmle alipose tissue; and, secomi, to keep up the luat of the lanly, by materially checking, throumh its very slight comlucting power, the luss of free leat lyy radiation. This use of the fat is most Wharly secn in some of the lower animals (the seal, whats, \&e.), which are expused to very luw bemperatures.

Another physical use of fat is to promote the mobility of varions orgaus. Hence, in cases of
extrome ennabiation, it islways remains in the peats where motion is most esseintial, as the heart, and the orlint of the eye.

Another uf its muprtant physical properties is that of rombering other horlies subple, and diminishine their lrittlenes. In this point of view, the use uf lat is very consisponous in the bones.
'l'lue' chief chemacol use of the fat is its power of caciting and sumpenting the animal lowt. In the wablation of the fats in the animal oranism, Whether the frocess le exadual mernid. at large :mmant of lacat mant nucessarily la liberated; ancl that they are undisco, and for the most part reduced to varhonic achl and water. is evident, becanse they mother apmoar in any prantity in the excrotions, nor, as an germal rule, aecomalate letyond a certain pont in the moramim. An aceumulation of fat thas serves an a reservoin of combustible mattor in time of ured. This is "speially evident in the casce of hybornatimp mamamals, as, for example hedgelogs, in which in emomons quantity is deposited jusi before the hybratans perion : during thas period, it gadnally disablears, its cabon heine slowly consumed in the respiratory froess, and kerping up the animal heat.
fiat is, morcover, one of the most active agents in the motamophosis of animal matter. Lelimam asecrtabucl that a eertain, althongh a small quantity of fat was indispensable to the complete gastrie ligestion of mitrogenoms food, a fact which is confirmed by the uhservation that in experments on artiticial digestion, the solution of substances nsed is ford is conshderably accelerated by the presence of a little fat. 'l'lie ocemrence of fat in the milk and in the core, as alse in all highly cellular orams (as. for cxample, the lover), is a clear indieation that this sulastance phays an important part in the process of ecll-frmation: amd no ammat ecll or eell.yichlimer phasma las ever been olserved in which fat is not ac comstituent.

An umber arcmonation or increasel growth of the fatty tissum gres rise to the comblition known as Obesity (q.v.).

## 

FATC'ITV, (1) lUNENTIA. consists in the imbairment or extinction of certam mental powers, or of all. lisquirol has quantly but deseriptively said that the indiot and imbeole are poor who have never been rich, but that the fatuons on doments are rieh who have been made poor. This impoverishment is sometimes so extreme, and the sutferer is so little intlucued by consciousuess as to lose a knowledge uf his own existence : and sa little ly impressions thronnt the external sonses, and ly the instincts of the sensory gangla, as to le egually ignorant of the existence of others. Life is vegetative merely. This deprivation may be partial of complete. It maty alpear as a weakuing of sensillitity. This is int the tolerance of prowerfal or painful in. pressions, or inditierence to such, springing from abstraction or engrossment of the attention, but positive extimetion of perevption ; w it may present the more common form of chfocblement of intelli. Hence, of memory ; of the will, where the patient is apathetic, passive, plastic. 'l'he disuase may involve the alfections and the moral sense, and abrogate the power of elecision, and all spontaneity of action and thought. Ineoherence in ideas and words may be made to constitute anotlee Lomm, although gemerally regaraled as a chanateristic; whether it amonnts nerely to forgetfalness, or to confusion or irrationabty, to inconsecutiveness and inability to express instinets ind wishes. Irelusions and hallucinations may eo-exist with these comlitions, fut, like the read impressions received by this class of the insanc,
they are feeble, fngacious, aml uninfluential. U'nder all these aspects, the essential clement is privation of posser ; and this is met with as a specific mental disease, arising from obvions canses, unassociated with pheral alimation, acute in its mature, aml raph in its promess. It is most frepmently the discase of yunth, if the period if puberty, contemporancons with growth, with debilitating and exbanstive processes, amb depending, in all prohalility, as in the other forms, upon insuflicient mutrition of the brain. It this age, the imjury is reparable, and what may be designated juvenile dementia, has the rare distinction of leing curable. More fremontly, it is the sequel of mania, molancholia, aml severe aflections of the nervous system. The deterioration here arises from actual changes in the nurvons structure, which render halthy nutrition impossible; so that, althongh mitication, and sometimes to a marvelloms extent, is within reach of treatment, recovery is believed to be impracticable. Again, it is an affection of whl age; and althongh senile lementia may sem lut an exayorerated state of dotage, it is accompanicel by such marked physical changes, as to leave no doubt that it originates in circumstances differing widely from that gramal degeneration of the tissues which is evidenced by the 'second chillishmess and mere ollivion' Lastly, this state may follow fever, when it is transitery, and generally of brief duration.

Fatuity is one of the few momind mental conditions reognised in nur legal cole, even ly name, as relicring from the consequences of criminal acte, and as disqualifying for the alministration and disumsal of property: Esjuirol, Des Meted. Ment., tom. ii. 3. 219.

FAUCHER, LEON, a French puhlicist and statesman, was horn at Limoges, sth september ISU:; stumbed at first bhilology and archeology, in which branches of knowledge he a but about the perimi of the July revolution (is30), betook himself, with genuine enthusiasm, to journalism and political ceonomy. Ie became snecessively editor of the Temps, the Constitutionnel, ani the Courrior Francetis. These functions occupici him from 1530 to 1842, during which perion he published many articles on questions of pohtical economy: In 184: he began to write for the Rave des Dentr Mondes a series of articles on the imiustrial condition of England. The whole were collected intu two volumes, which appearel in $154 \%$, under the title of Eindes sur C"Angletere, and ennstitute the mast weighty and substantial of all lis pronluctions, though Englishmen reckon the author greatly in error in many beints. At the general elections of 1846 , he was clected for the manufaturing eity of Pheims, where his mpions on tariffs were hiehty appreciatet. In the Chanler of Deputics, he roterl with the dynastic opposition. A realy but hy no means brilliant speakcr, he came forward as one of the leading advocates of free-tranle, and publisher in the wiolde, and in the Rirue des Deux Momtes, a number of essays on national economy, characterised by their vigorous and spirited argumentation. After the revolution of 1945, he sat buth in the Constituent and Legislative Assemblies for the department of Dlaine. When Louis Napoleon was chosen president, F. hecame tirst Minister of P'ublie Worls, and sulsequently Minister of the Interior : lut when the President proposed to appeal to nniversal sutfrage, $F$. gave in his resignation, and, after the coup Refat, he withlrew from political life. 1 . lied 14th becember 1854. A large number of his most valuahbe contributions to the seience of prlitics will be found in the collection of the Ecomumistes et Publicistes Contenporains, and in the Bilhwehque ilds sciences Morales et Pulitigues.

FAULT, the term in Mining and Geoloyy for any intermption in the continuity of the stratia condet? with the displacemont of the beds on either side of the line of fracture See Dislocation.

FidUN. Fomns was a mythical fursomage, an an ient king of Italy, whe instructed his subjects in auriculture and the management of flocks, and was afterwards worshipped as the youl of tields and of shepherds. The festival of the Founalia, held on the sth December, refered to the protection be exerised over agriculture and eatele. Fama was his female complement. He was alsu worshipped as a prophetic divinity. As deity of the wouls and of nonks and hords, he corresponds to the Greck l'an : the in wa also arose of a pharaty of Fami or Fanne, like the (ireek satyrs, who were representet as monster deities with short horns, pointed ears, tail, aud grats' feet, and to whom all terrifying sounds and alncarances were ascribed.

Fll NA a term employed to desimate animals culloctivaly, or these of a farticular country, or of a particular seological period. Thus, we speak of the fama of Great Britain, the recont fama, the fossil fama, the fama of the Eocenc period or formation, \&: 'The term bears the same relation to the animal kincalam that Flore docs to the veretable. Its derivation is from the mythogical fanns, regarded as the patrons of wile animals. In the fauna of any comontry are inchuled only thuse animals which are indigenous to it, and not those which have been introlued.
 gist, historian, and critic, was burn at it Etienne, in the department of Loire, olst Octuler 1722, studied at the College des Oratoriens at Tommon, and afterwards at Lyon, and in 1799 was apmointer] to a situation under Fouche : but, lestitute of all political ambition or predilections, and passionately fond of learned studics, F. resigned lis office in 1802, am deroted himself to the calmer pursuits of literature. He made himself familiar with Sanscrit, Arabic, and the treasures of classical antipuity ans of the midnle ares; and although he did not write much, comparatively speaking, yet the value of what he dul write cannut assily be overestimaten. 11. Renan may exaggerate when le athims that F. 'put in circulation the ereatest number of inleas' of any contemporary writer ; but even the Germans allow that in many points of literary history, eriticism, and $1^{\text {hillohgy, }} \mathrm{F}$. was twenty yars in adrance of his age. After the July fevolution, he was appointer a professor at the Sorbme: in 1836, he published his chief work, Ifistoire de la Gaule Méridiunale sons la Domination des Conquérants (iermains ( 4 vols., Paris), which is reckoned one of the lust specimens of historical investigation and art produced in morlern times. Worthy of motice, also, particularly on account of its remarkable historical introluction, is his edition of the Provencal rhymed chronicle, entitled IIstoive de le C'roisude contre les Mériliques Alligecis (Paris, 18:\%). IN also cuntributed several important essays to the literary journals of France, of which, perhajs, the best known was that on the origin of the Epic of Chivalry in the midde ages. He died at Paris. ISth July iSt4. Two years after his death appeared a collection of his professorial lectures, under the title of IIstuire ale ha Puésie Prorencale (3 vols., Paris, 1815), in which F. endeavours, with great endition and originality of criticism, to shew that to the Iroveneals must be attributed the compo. sition and primitive rlevelopment of the greater portion of the romanees of chivalry, includinig those which describe the contists of the Christians and Dours in spain, and those which form the

Charlmage cycle, thas finding the orisin of then ohl spamsh amb German petry on the soil uf France. fins views have, howerer, met with enusiderahle oppusition.
 part encircling the looty of a phace, and rased alnomt three feet abrive the ferel ground. 'This work hats
 when used in front of eurtains, umber the nome of Tenailles ( $\mathrm{g} . \%$. The Frmoh enwers tave this title to the work, as an allaptation from the Italian term fosse Brece, which hal its arizin from the fanserbraye beine commonly in the ditch, in front of the main wall. 'The fanse-have lad the alfantage of givine an mhlitinnal tior of guns for defensive purposes: lint the still greater disadrantage of afforling facilities for the seating of the prapact.
 is a lake of Lamisima, Thitelstates, wheln heserves notice chefly as an index of the physical character of the comitry. 'Till alront a century and a half ago, it was a clannel of the Mississippi-a fact which prohably is still expressed in its name. Here, as in other alluvial formations, the beds of the running waters are maderging incessant changes.

FAUST, or FLST, Joniss, the chief promuter of the invention of printing, a rich citizen of Mayence, diel in the year 1460. Sue Guteneeieg,

FAUST, 1 Pr, accordine to traritiom, a celebrated Tealer in the lack art, frequently confommed with the preceding, was born at kintlingen, in Wirtembery, or, as some say, at limla near Wemar. He mourished during the latter lale of the fith and the leginning of the 16 th centuries, and is said to have studied magic at ('racow. After having spent a rich inheritance left him be bis uncle, F. is all gel to have mate use of his 'power' to raise or conjure up the devil, with whom lie entered into a contract for twenty-four years, ohtainint during that thae his till of carthly pleasure, but at its fermination surrendeping lom ${ }^{-}$and soml intu the hands of the fireat Enemy. The devil gave him an attondant spirit u denun, ealled thephistopheles, though other manes are given him by the later traditionsts, with whom he travelled about, enjoging life in all its forms, and astonishing people ly working wombers, till he was finaly carried otf by the Evil One, who appeared in terrible suise, lowtween twelve and one whink at night, at the village of Rimbich, near Wittenlerer, thouch several other places lay clan to that very questionalile honour. Some have dondtad, consider. ing the monstrously mythical form in which his career has cume down tis us, whether such an indiwilnal as $F$. eber existel; but it is now generally briever that there was a lasis of fact. ©n which tradition has built its erotespu0 superstructure forres, indecl, asserts that one Genrge Salolliens, who disapparad about the year kith, is the real F.: hat Philip Delanethon-the min of all the rofomers whose word in regard to a mather of fant woma most readity be trusted says that he hand himself conversel with Ibr Faustus. Conrad (besurr (1.jit) is equally Insitive; and Luther, in his Troble Tolle, speaks of He F', as a man lust heyom all hope. The opinion that preails, and which is reckomed to he intrinsinally the inore protable, is that some man of this name, passessed of varimi knowledgeo may possibly have fractiss jugethery (for the wamering savans of the midule ages had all a tomb of tho 'pack atonat them), and thus have been taken by the igmorant people for a dealer in the black ant, and ond who maintained a secret amb intimater relation with eril spirits. His whdely defused emblaty mot only wecasion the wonders worken by other
so-called meromancers of an earlier age-Albertus Marmus, Simon Magus, and 1'aracelsus-to be attriluted to lim, but likewise many aneient tales and legends of a marvellous character were gradually transferred tus lim, till he fimally appears as the very haro of macicians. lont while on the one hand, the marrative of F.'s marvels afforded amusement to the people, on the other. they were mate use of for nastruction ly the clerey, who pinted ont, in the frightiful fate of F , the danger of tampering with the • black art ;' and the abominalleness of a life sunk in sensuality and sice. The myth of F. has received a manifold literary treatment. First come the I olksiucher (or pexple's hooks), whin record 1F's enterprises and feats. 'The oldest of these now known appeared at Frankiont in $158 s$. Then came an 'inproverl' edition of the same, by Widmann, entitled W'akrhaftupe Mistorion ron denen aräulichen Stimden Dr Joh. $\because \because$ (True 1listory of the Morrible (rimes of Lir Ioln F., ITamb. 3 voils, 1509 ; and in 169.5, a work was pullished at Numberg by l'fitzer, hased mon that of Wixhman. The oldest of these lumks was translated into all the cirilisud lamguages of Europe. Impustors also puhlished looks of magic under the name of 1', such as Foust's grosser und grecoltigt Mollenzuang (Fanst's Great and Potent Brok of Spels), Pauvter's Mraculkemat (Fanst's Art of Ferfurming Dimacles), and Dreifache Hollenzeran (The Threefold hook of Spells). These wretched probluctions are filled throughont with meaningless scrawls anl figures, interspersed with texts iffom the Bible scandiansly misapplice ; bat in the ludief of the vulgar, they were supposed capalde, when properly understoon, of accomplishing protigies. That the pertical art shomat in the time lave seized on a subjoct afforling so much material for the fancy to work upon, was itevitable; and consequently, ficrman literature abounds in clechis, pantomimes, trasedies, and comedies on Fanst. Since the prid of the 17 th c ., the Pumbungiel (1 nppet-show) of Dr F. (first mblision at Lerpsic in 1850) has been me of the mest pophlar pieces in Germany. It forms the transition from the rude magie tales concerning $F$., tu the later philusolnie concepition of the Fanst-myth, which has lrecome the most perfect pretical expression of the eternal strife lnetween Good and Evil in the sout of man. The first writer who treated the story of F . dramatieally was the English writer Christopher Marlowe, about the year 1600 (Gemman translation by $W$. Miiller, Berlin. ISIS) ; lont the grandest work on the snljject is Goethe's Fuast, the tirst part of which appeared under the title of $D_{r} F_{\text {. }}$, cin Trauerspied (Leip. 1790), and afterwarts in a romodelled form, muder the title of $P$, cine Trayblic (Tiabingen, ISOS). The sccond part was published after the anthor's death.at Stuttert in 1833. Pesides Gocthe's drama. may tre mentional Lessing's masterly fragment, $\because$. und die Sithen Gointr, (F aml the Seven Spirits), (1. F. L. Mülher's Dr P'? Lelpen (I)r F.'s Life, Manh. 1728), and Klinger's $\because$ 's L. ben, Thaten, und Hölenfoht (F.'s Life, Duines, and Desecnt into Hell; petersh, and hetip 179t). The pastic art has also fomm a fit subject in Fanst. In Anerlach's eellar at L (ipipie, where F is said to have performed many of his feats, are 1 wo rme lanhs of the year 1525 , representing $F$. and Mephistopheles riding out of the edlar on a wine-harrel. Rembrandt and Christoph ron Sichem hase also illustrated the story of F., and, in modern times, Cornelius and tuctzoch have done the same. Sice Puter's Jie Literatur der limatsitge (The Literature of the Fanst $1 I_{y}(1 h)$, di ed. Leip. 1s.ī.

FACSTI'NA, mother ami daughter. The former, Ambin Guleria, usually spoken of as Prastina Semior, Wats the wife of the liomen amperor, Antonims

Pius, and died 141 A.d.; the latter, known as Faustina Junior, was married to his successor, Mareus Aurelias Antoninus, and died at a village near Mount Taurus in 17.5 A. D. Both, hut particularly the younger, were notorions for the poolligacy of their lives, which their exemplary lusbands in wain endeavontel to check. Aiter their deaths, institutions for the relief of por girls were founded both by Antoninus ancl Meareus Aurelius in honour of them. and were called' 'Bteller rtimenturite Funstince.' Mlarcus Aurelins, in his Meditations, speaks highly of his wife, and an attempt has hecn wade by Wieland to defend her against the imputations of the historians of the emperors.
FAUST1'NCS 1., cmperor of Haiti, known, before his elevation to the throne, as Fiastinus Soulougue, a negro originally of very bumble circumstanecs, was loorn in st Dowingo in 1759. In his carlier years, he acted as servant, and afterwards as adjutant, to Gieneral Lamarre. He subsequently servel under I'residents T'etion and Bover, and hy the latter was raised to the rank of captain. After the year 1S44, when the Haitian Repullic-of which General Boyer was then president-was lissolved. a struggle for the supreme power ensuet, in which F. played an impurtant Inart. In 1847 he was mpointed by the semate l'recilent of the Lepolbic. On the 16th Amil 1sis, a drealful massacre of the mulatoos in Pirt-an-Trince took place at his instigation. This, amd simikar mosures, struck terror into the hearts of his mpronents. In Angust 1849, he had himedf prochaned Euperor of Haiti, a title which he enjoyed for about ten years: but a revation having lirok out in 185s, and a rejublic having ben leclared, F. was forced to alulicate, 15th Jan. 1859. He diel Gith Aug. 1807.
FAUYETTE, a French name, partially adpited in the Enghish languace, for some of the little songbirls of the family Sylrienter or Warlders, havine straight sleador hijls slightly compressen in front, the ridge of the uper mamble curving a little towards the tip, and the legs not long. They mostly lelong to the genus C'urruch, as the Elackeal, the Dettychaps or Garden Warlier, the Whitethroat, So.; and to the genns dielicetrio, as the Selpe Wiarbler, the Raed Warler, 品. The I artforl Warbler (Mrliommitus provincialis) is also ealled Fourcte. They are all very lively little hirls, continually tlitting about in pursait of insects, mostly frequenting lmshy places; amb some of them, particularly those of the genus Silurtrien, preferring watery situations where seels abmont.

FAVA'RA, a town of Sicily, in the soath of the islam, in the province of Girgenti, and four miles sonth-east of the town of that name. It has rich sulphur-mines, and a population of 11,400 .
FAYART. 'HAmas smos. a Frmeh dramatist, was horn at Paris lith Nowmber 1\%11, and first
 Ierfonmed in 1741. In IT-4, ho married Made moiselle Duruncray, lerself a rlramatic writer of some note, and a simer of rmarkalike talent, and in the same year became directur of the opmorCominue. The fine taste and juldment of F . and his wife soon obtained for their theatre a great reputation. It was they who male the first attempt to harmonise the costume of the actors and actresses with their impersonations, and to put a stop to the ridiculons practice of decking out soulrettes and country-girls in the attire of court-ladios. So powerful, however, was the omo. sition excited against then ly the jealonsy of the other theatres, that the Oprine-Comigue was closed in the first year of its rxistence. After some time spent with Maréchal de saxe during his campaign
in Flanders, F. and his wife returned to Paris, where the former continued to write operas. His wife dind in 1702 , and he 10th May 170\%. F.'s suceess as a Writer was very great: he may lie reckoned the father of the cumic opera, and the happy snecessur of Le Sage, Piron, \&c. The number of his pieces amonnts to alout 60, of which the most velelirated are Comment IEsprit rient aur Filles, Le ('oy cha Jillage, Bastien et Bastienne, Vimnette à ha Cour, Les Trois sultanes, and L'Anglais it Bordeques. His works have been published suveral times. An edition in ten volumes was mulishel at Faris in 1810, under the title of Thiture de Monsieur et Iudame Farant. A very interesting bowk, entitleal Les. Mémoirsa et le Correspondence de Furart, givius delichtful glimpses of the literary ant theatrical work of the 1Sth e., was published at Paris in 1809 hy his grandson.
FATERSSIAAI, a municipal borough and seaport in the north of Kent, on a navigalile creck, opposite Shemery Isle, 8 miles west-north-west of Canterbury. It ehietly consists of fonr strects in an irrecular crose. It has a valuable oyster-fishery, employing 200 to ?on persons. It semls much agrienltural proluce to London by hoys. The ereck aiduits vessels of 100 tons. In the vicinity are some of the mast inurortant gunpowiter factories in the kiaglom. l'op. (1871) 719s. Euter the name of Farcesfell, it was a seat of the Saxon kinns, where Athelstan, in 034, helil a Witenagemot.: $1 t$ has the remains of an alhey foumted by king Stephen, where he and his yueen, Datilida, are buried. St Crispin is said to have Lean apprenticed to a shomaker here. Nar 1 . are some chalk caverns, with columus. In 1569, 2007 ressels, of 161,529 tons, entered and eleared the port.

FAVIGNA'AA. the chief of the Etales, a group of islands in the Mediterranean, off the west coast of Sicily: lies at a distance of six miles from the Sicilian shore, and is ahome six miles lons, with an average lrealth of two miles. It has a town of the same name, with two castles and a puphlation of $\% 900$. F. is fruitful, las gool pasturage, and proluces excellent wion.

FA'VOSITES, a genus of limelifomen corals, found in Silurian, Itevonian, and Corbunferous strata. They were social corals, closely packed thether, no space heng left between the walls of the different corallites. As in the other palazoie comals, the lamellice are develupel in multiples of four, and the oller portion of the stony lase is partitioned of ty horizontal tabula.

FATOCRS, or MARLIAGE FAVOURA, lows of white satin ribhons distributed at marriages in Great liritain, and nsually pinued on the lireast of all ennetrocd, attembants and postilions included. The farmurs of those more immediately interested are sometimes euriched with orange lussom. This is an ohl usare, connected with the love-knot of nneient northern nations, which is not likely soon to disalpear; it forms ahnost the only remaining token of morriment in the nutial ceremonial. See liranl's Popmlar Antiquitics, cdited by Ellis, article ' Brile Favours.'

FAVPE. Gametre Centtie Itatrs, a French adroeate and minister, was lorn at Lyon, 31st March 1519. He is the son of a merchant, stuliel for the loar, ant passol at Lyom in 1830. His political opinions have always been intensely republican, and when pleading in the course of numerous political lawsuits, l. not unfrequently placed the state solicitors, and even the judees, in a very embarrassing position, by the boldness of his sentiments. As the defender of the Wutuellists at Lyon in 15:31. Iae was in danger of losing his life; this, however, did
ant frobent him from defoming those who hal harn impreathed in that，and commenciar his sperech with／e sum hipulticain．Since 1s：3t，li．has lreen a member of the latis har．In the fednary rewhen－ tion of 184s，be was Itome secretary，in which capacity he wrote the notorions circular for which Lelvilionlin＇s administration was so seberely se－ powhed，ins ating the commissiners of the repablic with elictatorial anthority in the porinces．He was active as a manber of the committere of Foreign Dhairs．After the election of the loth December： F．shewed himself a persistent antaronist of houis Sapmen，ame after the Hight of Ledru－loullin， hecome the orator of the Somontain．The comp， rifue chesed his political eareer at this time．Ile． refused to take tha oath of didelity to the imperial government，and lectonk himself again to his foro fession．In 1858 ，he defembed Ursini，on his trial for a conspiarey to mumer．Ia the same year，how－ ever，he became a member of the Legislature．In September 15\％，after the downall of the empire， he was appunted Minister of War，and carried on nesntiations with Connt Bismarek．He resigned wthee in July 1571，and resumed practipe at the har． $F$ ．is greatest in phitical repartce，and thoun lons aceustment to milie strife，his laguage is motra for its Atte elegance．

Fl＇VU＇s（Lat．a honeyomb），a divense of the skin，chictly of the hairy sealp，whacterised hy yellowish dry morustations of more ip less rommisin form，and often chloshaped，composed of the shornles and dycelia（y．v．）of a segetable gowth letomging to the order of Fums（q．v．）．The dises of farms are bruduced with geat raphits，and spreal rapielly，if nut attuded tu at the first，ofer the whole scalp， destroying the balles of the hair，whed becomes very short ant thin，and then falls out altenether． Farus is a disgusting and unsichtly，lut harilly a dangerons disurder；it is，hegmal dumbt，contit－ gives，lut only spreats where cleanliness is preatly nedected，and is therefore almost unkown ammis the better classes．It is far mone common anomir children thim amoner alults，mind seems to le mone frequent in scothom than in Endand，and more frepuent also on the continent than in either Ens－ land or Soothand．The cure is sumetimes attempitit ly a variety of merlicated and simple contments，amd by fulling out the hair ly the ronts．or＇filution，as it is called：but it seems liardy y possilie in inseterate cases to get rid of the dismase without a very lome persistence in habits of the most sempluns cleanli－ ness，and therefore the cure is sthbun 1 remanent． though easily attained fro the time．Farns is almont always followed bey bermanent haldurs of the parts aflected；mike linarworm（q．v．），which is a minor disease of the same order．

The Favus fungus，Achemion Sihatheinit，is nearly allicad to the fungus which has recently $\mathrm{g}^{\text {nowed }}$ si destructive to rmes，and has ley some lootanists beon placed in the stme genns，Oidium．

FAWKES，Cus（monerly GCTmo），the heal of the conspiracy known liy the name of the Gumpwiler l＇lot，was bom of a l＇rotestant funily in Sorkshire，in the year 150．He became it Joman Catholic at an early ace，and served in the sponish army in thr Setherlands．Inspired with finnatical zad for his new religion，on his return to Eugland，he mened into a flot with seweral （＇atholic gentlemen for howing up the king，his ministers，and the mombrers of buth louses at the ＂preniner of parliament，ith November Ition．thyy F．was taken with the lmining mateh in his hami， tried，and after hasines bern pat to the torture，
 brance of this event，in most Endish tuwns，hat
partuularly in Lombon，a motesque figure，otuthen with stran，is carricil thont the streets on the ith of Sovember，and fimally committed to the hames．

and dams, it conmunicates like wise with the uyer basin of the river. While the interior semels down coal, the immediate neighlourhoml is covered with forests of pine, which are traversel in all directions by 350 miles of plank-roat, and yield not morely timber but tar aud turprotine. "The Cape Fear, noreover, gives abundance of water bower, which is largely appled to the manufacture of cottons and flour. F. has an arsenal of nearly in acms in extent, and numbers fully $f 000$ inbalnitants.

FAYÚM, the name wi an Eiryntian proyince. surrounded, in the form uf a basin, by the libyan Desert, and comectad morly by a harrow vallay with that of the Nile, between lat. $29^{2}-30^{2}$ N.
 clesert extenils alont 30 miles from north to south, and about 40 miles from rast to west, its lowest point lying 100 faet belw the binks of the Nile at Bomisuef, $F$. is one of the most fertile provinces in Equ7t: Mrodneing in addition to the ordinary useful plants of the country, loses, apricots, fins, vines, olivos, \&e. in mont quantitios. This fertility in a province the sull of which is naturally arid and sandy, is the rosult of irrigation. A cianal from the Nile was, at in carly perimb, carrical westwaml through a gorpe in tho liby:n hills, which here skint the westur bink of the Silu, aml after diviling into numeroms brancines, lomiget its waters in a depression in the north-west, thus formine, it is said, the Lake Dirris (q. . .). The anciut capital of the provinee, ealled Krokndilopulis, and at a latur priod Arsineé, stood on the eastarn shore of Lake Moris, and upou its ruins stande the preant town, Medinet-el-payun, still a place of cunsiolerable siza, and the chief town of the province.
 peculiar to the law of sesthmal, in virtue of which the proprictor of the dominant tememont fussensus the right of turning up and carrying off turf trom the servient tenement for the parpose of londoling fences, rootiner houses, and the hive. This, as wall as the servitude of fael, implias the rizht of naine the nearest gromals of the servient tomement wn which to lay and dry the Turf l'eats ( $\mathrm{f}, \mathrm{v}$, ) or feal. Thase servitules do not extem leyond the ondinary uses of the actual oceupants of the dominont tentoment, and eannot be talien albantage of for such a parpose hs to burn linnestune for sale. Theg are nut included in the servitule of pasturate , hat must be constituted either loy express urant, or by prisession following on the usual clanse of giots and pertments. Frsk. ii, tit. ix 5.17 . The etymondegy of these worls has boum mand di-puted. Fidel ar fuil is sail to come from the subs-trothic orell, any grassy burt of the surfore of the croumel; and Jamieson derives divet from debe (xix. delfim or deleen), (ur, as amothrr altomative, suys that it may have bicen furmeal ley the momki h writers of oft chasters from divilere, to ding the winth. The fommer is the more probibble conjecture.

FEALTY (Lat. findelifes) is the fidelity which a man who holds hands of another owes ti lima, and contains an chragenunt to furform the serviees, or to pay the dues, for which the laml is rranted. It was embodied in an oath. by which the tenant bound himself on enterime to the lands. In taking the oath of fillelity, Littleton suys, 5. !11, that the tenant shall not kneed, nor shall make snch hamhle reverence as in lmmare. The only mbject of fealty iumodern times is to kcep up the evinence of temare where no other services are due; hut even to this effect it has gune into desuctule.

FEAR, MASIA of, or I'ADPMOPLA. There are many morbid manifestations of the instinct of
cantionsness. Surlien fear in slexp, horrible dreams, nifhtnare, sleep-wabing, have beon regarded as symptoms of a spucial disuase. Actual terrol from irregular cirenation in the sensory fanglia; the sense of falline or drowning in cardiae affections; ineubus from disturhance of the cirenlation in the larger vesscls bay repletion, plethora, or position, where there is the super-ablation of at delasion to the fecling of abprobension-are all allied and dis. timoushed by involuntary anl exeiter cantiousness. It is not only, however, when the intelligence may he supposed to lie durmant, aml the instincts awake, that such exaggerated fuars baralyse minds otherwise sane and somml. Numat, "the limy est of the hrave, and olames 1 . of Lingland, learmed if unt wise, were sulaject to vague, uncontrollable panics, which for a tine ummaned them. The condition ls often fonnd associated with disuase of the heart, as at conserpuence and eonemmitant rather than a cans'. The presuce of the habitual dread of evil, the fear of death, the slenpless and breathless anxiety eluring darkness. "r sulitude, or silence. as well as the sublen, wik, nneovernable panic, point to the existence of wremic or functional diseases of the heart; and consersely, excited or inregular action of the wam, murmurs, angiaa, leal the astute psychologist to predicate fear as a chamateristic of the inental comblition. It precerles, and is helieved to prodnce "horea, comeer, and seirrlas. Iroximately, howerer, it repends mon alterations in the eapillary cirenlation, or nervons structure of the liam. Its charactaristic is involuntary, irresistille, Mind terror, which arises and continues without an adeyuate canse, and which is mot influenced by reason ar reliofion, not aren by the removal of the suphosed object uf alam. The disease has apeared epilemically, durmer commoreial fanies, during the horrurs of cholera and phage and in that singular affection calked Timonia, which is marked lye elehility, tremor, and terror, and lias been traced to the etrects of the damp, undathay regous in sambina and sicily, where it exclusively wecus. Panphobia is lereditary. amb has been traced thromg three suceessive gencrab tions. la reviewiner the umbtrusive members of an asylum family, the pallid, startleas starines, Hickerine coimenances may lie detecterl as those of pationts labourine mabr foar. They resemble melancholes in frallinity of skin, lont in place of courtins they surink from symprathy; thomrh horror-stricken lyy aloom, they hide in corners, they escape, they shrivk in desperation, they climb trees, and apparently inaceessille places; ind enoount real in urder to dule fancied limgers; or they are motionless, paralysed. They fear and flee from enomies, police, bemuss, death, punishment; molescribable aronies themselves, - Fenhtershen, Princindes or Medicul

## FEASTS. Sec Festivils.

FEATIEER, a rivor of Califomia, and a feeder of the Sacramento, runs throngh one of the richest [2nld-tiells in the state. It reecives the Inha near Marysville, which alpears to mark the heal of navi-gation-the distance down the F . and the sacramento to the harhom of San Frameisoo being abont 100 miles.

FEATIXER GRASS (b゙tign), a genus of crasses remarkable for the long awns which give a pecu* liar and very graceful apmarance to the species, mastly nations of wam temprate climates. In some of them, the awn is beantifully feathered. This is the case in the lest known species, the Common F'. Cr. (S. pemata), a very doubtful native of Britain, but found on dry hills in the milde aml

## F6:ATHIR (iRASE-FEATHELS.

sonthe of E゙urope. It is a premmal, easy of cultivathon, amlat twome ormanent of our gadems. When fathered before the sceds are ripe, its fothery awns - Sombetimes is fout in loheth- minam attacheid, su that tuits of $k$. retain their heauty throushont wintur, and form one of the most pleasing and familiar decorations of romms. 'They are often lyed, to give variety to the dicoration, but are never more beantiful than in their natural yellowishwhite colour. The feathery awns not only assist in the clitiusion of the seed, which is earried by the wind to great distances, but in a very interesting manmer help to tix it in the soil. The seed alights vertically, the furrow d base of the awn lecomes twisted, so
Feather dims (Sipu ponnatu). that its furrows
Fuather cims (siput pennatu), that its furrows a screw, the feathery portion lecomes horizontal, the wind acts on it, and the sed is screwed into the eround-a reverse action being prevented by still hairs which act as barlis. -The Esparto ( $\uparrow$. $\begin{gathered}\text { r.) }\end{gathered}$ of suain is nearly allied to the Coman Feather Grass.

FEATHERS, a complicatal mondification of the tegumentary system forming the external covering or plumate of hirels. and pecnliar to this class of animals. Nutwithstanding the varieties of size, strength, and eolour, all feathers are comprised of a quill or larvel, $a$; a shaft, $b b$; and a vane, leard, or web, re, on cither side of the shaft, the van consistiog of harlos and harbules.
The guill ly which the feather is attriched to the skin is wiler but shorter than the shaft, and forms a semi-transparent, horny, cylindrical tube, which terminates below in an obtuse ex. tremity, presenting an orifice termed the lower umbilicus, $e$. A second oritice, lealing into the interior of the quill, and termed the uprer umbilicus, $f$, is siturated at the upposite end, where the two vanes mect and unite. The cavity of the efuill contains a series of conical cajsules fitted me uron another, and united by a central pedicle: :mul the whole strueture presents a remarkable combination of strength and lightness.

The shaft is always of greater leugth than the पuill, aml topers gradually to its free extremity ; it is flattomen at the silles, is more or less convex on the hack, and presents a longitulinal gronse inferiorly: it is composed of white, elastic, sponey structure, which is covered by a thin horny sheath.

It the $I^{\text {ninint }}$ of junction of the shaft and quill, we usually observe-execpt on the feathers of the wars and toit-a small supdementary shaft given ott, which is furmished with bartis or fibres, and is termest the phomuln or aceessory plume. In the astrich it is altonether absent; in the rhea, it is represented by a tuft of down; in the emu, on the nther hand, it "Itals the original fathers in size, su that the equill supports two shafts; and in the easowary there is a secom phomule of considerablo size. so that the quill presents three distinet shafts.
The vanes or welis are emposed of numerous barks or small fibres arranged in a singic series along "ach sube of the shaft. "they are line prolongations if the outer coat of the shait, are of a tlattened form, and lie inclined towarls the apex of the feather, with their that sides towarls each other, and their musins in the direction of the external and internal shles of the forthor. The barbs aro brwater near the slaft than at the free apex, and in the large wing feathers the convexity of one is received into the concavity of another. They are, however, gnerally kept in position ly the harbules, which are minute curved filaments arising from the upper edgre of the barb, much as the latter arises from the shait. There are two sets of these barbules, one curved upwards, and the other downwarts, and those of une barb hook so firmly into thuse of the next, as to form a close and compact surface. In the ostrich, the larbules are well Heveloped. Lut are lowe and separate, and it is this arrangement which gives to the feathers of this hird their soft, flumons appearance.

Feathers present numerous gradations of strncture. Io the eassowary, the wines, instead of beine provided with ombinary frathers, are furnished with ive eylinilrical stallos destitute of larbs, so that hore we have murely the guill and shaft. On the breast of the wihl tunkey there is a tuit of feathers resembling long black hair. Tn the Dusylophus Cumingii, the feathers of the crest, breast, and throat are chancel, at their extremities, into round, horny lamella, looking like shining black spangles; and in the common waxwing or Bohemian chatterer, some of the wing feathers present at their extremities small horny expansions, resembling red sealing-wax, buth in colour and consistence.

Besides the common feathers, the skin of many hirds, especially of aquatic species-in which phamules rarely exist-is covered with a thick coating of town, which may be described as consisting of very minute feathers, each of which is composed of a very small soft tube lying in the skin. from the interion of which arises a minute tuft of suft filaments, without any central shaft. This duwny covering secures warnath without weight, like the soft fur at the base of the hair of arctic mammals. In most birds, the skin also bears a gronl many scattored hair-hike appendages, which indicate their relations to the ordinary feathers by the fresence of a few minute barls towards the apex.

Feathers are developel in depressions of the skiu, lined hy an inversion of the epidermis which surrounls the lath from which each feather spriags; thoy grow, mueh in the same nammer as hairs, by the aldution of new colls from the bulb, which leeromes modified into the lomy and fibrous stem, and by the chmation of previonsly existing cells. They are, when tirst formed, living vaseular parts, urowing ly nutrient vessels; but when they are fully firmed, the vessels locome atrophich, and the feathers become drid ul, aml cradually tie from the summit to the hase. For a full account of the devdopment of the diflerent parts, we must refor to l'rufessor Owen's article, 'Aves,' and to 'rofessor

[^0]
## FEBRICULA-FEBRONIANISM.

Huxley's article, 'Tegumentiry Appendages,' in the C'ycloperdiu of A natomy and Ploysiolont!.

Feathers grow with great rapility, and in some birds attain a length of more than two feet. 'lhey are almost always renewed anuually, and in many species oftener; hence it may realily be eonceived how much vital energy must be exhihitad in their development, and how critical the period of monlting must be. The phumage is usourally changed several times before it attains the state which is regarded as characteristic of the alult lind; these changes may occupy a periul usually ranging from one to five years.

Notwithstanding their extravascular nature, feathers, as is well known, undergo a ehange of colour after they are completely fonncal. In yearding birds, the winter plumage, which succetds the autummal monlt, gradually assumes brighter tints, the new colour commencing at the part of the vane nearest the body, and gradually extending outwards till it pervaies the whole feather. $\mathrm{D}_{5}$ Weinland, an American naturalist, is of opinion, from a comparison of bleached specimens in museuns, with recent ones taken from the bird, that the brightucss anul fading of the colours are chue to the inerease or dimiaution of an oily matter. Thus, the microsconie examination of the vane of feathers fiom the breast of a fresh merganser shewed numerous lecunce containing a reduish oll-like fluid; some weeks after, the same feathers having lecome nearly white from exposure to light, disclosed air-bubbes instead of the reddish thud. If this fluid is an actual oil, as is most probably the case, it could make its way into the non-vascular tissue by mere physical imbibition; and on the varying quantities of this oil the variations of plumage would depend.

The property possessed by the plumage of most birds, of keeping the swrace protected from moisture, is well known. This is due to two causes. Most birds are provided with an oil-gland at the base of the tail, whose seerction is distriluted over the feathers by means of the bill; and, additionally, the shedding of water is partly due to a thin pate of air entangled by the feathers.

The ieathers vary in form in difierent pats of the body, and afford zoological characters for the distinction of species. Hence, they have received distinct names, such as inimarios, secondarits, tertiaries, \&c., in ornithology. These terms are explained in the article Bistus.

The chief uses to which feathers are applied in the arts are three-pens, die to the peculiar elasticity of the barrels; bedjeathers, due to the combimesl softness and elasticity of the barbs; and ormament, due to the gracefnl forms and delicate tints of the whole feather. The mode of preparing the barrels for peus is described under Qriens.

Bed-feathers were used in England in the time of Henry VII.; but it is not known how much earlicp. At the present day, goose-feathers are preierred, the white rather than the gray. IVhat are called poultry feathors, such as those of the turkey, duck, and fowl, are less csteemed, on account of their deficient elasticity. Widd-duck fathers are soft and elastic, but contain an oil difficult to remove. The following is one among several modes of preparing feathers for berls. Clean water is satwated with quicklime; the feathers are put into a tulb; the lime-water is added to the depth of a few inches; the feathers are well steeped and stirred for three or four days; they are taken ont, drained, washed in clean water, dried n] na nets, shaken occasionally while drying, and tinally beaten to expel any dust. The larger establishments, how ever, now prepare bed-fcathers by steaming, which is found to be a more profitable and effecient pro-
cuss. The roun, which is of so light and cxplusite a texture as to have become the symbol of softnuss, is mostly taken from the breasts of birds, and furms a warm and debicate stufing for beds, pillows, and coverlets. The must valuable is that obtained from the eider-duck, described under Elder.

Feathers used for luad-alresses, or other purposes of ornament, are sclected according to the forms and colours which they liswlay. The ostrich, a very valnable kind of feather, may be taken az an example of the way in which orammental feathers generally are prepared liy the plumasoier. The mode of catching the bird itself is noticed under Osteich; it sufices here to state that the hunters endcavonr to aroid injuring the feathers by boud or bluws. When brought to England, tle feathers are astorted according to quality; those from the hack and almoe the wings are the best, the wing-feathers next hest, and the tail-feathers luast walued. The ferathers of the male are rather more prized than thuse of the female. They are cleaned for wise liy repeated soakings and washings in water, sometimes with and smotimes without soap. There is also a proepss of hleachiner by means of burning suldur. When dried by being lime mon cords, the feathers lass into the hants of the dresser, who opens the tibres by shaking, gives pliancy to the ribs by seraping them with hits of glass, and curls the filaments by passin the edge of a blunt knife wer them. If the feathers, whetlior of the ostrich or any other bird, remain in the natural colour, little more has to be dome: lont if a change of tint be required, the feathors easily take dye-materials-such as safllower and lemon-juice for rose-colour or pink, Brazh-wood for decep red, Brazil-wool and cudbear for crimson, indigo for blue, turneric or wed for yellow, \&c. A rocess of bleaching is adopted before the dyeing, except for black.

The kinds of feathers chietly used for armament are those of the ostrich, adjutant, zhea or American ostrich, emu, usprey, egrett, heron, antrenga, bird of paralisc, swan, turkey, peacock, arms pheasant, ibis, encte, and arebe. White ostrich feathers are frepared chictly for ladies' heat-dresses; and black for the IVichlamb regiments and for funereal trappings. The white and gray marabont-stork feathers, imported from Calcutta, are beantifally suft amb light, and are in request for hoad-ulresses, mutis. and hoas; the white kivnls will sometimes sell for their weight in guld. The thassy kinds of rbea feather are lised for military momes, and the loner brown wing feathers for lrooms and Lurnses. Osprey and cgrett feathers are mostly used for military plumes lyy Hussan truopers. Bird of Paradise feathers are much sumeht after hy Oriental princes for turban-1 humes. Cocks feathers are used for ladies' ridimelats and for military plumes. Dr Daccrewan, who was United States consul at Ninglo a lew yoars ago, has descrited, in the fomerican Journel of Scienie and Art, an ingenious process which the Chinese alont for combining orilliant. coloured feathers with bits uf edbured metal into gardands, claquets, frontals, tiuras, and other ornamental artieles.

FEBRECLLA (Lat. a little fever), sometimes called also Ephemera (ir. a fever of a day), a fever of short iluration and milel character, having no distinct type ur specitic symptoms, by whicl it can be distinguished and described. See Fever.

FEIBPHFLCHE (lat. foloris, a fever, and fugo, I drive away, medicines calculated to remove or cut short Fever (q. y.).

FEISHO'NIANISM, in Roman Catholie theology, a system of doetrine antagonistic to the almitted

elams of the loman pontifl, and assertine the indopewhence of national charches, and the dinecran rights of individual lishops in matters of local discipline and chureh government. The name is derived from the nom de furpre, Justime 'rab rouins,' assumed by John Xichelas von Huntheim. coaljutur arehbishop of 'Freves in a work on these
 he pulhished in the year 360, and which, with its several sucessive volumes, led to a vinkent and protraeted controversy, and clated the suverest tensures of the loman trimanals. Fie llostiman. (inhlicamsm.

FE'BRUAII: the secomal month of the your, has ordinarily 28 days, hat in leap-sear it has an mhlithonal or intercalary day. Among the Romans, it habl origimally 29 days in an "rlinary year, hit when the senate decreed that the eighth month shomh hear the name of Augustns, a day was taken from February, and given to Angust, which han then only 30, that it might not lie inferior to July. The name is derived from the circumstance, that hume this month oecurred the Ibman festival called the Luperealia, and also Fehrualia, from febmere, to jurify:

FE'BRUES (commected with Lat. finumere to furify) was the name of an old 1 talian disinity, whose worship was celehrated with lustrations huring the month of February. The ceremomes instituted in his honour were heliesel to have the effect of prolucing fertility in man and heast. F., whose name in the Dtmscan langare is said to have signified got of the lower world, was also worshipeil as such by the Lomans, ame identified with the Greek Pluto.

FECAMP, a manfacturing town ame seathert of France, in the ilepartment of some Inferiowe is sitnated in a narrow valley, dlanked on either side by steep chitts, at the munth of a stream of the sime name on the English Channt, 23 miles northcast of Havre. It consists mainly of one lemer street. Its priacipal huilding is the handsome chured of Notre Danc, in the early mointed style, and dating from the 14th century. The harbur is frequented ly colliers from Neweastle and sunderland, and liy Daltic timber-ships and fishing-vessels. F. has cotton-mills, sugar-refineries, tanmeries, ship-builiing yards, and some linen-cloth and hardware manifactures. Pop 10,424.

FECULA, or FAECLLA, is a term applied to starch olitained from varions sunvees, but in France is generally restricted to the stareh of the potato. See stafich.

FECTNDATTION, or FERTIEISATION, in plants, takes place according to laws similar to those which prevail in the ammal linglon. In phants, however, the organs if reproluction are not fermanent as in animals, lat fall ofl-the male urgans generally som after fecumation, the fumale after the ripening of the seed. The male seminal substanee, called pollen. never exists in a thind state, lont always in that of eranules of varions forms (poollen , prains), which consist each of one cell, whose cubring is of varions thickness, and contains the mapregnating sulstance. After the dehiseence of the anthers, the pollen gets into contact with the stigma of the pistil, which in its lowest and thickest part (the orery or (fermon) contains the rudiments of the future sects (onules). 'The inner layer of the coll-eovering of the pollengrain separates from the moner ant thicker layer, as if it came ont of a bas. and contiminis to 1 . elongated ly growth, is carrical down throngh the sylfe to the germen, whore it reaclies the finemon or small openine of the embirgo sac, and conies into contact with the ovule, or even
in many eases penetrates into the ovule itsolf butwen its eells. liy this time, one or other of the cells of the ovnle has beome conaileralby unve molared than the other cells, and what is ealled the ammun has been formet, in the mucilaginnes that of which (protoldasme), after the eontact of the bollen-bas, through the elymamic opration of its contents, a cell-germ or rytuldest is somn aleveloped. This cytohlast is the first commenoment of a new amd distinct edl, which divides into two cells. These increase, by contimually repatel soparation of new cells, into a cellular lecty, which foms the mone or less perfeet mbelo of a new pant. If the argan from which the pollen has proceeted, anil the organ which contained the owule, belong to the same plant or to plants of the same species, the embroo arixine from this fecundation becomes a plant if the same species. lint if the pollen hy which the fecundiation is ctlented comes from $a$ plant uf another sucecies than that to which the plant holongs in whow germen the embryo is formed, the secel resulting from this fecmulation will not, when it grows, produce phants of the same species, hat hophods, int ermediate luet wen the parent plants, and with varims degres of mambance to one or ather of them, hat not perfectly corresponiing with cither. Hence the production of hymids, and multiplication of variotice of phants in grardens. by what is called the artaticial impregration of the stigma of one plant with the pollen of another, Which, however, must be of an alliwd species, byhridisation being contined lyy the laws of nature within very narrow huits. Sce linprondetios.

FEDERAL GOVERNMENT (Lat. fiulerotus, lomm hy treaty, from fictus, a treaty). When sureral states, ctherwise independent, himd themselves together lis a treaty, so as to present to the external worlil the aspect of a siugle state, without wholy remoncing the in indidual lowers if internal self-gisermment, they are sail to form a Feleration. The contracting parties are sowerign states acting thenuh then representatives: and the extent to which the central ovemules the local begislatures is tixel liy the terms of the contract. In so far as the locial sonereignty is remonced, ame the central fower becmes sovereign within the limits of the federatel states, the federation approaches to the character of a lion: and the only renunciation of surereignty which a felderation as such necessarily inylies. consists in abandening the power which each seprate state otherwise woul possess of forming independent rulatims with forelign states. 'There are,' says Mr Mill, 'two different modes of srganising a foleral union. The feleral anthorities may represent the governments solely, and their auts may be olligatory omly on the governments as such, or they miy lare the power of emacting laws and issumg orders which are hinding directly on indwidual citizens. The former is the plan of the Geman so-walled confeleration, and of the swiss constitition presious to 18t7. It was tried in America for a fow years immodiately foblowing the war of independence. The other principle is that of the existing constitution of the Inited states, and has beon adopted within the last dozen years by the swiss comfederacy. The felleral congress of the American lanon is a sulstantive part of the shamment of every individual state. Within the Tmits of its attributions, it makes liws which are oneyed ly every citizen indivilually", exentes them throurh its own officers, and cnfores them ly its own tribmals. This is the only principle which has been fomm, or which is even likely to produce an effective firleral grvermment. A union between the wovernments only is a mere allianec, and smbject tu all the contingencies which render alliances
 One of the chief diflicultios which arise in organising a foleral government, consists in disentring by what means disarcemphats betwen one or more of the local governments and the central government as to the limits of their respective powers, are to be disposed of. The armagement ly which this oljeet was sought to Je c.ffectel in America, uf which M. de Toequeville expressed his atmiration, is thas explamed hy Mr Mill: 'Under the more perfect monde of fideration, where every citizen of each particular state owes whedinger to two govermments-that of his nwn state, and that of the federation-it is evidently nevessary mot only that the constitutional limits of the authority of each should be precisely and clearly detimed, but that the power tu decide letween them in any case of dispute should not reside in either of the egvernments, or in any functionary subject to it, brit in an umpire independent of both. There must he a supreme court of justice, and a system of sulwordinate courts in every state of the union, before whom such questions shall be carried, and whose judgment on them, in the last stage of alpeal, shall be tinal. Every state of the union, and the tederal government itself, as well as every functinary of cach, must he liable to be sued in those courts for exceeding their powers, or for non-perinmane of their feleral duties, and must in general lee ohliged to empluy those courts as the instrnment for coforciut their federal rights. This involves the remarkable consequence, actually realised in the United states, that a court of justice, the highest federal tribunal, is supreme over the various governments, both state and federal, having the right to declare that any new law made. ar act dune by them, exceeds the jowers assigued to them hy the federal constitution, and, in conseruence, has no legal validity.'-(P'. 305.) 'The tribunals which act as umpires between the federal and state governments naturally also decide all disputes between two states, or between a citizen of one state and the government of another. The usual remedies between nations, war and diplomacy, being precluded $b y$ the ferleral union, it is necessary that a judicial remerly shonld supply their place. The suprome court of the federation dispenses international law, and is the first great example of what is now one of the most prominent wants of civilised suciety, a real international tribunal.' Such vas the constitution of the greatest and most completely organisel felleration that the world has ever seen. To what extent it has been already shattered by recent events. it would lee difficult to state, whilst it is absolutely impossible to conjecture in what form it may ultimately emerge from the greater dangers which still threaten it.
FEE And LI'FERENT (in the Law of Scotland) -the first of which is the full right of propise torship, the second the limited right of nsufruct duriog life-may be hell together, or may co-exist in elifferent persons at the same time. The settling of the limits of the rights which in the latter case they respectively confer, is of very great practical importance, and, from the loose way in which both expressions lave beer used ly conveyancers, by no, means ires from dithiculty. 'In common language,' says Mr Bell, 'they are quite distinct; liferent importing a life-interest merely, fee a full right of 1 roperty in reversinn after i liferent. But the proper meaning of the word liferent has sometimes been confounded by a combination with the word fee, so as in some degree to lose its ajpropriate sense, and occasionally to import a fee. This seems to have begun chietly in destinations "to busband and wife, in conjunct fee aud liferent and
chiklren in fee:" where the true meaning is, that each spouse has a juint liferent while forth live. but that carl has a puxsible fee, as it is uncertain which is tosurviw. "Jlus same confusion of terms cance to be extendeal to the case of a destimation to parent and child-"t". A. I. in liferent, and the heirs of the marriage in fre"-where the worl bife. rent was hold to confer a foo on the parent. It came gradually to te held as the tertmical meaning of the worls "liferent to a parent, with fee to his chideren uascituri," that the word liferent meant a fee in the father. Finally, the expresoion came to be lich as strictly limited to its froper meaning by the accompanying worl "allenarly," or some similar expression of restriction ; whe whe the fue was given to children nati and nominatim; there bing in that case no necrsity to divert the word liferent from its prover meaning, or, on a similar mincijle, where the settlement was by means of a trust createl to take up the fee." (I'rin. s. 172.)

FEE, Estute In, the largest estate in land in Imint of quantity of estate known to the law of England, being a Freehold (4. v.) of inheritance. Estates in fee are divided into fee-simple and feetail. A fee-simple is defined by Littleton (!, a.) to be a lawful and pure inheritance. In order to create an estate in fee-simple ly deed, it is necessary that the worl heirs shonll le used; for a gitt by deed to a man for ever, or to a man and his assigns fur ever, creates only an estate for life. But words of perpetnity annexed to a gift to a man by will are construed as carying an estate in fece. The prosprictor of an estate in fee-simple enjogs the fuilest rights of property over his extate, which he may ahemate ne burden at pleasure, and out of which he may grant estates of a lower kind, as for life or years. He is owner of the soil ' $\ell$ crill $u$ twon ald centrum,' and is therefore entitled to every $1^{\text {nswanduct }}$ of the lamel, as timber, \&e., and to all minerals and other valuable polactions found heneath the surface. On lis death, the estate descends to his right heirs, except in the case of fees hehl by corpurations, which descend to their successors in othice. Where a man claims an estate in fee-simple in lussession in a corporeal Hereditament (g. v.), he is said to be 'seiserl in his demesne as of fec.' Wistates in fee-simple are divided into fee-simple ahsulnte, qualitied or base, and conditional. A qualified or base fee differs from a fee-simple absolute ly having a qualitication annexed which may determine the estate, as where it is granted to a nan and his heirs 'tenants of the manor of Dale.' If, therefore, at any time the holler of the estate ceases to be the tenant of Dale, the estate, which depended on that qualification, determines.
A conditional fee was limited to a particular class of heirs, to the exclusion of others, as to a man and the heirs-male of his body: On failure of beirsmale of the boly of the grantee, an estate of this kinl reverted to the grantor or his heirs. But although the estate was thus limitel, ley the terms of the decd, to a particular series of beirs, the judges previous to the reim of Edward I. held that the gift was a fee-simule on condition of the birth of heirs of the hody of the grantee, and that on the birth of an heir if the boly, the condition on which the estate was hell was jurifiel. The estate did not indeed hecome ipso finco a fee-simple absolute, but the grantee was hehi contitled to sell the estate, to forfeit it for treasun, and to burken it with encumbrances. But if the estate was not sold, and descended to the heir. he continued to hold a feesimple conditional. This state of things led to the famous statute De LHonis Condilionalibus (13 Ed. I. c. 1), whereby it was enactel that estates should be held secundum jormam doni, Estates createel
lig this statute wero called estates in fie-tuil. See E.statl.

The original mole of transforring on estate in fee was by Feoffment ( $1.5 \cdot$ ), hut the statute of Franels (20) (har. II. c, B) requiring that writing shoult the used in all transfers of lamel, estates in fere must now he conveyed by deed or will.

The proprietor of an estate in fee simple in the present day is sulstantially ahselnte owmer of the freelohd, which he hohs withot wwin: duty or service to any one, except the alleriano inn to the sovereign, who is regarled as supeme lord of all the lants in the kinglom. liut oriminally this was nut sn; an estate in fee is in its nature a femelal benetice, as feul, and the owner of the fee held his estate subject to all the services incident to the femdal state. lhut these duthes have leen by derres entirely ablished in England. See Fecbal siss tem, Texinits, In seotland, the fudal usages in resard to land are still retainel to a very great cxtent. See l'aterson's Compmdinm of Enylish and rouich Lau: An estate in fee in seotland mast he hohl hy one of the three existing temures-viz, feu, luinch, or burgage, and is subject to the casualties ( 1. v.) attaching to these rights. See Heritible Rucilt.

FEE-FCYD in Scotland, is the fund arising from the payment of thes of court on the talling of summonses, the extracting of decrees, and the like. Out of this fund, the clerks and other inferior officers of the court were paid. If the fund was at any time insufficient for the purposes to which it was ambind, the deficiency was sumplied ont of the moneys proviled by the acts 7 and 10 Anne for keeping inp the reottish courts of law. The otfices of collector amu accountant of the fee-fund were abolished in 1S6S, and the cluty is now collected liy stamps.

FEBJEE. See Fbs.

## FELLLAG. see Emoriun.

FEES. Neither barristers nor physicians could recover their fees by legal proceediags against their clicnts or patients, except under a special contract. The ground of this rule was that they are regarded not as parment, but as an expression of gratitude for services the value of which cannot be appreciated in money. The origin of the rule in the case of the adrocates, is traced to the relation Which sulsisted between patrous and their clients in ancient liome. When the former appeared as the defenders of the latter, they practised, as Blackstone says (iii. 29, Kerr's ed.), gratis, for honour merely, or at the most for the sake of graining influence; and so likewise, it is established with us that a counsel ean maintain no action for his fees, which are given, not as locatio rel conductio, but as quidlam honorarium: not as a salary or hire, but as a mere gratuity, which a counsellor cannot demand without doing wrong to his reputation. The rule at Rome was maintained eren unter the cmperors, aod Tacitus mentions (Am. lib. ii. c. 5) that it was directed by a decree of the senate that these lonoraria shonld not in any case exceed 10,000 sesterces, or about $£ 50$ of Diglish money. It has further been decidea in England, that no action lies to recover back a fee given to a loarrister to argue a canse which he did not attend (l'eake, 122). But special pleaders, equity draitsmen, and conveyancers, who have taken nut certificates to practise under the bar, and therefore are not counsel, may recover their reasonable chareres for business done by them (Poucher $v$. Nomma, 3 13. and (9, 74). Another rule with reforence to the fues of harristers and advocates is, that they are $\mathrm{I}^{\text {aid }}$ hefore they are carned; a rule which, by removing from its members all pecuniary
interest in the issuc of suits, has done mmeh to maintain the inelependenee and respectalility of the har. As regarils physicians, the rule that a fee could not be recovered lyy andion at law, way aplicel in the case of Chorley $x$. Bolcot, June : 0 , 1711 (4 'l. li. 317). If, however, either a harrister or a plyysician acted muder al special agreement or promise of a certain payment, then an action might be lowoght for the money. But all medical practitioncrs wre relieved from the above colle of honour by the act of 21 and 22 Vict. 90 , wheh applied to the Linited Kinglom, and enabled them to recover in any court of haw their reasonalde charges as well as costs of modicines and melical appliances used. Thes rule applies to physicians, surgeons, and authecaries as defined by the statute. Hembers of the inferior branches of Loth professions-attorneys, soliciters, de., on the one hand, and surgeons, dentists, cunpers, and the like on the other-were always chatiled to raise action for their fees. In Scotiand, the same rules prevail as in England with referenee to buth professions. In France, though the elelicate sense of honour of the bar has always hern presersed with quite as much care as in England, the rule is somewhat different. In law, an action for the recovery of fees would be maintain. ahle in that country ly an advocate; lout in Paris, the rule of the ancient bar, founded on the disinterestedness which was its characteristic, and according to which any judicial demand of payment of fees was strictly forbididen under man of (rasure from the table fof advocates), has lueen religiously 1 reservel.'-Mistory of the Freneh Bar. by liobert Jones, 1555. The practice in France, however, seems to be for the fees of alvocates to be paid afterwards, thongh any bargain with the client or his agent that their imonnt shall depend on the issue of a trial, is regardeel as dishonourable; and on several oceasions the lar has velsemently resistel regulations calling on them to acknowled ce receipt of their fees, as wounling their sensibility. There can scarcely be a stronger proof of the valuie of what seem in themselves to be tritling and pedantic glieces of eticuette, than the dignified and independent position, which, from its scrupulous sense of honour, the Freach lar has mantained during all the ${ }^{\text {nolitical }}$ revolutions which the country has undergone.

FEHERVVAR (SZEKKS), the same as the Latin Alba Regiu, or the German. Stuhweissenburi, is one of the most ancient royal free towns of llungary, situated in a marshy district about 40 miles southwest of Pestl. Under the Arpidian kings, it was the metropolis of the realm, and the resilence of the sovereigus, who lave been often crownel anel buried there. On many occasions, the diets also were held in F ., where twelve kings-among which are St Stephen, and the great Mathias Corvinus-lie buricd. It is the seat of a bishop, and contains a population of 21,000, chiefly Roman Catholics, and all of the Magyar race. Water is supplied by an artesian well.

FËl'A, a large lake of Brazil, lies on the maritime horler of the province of Lio Janciro, and is distant 150 miles, to the north-cast, from the city of the same name. It is so near to the Atlantic that it has lieen comnected with it ly means of a canal. F. is about a degree to the north of the southern tropic.

FEIGNING OF DISEASE is much practised in the army and navy, and also by convicts and others anxions to escaje from disciphine, or procure a discharge from eompulsory service. In the army, it is technically called malingering. The detection of feigned disease, of course, nccessarily belongs to
the highly edncated physician, and is impossible without a thorongh lnowlealge of the reality, unless, indeed, the imitation lee very coarse and badly studied. The diseases roost commonly simulated are epilepsy, catalepsy, eonvnlsions, blindness, duafness, palsy, insanity indigestion, nemralgia, rheuma. tism, palpitation of the heart, and Encoerally all disorters which may exist without leading to any distinet external appearances. Ulecrs of the legs, however. Iave often been made, and kept open artificially through the application of irritiant sub)stinces; and vomiting or coughing up of blood is very easily simulatel, if the supposed patient can get acecss to the necessary materials in the slaughterhouse or elsewhere. The detection of such inpostures is easy or not according to the opportmities and knowledgeand skill of the deceiver, as compared with those brought to bear on the discovery of the fraul. Maoy men in the public services, and women affected with hysteria, have become so expert as to deceive even men of high character and skill. The writer has known of an instance in which a man suhnitied to successive amputations of the arm upwards, nearly to the shoulder, for an uleer produced and kept open at will by local apphications; and a case has been lately recorded hy Dr Murehison in the Medico-chirurgical Transactions, in which there is no reasouable lonbt that a large moning into the stomach was the result of caustic substances dehbrately apllied to the abdomen, with the view of exeiting sympathy:

FEINI (from the Fr. feindre), in military or naval matters, a mock attack or assault, usually made to throw an enemy off his guard against some real desigu upon his position. Nee Fencivg.
FEITH, Fimonvis, a distinguished Dutch poct, who ranks next to Bilderdijk ( $q$. $v$.) as a reviver of the national poetry, was born 7 th February 175:3, at Zwoll in Overyssel, studied haw at Leyden, and returned to his native town in 1756 , where he held the office of burgomaster. He died Sth February 1824. F . tricd almost all kinds of poetry. In his carlier productions, he shewed an excessive inclination for the sentimental; but in 1792 appeared his $/ 1$ et Graf (The Tomb), a didactie poem, which, though not free from the weakness referred to, is yet on the whole happily conceived, and contains some aumirable passages. His De Ouderdom (Old Age), phblisleed in 1802 , is deficient in jlan. Among his lyrical pieces, Oden en Gedichten (Odes and Miscellaneons Poems, 4 vols., Amst. 1796-1810), are several marked by a high enthusiasm and warmth of feeling. Of his tragedies, the best known are Thirza (1791), Johamat Ciray (1791), and Incs de Castro (1793). Along with Bilderdijk, he recast in a nobler form Ilaren's famons patriotic poem, De Geuzen (Les Gneux, or the Beggars), which celchrates the first struggles of the Dutch for independence. Of F.'s lirose works, the most important are Brieven arer verscheiden Onderwevpen (Letters on Different Subjects, 6 vols., Amst. $178 t-1790$. . These Letters, by their polished style and refined criticism, did much to improve the literary taste of Molland.
FELLDMANN, Leorold, a ferman writer of coneclies, was horn at Munich in 1803, of Jewish barents, to whose faith he remains attached Aprenticed in 1815 to a saldler, and afterwards to a cobbler, he soon gave evidence of his determination to be a poet by sending, in a pair of shoes, which he hat mended, a poetieal expressien of his devotion to their fair wearer. For this his master sent him hack to school, where in 1817, when only in his lith year, he wrote a play, Der Fulsche L'il ('Jhe False Oath), which was actually produced on the stage. Aftcr spending a few years in business
at Paprenheim, anal sulbsequently in Munich, he was induced, ly the reputition which he simed from some humorons piecess, entitted Genrebiliter, to Jevote himesclf entirely to literature. $\ln 18.5, \bar{n}$,

 Travels, was acted in Munich with applause. While traveliango thereafter for fiye years, chiefly in (ireece, he wrote 'P'ictures of Travel' 'for Lewald's Europer, ayd the correspondence for the dllyemine Veitung. In 1841 , his connedy was probluced in Vienna, and since 1550, he has been employed as histrionic teacher in the National Theatre of that eapital. l?'s works, which are numerous, are rechuned among the best specimens of modern German comedy, pleasing by their cheerfal humour, and happy employment of contemporary juleas and events, thourl complained of as deticient in artistic finish. F. has publisherl a collection of his comedies in six rolumes (Dertsoke Originallustosphele (Original (ierman Comedies), Wien, 1S4-185̄).
FELEGYHA'ZA, a town of Little Cumania, Hunary, is situated on the railway between J'esth and Tcmesvar, 67 miles south-east from the former. It has ia extensive trade in graia, fonit, wine, tobaceo, and cattle. In the neishbourlond, scruat lioman urus have been fommel. I'op: 17,500 .

## FELICU'DI, See Lipafi lislands.

FELLDA, or FELIN-E, a family of digitigrade caroivornas quadrupeds (sce Chevivomi and DisiThimidi), corresponding to the genus $F$ elis of limnaus, and sometimes collectively ealled cats of the cut tribe. They are, generally speakiog, the most carnivorous of all the Curnirora, holding the same relative place among quadrupeds that the Felfonide do among hirds. Their ersanisation is almirally suitable to their habits. They lave a very lithe muscular frame the hody is rather long, and remarkal,ly flexible; the limbs generally short. Few of the species possess much fleetness, but most nf them excel in climbing and in Jeaping. When moving rapilly over the surface of the gromul, they generally advauce ly a series of zigzag boumts, rather than by direct ruming. They aro mostly inhabitants of forests, and many even of the larger species live much among the hranches of trees, although some of the largest do not leave the ground. They all almance stealthily on their prey, which all of them kill for themselves, and drrome in, a perfectly fresh state, and gencrally whilst still warm and quivering Wheu they have approached within a sufficient distance, they complete the seizure by a spring, many of them uttering a roar or yell as they do so, and thas rendering their victory more secure by the consternation which paralyses the object of their attack. Their movements are extremely noiseless, owing to the soft velvety pads with which their toes are providud. Their claws are strong, much curved, very sharp, and retractile; being withdrawn hy special museles and ligaments into sheaths when not in use, and their joints even turned upwards, so that they are not blunted by umecessary friction, and do not interfere with the mowements of the animal by aceidentally hooking objects which are in the way. The last bone (phulanx) aml joint of the toe exhibit peculiarities requisite for the extension and retraction of the claws. The fore-feet have five tocs, the hind-feet four. The head of the F . is characterised by great breadth of skull, whilst the muzzle is short, and sometimes even rounded; the jaws are moved by very powerful museles, ami the articulation of the lower jaw is such that it has ne rotatory motion; the teeth also being so shaped, and those of the two jaws so titting to each other, that they

FELI'XIANS, a Smanish suet of the latter part of the Sth c., so ealled from Felix, Rishop, of Lrgel. See Aborthas Controversy:
FELLLAH (plaral, El Fellainis), an Arabic worl meaning peasant or auriculturist, specially appled to the agricultural or labouring lopulation of Egypt by the Turks, in a contemptuous sense, as 'clowns.' or 'hoors.' They form the great bulk of the population, anil are descendants of the ancient Eqyotians, intermingled with Syrims, Aralis, and other races who have been converted to Islam. In their physieal conformation and features, they difler anong themsclres, those of the northern provinces of the Mediteranean being of whiter bne, while at Assoman they are almost black. 'Phey are leseribed as having a large skull, facial angle ahoost 90 dearees, owal face, archal eychrows, deep eyes, projecting lips, large mouth, thin heard, short nose. large chest and small belly; arched back, and smail hants and feet, and being of mean lueight. They form the fourth class of the population, and are distinguished from the Bedouin or free Arahs, who have entererl the country later than the Saracenic conquest, and the Arabs of the towns and villages. Their alress consists of a shirt and linen drawers, over which is a larger blue shirt (horir), girdend ly a leather or stufl belt, which is exchanged in the winter for a eoat with sleeves (zabout). On their head, they wear the tarboush, turban, or a haek or gray cap; the women tattoo themselves, and are mulide at an early age, being often married at 11 years, mothers at 12 and grammothers at 24 . The ford of the Fellahin consist entirely of regetables, which they cat in a crule state, dhourria breal, and beans. Even rice is too dear for them and animal fool umattainable. Their drink is linited to the waters of the Nile and coffee, and the only laxury which they enjoy is the green tobace of the country; yet on this diet they are rubust and healthy, and eapable of much labour and fatigue. In their social position, they are inferior to the Bednum, Who, although they will marry the danghters of the Fellahim, will mot give to them their own in marriage. They aplear to exbibit the moral qualities of the ancient Feytians, being intelligent, grave, and calm, docile, pliable, and sober on the one hand; and inlle, jealous, guarrelsome, satirical. licentions, and of unlieming: olstinaer, on the other, and inkerit the traditional hatred of their ancestors to the payment of taxes, which are often only extorted lon the lastinado. Their political eombition is most miserable. Each village is governed by a Slacik-el-Belech, who is responsible to the Nazirs and Mamours, or distriet officers, for the conduct of the inhabitants, and their due payment of taxes. So opressive, indeend, is the taxation and exturtion, seareely $\frac{1}{5}$ of the prodnce falling to their lot, that it wonld not be possible for them to live if it were carricel to a higher pitch, and none eultirate the lands with diligence unless compelled by their superiors.Glidlon, Tupes of Munkind, p. ©n!); Lepsius, Lyypt

FE'LLENBERG, IMitip Eminct vos, the founler of the institution for the improvement of edueation and arriculture at Hofwyl in the eantun of Bern, in Switzerlanl, was bum at Bern in 17\%1. His father was a man of patrivian rank, and in consequence, a member of the government. From him F. received a very careful education; but it was his mother, a great-grand-danghter of the famms butch atmiral, Van Tronp, who insiret him with the ardent desire of being useful to his forlow-creatures. In 1789, he went to the miversity at Tubingen, for the purpose of studying law, and subsequently travelled in various parts of Eurone, taling up his quarters not in the hotels of the large towns, hit in the eottages of the peasantry, that he might know at first hand the real comlition and the manners of the porr, as well as the kind of elucation received ly thuse whose life was to be spent in arricultural pirsuits. When the revolution of 1798 broke ont in switzerlaml, J. took part an it for some time; lont the faithlessness and want of pullic suirit on the part of the Brase government inducel him t" withdraw from 1 mitical life altogether, amt tu devote himseli solely to philanthrope schemes. 1Ie now $1^{\text {rurchaserl the estate of Hofwyl, near }}$ liern, and som after cotered into an allianee with I'estalozzi, the elluationist. Their different characters, howeter, rendered sueh a union impracticable, and they found it necessary to separate, $l$. now proceded with redoubled zeal to inerease the proluce of his estate by new improvements, to influence the neinhburbond by his example. and to make his experiments known to the wold ly his agrieultural treatises. At the same time, he founded an asylum for forsaken children. He also npened a school of theoretical and practical agriculture, and connected with it an institution for the ellacation of the children of the higher elasses. The establishment at liofwyl acyuicel for its fommer a very great reputation, and pupils bastence to it from all guarters. Many foreign pinces visited it. and on their return to their nwn countries, fonnded similar institutions. In the year 1830 , F. founderi a schond of art, and some years later, an infant schwol. He dial 21st Novenber 184!. The institutions at Hufwyl were continued for some years by his son Wilheln, ant then entirely given up. Compare Hamm, $F$ 's Leben und llirken (Bern, 1845).

Féllows, Sir Charles, an antiquary of considerabie reputation, was born at Nottingham in 1799. In the heriming of 1835 , he commenced those travels in the East by means of which his name has been brought so prominently into pullic notice. His researehes were chicfly confined to the western peninsula of Asia Minor, and to the course of the ancient Xanthus, in the south of that peninsula. Commenemp his investigations at Patara, at the mouth of the Xanthus, and proceediny inland along the valley of that river, he discovered, only nitue miles from the coast, the ruins of the city of Xanthus, formerly the eapital of Lycii. Fourteen or fifteen miles higher up the river, he met with the ruins of another city, which, from inscriptions, he found to he the ancient llos. ILaving made dramings of some of the tine remains of arehitecture and scuppture which he found in the ruins of these cities, and copics of some of the inseriptions, F. returnod to England, aml published A Journut uritten during an lixcursion in Asiat Minar, by (Turtes Fellines, 1535 (Limul. 15:9). In 1535) he again risited lyeia, and in the comese of another excursion, be discovered the rums of no lese than

## FELLOWSHMD-FELON AND FELONY.

thirteen cities, each of which entained works of :urt. Another Journal, entitled An Acomut if Discotertis in Lfecia, lueing a Journal hept during a second Excursion in Asia Mianr (Lnnd. ISH1, was the result of this jonrney. In ISt1, an expeNitom left England for the purpose of selecting works of art from the ancient cities discovered hy F, who accompanicd the expedition, and directed its operations. Anthorised by a fiman from the sultan, they made their selections, and returued in the sping of $184^{\circ}$. Another expedition sent out by the trustees of the British Musemm brought home twenty eases of marbles and casts in 1841. These remains have been deposited in the liritish Musenm in what has beea called the Lycian Ealoon. In 1545 , F',s labours were rewarded by the henour of knighthood. The other works of F. are-The Xanthan Marbles: their Acquisition and Tranmission to Entlund (IS43); An Account of the Ionic Trophy Monament lixcturated at Nenthus (ISES); a re-issue of his carlier Journals under the title of Travels and Reseurches in Asia Minor, particularly in the Proriace of Lycia ( 185 ) ; and Coins of Ancient Loycia before the Reign of Alexander; with an Eistey on the Relative Dates of the Lycian Monuments in the Britis/L Muscum (IS5̄ँ). He died in 1860.

FE'LLOWSIIIP, in A I'mversity. As the history of this institution will be treated unter Unubersity, we shall here only mention its leading eharacteristics, as it exists in the two great univers? ties of England-Oxford and Cambridge. In these ancient and celebrated seats of learning, the fellowships were cither constituted by the original founders of the colleges to which they belong, or they have been since enduwed. In almost ail eases, their holders must have taken at least the first degree of Bachelor of Arts, or student in the civil law. One of the greatest changes introduced by the conmissioners under the University Act of 1854, was the throwing open of the fellowships to all members of the university of requisite standing, by removing the old restrictions by which many of them were confined to founder's kin, or to the inhabitants of certain dioceses, archdeaconries, or other districts. Fellowships vary greatly in value. Some of the best at Oxford, in good years, are sait to reach $£ 700$, or even $£ 800$, whilst there are others which do not amount to 1100 , and many at Cambridge which fall short of that sum. Being paid out of the college revenues which arise from land, they also vary from year to year, though from this arrangenient, on the other hand, their general value with reference to the value of commolitics is preserved nearly unchangeable, which would not Toe the case if they consisted of a fixed payment in moncy. The senior fellowships are the most lucrative, a system of promotion being established among their holders; but they all confer on their holders the privilege of occupving apartments in the college, and gencrally, in addition, certain perquisites as to meals or commons. Nany fellowships are tenable for life, bat in gencral they are fortcited should the holder attain to certain preferments in the church or at the bar, and sometimes in the case of his succeeding to property abowe a ectain amomet. In general, also, they are forfeited by marriage, though this disability may now be removed by a special vote of the college, permitting the fellow to retain his fellowship notwithstanding his marriage. With the single exception of Downing Colloge, Cumbridge, in which the graduates of looth universitics are eligible, the fellowships are contined to the graduates of the university to which they belong.

## rellow ${ }_{273}$.

FELO DES SE, in English Law, is where a matn, of the are of discretion, and conpos montix, voluntarly kills himself. 'No man,' says Sir M. Hale (t'l. of the (r. H11), 'hath the absolute interest of himself, lat lst, (iod Almighty has an interest and propriety in lim, and therefore self-mmoter is a sin arainst God; Qd, The king hath an interest in him, and therefore the injunction in case of self-murter is felonice et roluntarie se interfecit a murderavil contra jracem domin rogis.' A inan or woman is considered of full age in regard to capital offences at the age of fourteen. A lunatic killing himself during a tit is not guilty of fulo de se; lut a merely mancholy and hypoehondriacal temperament is not such a state of mand as will relieve a person from the consequenecs of this offence. Where two persons agree to die together, and in pursuance of this design one or both dic, it is suicide, or felo de se. And in some cases, where one maliciously attempts to kill another, and unwittingly kills himself, this is said (liawkins, P. (. c. 2, , s. 4) to be felo de se. But as a general rule the act must be voluntary. Therefore, if death ensue from a rash act not intended to kill, as where a man cuts ofl his hand to prevent a gangrene, and the act is fullowed hy death. this is nut felo de se. Formerly, the law pmished this offence by inflicting innominy on the hody of the offender, which was ordered to be huried by might at fur cross-ways, and that a stake should be driven through the boly. But by \& Geo. IV. c. 52, this ignominions mole of burial is abolished, and it is provided that a felo de se shall be privately buried at night in a hurial-ground. All the chattels, real and persmal, of a felo de se are forfeited to the crown. In Scotland, the crime of scli-murder is known as suicide (q. v.).

FELON AND FELONY. The etymolng of the word felon has given rise to much difference of opinion. By the majority of the most reliable lexicompapers, it is supposed to have a common rowt with fiti, and its oryinal sigmilication was supposed to le a rassal who failed in his fidelity or allegiance to his surerior, thus committing an oflence by which le forfcited his fee or fend. From this it came to signify traitorons or rebellious, and was gradually geueralised till it reached its popular meaning of a crime of so beinons a mature as to infer a capital punishment.
The characteristic distinction of a fllony, in the opinion of all legal mriters, is, that it is a crime which occasions the iorfeiture of the otlemler's goods. 'Felony,' says Blackstone, 'in the general acceptation of our English law, comprises every species of crime which oceasioned at common law the forfeiture of lands and goods. Treason itself. says Sir Edward Cuke, was anciently comprised under the name of foluny: . . . And not only all offences now canital are in some degree or othor felony, but...many other oflonees not punishable woth death, as suicice, manslaurhter, and lareny, as they summit the committ res of them to forieitures.' When a person is now convicted of fuluny, le does not forfeit any of his property; but he foricits and is disqualifed for any government or public office. The court may order him to pay all the costs incurred in proeuring his conviction, as well as compensation to persons defranted or injured ly his felonions act. The crown may during the sentence of imprisonment, or on the execution of the felon, appoint ahministrators to take possession of all his [roperty, and hohl it minth the sentence expires, dealing with his affairs as if he were thankrupt, by paying his delts; and if there is a surplus. Necping or reassigning it for him or his heirs and representatives at the expiration of the sentence, 33 and $3+$ Vict. e. 23 . Similar arrangements do not apply to Scotlaud.

FE'LSPAR (Ger, feldspath, field-spar), a mineral extremely abundant in almost all parts of the world. It is a principal constituent of many rocks, as granite, gaeiss, grecnstone, trachyte, \&c. ; and clays sem very generally to have resulten, at loast in great part, from its decomposition. It occurs both massive and crystallised, in rhomboidal, pyramidal, and prismatic crystals, often having their edges and angles truncated, and thus very variously modified. There are many different kinds of F ., which mineral. ogists have recently attempted to arrange in mineral species, distinguished by physical and chemical characters, and also by geognostic position, and by the gronps of minerals with which they are associated. For these mineral species new names have been invented, Orthoclase, Olifoclase, Alhite, Labradorite, \&c. All the felspars are anhydrous silicates of alumina, and of an alkali or lime. Orthoclase, and the other more silicions felspars containing potash, abound chiefly in granite and the plutonic rocks; the less silicious, containing soda and lime, characterise the rolcanic rocks-' as labradorite the basaltic group, glassy felspar the trachytic.' All the kinds of $F$. are so lard as not to be easily seratehed with a knife, and are fused with rithculty. Some of them are solulle, some insoluble in acids. -The kiod known as Commos F.-referred to Orthoclase-is gencrally white or tlesh-coluured, has a glassy and somewhat pearly lustre, is translucent at least on the elges, and has an uneven or sphintery fracture. Crystals four or five inches long are found in Aberdeenshire. This variety, under the name of Petunse or Petuntio., is used by the Chinese in the manufacture of porcelain; alon sith some of the quartz which is associated with it in the rock. It is used, with other materials, as a Hux ; and alone to form an enamel or glassy covering, without which the porcelain woull absorb moisture and grease, and wond be unfit for any except mere ornamental purposes.-Avelaria is a transparent and almost colourless variety of $k$., often cut as an ornamental stone, the timest varieties, of which one is known as Moovsrose. being prized almost as gems. A variety, found among rolled stones in Ceylon, and remarkable for the reflection of a pearly light, has been sometinues confounded with Cet's Eye-Arasturine F. is similar to the variety of quarta called A Anturine ( $q . v$ ) in the play of light which it exhibits, and which is said to be owing to minute crystals of specular or titanic iron. It is much esteemed as an ornamental stone. A yariety with gohlen yellow specks, called Sursrone, is very rare and very heautiful: it sells at a high price-Labradorite exhibits rich colours and a be:utiful opalescence, on account of which it is much osed for ormauental purposes.-A blue variety of F., fonm only in Styria, and a green varicty, sometimes called $A$ mazon Stone, are also esteemed as precions stones. - All the tiner varicties of $F$. are characterised hy a soft beauty, which well compensates fur the want of that brilliancy which belongs to the true gems.
Kaolin, or Porcelinin Clay, is regarded as a decomposed felspar.-To F. also are referred, as chiefly compmsed of it, or apparently derived from it, Felstone, Trachyte, Claystone, Clinkstone, Pitchstone, Obsidian, and Pumice.
FE'LSTONE, a name introduced by Professor Sedurick to designate those rocks which are composed, cither in whole or to a large extent, of felspar. When they consist of a compact and apparently amorphous felspar, they are known as Trachytesa variety of this ruck, which splits into small slabs, that ring with a metallic sound, is called I Ponolite. Trachyte, with distinct crystals of felspar scattered through it, becomes felstone porphyry; when the rock
is in a vitreous condition, and has a resinous lustre, it is Pitchstonc. Even in the most compact felstones, minnte crystals may be detected, and these sometimes increase in size, till we have varieties which are completely granular and crystalline.

FELT, FELTING, a fabric formed without weawing, by taking alvantage of the natural tendency of the fibres of hair and wool to interlace with and eling to each other. The hatters' tradition concerning the invention of felt aflords as gond an illustration as any we can find of the principle of this manufacture. In most Roman Catholic countries, the hatters celebrate as a festival the $23 d$ of November, St Clement's Day, as they formerly did in this country; and it is stated that St Clement, when on a pilgrimage, put carded wool between his fect and the soles of his sandals, and found on his journcy's cud that the wool was converted into cloth. Although this tradition is sery questionable, as the manufacture of filt is uf far more ancient origin, there can bie no doult that if carded wool were thus continually trodden, and at the same time moistened, it would become felt, and all the manufacturer's processes of felting are lont molifications of such treatment.

This mattinc or felting of the fihres of hair and wool results from their structure, for, when examined by the microseope, the hair of all animals is fomm to be more or le'ss jagged or uotchend on its surface; in some animals it is (istinctly barbed; and this structure is so directed that the teeth or harbs all point towards the tip of the hair. See Hate. If a piece of human hair (in which this structure is less marked than in most anmals) be held leetween the fioger and thumb, and mubed in the direction of its length, it will invarially move hetween the fingers in the direction of its ront: for the skin, while moving towards the tip of the hair, slines freely uon it, but moving in the other direction, against the inclination of the harhs, it lrings the hair with it. It will be casily umlerstoon that when a number of hairs are pressed together, those which lie in oprosite directions to each other and in contact will minerlock at these harhs or teeth, and thus resist any effort to tear them asunder. When once this clase contact and interlocking is established hat ween any two or more hairs, they remain attached, hat the others that are diflerently arranged, or mot in contact, will still lue free to move upon each other; and therefore, if subjected to continual lows. pmshing, and pressure, like the treating of the feet in walking, the unattached hairs will be continually shifting until they reach others in suitable positinns for elinging together, either by crossing olilizucly or by lyine in the same line, and overlapmin at their ends ar any other portion. When the har has a natural tendency to curl, the felting is still more readily brought ahont by the additional interlaciog. This is the case with wool to such an extent, that when free from grease it cannot he retained in the straight earded condition required for spinning and weaving. When it is required to be felted, the natural grease has to be remowed. This teadency to felt is shewn in the lard lumps formed in wool. mattresses that have been long used.
The beaver-hat maker produces his felt by taking a few ounces of the mixed fur, distributing it in an even layer by twanging a bowstring against the heap, and then condensing this into a felt by a sort of kneading process with his hands. See Hatmaking.

The felt now extensively used for carpeting and other purposes is made by machincry, chiefly from the waste wool from the weaviogmills. Many patents have been taken out for the varions details of felting-machinery, but the main principle is the

FEMERS, on ivland of Denmark, nowth-enst of Holstein, and seprated from it ly a strait called the Fenern sorumb, has an are:i of $6: 3$ square miles, and a population of about 9000 . Tho island is flat, fruitful, and lestitute of wool. Aerionlture, tisheries, and stocking-weaving for exporation, form the principal emplogments of the inlabiatants. The chicf town is Bury, which has about $\stackrel{y}{0} 0$ iuhabitants.

FE'MGERICIITE (derived from the ohl Cerman Fem, punishment. and Gericht, court of justice), spoken of as the Holy Feme (ur Fchme), and also known as the Westphalian or Secret Tribunals, were among the most remarkable phemmena of the midde ages, and sumpled the place of the resular almimistration of justice, then in a deplorable conclition. The origin of these courts has been ascribeel to Charlemagne, who, it was pretenderd, had instituted them to prevent the relapse into Taganism of the Saxons who had been forcibly converted to Christianity, It is more probahle. however, that they were a relic of the ancient Gomman free courts of justice, the preservation of which may have been iavoured in Westphalia by special circumstances.

When Hemry the lion was put under the ban of the empire, and deprived of his possessions in 1179, Westphalia, which then comprisel nearly the whole alistriet between the Rhine and the Wieser, was granter to the Archbishop of Cologne : ame from this time the secret tribmals gained in importance. In the general cominsion which then prevailed in Germany, when all laws, both eivil and ecelesiastical, hail lost their authority, and the fabric of socinty seemed on the point of toppling into ruins, the Femserichte were organiserl for the purpose of arrestines and controlling the incipient anarchy that threatenel to liriug chaos lack again, and of inspiring with feelings of salutary terror, throug the arency of their mysterions powers and solemn julpments, all rapacious amb lawless persons (but especially the feldal harons), who-m acemut of the improtence of the orilinary legal checks-cummitted crimes with impunity. In the canses, therefore, which leal to their formation, and in their general design. the Femgericht resemble the Hanseatic towns. They som acquirel tremendous influence, the aperors themselves having recourse to their assistance against powerful and releclions wobles. It was in the 14 th and 15th conturics, however, that they attained the summit of their ireal anthority, whin they began to extemb themselves over the whale of Germany: Bencticial as in many instances they provel to he, they coukt not fail, in the longran, to desencrate, and to be frequently employed as a cloak to selfinterest and malice. It is therefore by no means surprising that many voices were raised against them, and that in 1461 various princes and cities of Germany, as well as the swiss confederates, furmed unions for affording justied to every indi-
vidual, and prerentiag any from serking it from the secret tribmaki. I'articular classes hikewist: obtained imprial letters of protection against the pretensions of these trimmals. The emperurs themsclves, however, combla forther than to make some mavailing attompt; to introluce improse ments into the constitution of the Femperichte, as the later ware bohe cunula to "ppose the imprial autharity, and eren summoned the cmpror Frichtrich 151. to appar before them. Their inthunce cane to an end only when the public peace (Lundirithe) was established in Gerumb, and an amended fimm of trial ancl penal julicature was introdment. The last real Femgericht was held at Celle, in llanover, in the yar 156s. A rembant of the institution, how+ver, existed in Westphalia until the Jear 1811. at which time it was performing the function of a senicty for the suppression of vice, when it was abolishel by an orber of Jerome bonaparte. In somal the limits of Weatphalia, notwithstanding all their endeavours, the Femgerichte never suceeded in fully estahlishing their authority ; and even in the Licil Lend, as Westphalia was called (probably from the colnur of the soil), they were restricted liy the imperial frivileges on which they founded itheir authrity:

The numbers of the Fome wore callal II"Bambl", 'the knwing ones, "r the iniliated. It was necessary that they should he brm in wollock, he of the Christian religion, lent at haneless life, and bind themselves ly a tremenduns oath "tu" surport the holy Feme, and to conceal it from wite and child, father aul mother, sister aml bother, fire and wind, from all that the sun slimes on and the rain wits, aml from all that is hetweon hearen and "arth.' Origimalls: none bat an inhabitant of the
 ahmitter a momber of the Wissembe; at a lat-r perion, this rule was relaxet. From the general
 justices), who were assessors uf the conort, amp executors of its sentences. The presiling julce was called the formuf (free count). The general superintendence and prositency of the secret trithmals indongerl to the lord of the lam-i. e., in Westrhalia, to the Archlishop of Colone. The lighest office, howewer, as supreme presilent. was nominally hold hy the emperor, who was nomally clecten into the number of the Wissende on the oceasion of his coronation at Aix-la-Chapclle. The court of a Freigraf was callell Freiding (a fre cont of justice), and the flace where he held court a Fristuhl (free bench or court). One of the most codebratenl frec courts hal its seat at Dortmund. The sittings of the trihnal were eithe open or secret. The former were held hy day in the open air, and alecideal in civil disputes: the secret trilimals took enenizance of those who had been maldi to prow their innocence in the "pern courts, as well as of those who were accuser of heresy, sorcery; rape, theft, rullery, or marder. The ancusation was mate 1 y one of the Freischitlen, whe declarel, upon with, that the accused hat conmitted the crime. The citation was secretly aflised, with symbolical sigus to the done of the accuser, who was to meet the Wissende at a certain home and place and be conducted by them lofore the trilnmal. The acensed cond now clear himself by an oath, lont the aceuser and winnesses could oprose this with another. It the aceused conlel now brime forwad six witnesses to swear in his favour, the accuser could strengthen his oath with 14 witnesses; and it was not till after 21 witnesses hal male their alliditit in his favour that sentence of acquittal necessarily followed. The persons convicted, as well as those who refused to obey the
summons，werk given over to the Freischoffen．The tios：l＇reischüfe who met him was lwomet to hine him on ib tree，or，if he mate any resistance，to put him ＂therwise to death．A knife was left by the corplse， to shew that it was not a murier，but a punishmont intlicted hy one of the Freischathen．Complare Wigand，Dis Fehmgerich！Westfaton＇s（Hamm．1バロ．⿹\zh26， and Usener，Die Frei－uml heimlichen deriehte West－ fulem＇s（Frankfort，1832）．

FESClSS，in Agrienlture，serve the twofold purpuse of enclosing animals on pasture－gronnds， abi of protecting land from staying animals．＇they＇ are formed of a eqreat varicty of matermals，amo of very different structure．In comitries where wool or stones are scarce．more especially where they have been loar settled，hedges，formed of varions linels of flants，are common．These，when well kept and managed，give a clothed and pietmesque aplearance to the landscape．The haw horn is the facourite hedzeplant in this country：see II EDa：s．

When stomes are used as fences，they are latit as walls．The form and mode of hulding varies with the nature and quality of the stones，and the degree of taste and nicety required．Alerdeenshire forms its walls or dykes surrounding its fields with the Granite boulders that are strewed over the surface of the cometry．The graywacke affords slaty stones， which give the walls their peenliar form in other garts，and so with the varimus kinds of sandstone．

In new countries，where wood is almmdant，the fences are all of this material．＂The snakes－fence， named from its zigzag form，is made ly mercly lay－ ing the ends of trees above each other，and requives no other means of fixing．Is wood becomes more valuable，it is made into stobs and rails．The stobs are driven into the gronnd from two to three yands apart，and from four to five rails are nailed across，accorling to the purpose it is meant to serve．The stol，imd rafter fence is mule by driving the stohs from three to fons inches apart，and linding the whole by a rafter or rail nailed newoss the thp．This is one of the strongest of woolen fences，but requires more material than the other．

Iron or wire fencing has come much into use of late．V＇ast stretches of waste lam in this comntry， as well as pastures in Australia，have been enclosed ly means of wire－fencing．Strong wires are stretched on posts tirmly secured in the ground，from 100 to 200 yards or more apart．Intermediate or lighter posts are put in at from two to three yards＇dis－ tance．After the wires are fully stretched，they are fixed to the smaller posts；when of wood，by means of staples，or threaded through，when of iron．

Lato regerding Fences．－In Enerlani，it is lich to be the duty of the ocenpier of lands to repair and u！huld fences，and not of the landlord；and without any special agreement，the landlord may maintain an action against the tenant for not doing so．Though a tenant from year to year is not hound to put the fences and other buidines on his farm into repair， he must not do anything that amounts to waste，or to a breach of the rules of good hmshandry．IIe cannot ent and sell helgerows，or if he docs so，he must make up the hedges and fences according to the course of good hushandry．＂If there be a quickset fence of white thorm，and the tenant shat it up，or suffer it to be destroyed，this is destruction； lmt cutting up ruicksets is not waste，if it preserves the spring，－Woodfall On Landlorl and Tenant， IIP．46．15\％，and cases cited．Where，in answer to al leclaration against a tenant for not using premises in a husbandlike manner in repairing fences，on his inplied obligation to do so，the tenant pleaded that the fence became ont of repair by natural decay， and that there was no proper wood which he had a right to cut for repairing the fences，and that the
plaintiff ought to have set out proper wood for the purpose of repairs．which he had neglected to do， the flea was held to he bad，because it did not aver any request to the plantifl soto do，or a custom dif the country in that respect．－－Whitield $\%$ Wexdon，
 the destruction of fences is declared to be punish． able summarily with a tine of not more than $\mathbf{x}^{5}$ ； or in the case of a decr－park fence，with $\pm 50$ ．The statute is limited to linclamel．

In Suothand，the lamblore is heled homed to put the fences on the farm in diuc repair on the entry of the tenant，imberendently of any stiphation in the lease； whilst the tenant must mantain them and leare them，with the exception of orlinary tear and wear， in the state in which they were given over to him． But the landlord is not entitled to increase the burdens of his temant hy erecting new fences not stipulated for，unless they be march－fences，which he may be compelled to erect hy contiguous proprietors， and half the expense of which he must slare with them，under the act 166 j c．41，ratitien by 1685 c .30 ， of the existence of which the tenant is presumed to hawe been aware when he entered to the farm．As reqaris fences erected spontancously by the tenant， the rule is that if，being entitled to remore them， he allows them to remain，he must lease them in repair；lat if they are Fixtures（ $q$ ．v．），which he is not entitled to remose，he is not bonud to repair them．It is optional to the landord，at the ter－ mination of the lease，to order removal of fences and wher buildings voluntarily built hy the tearat， except in the case of paliners and movable fences， or to prevent their heing removed withont oftur ing any indemnitication．－Hunter，Lamllord ame Penont，ii．1．2is．As lhillinms，fences，aml other ameliarations made by the tenant，are supprosed to be made for his own sake，and not for the sake of the landlord，he has no clam for the moness whin he may have expended for such frip poses，at the end of the lease；except under a spectial stipulation to that effect．But if the temant＇s occupation be terminated abruptly，and more particularly if his lease cxclueles assignces and sub－temants，it is equitable that the laullord，gretting the benefit beyonel what was contemplated by the tenant，the family or the creditors of the latter should be allowed a proportion of the value of the ameliora． tions．Bell＇s Princip．s．1255．The cases in which meliorations are or are not removable will be explained under Fixtures（q．v．）．

FENCIPLE，a word，of doulatful origin，mean． ing defensive．Reqiments raisel for local defence， or at－and only for－a spectial crisis，used to be denominated＇Fencible．In the last French war， the local，as distinguished from the general militia， was called fencible，and many of the volunteer corps styled themselves the＂Inoyal ．．．．shire Fencible Infantry：＇The only resiment of this character stull bearing the title is the＂IFoyal Malta Fencille Artillery，although the Ceylon Ritle liegiment bas also essentially the character of fencible．

FENCING may be described，for a general definition，as the art of defending one＇s own borly or assatiling，another person＇s in fair tight by the aid of a side－weapon－i e．，hy a sword，rapier，or bayonet．Technically，fencing is usually limited to the second of these；and works on the art tonch only on attack and defence with the foil in pastime，and the rapier in actual personal combat． The present opportunity will，however，be taken to introduce thic elements of single combat with foil，sword，and bayonet．The objection formerly existed that instruction in fencing eucouraged a
propensity to duelling ; but as that absurdest of absurd customs has eutirely ceasel-at least in Lritain-to demand its annual victims, no such objection now holds. Fencing may therefore be safcly learned and taight as an elegant and manly accomplishment, developing gracefuluess and activity, while it imparts suppleness to the limbs, strength to the muscles, and quickness to the eye. This regards fencing with the foils (the rapier has disapeared with the ducls which employert it); but instruction in feneing with the sworl and bayonet, while conferring the same advantayes, bas in addition the recommendation of helping to tit the student for taking an active part in any general national defence that political circmustances might render necessary. The Foal (q.v.) is a circular ur polygonal bar of pliable and very highly temperel steel, mounted as any other sword, and blunted at the point by a 'button,' to prevent danger in its use. From its nature, the foil can only he employed in thrusting, and, being edgeless, it can be handed witbout liability to cuttines wounds. The leneth of the blade should be proportioned to the height of the rerson using it- 31 inches being the medium length for men, and 3 inches from hilt to point the maximum allowable. As a protection against accidental thrusts, the face is generally guarded by a wire-mask. The two purtions of the blate are known as the 'forte' and the 'fecble;' the first extending from the lilt to the centre, and the other from the centre to the $\mathrm{P}^{\text {rint. }}$

In draming, alvance the right fout sligatly to the front, take the scabbarl with the left hand, raise the right ellow as high as the shoulder, seize the hilt with right hand, nails turned inmard, and having drawn the foil, pass it with vivacity over the head in a semicircle, and bring it down to the guard (of which presently) with its point towards the adversary, not higher than his face, nor lower than his lowest rib. Simultaneonsly with the weapon being brought into position, the left hand with fingers extended should be raised to a level with the bead, as a counterpoise in the varions motions to ensne. In establishing the position of guard, the right foot must be advanced 24 inches lefore the left, the beels in a straight line, and each linee slightly bent, to impart elasticity to the movements, but pot too much, lest the firmness of the position be diminished.

In fencing, there are three openings or entrances -the inside, comprising the whole breast from shoulder to shoulder: outside, attackable ly all the thrusts made above tie wrist on the ontsidu of the sword; and the low ports, embracing from the armpits to the hips. For reaching and guarding these entrances, there are five positions of the wristprime, seconde, tierce, carte (quarte), and quinte. The most important, and those to commence with, are carte and ticree, from which are derived the subordinate positions of carte over the arm, low carte, and flanconnale or octare.

To engage is to cross swords with your alversary, pressing against his with sutheient force to prevent any manoellme taking you unawares. To disengace is to slip the point of your sword briskly under his blade, and to raise it again on the other sille, pressing in a direction opposite to that of the previons ease.

The glard in each position is a passive obstruction to the opposing thrust; the parade is an active olistruction, in which the guard is first assumed, ancl the blade then pressed outward or inward by as turn of the wrist against the adversary's sworil, so that when thrust at your body it shall he diverted from its aim, and held off. The parade may therefore be regarded as a mere extension of
the guard. If the parade were ealled the 'parry,' it woufl convey its meanimg more readily to English ears. Another, and worhips more aploropriate nume for thrnst, is the 'lange' or 'longe,' as the thrust is almost always accompanied by a lunge forwarl of the right foot, to gite at once greater force and longer command to the llow.

The following are directions for the principal gnards and thrusts, which may also be seen depicted ronghly in the sketches below.

Carte, Guard.-Turn wrist with nails upwards ; hand on a line with lower part of breast; arm somewbat bent, and dbow inclincel a little to the outside : point of foil elerated at an angle of abuat $15^{\circ}$, and directed at upper part of ancersary's breast.
Thrust.-Being at the guard in carte, straighten the arm, raise the wrist ahove the heal, drop the foil's point to a line with the adversary's breast, thruw first the wrist, and then the whole body, furward by a lunge with the right foot of two feet from the 'guarcl,' the left foot remaining firm. The left hand slumbl be drupred during the lunge to a level with the thich, and to a position distant alout a font from the boly; it wifl then afford a good cometerpoise to the sword-arm. During the whole action, the bolly must be purfoctly upright. When performed briskly, it aplears that the point and fuot are advanced simultancously, lut in fact the point has, or should have, priomity, in order that the instantly following lunge may drive it home. Most of these olservations concerning thrust in carte apply exually to all other thrusts.

Fiz. 1.-Carte.
Carle arer the arm is a varicty of this thrnat. The sword is driven outside the alversary"s blate, from the carte position, but in the tierce line.

Low Carte-Engrace adversary's blade in carte, then drop point under his wrist, in a line to his cllow, and thrust at his flank, the body being considerably bent.

Flanconnale or Octare. - Encace adversary's blade in carte, and hind it with yours, then carry your point hehind his wrist and under his elbow: withmat quitting lis wlade, phange your point to bis flank.

Tierce, Guard-Is in carte, the nails and wrist being somewhat more downward, and the arm stretched a little outward, to cover the outsinle.

Parade.-Nove arm, from the guard, obliquely downward to the right about six inches, and oprose the inside of the adversarys blade.

Thrust.-From the guard, turn wrist with nails downward, the same height as in carte, the inside of the arm in a line with the right temple; then thrust and lunge as in carte.

Seconele, Parade.-Niails and wrist downward, hand opposed outward. and blade, pointing low, sbould form an angle of about $45^{\circ}$ with the ground.

Solule．－The salute is at eometenus ofring of the foming，and monsists in gracefnly taking off the hat，whik，with the foils，your adversary and your－ self masure your respective dist：mens．

Appels or lieats with the right font，bects on the alversary＂s hade，and glissudes or ghlinus of one sword atons the othor，are montions intembed to ＂enfuse the entmy and give（onemings for thasts．
lollos，demi－rolles，and distmini，were maneuvres formonly tanght with eare，but thay are now quite
discarded in the acalemies of Englamd and France, as uscless and umdesimalle.

In spin amd ltaly, eonsiterable diferences of practice from that in liance and England prevail. The leit hand is usel as an amxiliary in parrying, and in Italy is aided by a darger, or sometimes a cloak. The Spanarl, though trusting to his sword and left hand mily, has his hale five feet long, with sharpe elges: his guserl is nearly straght, ant whe of his farourite attacks is by a cut (not thrust) at the lacal.

In an article limited in lencth as this must necessarily lo, it is impossible to give move than the merest ontline of the varius motions: lant, nif course, in actual practice, there are endess varibtions of the different moles of attack and defence. which will be severally adopted acendinst to the skill and option of the fencer. There is no tiner indonr exeresise than fencing as the muscles in every limb are developed and strengthened ly it. The cruat requirements for sucess are a stemy cye and haurl, a ruick purpose as quickly exccuted, ani, perhaps above all, perfect equanimity of tomper.

The Swori lixerons hiffers from fencing with the fuil; in that, the weapon cmployd has one cotting edge as well as a point, and is therefore intenled to cut and thrnst. The sworl is the arm of all officers in the army anl navy, of many noncommissioned officers, ant constitutis the sole monde of attack and defence for the ollicers of the Irritish volunteers. A certain demere of proticiency in its use is therefore always servicealle. In practice, the usmal substitute is a stout, straight stick, called a "single-stick,' having a basket-liandle to protect the kunckles.
The position of the combatant is the same as that assmmen in fracing with the foil ; the lunge is similar, as are also the 'adrance' and 'retreat,' and other minor points. According to the instructions of cirill-masters, there are seven ents, with seven corresponding giards, and three thrusts.

The theoretical lirections of all these are shewn on the acompanying diagram, which represents a target placed oposite a punia, so that he may see the motions he is expected to perfan displayeal lefure him. The centre of the target is sujpused to be in a line with the centre of his breast.

Fig. 6.
The cuts proceed from the circminference towards the centre aloner the thick lines. Nos. 1, 3, and 5 are inside euts, and attack the left check, leit site, and inside of the right leor respuctively; - 4 , and 6 are ontside cuts, attacking the enemy's right check, right side, and right leg on the outsile. No. 7 is a vertical cut, amed at the heal.

The dotted lines shew the position of the sword
in the several guarils by which the cuts are opporsh The sworl-handles illustrate the situation of the right hand with refermee to the centre of the lody.

The pionta or thrusts are shewn ly the black circles. That towards No. 1 shombl he lirected with the wrist and cdie of the sword mparals to the right; towards ?, with the cdese upwards tu the left; and in the id puint, with the wrint neing to the econtre, and the elfen upwarls to the right.
The 'bary' is an onditional defonse movement, and consists in bringiur the wrist nearly to the right shoubler; whenee, as centre, a circular swerp of the sworl is made from left to right.

A consideralde latitule is allowable in recarel to tha cuts, as to the part of the alversary's buely at which they are directed, provided the gencod indiantion of the how be olserved; similatly, the cat may at times be parrien hy a guare ,ither than that intended specially for it, according to the discretion of the fencer.

In "nghaing, or joining sworls, with the enems, press the liales lut lightly together, so that the hand and wrist may le readily susceptihh: of any motion. In making the guaris, care must always le taken to receive, if pussible, the fuctle of the "nomys blade on the forte of your own, so as to ofler the greater opposition. It should also be borne in mind that, in all cuts at the leq, when at proper listance, the shiting of your owa les, and delivering a cut at the same moneat, lecomes the most eflectual amb advantageons defence, particularly if you happen to le talle than your adversary, ans yon will then probably be out of lis reach, while he is within yturs.

In contenling with layonet or like, the most effectual guard is the Sth, which, if well timen, enables the swordsman to seize the mosket or pike with his left land, and then make the Gith eut at his oprment's neck. In an encmuter with the rapier, the lest euts are Nos. 3 and 4. as they attack the chuy's arm, which must be alvanced within reath before lie can touch your bouly, and also constitute a lefonce arainst his thrust. If the enemy-no matter how armed he on horseback, the lismonnted sworlsman ([norifed he bave pruce nerve and arility) has olecidedly the alvantage, Emdeavom to Hiare yourself on his left, where he has less power of defouding limself or his horse. and canot reach to So preat a distance as on his right: an attack on the lare will probaly rouker it montrable, and it hecomes easy then to asmid the riber's hows, while he limself may be atta kel with impmity in almost any direction.
B.twonet Exermise-If the sworl exereise he of u-e to volmener oflicers, there are thaty times as many viluntecrs themselves to whom a projer commath of the laynot is indispensalile. In chasefuarter argaments, there is mo weam more fire mivalle: from its length and weight, the thrust of the linyonet gives a terrible wemul, and its force is such that there is ereat dithenty in parying the att:ck. Like other small-arms, it is monst servicable when handled on scientific principles; and the art of nsmer it to alvantare is so simple as to be very easily acquired, while the excreise, from the weight of the rille, admirahly aids in developing the maseles of all parts of the boils.
Of course, the bayonet is always fixed at the end of the musket, when it hecomes virtually apike. Tho position of the fert in the bayonet exercise remains always the same relatively, and absolutely until alvanee or retreat be effected. The right foot is thrown back $2 t$ mehes, and the weight of the boly thrown nyon it. The heels are kept in a line with each other, both knees lient and well apart; the right knce directly over the foot, the leit easy and

## FENClNG—FFNELON.

Anexible puintins to the front. In this pesition of the foxiy, all the defensive motions of the bayonet are mands. In "Enama, the hayomet is bromght wearly to a hurizontal dareetion, level with the waist, and dantine twwares the loreast of an arlvancine comey
 "secombl point "are assmaed, the bayonot puinting as sicwn hy the doted lanes in fig. \%. The butt of

the rille is always kept well to the right sile, the
 in attitude to offer rreat resistance. In 'low, the lamole is turned downwards; but in all the other Aefonsive nutions it is helel upwards. The position of the arms is in each case that which would naturally ho taken in placines the bayouet and masket in the remuired direction.

The offensive position of the body is acquired by the extension of the right leg, and bending forwaril of the leit withont muring the feet. The Lutt of the rille is at the same time pressed firmly to the shouleme. "This position is callerl 'point," aum constitutes an extension of the weapon in a rlirection pramallel with either of those previously taken. As thape were fonm ""umals,' so there are four points, which are shewn in tio. $S$. "The harel is in eateh

Fig. 8.
case upward, and the motions for eacly are similar, except in pointing from 'al point,' when the rille, seisell by the right hand round the small of the butt, is thrust straight up above the head to the full extent of the arm, the left hand falling along the thigh, and the legs being straightened so as to furm an isusecles triangle.
'Klorten arms' is a nseful motion, both as a dubuceanl as a preparation for a strong attack. It consists in carrying the butt back to the full extent of the right arm, whle the barrel (lownwards) rests upon the thick part of the left arm. The borly is threwn npen the right leg, and the left straightence. This ["wserfal prosition is seen in the annexed ent.
ln all the Guarels amil punts, amb also "shortun arms," the batyonet may he tarneal directly to the front, to the right, or to the left, as circumstances

246
may suggest. In contembing with a swordsman, the action of elanging from right to left, when at

Fís 9.
the 'high' on 'luw,' is sumcient a lufeuce againat the ordinary ente of the latter.

Ammiry the treatises eunsulted for this artiche have licen the works on fencing ly Angely and lioland, as well as the shorter instructions issued by the military authorities.

FENELON, Frascis he Shlig.ic De li Mothe, was hom, Aucrist 6, 1651, in the chateau Femelon, brovince of Perigord, now inchuled in the department of the Dordogne, of a family which has given many celelsrities both to the church and to the state in brance. llis education was eombucted at home up to his leth year, when he was transferred to ('ahors, and afterwards to the Plessis College in l'aris. At the close of a most blameless collegiato eareer, he selected the clumele as his profession, amd entered, in his outh vear, the newly fomeled seminary of St Sulpice, then under the direction of the celobrated Abbé Tronson, where le received lonly orters in 1675 . Unlike but too many ecclesiastios of his own rank at that perion, he gave bis whole heart to his sacred calling. For some time after lis ordination, he was employed in attembane at the hospitals, and in other garochal dutios of the parish of St sulpice; and in the year $16^{2} \mathrm{~s}$, he was named directiv of an institution recently foumberl for the recention of female converts to the Roman ('atholie faith, in Paris. During lis tennre of this office, he wrote his first work, On the Liducation of Gobls, which is still a stamlarel authority; aml the genthemess, monderation, and charity with which be discharged his duties towarls the younde converts, led to his appointment as head of a mission, which, on the revocation of the Tiliet of Nantes in 1655, was sent to preach among the lrotestant pepulation of Saintonge ant l'oiton. In 16SS, he resumed his duties in the Naison des Nomveldea Converties, at Paris; and in the following year, he was nameal by Louis VIV. to the lighly condidential post of preceptor of his gramelson, the young Duke of Burgundy. F.s management of this most important and delicate trust shewed how well he understood the true mature and olljects of colucation. All his own instructions, and all the cxercises enjoined ubon his prpil, were so contrived, as, while they inparted the aetual knowledge which it is the ordinary bnsiness of a master to communieate, at the same timo sarved to prepare the mind and the heart of the pupil for what was to be the real husiness of his life, by impressing upon him a sense of the responsibility which awaited him, of the freat primeiples of truth and justice mpon whieh these responsibilities are fommed, and of the hollowness and futility of all arthly glory, luwer, and happiness, whieh do not rest upon this foundation. To this wise design of the preceptor we are indebted for many works still popuar in educational use; for the l"ables, for the

## FENELON.

Dialogues of the Dcat, for the History of the Ancient Philusophers, for the garm at least of the Telemachus, and for the Life of Charlemagne, the manuseript of which last work, unfortomately, was lmaned in the dire which destroyed the arehiepiseopal palaec of Combray in the year 1697. As an acknowledrment of these preat merits, he was presented by the king, in $1695, t_{1}$ the Abbey of st Valery, and in the following year, to the Archhishopric of Cambray, which he ouly acecited on the express condition, that for mine months of each year be shond he exempted from all duties as preceptor of the pince, and left at liberty to devote himself exclusively to the care of his dincesc. It is to this leciod of F.'s life that the history of the unhajny controversy abut Quetism belongñ. Without entering into the details of this singular revival of the ancient Mysticism (sce Mrsticism), it will he enough to say that two separate schools of Quietism are to be distinguished, the moral character, or at least the moral tendeney, of which was execedingly different. See Quertism. In one of these, the common mystic primeiple of the absurption of the sonl in the love aud contemplation of (iond, ded to the cunchsion, that the soud, in this state of alsorption, became entirely passive; that it was thenceforth independent of the extermal worh: that it suffered no contamination from the material actions of the outer man, and that no acts of virtue, nut eren of prayer, were any longer requirel. See Momisos. The other sehocl, while it maintained the theory of passive contemplation and love, yet rejndiated the dangerons and inumoral consefuences which were deduced therefrom. It was exchusively the latfer and less objectionalde form of Quictism, the professors of which for a time claimed, although not the patronage, yet at least the indugent consideration of Fenclon. He formed, in the year l45", the acquaintance of the celebrated Nadame Guyon, who may be regarded as the fumdress of the French school of Quietism. See Guyon. The extraordinary piety and exemplary life of this remarkable woman, and his own natural bias towards the tender and lofty spirituality which she professed, aymear to have biniled F . to the true nature and to the fractical consequences of the system which she followed. Fully convinced of the unfairness of much of the outery which was raised against her, and which made her responsible for all the principles of the grosser Quietism of Molinos, his gencrous mind was perhajes attracted to her canse ly the very injustice of her opponents. He advised her to sulmit her works to the judgment of Bossuet, who was then in the zenith of his fame, and with whom $F$. was in the most friendly relations. In the condemnation of the book of Madame Gayon by this prelate, F . acyuieseed ; but as she made a formal submission to the church, he refused to join in any condemnation of herself personally: Nevertheless, when a commission was appointed to examine the whole affair, F., although not a member, took a part in the proceedings; and he even suggested certain changes in their report, which he suluseribed in common with the rest. To the artieles prescribed for her signature by this conmission, Madame Gayon readily subscribed; but it was further considered necessary not only to publish a condemnation of her several works, but also to prepare a special exposition of the true doctrine of the church on these questions. When the work of Bossuet on this subject was completed, he submitted it to F. for his approval. This F. not only rufused to give, but even composed his own Maxims of the Saints in the Interior Life, in explanation and defence of certain at least of Madame Guyon's doctrines. He submitted his hook to the Archlishop of P'aris, and introduced into it some moditications which were
suggested hy the diocesan censors, cheerfully agre ing to the stipulation of the archbishol, that it slionh le kept back from puldication until the completion of the rival treatise of liossuet, on the States of Prayer. An unfortunate violation of this engagement, committed withont the knowledge, and in the alsence of $F$., was the last uf a long train of canses which led to the painful and disedifying rupture Letween these two great prelates. Fi's hook was received with much clamour, that of Bossuct was universally approved ; and in the controversy which ensued, all the weight of the displeasure of the court, which F. had provoked by the covert strictures upon the existing state of things, in which he was helievel to have indulged in his works of fiction, was brought to bear against him. He was ordered to sulmit his book to the judgment of an eeclesiastical tribuand, of which Bossuet was a member. F. refused to accelt bossuet as judge, on the ground that he hal already prejudged the cause; and in the cnd he aypealed to the judgment of the holy see. Unfortunately, even while the affair was pending at lome, the controversy was still maintained in France. Bossuet 1 mblished a succession of $1 \times 1$ mhlets. Several of the bishons who had espoused the side of Inssuct, issued pastorals in the same sense. I'. defuded himself vigorously against them all in several publications, explanatory as well of his principles as of the personal imputations in which some of his adversaries did not scruple to indulge. The last blow ayainst the ancient friendship of the great rivals was struck ly Bossuct in his celebrated Relation sur le Quirtisme. F. was wounded to the heart. The eopy of Bossuet's pamphet which first canse into his hands is still proserved in the Sritish Alusemm ; and the margin is literally filled with remarks. annotations, replies, denials, and rejoinders, in the singularly delicate and beautiful handwriting of the indignant archbishop. The coply now in the British Aluseum is wost probahly one which, as we learn from his correspondence, he sent to his agent at Rome, aml on the margin of which he corrected, for the fuidance of his friend, the many false and exagerated charges of his great antagonist. The sulstance of these replies he gave to the puldic in a most mastorly defence. written, printed, and published within littlo more than a fortnight from the ajpearance of Bossuet's Relation. From this point, the controversy assumed a more personal, and therefore a more acrimonious character; and it was maintained on hoth sides till the long delayed decision of the poje hrought it to a close, March 12, 1699, by a lirief, in the usual form, condemning the Maxims of the samts, and marking with especial censure 33 propositions extracted from it. The eouduct of F . under this blow constitutes, in the eyes of his fellow. churehmen, one of his highest titles to glory. He not only aecepted, without hesitation, the decision of Kome, hut he took the yery earliest occasion to publish from his own pulpit the brief of his condemmation; be issued a pastoral audress to his flock, to arprise them of the judgment of liome, and of his own cheerful acquiescence; and he presented to his eathedral a magniticent picee of church-plate, a gold ostensory, in which the Angel of Truth is represented trampling under foot many erroneous works, tho most prominent of which bears the title of Maxims of the saints! Bossuct is said to have been greatly touched ly the conduct of bis noble adversary, and to have carnestly desired a reconciliation. But tho adverse induence of the king, Louis XIV., and of the court, stood in the way. The jealousy with which the political principles of $F$. were alrealy regarded was heightened about this time into of": hostility by the alpearance of his Telemaches, which was printed from a copy sureptitiously obtained by

## 

his sorvant, and which the kind regarded as but a maskel satire umon his own court: Scoustris inilus *upposen to represent the Gram Domaryue him-

 rotrained within his diocese? masures wert taken th give the comdmation of his imok every charactur of pmblicity: and what wombed him hust oi all, all intereourse with him. whether prersmal of ly letter, was forbiden to his olp amb much-owent pupil, the Doke of Burguly. From this date, l'. lived exchasively fur his dhenk. Ste fommed at Combray a smmary for his areholineese, whel the mate his nwo especial eharge. He was assidums in preachang and an the diseharg of the other duties of his other ; and the fom, of his hometrate charity, and colightemed liferality is aftested boy the orater given in the campain of 1709 to spare the place and the stores of the dreblishop of cimbray. The only later controwers in which he apears is the revival of the dansenistic dispute in the wedlknown furm of 'Tlic Case of Conscience' (see J.siaExIsM), in which F. enqagel earnestly on the side of orthodoxy: Xiutwithstaming the prohilition of his grambither, the young buke of Furguady retained all his wh affection for his preceptor: and the highest hopes were entertained as to the future carect of the puph of such a school. These hopes were unfortulately cut short by the premature leath of the duke in fille. F. surviwal him lat a short time. He died Samary 7,1715 .

The works of F are very whminons. The latest collectel elition extomets to twenty 8 oo wohmes, amb embracos every variety of sulojects- theologe, phinsophy, history: literature, ancient am modern, onatory, especially the eloquance of the pulpit, asceticism, amb spirituality in all its lranches. His correspondence is wry extensise and most interestins. Of his early semmons (one of which was delivered in his J ath year). a vulume was printed in 174. If his mature discouses, two only have reached $n s$ in a dimished state. They are of the wery hichest ornhe of sacred doquence. Wf the rust. we can mly judge from the skeletons which it was his hahit tio prepare with great exactness, and of which very many have becu jreservad. His literary and historical works, many of which were composel for the instruction of his pupil. are tilled with allasions and surgestions illustrative of the principles of govermment and of the relative duties of sovereigns and subjowts, far in alvance of the time in which he lived. His work on the Temporal Porer of the Mrimeal Poprs presents that doctriue in a form which divests it of many of thuse elaracteristics which are most abjectionahle in the eyes of l'rotestants; and even his spiritual writings in general may be real. and inded are not mifrequently read, mot only withont offonce, hut even witl positive arvantare. ley thristians of all denomimations. See ('ard fanssett's Jie de Fonelon, 4 rols. 12 mo ; also the lie do liossurt of the same author. Sice also the Life prefixal to the collecten culition of the ajurres de Iblon: the whminoms corresundence rontainen in that collection; and above all, the lie de lomen, recently palishot, ly one of the sulpician congrega. tion (Ai, (insselin), in four large svo volumes.

FENESTELLA, w FENESTRELLA, a genus if J'olyzon, resombling the recent 'lace coral,' very rommon in Fakenzaic rocks, ranging from the jownor Silurian to the Jermian. Thirty species have been described.
 romidn, lecular t", Africa, resembling foxes in grneral form and in tha bushy tail, but having eyes
alioptad for diamal amd not for nosetumal visina, ami remarkably lats ents. The spwes are small and leantiful. The fieel partly in dates and wither veretable from, also wh extec, and on insects, which they adroitly sulu, as they pase.

FENXVI, (I'quiculum), a gemus of umbelliferons plants, allied to lill ( 4. . . ) , lat distingaished ly the cylindrical strongly ritheal fruit. 'Ihe ilowers are vollow, All the specins are armatic, and have inuch divided leaves with thond-hke spoments. The best known is the 'ommon $l^{\prime}$. ( $F$. culgere), a mative of the smath of Durne and of some parts of lingland. It is a hiennial, three or four fect high, and is cultivated in garlens, chiefly for the sake of its leaves, whinh are lailal, and servel ap with matekerd, with samon, and orcasionally with other kinds of tish, ar are cmplesel to form as sate for them.-Swfare F.,
 mucl humbler mewth, amb ammal, mach cultivated in the sonth of Dirme, but tom tember for the climate of loritain. The fome spmots from the root are sweeter and less armatic than those of Common Fo,

Jemel (Fomiculum rulyare): a, a tlower.
and when ldanched, are a yery agrealle salad and potherb. The fruit (sed) is longer and faler than that of Common P., lats a more agreeable ndone and flatour, is the favorrite aromatic eondiment of the Italians, and is used in medicine as a carminative and aromatic stimulant. Oil of $F$., an aromatie, stimulant, and eaminative csecntial oil, is also made
 of the Cape of Goom IHowe, has a thick, aromatic, esculent root.-The l'sisucnooners of ludia ( $F$. penmorium) is a specties of $k$ muth cultivated in its native country for its swect, warm, an? aromatic frait, wheh is much usen as a carminative, and in curries.- The finst F. of the south of Empere is a
 in a retid juice. It is indeel closely allieed to asafoctida, but forms a farourite food of butlaloes in Apulia, whore it particularly almumbs. The dry drad stem is full of a white jith, which is used in Sicily as tinder.

Jexs. Sce Menvond Level; adso Marisies.
FE'NUGREEK (Trigonella), a genus of plants of the natural order P'upilionacer, sub-orter Legmmin. oso, allied to elover and melilot. The leaves have
three obovate leaflets anl seythe-shaped stipules. The flowers generally have the kepl very small, so that the wing.s and mpmourl present the appearance of a tripetalons corolla. The commos E. ('T', fomam (irecem) is a native of the soutly of Eumole, and of some parts of Astia; it is mowh cultivated in India as a foulder-phat, aul derives its name (Funum Gnceum, Greck hay) from its use is fonder in Grecee.

Fenugreek (Trigonelut funum (rratum).
Its pods are many-seeded, and cylindrieal ; its seeds have a strong peculiar smell. and an oily bitter taste: the flour made from thrm is used for emollient ponltices, but only in veterinary practice. The seeds of F . were formerly helil in meat steem in medicine.-Another srecies ( $T$. incistm), growing spontaneously in many parts of India, is much nsed as folder for eattle. The legumes of the Evecteser 'Trigonelli ( T. esculentor), also an Iudian plant, are' used as human food. One species only, the Birb's Fоot F. ( $T$. ornithomelioters), is a native of Britain, a small phant, growing in sandy pastures near the sea, aml not very common.

FENIES, Etek (Alexius), a Hungarian geographer and statistical author, was horn in 1817 at Csokaj, in the cumaty of liilar. After the usual carcer of stulins in philosollyy and law, F. became barrister-at-law as early as lyon: lut instead of frequentiog tho law-conts, bu becan travelling all over the country, with the parpuse of making himself thoroushly acquaintel with the state of the Hungarian kinedom, of which there hat never before been an authontic survey. The tirst frnits of $F$ 's enterprise appeared in 1510 , muler the title, Mungary and ita Anurcel Purts, Goyruphacally and Stutisticully considered ( 0 vols, Pesth). The sreat prize of "00 ducats was awarden to the anthor ly the Inngarian Aealemy, The statistics of Hungary, in 3 vols., followe! (1843); General Athes for IIengery (15tö); Description of IIunyary (1847); Geotraphical Dictionary of IInngary (1551) -all of which wre pahlished at l'esth. The whole of F''s works are written in the Magyar toncue, but several of them have been translated inte Creman, and repeatelly pmblished. Eesides that these works are the first true expwonders of the state of Ilumgary, it is also generally admitted that, as to their completeness, solitity, and exact-
1.5
ness, they will bear a comparison with the best of kindreil works in Furopean literature. During the national governmont of IIungary (1S4S). F. was made the dhicf of the statistical suetim. Aiter a respite of several years, from failimg health. 1 : is agan hasily engatem in the poriontioal pross, and is elitor of the F"urnern' Journet! ( 1 Falusi (rizala).

## FEODO'S1A, or THEODONI. Sockirl.

FEOTFMENT (ingiuder, othe dilest, and for a lone leriod the only, methol for the combyance of land known in Eughanl. Feothment consistol in the formal converance of the land from the forfler to the fertler. the former statins listinetly the measure of the state cunferrel, whether it was in fece in tail. or for life. Where no mention of the duration of the estate was makle, the gift was presumed to be fine bife. This conveyance of the lami, in onder to be comphite, required to lie aceompanied hy delivery of Sasine (q. r.). Livery of sasine was of two kindsriz, loy dred, and in law. -In the former case, the partios leeing actually uron the lam, the fentior, by delivery of a twig or a tarf, testifich his comverame of the land. In livery in law, the parties leciow in sight of the land the fentline referring $t_{1}$ the land gave pussession to the fooltet. This mode of feollment was inetfectual unlos the fentere enternl into pussession durine the life of the foulon. livery in deed might be effecterl hy attorney: but livery in law onlyly the partie themselues. In the earliest times, these ceremonies completel the converance. But by degrees the practice of embulying the transaction in a deal was introluced. When a iteel was used, it hecame custmmary, hint not essential, to endorse on the deed the fact that livery of sasine hal been made. by the statute of Franils (29 car. 11. e. 3), it was declared that no estate created by livery of sasine, mass accompanied by writing. signed by the party or his arent, shonll tre of any effeet, excelt as an ratate at will : and ly $S$ and 9 Tict. e. Iofi, ss is, a foollment is romel maless accompanied loy deen. The law formerly gave so great an effect to a feoffment, that even when the Iorty ustensibly making the conseyance was not lawfully seised in the estate, the feofment was sustaineil. This was ealled a tontinns conveyance ; the party in whose favinur it was male was sand to lave arguirel an estate hy wrimg, the rightful owner was dirseised, and was leit to his right of Entry (4. v.). lint hy the act last mentionet, this tortions effect of a feof. mont was removel. It must be observel that the practice of feoffiment above ilescribod, and whinh has existel in England from thae immomorial, liffered materially trom the ohl fomb of investitme in use in strictly femdal times, and from that which still Irevails in seatland. In Fighand, the transaction was simply a couveyance by the actual holler of the land to a new temant, testified by certain ceremomies, but reduiring no confirmation by a thisd party to complete it. Pat by femal usages, every halder of land was the vassal of sona. suphior lorit, to wham le owen suit and service, and withont whose consent he could not even part with his land; hence no monveyance was complete without the reception of the new temant by the lerel paramont as his vassal. In like manor. to this day, in sootland, no transfer of heritage is complete without the formal contirmation oi the supurior; and althongh by revent legislation the wh fembal usades, which for two centuries have existed as landmarks, telling ms of a systema now passed away, have heen abolished, yet the fact of acceptance by the superior, and the jeriormance of the pecumary services attemdant on that accereance, are still preserved. See Lheftaevt, Sishise,
Fecdal System.

FERDDNAND I., emperor of Germany, $15 . \pi 6$
156t, was lurn in Spain, 1503. IIe was the son of Philip 1., and bruther of Charles V., whom he suceeded in the empire in 1556 , having leen previously dected king of linne. F. han married, in 15 ? 1, Aman, danghter of Ladislaus Vl.. king of Bohemia and Humeary: When her lrother Lonis fell in 1020 in hattle with the 'Turks, leaving no issue, the crown was clamed ly $F$, in right of his wift. This involvel lim in a long and hloody strugete with a rival, Johu of Zapolya, who laicl chaim to Hnngary, and who, as well as his son Sinismum, was supported ly Soliman, sultan of the Turks. F. at last quined the upper hame, lowisht of the Turks hy a yearly tribute, and finally secumal Hungary and Bumenia to the House of Austria. When he was chected cmperor, the conussiuns le hat made to the Protestants caused

 complaisant; hat the clecturs resolved that for the future the consent of the pogne should not be asked; and this was carrical nut. $F$. made several attemp ts to reoneile the l'rotestants anel Catholics, amd urgel, thengh froitlessly, the reformation of alnaes on the (ommal of Trent. He died in liset. 1 aving the reputation of a prodent and enlightened mater, and was succerded by his son, Alaximilian 11.

FERDINAND 11., emperor of Germany, 1619 - I637, was lurn at Giatz, Ith Juty 15\%'s. He was gament of Corlinand I., his father beins (harles, Mrchuke of Syria, the younger brother of Maximilian. F's mother, Maria of Bavaria, early inspired him with hatred agrinst the Protestants. lle was edueated liy the Jesuits at Ingolstalt, aloner with Maximilion of Bavaria; and at Loretto, be laul taken a solumu oatli, hefore the altar of the Mother of Gol, to reinstate Catholicism as the sole religion of his dominions, at any cost. As soon as he succeded to the govermment of his own duchy of Sityria, he set abont putting down Protestantism by furce. Ite attempted the same in Bohemia aud liungary, of which countries he had been clected ling duriug the lifetime of Matthias Corvinus: lat thomorh at first unsuccessful, and even in demerer of losing his dominions, he ultimately namated. with the aid of the Cathone league and of the liketor George 1. of Saxony, to subdue then. Fhhemia lost all its privileges. By hanging. -undiscatime of poperty, and the banishment of immmerahle famlies, the wretehed land was redued tu olvedience; and the introlliction of the Jesuits, ans 1 rgerous persecution of Protestants, re-establisluet C'athole ism. Meanwhile, F. had heen elected - mueror of Germany (1619). The war, which properly ended with the subjugation of Bohemin, was at the same time transierred to the rest of Germang:, and took the charater of a religious

## FERDINAND.

war-the famons 'Thirty Years' War' (q. v.). The
two imperial generals, Tilly and Wallenstein, were
opposed by a confederacy of the Protestant states of Lower Saxony, with Christian IV. of Denmark at their head; but the confederates were defeated by Tilly at the battle of Lutter, in Pruaswick, and forced to conclurle peace (habeck, 1629). Confident in the ascendency which he hat acsuired, F., in the same year, issued an Edict of lesstitution for the whole of Germany, taking away from the Protestants nearly all the rights they had acquired by a century of struggles; and the troops of Wal. lenstein and of the league were immediately set to work to carry it out in several places. But further procedings were soon arrested by the dismissal of Wallenstein, on which the diet if the empire at Regensbury had insisted; and ly the opposition of Pichelien, who put every wheel in movement to curb the power of the llouse of Austria. At this time also, a formidable opponent to the schemes of the emperor appeared in the person of Gustavus Adol ${ }^{\text {dinus }}$ of Sweden (I. r.). After the murder of Wallenstein, the commivance at which is an ineffaccable blot on F.'s memory, the imperial commander, Gallas, gained, 1634, the battle of Nordlingen, which had the effect of cletaching saxony from the Swedish alliance; lont the abilaty of the Swedish generals, for whom Anstria hail none that were amatch, and the open part that France now touk in the contest, brought back the lalance of victory so far to the Protestant arms, that when I. died, February 15, 1637, he had given un. the hope of ever attaining his oljects His reign is one of the most disastrous in history; for Germany owes him nothing hut blowlshed, and misery, and desolation.
FERDINAND III., emperor of Germany, l6371657, the son of Ferdinand II., was horn lith July I60S. He was not so much under Jesuitical ant Spanish influeace as his father. Having accommanied the armies in their campaigos after the death of Wallenstein, he had witnessed the miscries of war, and was inclined for pace; lut the conflicting interests of the individual belligerents hindered any unity of riew, and made it necessary to proceed with the contest. Thus was this miserable war protracted, crer extending in circuit, and increasing in devastation owing to the growing licentiousness of the soldiery. At last, in 1643, a congress met at Munster to arrange terms of peace, which was concluded in 164S, and is known as the Peace of Westphalia. At the diet of the empire, 1653-1654, the last juresided over by an emperor in person, $F$. effected important alterations in the administration of justice. He died, 20 April 1657 , shortly after concluding an alliance with Poland against Sweden. His son, Leopold I., succeeded him in the German empire.

FERDINAND I., emperor of Austria (15351848), cldest son of Francis I. by his sceund marriage with Maria Theresa of the IIvuse of Naples, was born at Vienna, 19th April 1793. He was from the first of a weak constitution, and was unfortunate in those to whom his education was intrusted. Yet he shewel on all occasions a goodness of heart, which was fostered by the example of his uncle, the Archuluke Charles, to whom he was much attached. While crown-prince, he travelled through his Itaian provinces, Switzerland, and part of France, and took great interest in manufacturing industry. In 1835 , he succeded his father on the throne. It was expected from his character that he would inaugurate a more liberal policy than his prede. cessors hal pursued, hat the absolutist principles that seem destined to rule for ever the iustrian
cahinet, triumphed, and Metternicla was allowed to carry on the fovernment. It now lecame obvious that F. sadly lacked moral decision, and his 'goodness' exhausted itself in numerous acts of clemency and bencolence. Nevertholess, duriw; his reign, the industry of Austrin made a qreat advance, and the great network of railroals and highways was begun. The insurrection in fralicia, 1s46, led to the anmexation of Cracow to Anstria No country was more affected by the Europuan movement that legan in the winter of 154.-1548 than Austria, thongh the revolutionary stomes that shook the empire cannot the attributed tu any want of goodwill to his people on the part of Frrilinanl, Init only to a complete want of pulitical wishom. On the disturbanees breaking out in March, h" consenterl to the dismissal of Mettemich, the apmintnent of a responsilite ministry, and grated the mutlines of a constitution. In May, he retired with his court to lunsprock, but was inducel to return tu the capital ins. August. It last, the Octulur insurection in Vionna made him atain leave the palace of schünbrunn, and ratire to olmite, where: on od December 1sts, he atulicated in farour of his nephew, Franz Joseph. He has since resiled at lragne. Ite marritu, 2Tth Fehruary Is:31, (aroline, daughter of Victor Emanuel L., king of Sardinia, lut has no children.

FERDINAND THE CATHOLH, 施解 of Castile, Od of Arasom, 31 of Napkes, ame ed of sicily, was lorn loth March 1422. He was the som of Jom II., king of Navarre and Arakon; and in 1 His mamied, at Valladulid, Isabella, sistar of It mary 11. of Castile. Eren in the lifetime of his father. events were paving the way fur the sulserpunt union of the two kinguloms of 'astile and Aragn. Un the death of Ilenry 1V. of Castile in 145, the Cortes refused to acknowhedge the leritimacy uf his daughter Juana, and proclaimet isalotla ame her husband F. joint-suvereigns. A war ensuen, in which they were completely suecessfil. In I $17!$, , F. lecoming king of Aragon on the death of his. father, the two kingdoms of Araron and Castile were united in the jersons of F . and Isabrlla. Isabella, however, as long as she lived, maintained her position as queen of Castile, and allowed her husband no other share in the gevernment than the privilege of alixing his signature to the decrees, and of uniting his arms with her ownl. F'.s whole reign was an unintermped series of successinl wars. In C'astile, he distinguished himself by the effectual suppression of the landitti, who had liecome fornidable in the confusion resulting from the civil wars. This lie accomplished by re-organising aut futting in force against them the hermondat, or lurutherhood, a kime of Spanish militia, composed of the citizens and the country-people. But F., whose craft and visour were quite Machiavelian, was not content with taking strong measures against the Castilian ontlaws: he also resolved to break the lower of the foudal nobility, and made good use of the hermandad in carrying ont this design. Cities and towns were encouragel to make themselves independent of the nobles, who ware deprived of many important privileges. Among other humiliations, they were snljjected to the ordinary tribanals of justice. The estahlishment of the Inquisition in 1478-1450, althongh primarily and mainly intended to further 'religions' ends, likewise helped to lessen their intluence. F also strengthened his power by vesting in himself and his successors the grand-minstership, of the military orders of Calatrava, Alcantara, and Santiato. In all his schemes, F . was ably seconded ly his queen Isahella, and by the celelrated Cardinal Ximencs. The year 1492 was the most brilliant in his rocign,

leERIDN゙AND I．，king of the Two Sicilies， was the son of Charles lif．of spain，and born

19th Jannary 17.51. When Charles ascented the Spanish thrume in 17.5!, F., though a minor, succected him on that of Naples under a regency. After his marriape in 176 , with Maria Carolina, danghter of the Fimpress Daria Theresa, he fell completcly multer hor intlunce, and lost atl his former lumbarity. The quen and lar favourite minister seton (if. \&) raleal the kinglom juined Fnglamd ald l Dustria against France in 17a, but in 1 sul was forecd to enter into a treaty with the first comsul. I sulsequent violation if this treaty compelled him, in 1 sot, to take refuge in Sicily, muler the protection of the Inglish. I French army marched into Naples, amb trulk $1^{\text {wis- }}$ session of the kinghom, which Nipuleom bestonver first on lis brotleer Juselh, and aft.rwarls on Murat. F. wats reinstated by the congerss of Viomma, and entered Naples, aftel Murat* illint, in . Tume $1 \mathrm{Sl} \mathrm{s}^{\circ}$. His queen had died in lslf. Duriag the revolution of 1520 , he was obligelt to intronluce the spanish constitution of $181 \stackrel{2}{2}$, hat abmishod it next sear with the hel ${ }^{\prime}$, of Anstrian arms. He however, expelled the Jesuits, amd alulished supertlums comvents; acts that may, perhaps, partly atone fur bis bloody persecution of the repulbicans in 1som, and his gencral autipathy to enlightened principles of government. ITe died January 4, 182.5 ; and was succeeded by his son Francis I., who died in Is:30.

FERDIN.IND II.. king of the Two viedies, was the son of Francis I. hy his second wife, Isabella Maria of Spain, and was born 12th January lol0. He succected his father in 1830. The conntry was in the most wretched condition; and all eyes were turned to the young kins, the beginning of whose reign was markel by varions acts of clemency towards political enemies. and also by the introdnction of reforms in the economy and government of the comatry: But it was not lung before he legan to listen to foreign counsels. which saw danger fir the whole peninsula in liberal measures. From that time, Naples became the scene of incessant conspiracy, insurrection, bloodshed, and political prosecutions. Ferdimand yielded to the storm of 1845, and granted a constitution to both parts of his dominious; he was eren olliged to take part in the war against Anstria in Northern Italy. The Sicilians mistrusted, and with reason, the king's procecdints, and declared that he and his family had forfeited the Sicilian crown. F. followed the constitution so far as to call the chanbers together, lut quickly dismissed them, impatient of iny interference with his anthority. After the subjugation of sicily in 1849, when the reaction heran to set in all over I taly, hes hastened completely to set asilu the new constitution; while all who had taken any part in state reforms were subjected to those ernel persecutions that the Letters of Mr Gladstome have hed up to the exeeration of the workd. F. died 2ed May 155!, and was suceceled ly his son Frameis Il.

FERDINAND 11I.. Graml 1mke of Tuscany, and Archduke of Austria, was horn at Ilorence, 6th May 176\%. In 179, he succected his father, Leopold 11., in the guvernment of Tuscany, when the latter obtained the imperial thron at the death of the Emperor Juseph 11., Leopold's bruther. F.'s rule in Tuscany wats one of combined milaness and ability; and during his reign were inaugurated many judicial, economieal, and legislative reforms: commerce was potected and encouraged: hospitals and asylums founded, gool roads opened through the state, and the greatest attention hestowed on the welfare of his subjects, which an conlightened and good prince could excrise. A lover of peaceful progress, he remained strictly mentral in the first
coalition agaiust France, and was the tirst sovercien in Eurepe to recomise ami treat diplomatically with the French Repullie in 77 an. In 1703 , intumidated ly the combincel monaces of the linssian ant British calpincts, $F$. wats constrainel to relin. quish his nontral pricy, ant become a passive nember of the cralition famed by the alowe graemments against Firnee. In loin, on the Fremeh ownpation of liedmont, he speenty reassumed fricnilly relations with France. In 1F97, in order to. save his states from amexation to the ('isalline leppublic, F. condudela a treaty with Lomaparte on most unfavourable torms; undertaking to pry a war-lesy to France, and to transfor to the Muscum of l'aris some of the chief mastergieces of the Florentine falleries, including the "Vonas the" Hedici. Owing to the continued intrigues of france in his states, f. was furcel to seck all Austrian alliance, which furnishet Bomaparte with a pretext for Chelaring war simultaneously aganst Austria and Tuscany. In 1799, F. retired to Viema, leaving the. French troops in ocenpation of Tuscany: In 1sol, at the gace of Luncoille, le was furced to renounce all claim on 'luseany. In 1814, the peace of I'aris reinstated him in Tuseany, and even restured lis artistic treasures. Ho ricil 17th June 1set, leaving his states to his sm Lenpold 11 .

FERENTINO, a town of Italy, in the former delegation of Frosinone, ami f m. N. W. of the town of that name. Portions of the ancient walls, built in the eychopean style of larte irremur and polywonal blocks of limestone, and patched or surmounted with luman masonry, no mortar having been useng, are still extant. F. is the ancient Ferentiom, a city of the Hernici. Present zop, $8: 306$.

FERGUSON, ADAM, a Scottish philosopher amd historian, was born (1:24) at Logierait, in l'erthshire, where his father was parish minister. He studied at the miversitics of st indrews and Edinburesh, and was appointed (1544) chaplain to the fod liegiment, in which capacity he was present at the battle of Fontenors, and is said to have chargel the enemy sworl in hand, among the foremost of the regiment. In $17 \pi=$, he suctected Davill llume as keeper of the Alrocates' Lihnary in Edinhurch. He was next appointal professor in the Edinburelh Uuiversity, first of natural philosophy, in 1759 , and subsequeatly ( 1764 ), of moral philusithy-a sulbeet which had always had great attractions for him. While holding this office, he accompanierl the young Earl of (hesterfidi (17:5) on his travels on the continent: and in 17:8-177!, he acted as secretary to the commission scant ont by Lurid North to try to arrange the dispates letween the North American colomies and the mother-comitry. The state of his health induced him, in 1784 , to resign his professorship, in which he was succeeded ly Dugahl stewart. In 179:3, he visited varions marts of the continent; and on his return, took up his residence for sonne time at Neidprath castle, in Tweeddate, and latterly in st Andrews, where he djed. 2ed Febnary 1516 . His chicf works areLisisty on the Mistury of Cind socity (Lond. 1767), Iustitutes of Morel Philesomy (Lomel. 176:), Mistory of the Prorgrax and Tomination tif the Romun lipmoblic (Lond. ITs3), and I'rincighes of Moval and Politual Science (Loml. 1792). The watk by which he is liest known is his Mixtory of the lioman Republic: this, torether with the Essay and Institutes, bave gone through a number of editions. All his works have been translated into German aud French, and the Institutes has lreen used as a text-bork in several fortign unversities. F, was distinguished for the decision and manliness of his character.

FERAMANA(AI, an inland eounty in the snuth. wrst of the prowine of Ploster, Ireland. It is 45 miles long, and 99 hroal; area, 714 square miles, arahbs in wool, and above in water, meluting Iprer and Lower Lamh Erne, and the smaller lakes, Mdvin and Mix"man. The surface is mustly at succession of momatains and hills, and the secmery varies. The dhef rows are limestone, with many eavitics and umlersfomb water-conrses, millstome grit, and ohd red sambtome sume coal, iron, and marble necur. The chief rivers are the Lrme and its tributaries, the Colderome, Woodforel, and Armey. The smin the low gromms is a decp rich loan, lout in the limestome and sandstome district it is cold and thin. 'The elimate is milu abd moist. Marsh-few prevails in sumber and tutumn near Lomeh Exae. In 1872 , 106,001 aeres were in crop: mats, larley, what, fotatoes, turnips, and hay being the chas prowacts. The chaf exports are mats, hotter, and euses $F$ is dividen into $s$ haronien and 23 parshes. It returns 2 members to parliament. Primejal towns: Enniskillan, lismaskea, and Lowthrotoma. Pop. (1s.il)
 51.736 were lioman Catholies, 35,5!9 Episcomalians,
 nations. in 159:, there were !o national schools, with 1f.ges sholitr. The chief antiquitios are raths of rude hill-forls, aml some ecelesiastical ruins.
 was bern at Toulonse in J. 59 , and at an early period, in eonjunetiom with his friend Paseal, hit "pom a vory ingenims mode of considering figurate mumhers, upon whieh he subsequently based his dontrine of the calculation of probabilities. $F$. cmpleged limself gratly with the propertios of mabers, mal made many acute diseovers in ragatel to their composition and analysis. He also squared the parabola in a much simpler way than Arehimedes at an earlier perion had done, and make many other discoverites in geometry. llis methon of finding the eratest and liast ondinates of onrid lines was analugnes to the methon of the then umbnown diflerential calculus. In aldition to his scientifie attamments, $F$ persessed an extrame simary kawlenge of ancient and modern langages. Ha, dien at 'Toulatse in I665. A collection of F.'s works appared at latis in 1699.
Fresial tha, in dusie, is the name given to a fanse. or resting-pmint, generally marked by the sign $\sim$. The nutws over which this sign is phaced are prolongeal beyond their true leagth. The
fermata is frequently found near the end of a part of a composition, which affords an opportanity for the singer or player to introduce an extempore embellishment.

FERMENTATION is the tom applion to the change which oveurs in one organic subistance when influenced ly another in a state of decay or putrefaction. The process was origimally umlerstond to inclume all the changes which matter of plant and anmal origin undergoes when disunited from the livan: firct but is now restricted to ertain of the changes. Thus, there are many sabstances, such as starch and surar, which have no power if themselves to phas into deeay, or change in composition through lengthened priods of time; whilst there is another class of sulustances, inclndiag albumen, lihrin, and caseue, as well as gelatinous tissues, mucus. de., which, when exposed to moderately beated air in a moist condition, more or less rapidly legin to putreiy or decompose. The latter sulnstances, viz. these which spontanconsly pass into a state of change, are called fromento, aml when they are brought in contact with sugar. \&e., which otherwise would not be altered, they cause the latter to he broken up into simpler compoonds; it is this process that constitutes fermentation. The ferment is alsays a boly which has the power of rotting or becoming patrid, and is actually in a state of decomposition. Every substance which is liable to putrefy becomes, while putrefying, a femment; and in this condition acquires the property of setting agoing the process of fermentation in any seconl body capable of it, and retains the power till it is su far tecomposed that the putrescence is over. The ferments are very widely distributed in organic matter. and hence, whenever a plant or an ammal dies, the process of fermentation proceeds more or less rapidly. The most important kind of fermentation is that known under the desionation of cinous, and which forms part of the processes in the preparation of alcohol, beer, wine, \&c. It consists in the action of a peculiar ferment called Yeast (q. v.) upon a saccharine liquid, when the sugar $\left(\mathrm{C}_{1} \mathrm{II}_{1+1} \mathrm{O}_{14}\right)$ is decomposed into two atoms of alcohol (each $\mathrm{C}_{4} \mathrm{H}_{8} \mathrm{O}_{2}$ ), four atoms of carbonic acid (each CO.), and two atoms oi water (each HO). In this change it will be observed that the yeast, whilst it causes the change, does not unite directly or indirectly with any of the constituents of the sugar. The vinous fermentation proceds best at a tem1 erature rangine from 60 to $80^{\circ} \mathrm{F}$., the mean and more desirable leing ahout $80^{\circ} \mathrm{F}$. The process itscli causes the development of heat, and recomrse must lee hal. therefore, to lare airy roons, where the fermenting tums or vessels are arranced. and also to the circulation of cold water in bipes dis. tributed round the interior of the ressels, and in contact with the liquid. See Beer:
The lactic acil formentation takes place in milk when it herins to sour. The cascine of the milk acts the part of the ferment, and it causes the change in the sugar of milk, which is in part resolved into lactic acid $\left(\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{O}_{5}+\mathrm{HO}\right)$. The latter then curiles the caseine, and the milk becones clotted. When the milk still further somra, and the material is kept at a temperature of $\pi^{\circ}$ to $\$ 6^{\circ} \mathrm{F}$., the buturic arin fermentation takes place, in which the putrefying caseine changes the sugar (q. v.) of milk into butyric acid ( $\mathrm{C}_{0} \mathrm{II}_{4} \mathrm{O}_{3}+\mathrm{HO}$ ).

The riscous or mucus fermentation occurs when the juice of the beet-rout, dandelion, ash-tree. \&c., is allowed to decompose at a temperature of $90^{\circ}$ to $100^{\circ} \mathrm{F}$., when the albuminous matter present causes the sugar to ferment into lactic acid. mannite, a gummy substance, some alcohol, and various gases. The same kind of fermentation occurs
when biled yeast or boiled glaten is addel to orelinary sucar.

The remaining 1 rocesses of iementation are the benzoic fermentation. yielling. anonest ot her matters, the Essential Oil of Litter Almonds (q. $\because$ ) : the simpic fermentation, which necurs in mustard when moistened with water, and during which the purgent oil of mustare is developed; and the actous fermentation, which is. however, met a ture instansee of fermentation, as the oxygen of the air is requirel to eomplete the chane see Acrme bon
FERMENTED LICUORS are alcomblic be:cr. ages made by fermentation of saccharime fluils and juices; the priacipal being the different kinds uf ale ur lueer, made by fermentation of an infusion uf malt, chiely of harley, hut also sometimes of uther kiads ui stain; and mine. made by fermentation of frab jubce. Cout is made ly femmentation of tho
 by iermentation of the salp of diferent kimla $n$ fram. Fermonted liquors, commonly calleal winns, are also mall: from the juice of various kinls "s fruit. as currant wine from that of the red currant; and from the juice of some ronts, as jarsnip wine from that of the rarenite \&e. The sal of the Ancrican Alm, ir Apme (1. vi, yivela the fermeated liquor called Pultue, much used in Mexico. I wine is manle from the sap of the birch, amo thas of some other trees jo used fos a similar purpose. Youd is a formenterl lipuor made froma hance: From every fermented ligmur, a hind of aisi may he ubtainelly distillation.
FERMENTET AND DISTILLII LIQCORS, sritistifs of. "obler the headings Leele, spipits, and Wise, will be fonnil particulars as t., the history, manniacture, $\& e$, of the se liquors. All that is contemplated in the present article, is a statoment of the quantities manufarturel and consummi in the Lnited Kinglom of ©, reat Lritain ani lrelanl. In 1501, the consumpion of spirite, British, colonial, and foreina, in the Tnited liustom was $8,500,5-511$ gallons. In fifty fears. it law consid rably mome
 gallons. In the same time. the Immlation lan
 periok, therefore, the consumption was at the rato of little nore than half a callon ber howh, while in the latter perion it amounted the mine than a arallos. There would seem, however, to lave leen equathing exceptional in the year lsul to reduce the consum! tion to the low joint we have mentioned, as in the previnus year, the consumption was hearly 12 milliong gallons, amb in the suceeding year, more than 1.5 million gallons; and in no sulbequent year dint it fall solow as in $1-11$. The consmmetion at the two 1 erioht was diviled aser the three combtries as follows: Enoland, 1501, 6,I50.!9:3 gatlonsnamely : $2.5 .5,420$ ISritish ; 1.657 .539 colonial ; ant 1.306.2et forem. In $15.1,13,446.31 \%$ Eallons -namely. a.jor.354 Pritish; 2.-H2.345 rnmial;
 consumption of rach indivilual was less than threto fourths of a callon; in the latter, usarly seven-ninths of a gallun. Cotland, 1801, $930,490-n a m e l y$, British. 295,931 ; crlonial, 849,237 ; and forkion,
 colonial, 179.593; and foreign, s0,341. The ronsumption fer head in Sontland in 1501 was thra only theec-iftha of a callom, white in 15.51 it was 2 callons. Ircland, 1s01. 1.719,367-namely, British, 35.1146 : colonial, 1.050 .316 ; ioreizn. $306,445.15 \% 1$, 7.7.3.01:-namely, British, 7.5.0,īls; colonial, 156147 ; reig. 4.352. In the former period. th: consumption jer lieal was twothirds of a gallon; in the latter, about $1 \frac{1}{4}$ gallon. But there is esery

FEIRLANIOJNA, a tom in the sonth of Ital? in the provimoe of bashlicita, stambs on a height ous tho right bink of the liasento, 35 miles east-sonthfitet of lubluza. Giond wine is produced in the wirlabmardmet. Jole about botoo.

HHIRliAliA, the most morthern of the Italian businces that arr. washed by the Adriatice. It extamels immediately sunth of the lo, between the uain lirand of whieh, whl the P', di Jrimaro, it is fur 1 ho most phet enclosed. As anc of the ohal

Helogations, it hand an area of llso square mules, with a f"pmlation amonnting to $2+4.5$, but

 comsists, for the most put, of swamp and lake; and many rivers and wamb intersect it. lectween the l'u di Vnlans and the l'o di l'rimaro, the marshos lamane very extonsive, and rocesve the name of Vallidi (manceio. This province prodaces
 carries on a scont thade in com and hemp. It was at one time a dakedonn moder the House of Lisin, lant on the foilure of a legitimate male heir, l'ape Clument VIll. wrested it from this family, and ammexal it to the states of the Church in 1.ins. It become part of the kinglom of Italy in 1560.

FKRIVAliA, an ancient city of Itals capital of the movnoe of the same mame, is situated in a low marsly plain in the delta uf the l'o. and ahout 4 miles sunth of the main branch of that river, 28 miles north-north-east of Eologna, and 40 miles nuth-west of Iavennit. $F$. was first made a walled city by the exarch of Liavenna abont the elose of the Gthe, aml in the following century ( 661 A. I. ) became the seat of a lishop. In the midille ages, it was the ereat enmmercial emporimo of laly, ame the seat if a court renowned thronghont binrope: lut now the enty has a peenliarly deserterl ami melaneholy nupearance; grass grows on the puvements of its hrom and regular strects, and its churches and pancas are cither rapally falling, or have alreaty tallen into decay, It is surroumled with walls, and is strenthened by bastions and a fortress. The ohl castle, or ducal palace, onee the residence of the Dukes of Liste, but recently, until 1560, ocenpied hy the papal legates, rises like is horie rock, is strengthened with corner-towers, and surmunded by it litch. Its ecelesiastical edifices, which are vary mumerous, and of which the chnrehes of Santa Naria degl' Augeli and of Sin Benedetto are the most remarkable in point of architectue. are lich in paintings by the great masters of the Ferrara and Bologna echools. Jesides their viluable praintings, these churches contain numerous senlptured momments of famons persons; the church of sian Francesco las a eurious echo, with sixteen reverberations. The miversity, founded in 1264. was reorganised in 1402 , elosed in 1794 , and renmenel in 1824 . It is in high relute as a school of medicine aud jurisprodence, and is attended by about $2(0)$ or 300 students. It has an excellent hhrary, which, besides a variety of MSS., missal printinus, and old editions of printed works, contams several of the works of Tasso and Ariosto in their own hand. $F$. is specially remarkable for its art associations. Under the patronage of the bukes of Exte, it produced a school of painters who rank high in the history of art: while in litcrature the name of $F$. is immortalised through its connection with those of Tassin, Ariosto, and Gimami. It the period of its greatest prosperity, 1 ". han alont 100,000 imbalitants, lut at fresent ( $15 \%$ ) it has a pupalation of only $7 \boldsymbol{2},+47$.

1n IS 19 , the Austrians took possession of the kown, lat were compelled to abandom it at the (fimmoneemont of the Italian eampaign in dune 1s.s!. In April 1860 , F., with the state of which it is capital, was formally annexed to the kingdom of ltaly umicr Vietor Emanuel.

Flikilid'lis, fistoderzio, sprung from a family whele followed a courcer of art as if by inheritance, was born at Valdugia, in the Milanese, in 1484.

## FELRAATES-FEMIIELi

A scholar of Andrea Scotos and Perugino, and the chosen associate and friend of liaplied, his uwn creations may be said to have canght sume inspiration from each of these three ereat masters, while they also numistakalbly reflect genius of a buhd, mushackled originality. The elinef characteristics of F 's style are correct and rigrons delineation, extreme vinlness and delicaty of colouring, noble srace of form and attitude, and monsuassable art in the classic dispusal of drapery. Being one of the most labrious iatists of his diyy, he has executed innumerable painthas both in fiesors and in oil, the greater gart of which are possessed by the Lombard rallerics. His most comprehonsive work, the freseos at Ibarallo, in limdmont, represents the l'assion; the "Martyrdom of sit Catherine, ta which he owes his brightest fame. is in the Milanese collection of paintings. Ife died in liv! , having fromed some fook scholars, the chief of whom is Ambrea Solario.

FE'RRATES are combinations of forric acir ( $\mathrm{FeO}_{3}$ ), a weak mostable compound of iron and uxygen with bases. Sce Iron.

FELELEIRA, AxTONo, we of the classic poets of Portugal, was born at Lishom, Rost. He was educatert at Comina, where he oceuriod himself with the stuly of the Italin and Latin authors, more especially IIorace, whom he ahmst rivalled in conciseness, but mot in clegance of expression. After hahling for some time the oflice of a professon at Coimbra, be olitained a cival appontment of some importance at the court of hishan. He carried to perfectim the clegiae and epistolary styles, already attempted with success hy sit de Miramia, and transplanted into. Portoguese literature the epithalaminm, the epgram, ote, ani tragedy. His Thes de Castro is the sceond regular trayedy that appared after the revival of letters in Eurnge, the dirst being the Sophonisfor of Trissimo. It is still regarded liy the Portuguese as one of the finest momments of their literature, for its sublime fathos and the perfection of its style. The wonks of F. are not numerous, as his ofticial duties left him little leisure. ITe died 1560. All his works are distinguished by sounduess and depth of thought. His expression is strone rather than sweet, is extremely animated, and full of that fire which elevates the mind and warms the heart. His efforts after brevity, however, frequently led him to sacrifice harmony to thuught. His Poemas Lusitunos were first published at Lisbon, 1598, and the Torkes ass obres. de Ferveira in 1771. (Compare Sismonli's work, La Jotlorature dh Midi (Paris, 1813), and Bouterwek's 'Geschichte dor nenom l'oesie und Beredsumkeit (1: vols. Gïtt. 1801-I819).

FE'RRET (Mustele foro), an anmal of the weasel family (Minsteluder), so nearly allien to the Polecat (q. $\because$ ), that many regard it as a mere domesticated variety. It is of mather smaller size, the head and looly being abont fourteen inches loug, the tail five inches and a half, the muzale rather longer and more pointed, the head rather narrower ; and the colonr is very different, heing yellowish, with more or less of white in some parts, there beine two kinds of hair, the longer partly white, the shorter yellow. The eyes are pink. It is, however, much more suseeptible of cold than the pherat, and requires careful protection from it in climates where the polecat is a hardy native. It was imported into limope from Africa, and was well known to the Inmans, being anciontly employed, as it still is, in catching rabhits, for which purpose it is often sent into their burrows muzzled, or 'coped,' by means of a piece of string, to drive them out into nets, or, with a string attached to it, it is allowed to seize a rabbit in the
lurrows, and is then drawn out, holding it fast. The usual plan, however, is to let the $F$. have free range of rabhit-holes ummuzzet. Ferrets are generally kept in boxes, and attention to warmith

Ferret (Mustelt furo).
and cleanlimess is cssential tor their health. They are capalle only of partial domestication, acquiring a kiml of familiarity with man, and sulbuitting with perfect quietness to his handling, but apparently never formin! any very lecided attachment; and they never cease to he dangerons if not carefully watched, especially where infants are within their reach. If allowed any measure of freedom, they are ready to attack poultry, and kill far more than they can devour, merely sucking the blood. They generally breed twice a year, each brood consisting if six or nine. The female sometimes devours the young ones, in which case another brood is speedily produced.
